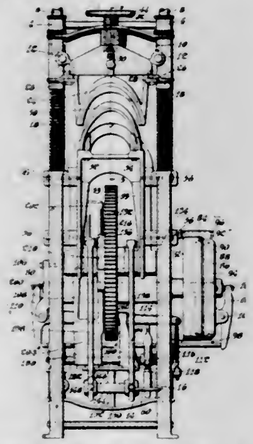
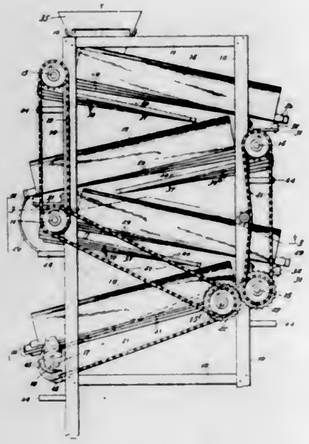
4. Automatic circuit breaker mechanism comprising a movable contact arm, toggle structure comprising a link connected to said contact arm and another link pivoted intermediate its ends, one end of said other link on one side of said pivot being free, an enclosing housing having an aperture, and an indicating member disposed on the free end of said link and movable with respect to said aperture in accordance with movements of said switch arm.



20. The combination with a movable contact member, of an overtravelling toggle for moving it to and locking it in circuit closing position, an enclosing housing, a resetting member carried by said housing for engaging said toggle for moving said contact member to circuit

closing position, a pivoted member carried by said housing and adapted to engage said toggle to move it to under-traveled position, and manually operable means

carried by said housing in detached relation to said pivoted member and operable from the exterior of said housing to actuate said pivoted member.

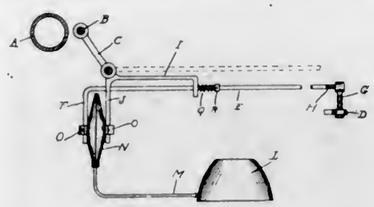


1,508,415. MOLDING MACHINE. THOMAS H. SEELY, Malden, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Mar. 24, 1920. Serial No. 368,387. 27 Claims. (Cl. 69—8.)

1. In a molding machine, a die having a molding surface, a fixed piston, a movable cylinder, means to raise said cylinder and allow it to drop under the action of gravity, means to render said cylinder ineffective through a part of its movement, and connections from the molding surface to the interior of the cylinder whereby sudden flow of a fluid is supplied to the molding surface to separate the article from the die.

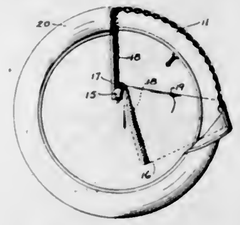
1,508,416. GRADER FOR FRUITS, VEGETABLES, AND OTHER ARTICLES. HENRY A. SHELDON, Buffalo, N. Y., assignor to Peerless Husker Company, Buffalo, N. Y., a Copartnership. Filed Feb. 19, 1921. Serial No. 446,250. 21 Claims. (Cl. 130—32.)

1. A grader of the character described, comprising a plurality of parallel, longitudinal bars which are inclined from their head or receiving ends toward their tail or delivery ends and which are spaced laterally from each other, and actuating means for reciprocating said bars lengthwise and vibrating the same vertically so that as a whole the upper surfaces of the same produce a wave-like motion crosswise of the several bars and cause the ma-



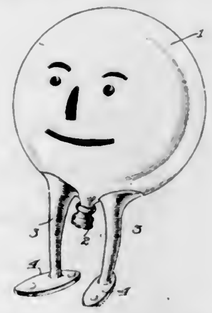
terial resting thereon to move by gravity diagonally over the several bars from the head end to the tail end of the same, the crest of each wave being formed by a plurality of bars, the inclined sides of the waves being formed by a plurality of bars and the trough of the waves being formed by a plurality of bars.

1,508,417. PIPE-RECOVERING DEVICE. JOSEPH M. SPITLER, Houston, Tex. Filed May 2, 1924. Serial No. 710,487. 5 Claims. (Cl. 294—90.)



2. A pipe puller including a tubular jaw carrier, a mandrel therein provided with a flared portion, cams on said mandrel, pipe engaging jaws radially movable in said carrier and adapted to be expanded by said flared portion when the mandrel is moved longitudinally in the carrier and adapted to be expanded by the cams when said mandrel is rotated relative to the carrier.

1,508,418. ACCELERATOR ATTACHMENT. WILLIAM G. STEWART, Windsor, Ontario, Canada. Filed June 18, 1921. Serial No. 478,639. 10 Claims. (Cl. 74—39.)

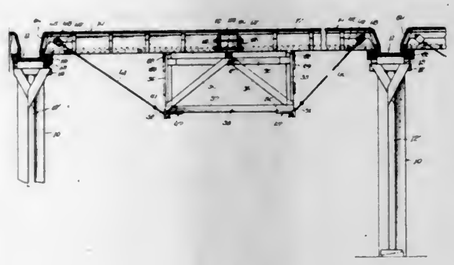


1. An accelerator attachment for motor cars comprising a substitute connecting rod between the hand control and throttle, having members relatively movable longitudinally of the rod, a pneumatic compressor bulb and an expansible chamber connected with said bulb engaging said relatively movable members of the rod to actuate the same.

1,508,419. COVER. GIDEON SENDBACK, Meadville, Pa., assignor to Hookless Fastener Company, a Corporation of Pennsylvania. Filed Jan. 8, 1923. Serial No. 611,210. 1 Claim. (Cl. 150—54.)

A flexible cover extending on one side, enclosing the edges, and provided with an overlapping portion on the opposite side of an article, said cover being provided with a single slit extending from the overlapping edge of said cover, over the edge of the article and inwardly along the first side far enough to permit removal of said cover, and means for closing said slit.

1,508,420. BALLOON TOY. ALVIN J. SWARTZ, Willard, and CLYDE O. ROOSE, Norwalk, Ohio. Filed June 2, 1922. Serial No. 565,492. 6 Claims. (Cl. 46—40.)

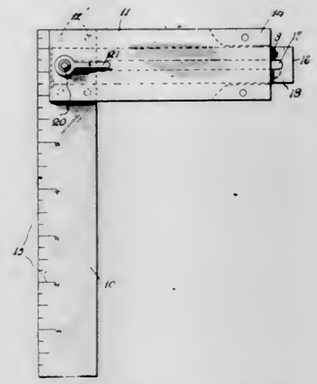


1. A balloon toy, including an inflatable bag designed to represent a fanciful figure, and means connected with said bag and so positioned and of such weight as to cause said toy to assume an erect position on any surface, said means forming a part of the fanciful figure.

1,508,421. BRICKWORK WALL FOR SAFES, STRONG ROOMS, AND THE LIKE. HANS TAEGEN, Berlin-Grunewald, Germany, assignor of one-half to the Firm Minimax-Aktien-Gesellschaft, Berlin, Germany. Filed Mar. 13, 1924. Serial No. 699,093. 8 Claims. (Cl. 109—1.)

1. In brickwork walls in combination, obliquely disposed bricks and steel reinforcements arranged in the joints between said bricks at about the middle of said wall.

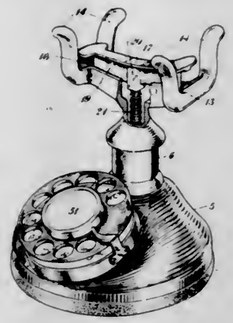
1,508,422. FORM STRUCTURE FOR CONCRETE CONSTRUCTION. JOHN A. TAGGART, Wilmette, Ill. Filed Apr. 25, 1921. Serial No. 464,238. 8 Claims. (Cl. 25—131.5.)



1. A form for concrete construction comprising, in combination, a top and two sides, and means interconnecting said top and sides adapted to break the suction, first between the sides of said form and the concrete and, next, between the top of said form and the concrete.

5. A built up structure for concrete construction comprising, in combination, a plurality of transverse forms, cleats secured to the ends of said forms, spreaders adapted to be positioned against the inner edge of said cleats, and means for interlocking said spreaders to rigidly interconnect and interlock said transverse sections.

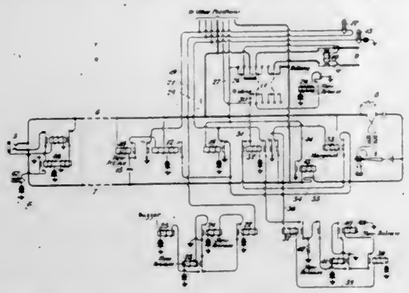
1,508,423. COMBINATION SQUARE. JOHN O. THOMAS, Long Beach, Calif. Filed June 27, 1921. Serial No. 488,010. 1 Claim. (Cl. 33—44.)



A measuring and plotting instrument comprising a beam consisting of two similar rectangular members arranged in parallelism one above the other, and spacing blocks between said members respectively at the corners of one end thereof, and means permanently securing said members and blocks together, said blocks being spaced to define an open passage between them, a straight-edged blade inserted between said members at the other end of the beam and rigidly attached to one of said members at a right angle thereto while spaced from the other member, a straight-edged leaf disposed between said blade and the other member and having a longitudinal slot and adapted to be housed within the beam with one end extending through said passage or disposed in angular relation to the beam and the blade, a clamping screw pass-

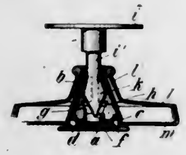
ing through the beam and the blade at said other end and through the slot in the leaf, and a nut on said screw

adapted to be turned home against the other member of the beam to secure the leaf in a set position relative to the beam and the blade.



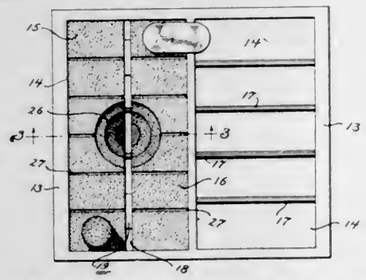
1,508,424. TELEPHONE DESK SET. GEORGE K. THOMPSON, Maplewood, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Dec. 28, 1922. Serial No. 609,506. 6 Claims. (Cl. 179—165.)

1. A portable desk set comprising a base and standard therefor, a cradle member integral with said standard and adapted to support a hand telephone, a T-shaped plunger including a head portion and a spindle adapted to reciprocate in said standard, switching mechanism mounted in said base, and means associated with the said plunger and actuated upon the reciprocation thereof for operating said switching mechanism upon the association and dissociation of the hand telephone with the cradle member.



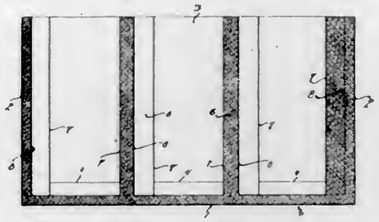
1,508,425. TELEPHONE PRIVATE BRANCH EXCHANGE CIRCUITS. JOHN F. TOOMEY and HENRY E. PHELPS, New York, N. Y., assignors to American Telephone and Telegraph Company, a Corporation of New York. Filed July 7, 1921. Serial No. 482,988. 10 Claims. (Cl. 179—42.)

1. A trunk line interconnecting a central office and a substation, ringing responsive apparatus associated with said line, signaling means controlled thereby, a second signaling means, a circuit including two relays connected in series, switching means adapted to be thrown in talking position or in holding position, operator's telephone apparatus, said switching means operating when thrown in talking position to close said circuit and to operate said relays whereby one of said relays will connect said operator's set to said line and the other of said relays will operate said second signaling means,



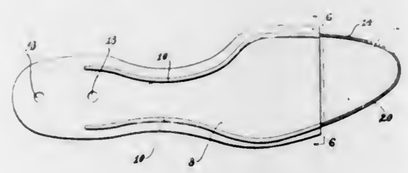
and means associated with said line and operative when the subscriber at said substation responds for short-circuiting the portion of said circuit including said first relay.

1,508,426. BUTTON. WILHELM TUNHORN, Stolberg, Germany, assignor to William Prym G. m. b. H., Stolberg, Germany. Filed July 18, 1923. Serial No. 653,150. 1 Claim. (Cl. 24—109.)



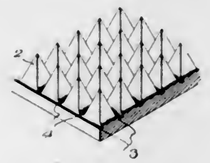
A button of the character described comprising a base member having a headed stem, a top member receiving the stem and including a plate having a series of concentric openings and tongues projecting inwardly of the openings and a clamping member composed of a conical sleeve for receiving the stem of the base member and provided with longitudinal slots forming resilient tongues and with openings at the inner ends of the slots forming shoulders for engaging the tongues on the plate for preventing accidental separation of the top member and also provided with an exterior annular groove for receiving the plate, substantially as and for the purposes set forth.

1,508,427. ELECTRIC STORAGE-BATTERY CONSTRUCTION. HUGO G. WAGNER, Point Pleasant Beach, N. J. Filed Dec. 27, 1921. Serial No. 524,891. 2 Claims. (Cl. 204—29.)



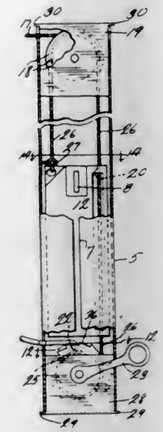
1. In an electric storage battery, positive and negative elements consisting of porous blocks composed of ammonium sulphate, carbon, an accumulator oxide and calcined calcium sulphate.

1,508,428. ELECTRIC-STORAGE-BATTERY CELL AND CASE. HUGO G. WAGNER, Point Pleasant Beach, N. J. Filed July 13, 1922. Serial No. 574,606. 2 Claims. (Cl. 204—29.)



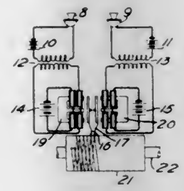
2. A battery case having opposed walls provided with inwardly extending projections and corresponding depressions adapted to interlock with correspondingly shaped grids, the projections from each wall being aligned with the depressions in the other wall.

1,508,429. INSOLE AND METHOD OF MAKING THE SAME. GEORGE E. WARREN, Swampscott, Mass., assignor to United Machinery Shoe Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Mar. 23, 1921. Serial No. 454,755. 15 Claims. (Cl. 36—22.)



15. The method of making manufactured insoles which comprises providing a marginal sewing-rib and feather in a blank of insole material which terminates substantially at the tip line, securing to the unribbed side of said blank another layer of material formed to provide a complemental sewing-rib about the toe, the base of said complemental sewing-rib being disposed in a lower plane than the base of the rib at the rear of the tip line.

1,508,430. BURR. CLAUD H. WELLS, Gouverneur, N. Y. Filed July 14, 1923. Serial No. 651,548. 1 Claim. (Cl. 125—37.)

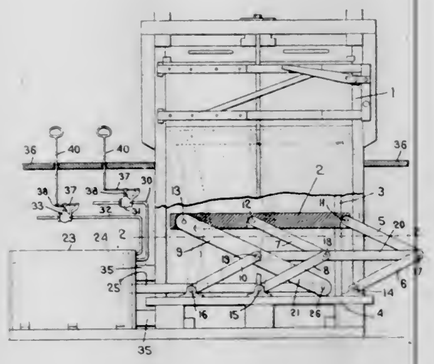


A burr for facing pulp mill stones, comprising a cylindrical body having aligning circumferential and transverse series of teeth, each of a pyramidal formation, said body having its outer face between the teeth grooved both circumferentially and transversely, and the walls of said grooves being rounded.

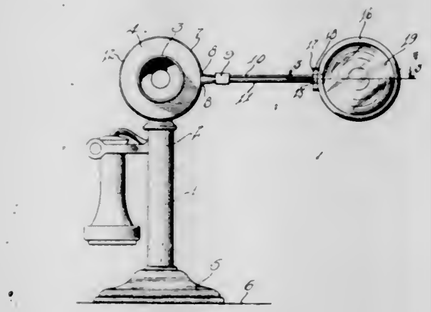
1,508,431. ADJUSTABLE WINDOW-SHADE SUPPORT. BEVILL W. WHITWORTH, Omaha, Nebr. Filed July 25, 1923. Serial No. 653,645. 1 Claim. (Cl. 156—27.)

The combination with an adjustable shade supporting device comprising vertically disposed casings, members within the casing for supporting a shade roller, pulley and cable means for simultaneously moving said shade supporting members, said pulleys being disposed within the ends of the casings, of means for supporting said pulleys, said means comprising casings disposed within the ends of the vertically disposed casings, said pulley carrying casings being provided with flanges overlying the ends of the vertically disposed casings.

1,508,432. SOUND RECORDING AND REPRODUCING APPARATUS. HARRY B. WIER, Plainfield, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 18, 1921. Serial No. 516,051. 3 Claims. (Cl. 179—100.1.)



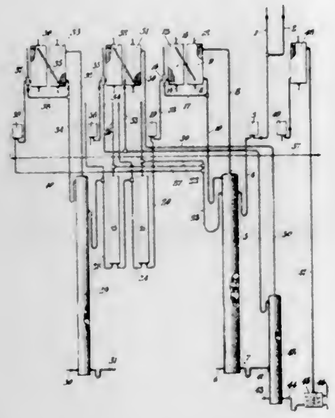
1. A binaural system for recording and reproducing sounds comprising a pair of transmitters for simultaneously collecting the same sounds, a record, a double recorder for recording the sounds collected by each transmitter on said record, a double reproducer for reproducing the recorded sounds and a pair of receivers connected to said reproducers whereby the sounds may be heard in their natural acoustical relation.



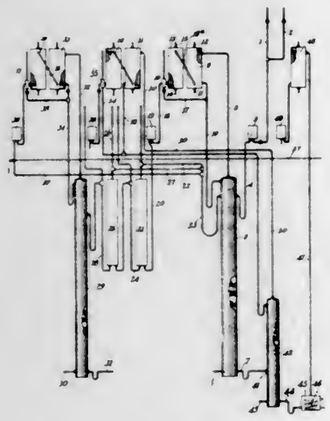
1,508,433. BALING PRESS. CHARLES M. WOULF, Buffalo, N. Y. Filed Feb. 2, 1920. Serial No. 355,579. 1 Claim. (Cl. 100—9.)

In a baling press, the combination with a press frame, of a follower operable therein, a plurality of connected parallel toggle elements pivotally connected at one end to said follower and at the other end to the frame, one

of the members of one toggle element being extended beyond its central point, a cylinder connected to the frame with its axis in line with the lower end of a toggle element extension, a piston in the cylinder having a piston rod connected to said extension, and means for admitting fluid to the cylinder.



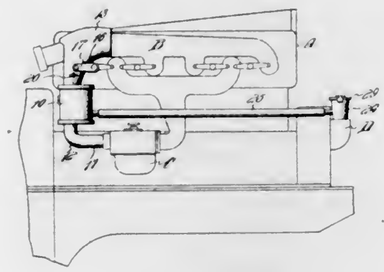
1,508,434. MAGNIFYING GLASS FOR TELEPHONES. JOSEPH J. AYRES, Keokuk, Iowa. Filed Jan. 8, 1923. Serial No. 611,411. 3 Claims. (Cl. 88—39.)



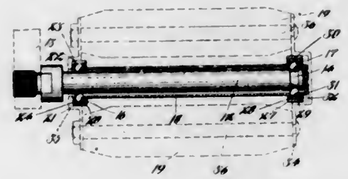
1. A magnifying glass for attachment to telephone instruments, and means for movably supporting said glass upon said instrument at one side of the transmitter thereof, said means comprising a wire loop, arranged for engagement with the housing of said transmitter and formed with outwardly extending radial end portions, and a frame for receiving said magnifying glass hingedly supported upon the outer ends of said radial portions of said loop.

1,508,435. PROCESS OF RECOVERING ABSOLUTE ALCOHOL. ARTHUR A. BACKHAUS, Baltimore, Md., assignor to U. S. Industrial Alcohol Co., a Corporation of West Virginia. Filed Apr. 5, 1921. Serial No. 458,845. 3 Claims. (Cl. 195—15.)

1. The process of manufacturing anhydrous alcohol which comprises the addition to commercial alcohol of a substance miscible therewith but immiscible with water, and the distillation of the mixture in a column whereby an azeotropic mixture is obtained as a distillate and anhydrous alcohol containing a small proportion of said substance as a residue, and the distillation of said residue to obtain pure anhydrous alcohol as a distillate and said substance as a residue.



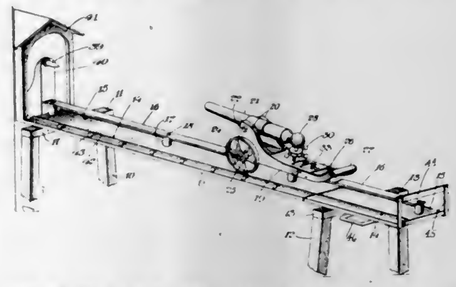
1,508,436. APPARATUS FOR RECOVERING ABSOLUTE ALCOHOL FREE FROM FOREIGN MATERIALS. ARTHUR A. BACKHAUS, Baltimore, Md., assignor to U. S. Industrial Alcohol Co., a Corporation of West Virginia. Filed Apr. 5, 1921. Serial No. 458,846. 4 Claims. (Cl. 195—15.)



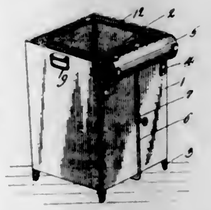
1. An apparatus which comprises a rectifying column, means for feeding a ternary mixture thereto, means for removing a single constituent therefrom, and means for rectifying said constituent.

1,508,437. HOT-AIR PIPE FOR CARBURETORS. WILLIAM A. BAKER, Elgin, Tex., assignor to Baker Gas Saver Company, Elgin, Tex. Filed July 13, 1923. Serial No. 651,384. 3 Claims. (Cl. 123—119.)

1. A hot air supply for engine carburetors comprising a drum, a conduit extending through the drum and having one end inserted within the air inlet of the carburetor and having its other end formed as an open sided shield engaged against the exhaust manifold, means for holding the device in position, a tube leading from the breather pipe of the engine into said drum, means establishing communication between the drum and the conduit a valve within the conduit.



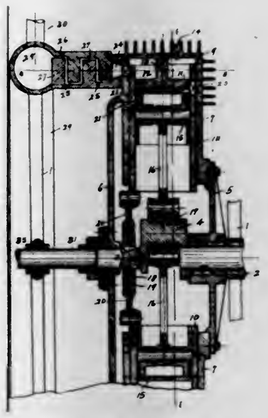
1,508,438. ANTIFRICTION BEARING FOR BICYCLE PEDALS, ETC. HUGH W. BATCHELLER, Worcester, Mass., assignor of one-half to H. F. Farrell, Worcester, Mass. Filed June 22, 1923. Serial No. 646,997. 2 Claims. (Cl. 208—70.)



1. A self-contained antifriction bearing comprising a cylindrical shaft having a peripheral groove adjacent to its outer end, the minimum diameter of the groove being less than the diameter of the shaft; a circular series of inner balls contacting with the periphery of the shaft; a smaller circular series of outer balls contacting with the groove; a tube loosely surrounding the shaft and provided at its inner end with an inner cup, having a shoulder-forming face contacting with one side of the series of inner balls, and an internal face contacting with the perimeter of said series, to maintain the inner balls in loose contact with the periphery of the shaft; means for confining the balls in the inner cup; the tube being provided at its outer end with an outer cup having a shoulder-forming face contacting with one side of the series of outer balls; and a keeper fixed in the outer cup and having a shoulder-forming face contacting with the opposite side of the series of outer balls, and an internal face contacting with the perimeter of said series, to maintain the outer balls in coupling engagement with said groove, and thereby prevent endwise movement of the tube in either direction on the shaft, the arrangement being such that the tube is locked against endwise movement by the operation of securing the keeper to the outer cup.

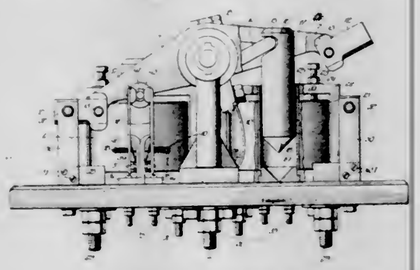
1,508,439. AMUSEMENT DEVICE. ISAAC N. BEBAHA, New York, N. Y. Filed Feb. 28, 1923. Serial No. 621,960. 10 Claims. (Cl. 265—20.)

1. In a device of the class described the combination of an inclined platform, a wheeled firing device mounted thereon and adapted to be propelled up said inclined platform, means for guiding said device upon the platform, a support located at the upper end of said platform, means for holding a cartridge and means for exploding it, one of said means being carried by said support and the other by said firing device, and a handle connected to said firing device and adapted to be grasped for propelling the firing device up the platform.



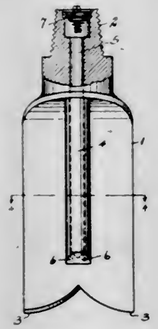
1,508,440. ICE-MAKING MACHINE. THOMAS BEARD, Togo, Minn. Filed July 13, 1922. Serial No. 574,719. 1 Claim. (Cl. 220—13.)

In an ice making machine of the class described, an outer receptacle, an inner receptacle removably mounted within the outer receptacle, spacing strips provided on the inner receptacle, said strips provided with notches, and handles pivotally mounted on the exterior of the inner receptacle and adapted to be received in said notches when not in use and when the inner receptacle is mounted within the outer receptacle.



1,508,441. TURBINE. LESTER L. BROWN, Houston, Tex. Filed July 26, 1920. Serial No. 399,010. 5 Claims. (Cl. 60—41.)

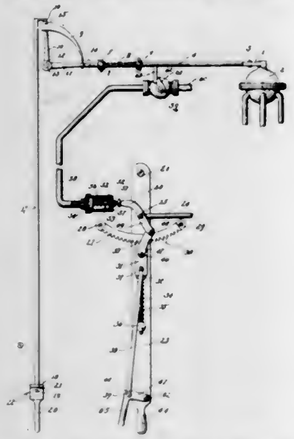
1. A turbine including a plurality of rotating cylinders each having a discharge port, pistons reciprocable in the cylinders, an eccentric bearing around which the cylin-



ders revolve, connecting rods each pivoted at one end to its corresponding piston and at its other end to said bearing, stationary vanes against which the motive fluid is discharged from said ports, and vanes which are fastened to the cylinders against which the motive fluid is deflected by said stationary vanes thereby imparting rotation to them and to the cylinders with which they are connected.

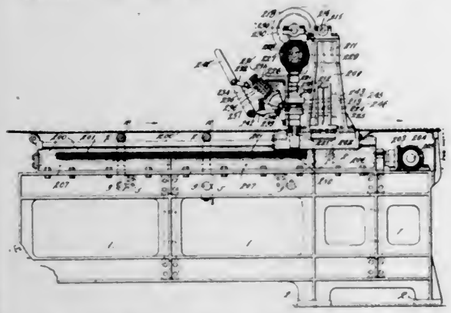
1,508,442. DOUBLE-POLE DOUBLE-THROW SWITCH. CARL O. BURTON, Duluth, Minn. Filed Mar. 17, 1921. Serial No. 453,074. 2 Claims. (Cl. 200—101.)

1. In an electric switch, a rocking shaft, switch arms and an operating arm extending transversely of the shaft and having their median portions connected thereto, con acts adapted to engage the ends of the switch arms, secondary contacts adjacent each end of the main switch arms, and means carried by the switch arms insulated from the main circuit and adapted to engage the secondary contacts when the switch arms engage the first-named contacts.



1,508,443. DRILL BIT. WALTON G. CHRISTIAN, Houston, Tex. Filed Jan. 29, 1923. Serial No. 615,573. 6 Claims. (Cl. 255—61.)

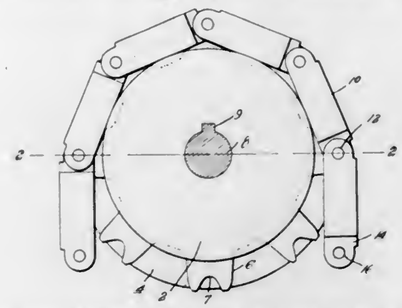
1. A drill bit including an elongated flat relatively thin body, having a centrally located vertical rib on each side formed integrally therewith, and whose lower end is formed with cutting blades, said bit having a single water course which extends from the upper end thereof and continues down within said ribs near the lower end thereof, the lower ends of the ribs being provided with water ports through which water may be discharged on opposite sides of said body the upper end of said water course being enlarged and a back pressure valve located in said enlarged portion.



1,508,444. TRAIN-STOPPING MEANS. HARRY L. CRAIG, College Point, N. Y. Filed Mar. 27, 1922. Serial No. 546,999. 2 Claims. (Cl. 246—188.)

1. In train stopping means, the combination with releasable latched devices, of a spring controlled air brake rod actuated by the release of the said devices, the said rod having a striker arm projecting from it, an air valve arranged to be operated by the movement of the said arm, a cylinder having a spring controlled piston and piston rod, the cylinder being in communication with the said air valve, a throttle valve lever, a toothed quadrant, a releasable dog carried by the said lever and engaging the quadrant, a throttle valve rod

pivotally attached to the said lever, a toggle joint having a limited movement and having the end of one link attached to the said dog, and having an intermediate point of the second link of the said toggle pivotally attached to the connection of the said lever and throttle valve rod, and the free extremity of the said second link being arranged in the path of and operated by the said piston rod whereby the said dog is released and the said throttle valve rod is moved.



1,508,445. CUT-OFF MECHANISM. LEWIS K. DAVIS, New York, N. Y., assignor to Vaughn Camp, Norfolk, Va. Filed May 17, 1921. Serial No. 470,470. 19 Claims. (Cl. 164—49.)

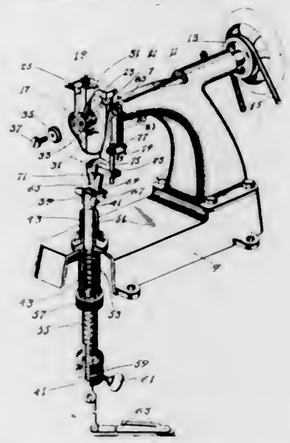
1. A device of the character described, comprising a main frame, means to progress a fabric over the same, a carriage adapted to travel over the main frame, a cutting blade mounted upon said carriage, means to so actuate the carriage that it will travel synchronously with the fabric and cooperate to drive the cutting blade, and manual means to control the action of the cutting blade.

1,508,446. SPROCKET WHEEL AND CHAIN. FRANK DIEHL, Wabash, Ind. Filed July 26, 1923. Serial No. 653,962. 3 Claims. (Cl. 74—30.)

1. A sprocket wheel adapted to be mounted for rotation about a vertical axis, and comprising a hub having upper and lower flanges, the hub being provided with an intermediate driving flange located between the upper

and lower flanges, the lower flange being off-set to form a chain-supporting lip.

1,508,447. PHOTOGRAPHIC-FILM PACKAGE. CHARLES STEWART FORBES, Strathdon, Scotland. Filed May 5, 1923. Serial No. 637,011. 9 Claims. (Cl. 95—2.)

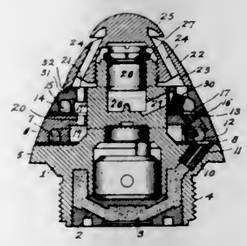


1. As a new article of manufacture, a photographic film package comprising a non-transparent backing strip provided with a sensitized coating, and a transparent sheet in front of said coating, provided with a sensitized coating.

1,508,448. METHOD OF MAKING GREEN SCALES. WALTER GLAESER, Brooklyn, N. Y. Filed Nov. 9, 1921. Serial No. 514,100. 1 Claim. (Cl. 260—11.)

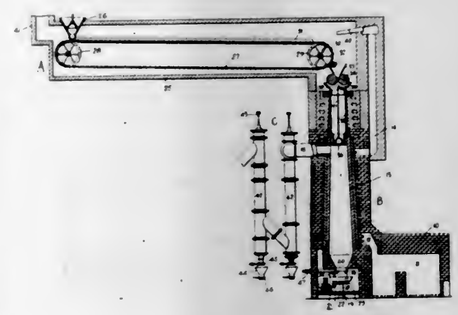
In a method of producing green scales, the steps which consist in treating calcium citrate with ferric sulphate solution and then removing the precipitate formed, then adding an ammonium salt removing further precipitate, evaporating the filtrate to a strength to produce green scales and brushing the same onto glass.

1,508,449. SEAM-FINISHING MACHINE. GEORGE J. GOERSCH, Rochester, N. Y., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed July 10, 1919. Serial No. 309,902. 53 Claims. (Cl. 69—7.)



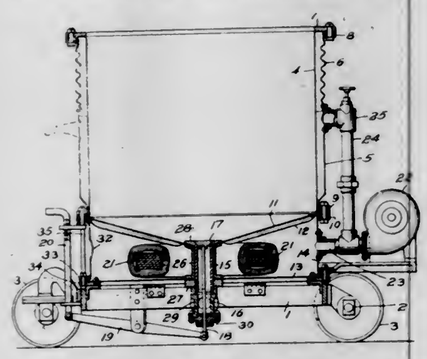
1. A seam finishing machine, having in combination, a work support movable back and forth in the line of feed, a hammer, means for imparting to the operative

portion of the hammer movement in a path to pound and feed the work, and means constructed and arranged to permit the work support to be moved forward with the hammer during part of its stroke and then to move the work support backward in contact with the work to its initial position.



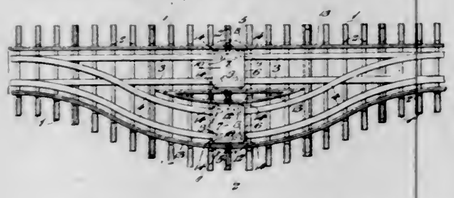
53. A seam finishing machine having, in combination, a movable support for a seam, a hammer member to press a seam thereagainst, means to operate the hammer member, and auxiliary means to move the support, said means and auxiliary means cooperating to move the hammer member and the support to rub and press the seam and to feed it through the machine.

1,508,450. FUSE FOR PROJECTILES. JOHN H. GOSS, Waterbury, Conn., assignor to Scovill Manufacturing Company, Waterbury, Conn., a Corporation of Connecticut. Filed Aug. 12, 1919. Serial No. 317,058. 9 Claims. (Cl. 102—36.)



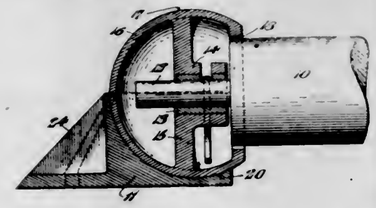
3. A fuse including a body, charge containing rings carried by the fuse, said rings being provided with gas escape flues, and a cap carried by the body and free to move toward the rings under the forces developed during firing.

1,508,451. MANUFACTURE OF ALUMINUM CHLORIDE. GEORGE W. GRAY, New York, N. Y., and FRANK W. HALL, Port Arthur, Tex., assignors to The Texas Company, New York, N. Y., a Corporation of Texas. Filed Dec. 1, 1921. Serial No. 519,087. 18 Claims. (Cl. 23—13.)



1. The process of making aluminum chloride which comprises supplying a carbon-alumina mixture to a conveyor, heating said mixture while in transit so that the mixture is coked, removing the coked mixture from the conveyor and chlorinating it.

1,508,452. ELECTRICALLY-HEATED RECEPTACLE AND HOT PLATE. ALFRED L. HARRINGTON, Rosslyn Farms, Pa., assignor to Pittsburgh Plate Glass Company, a Corporation of Pennsylvania. Filed Mar. 23, 1923. Serial No. 627,081. 16 Claims. (Cl. 219—43.)

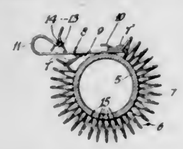


1. In combination, a heating plate of high resistance material and connections whereby a flow of heating current is provided between the periphery of the plate and its central portion.

1,508,453. AMUSEMENT APPARATUS. THOMAS D. HOOPER, Jr., Merchantville, N. J. Filed Jan. 2, 1924. Serial No. 683,854. 10 Claims. (Cl. 104—35.)

1. In amusement apparatus, an incline provided with a single set of traction rails, a loop arranged along the line of said rails, a pair of trucks including traction wheels adapted for travel over said rails under the influence of gravity, a car supported by said pair of trucks and having swivelled relation with each thereof, and guiding means independent of the traction wheels carried by each truck and arranged to so track said rails that upon reaching a loop, the car is caused to reverse itself bodily without changing its course of transit.

1,508,454. SELF-ALIGNING BEARING FOR CABLEWAYS. DAVID R. KNAPP, Philadelphia, Pa. Filed Feb. 9, 1923. Serial No. 617,968. 5 Claims. (Cl. 64—54.)

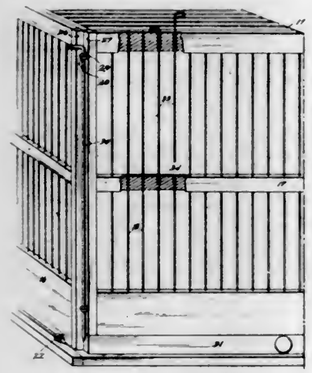


1. In a bearing construction for cableways, the combination of a rotatable guide for a cable, means for supporting one end of said guide for universal movement, and means forming a fixed guide to direct said cable to said rotatable guide in case of displacement.

1,508,455. GLASS. CHARLES A. KRAUS, Worcester, Mass. Filed Oct. 13, 1920. Serial No. 416,700. 14 Claims. (Cl. 106—36.1.)

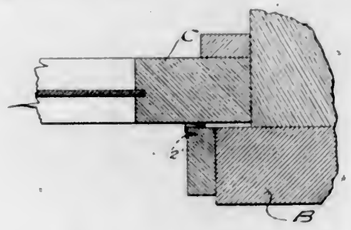
1. A glass containing lead oxide and having a coefficient of thermal expansion below about 4.0×10^{-6}.

1,508,456. GROUND CLAMP. WILLIAM G. LENZ, Brooklyn, N. Y., assignor to Perfection Mfg. Co., Brooklyn, N. Y., a Copartnership. Filed Jan. 4, 1924. Serial No. 684,335. 4 Claims. (Cl. 173—273.)



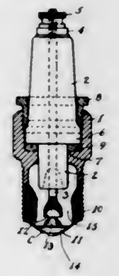
4. A ground clamp adapted to be attached to a grounded element comprising a spiral spring adapted to encircle said grounded element and contact therewith, a conductor clip, means at one end of said spring for permanently attaching said clip to said spring, means at the opposite end of said spring for detachably connecting said clip to said spring, and means for connecting a conductor to said clip.

1,508,457. PYROXYLINE AND METHOD OF MAKING THE SAME. WILLIAM G. LINDSAY, Newark, N. J., assignor to The Celluloid Company, a Corporation of New Jersey. Filed Aug. 26, 1922. Serial No. 584,554. 5 Claims. (Cl. 260—145.)



5. A process of producing pyroxyline comprising nitrating, approximately one part of cellulose in approximately 71 parts of the mixture of approximately 61 parts of sulphuric acid, 22 parts water and 17 parts nitric acid at approximately a temperature of 100° to 105° Fahrenheit.

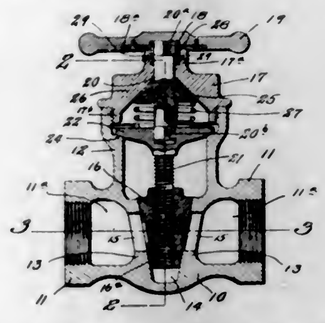
1,508,458. BIRD CAGE. CHARLES LITSCHGI, New York, N. Y. Filed Oct. 26, 1922. Serial No. 596,959. 7 Claims. (Cl. 119—17.)



1. A rectangular knock-down bird cage comprising a flat bottom, and certain upstanding flat sides resting on the bottom, said sides free of angled extensions, one of said sides having a pair of readily removable screen eyes projecting outwardly therefrom adjacent its lower edge, said bottom provided with a pair of upwardly extending and readily removable eyes aligned with the eyes projecting from the upstanding side, a removable horizontally extending rod inserted in the aligned eyes to secure said side temporarily to the bottom, said side so secured to the bottom and an adjacent side each having its contiguous edge exposed outwardly or offset from the other side, each of said edges provided with aligned, readily removable eyes and a vertically extending and readily removable rod inserted through said last named eyes for temporarily securing the sides to each other.

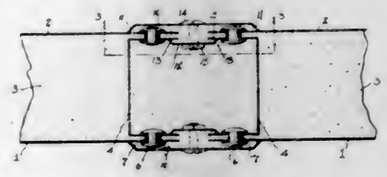
1,508,459. WEATHER STRIP. CHARLES D. LYON, Chicago, Ill. Filed Apr. 9, 1923. Serial No. 630,901. 3 Claims. (Cl. 20—69.)

1. A weather strip for windows comprising a stationary limb, a movable limb yieldably connected to the first limb, a flange on each limb for sliding engagement with each other, one of the flanges being arranged for permanent attachment to a suitable support.



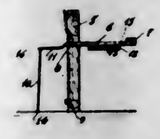
1,508,460. SPARK PLUG. HORACE MANSFIELD, Yonkers, N. Y., assignor of one-half to Thomas J. Carson, Brooklyn, N. Y. Filed Apr. 3, 1924. Serial No. 703,942. 7 Claims. (Cl. 123—169.)

1. A spark plug comprising a pair of opposed cup-shaped electrodes each provided with an annular contact edge; and a conductive ball loosely retained between and by said edges for intermittent contact therewith and having a radium slightly greater than the inner radius of said annular edges and different from the radius of the faces of the cups to prevent extended contact with the cups except at said edges, whereby packing of carbon in the cups is avoided.



1,508,461. VALVE. ATTILIO MARCELLI, Overland, Mo., assignor to St. Louis Tool, Die & Manufacturing Company, a Corporation of Missouri. Filed Aug. 26, 1920. Serial No. 406,148. 3 Claims. (Cl. 251—62.)

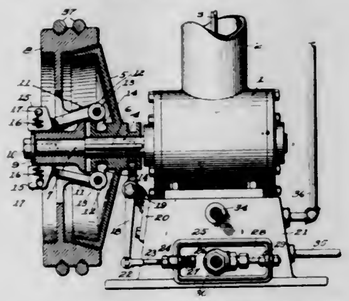
1. In a valve, the combination of a housing having inlet and outlet chambers and a valve chamber connecting the same, a valve operating in said valve chamber for controlling the communication between said first-mentioned chambers, a bonnet screw-seated on said housing and having a downwardly presented cone-shaped seat, a rod rotatably mounted in said bonnet, a disk carried by said rod and having a conical upper face adapted to be seated in said cone-shaped seat, a valve stem having threaded engagement with said valve for operating the same and provided in its upper end with a non-circular seat for operatively engaging the non-circular end of said rod, a disk carried by the upper end of said stem and provided



with an inclined lower face having a bearing in a seat formed in said housing, a spring interposed between said disks for holding the latter to their respective seats.

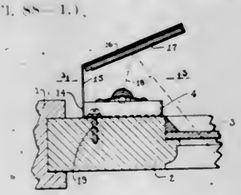
1,508,462. OVEN WALL. CARL F. MAYER, Cleveland, Ohio. Filed Nov. 24, 1922. Serial No. 603,091. 9 Claims. (Cl. 72—16.)

1. In a sectional heat insulating wall, the combination of inner and outer spaced metallic plates, a channel strip disposed between and with its side flanges substantially parallel with the edge portions of said plates, insulating material interposed between such flanges and portions, and means permanently connecting such flanges and portions together.



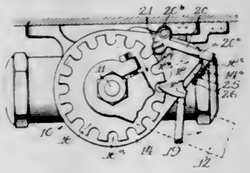
1,508,463. EGG-RECORDING NEST. WILLEM MIDDELMAN, Barneveld, Netherlands. Filed Nov. 7, 1923. Serial No. 673,364. 3 Claims. (Cl. 119—50.)

3. An egg recording nest comprising a single door frame, a hen operable trap door swingably supported in the upper part of the frame, an upright pin extending from the uper edge of the door and located on the inner side of the door frame, a flexible element having one end rigidly secured within the nest and the other end detachably engaged with the outward edge of the pin for normally holding the door in an outwardly extending and raised position to permit a hen to enter the nest but adapted to be disconnected by a hen upon entering the nest to permit the door to move to a closed position, stops provided on the door frame to prevent inward swinging of the door, weights on the lower edge of the door to facilitate the rapid closing of the door, a marking device including a bracketed plate adapted to be secured to the back of the hen, a wheel journalled in the plate and provided with corresponding numerals on the



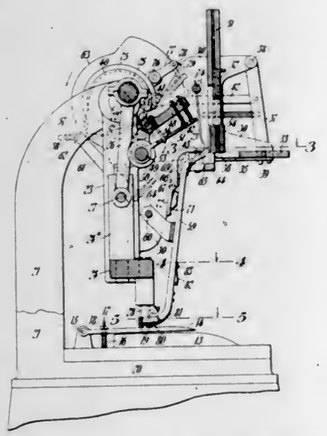
outer periphery, and a paper supporting frame carried on the back of the door and adapted to contain a sheet of paper upon which the numeral is impressed in the wheel by the hen when leaving the nest, substantially as and for the purposes set forth.

1,508,464. CLUTCH-CONTROLLED VALVE. GEORGE MCFARLAND, Fort Madison, Iowa. Filed June 9, 1921. Serial No. 476,252. 6 Claims. (Cl. 62—3.)



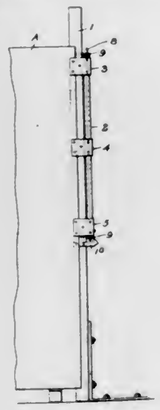
1. In a machine the combination of driving and driven elements, a clutch between these elements, a clutch, centrifugal means for moving the clutch, and means controlled by the movement of the clutch for operating a valve.

1,508,465. THERMOMETER. JAMES B. MCGHAN, Kenosha, Wis., assignor of one-half to William F. Martin, Kenosha, Wis. Filed Jan. 10, 1922. Serial No. 528,191. 1 Claim. (Cl. 88—1.)



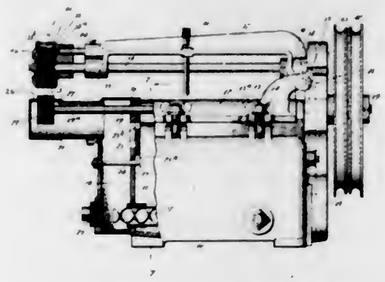
A device of the class described comprising a thermometer having a back member bearing reversed indicating characters; a sheet metal casing receiving and holding said back member, one wall of said casing being extended beyond the face of said back member and bent at an obtuse angle in front of said back member, the edges of said obtuse portion being bent to provide flanges; a reflecting mirror embraced within said flanges, its entire back surface being engaged and supported by said obtuse portion; and means for readily detachably securing the device to a support.

1,508,466. DOOR HOLDER. JOSEPH NEMEC, Chicago, Ill. Filed Nov. 15, 1923. Serial No. 674,805. 15 Claims. (Cl. 16—65.)



1. In combination, a door check comprising a rotatable arm operatively attachable to a door, a ratchet rotatable with said arm, a pawl having a portion engageable with said ratchet, and means operable to move said pawl into and out of engagement, said pawl being constructed and arranged to move out of engagement with said ratchet upon movement of the latter in one direction.

1,508,467. ENVELOPE-FASTENER-ATTACHING MACHINE. ABRAHAM NOVICK, Brooklyn, N. Y., assignor to F. L. Smithe Machine Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 17, 1921. Serial No. 508,246. 10 Claims. (Cl. 1—2.)

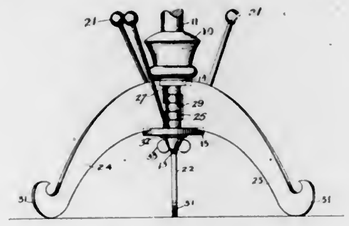


1. In a fastener attaching machine the combination of a hopper for the fastener blanks, fastener prong punching mechanism, means for delivering the fastener blanks one at a time from the hopper to the punching mechanism, fastener setting mechanism, and means comprising a movable chute for delivering the punched fasteners one at a time from the punching mechanism to the setting mechanism.

1,508,468. PLATE-GLASS INSPECTION CLAMP. GEORGE W. OAKES, Crystal City, Mo., assignor to Pittsburgh Plate Glass Company, a Corporation of Pennsylvania. Filed Apr. 18, 1922. Serial No. 555,379. 3 Claims. (Cl. 49—14.)

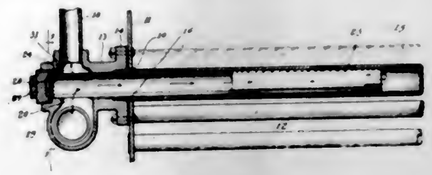
2. In combination in a glass supporting device, a vertical post adapted to engage a sheet of glass to be examined along one of its vertical edges, a clamping frame hinged to the post and adapted to swing to holding position over said edge, a catch member secured to the post beneath the frame and a pivoted latch carried at the lower end of the frame and adapted to engage the catch when the frame is in holding position.

1,508,469. CEMENTING MACHINE. WALTER P. OSGOOD, Malden, Mass., assignor to Boston Machine Works Company, Lynn, Mass., a Corporation of Massachusetts. Filed Jan. 25, 1919. Serial No. 273,039. 21 Claims. (Cl. 91—51.)



1. A cementing machine of the kind described, comprising two cement laying members having working faces adjacent and co-operative to apply cement to two sides of material at the same time, and a cement reservoir supplying one of said members directly, said members having co-operative equipment for the transfer of cement from one thereof to the other, and for the application of the cement so transferred to a side of the material.

18. A double cementing machine comprising two cement applying rolls, one thereof receiving its supply directly from a body of cement and the other roll having an equipment for gathering and storing cement between periods of operation.

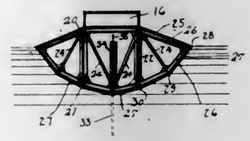


21. In a gluing machine, a gluing roll, a supplemental roll in rotatable contact therewith along part of the periphery of said supplemental roll, another part of said periphery being out of contact with said gluing roll and means for transferring glue from the part which contacts to the part which does not contact with said gluing roll.

1,508,470. STAND. ANTON PARTMANN, New York, N. Y., assignor of one-fourth to Ernest W. Probst, Brooklyn, N. Y.; one-fourth to William Pagalas and one-fourth to Gustav Nelson, both of Arlington, N. J. Filed Feb. 9, 1923. Serial No. 618,064. 4 Claims. (Cl. 211—24.)

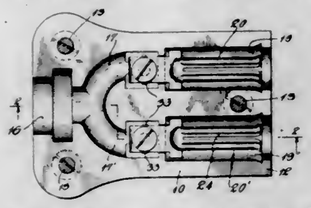
1. In a collapsible display stand, separable and detachable supporting legs, said legs having apertured lugs, a centering pin, the lugs being arranged respectively on said legs so as to be capable of assemblage with relation to each other close together with the apertures therein in alinement for the reception of the pin in the apertures, spaced plates each having grooves therein which accommodate portions of said legs.

1,508,471. WATER HEATER. GEORGE F. PAUL, Los Angeles, Calif. Filed Aug. 25, 1921. Serial No. 495,271. 5 Claims. (Cl. 122—20.)



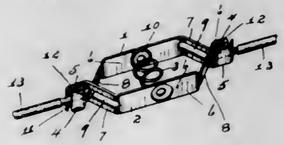
5. A water heater comprising a cylindrical casing having a discharge stub in its upper segment, a hollow foot embossment extending across its lower segment and opening into said casing, a tube secured to and extended axially from one end of said casing, a removable partition consisting of a sheet metal sheet bent to an inverted V-section that is disposed in said casing and tube and terminating adjacent the end of said tube opposite the casing, a shoulder in said casing engaged by said disk; said shoulder provided with a recess in its upper segment in which the apex of said V section partition is seated and prevented from relative movement by the disk-securing means, and a plug screwed into the adjacent end of said casing to press said disk against said shoulder whereby the partition is securely positioned in the casing and tube and straddles the inlet opening of the former.

1,508,472. BOBBIN FOR FEELER MECHANISMS. CLARENCE A. PIERCE, Lowell, Mass., assignor of one-third to Jude C. Wadleigh and one-third to Avery B. Clark, both of Lowell, Mass. Filed July 22, 1921. Serial No. 486,765. 2 Claims. (Cl. 139—289.)



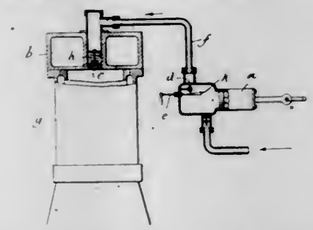
1. A bobbin having a cylindrical body portion, a heel portion, a non-recessed cone shaped portion having a continuous surface interposed between the heel and the body portion and a cylindrical smooth-surfaced bunch-receiving portion at the base of the cone and between the latter and the heel.

1,508,473. SHIP. SAMUEL N. POLIS, New York, N. Y. Filed Sept. 17, 1917. Serial No. 191,875. 7 Claims. (Cl. 114—79.)



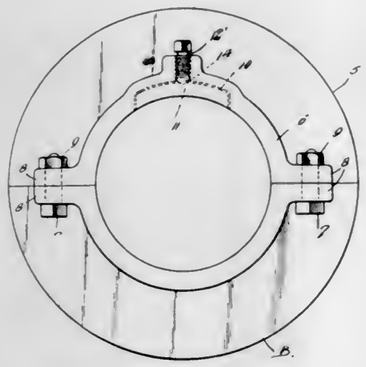
1. In a ship's hull, the combination of a plurality of interior longitudinal girders, means extending transversely of the hull and located between said girders at a plurality of points to connect the same, and means co-operating with the first named means and extending from said girders towards the sides of the ship for constituting, in effect, transverse girders rigid with the longitudinal girders, said transverse girders providing supports for portions of the hull between the longitudinal girders and the sides of the ship, thereby causing stresses upon the hull to be resisted by said longitudinal and transverse girders, the longitudinal and transverse girders dividing the ship into compartments for loading and unloading cargo vertically.

1,508,474. ELECTRICAL ATTACHMENT PLUG. LEOPOLD POLLOCK, New York, N. Y. Filed Apr. 24, 1919. Serial No. 292,246. 1 Claim. (Cl. 173—332.)



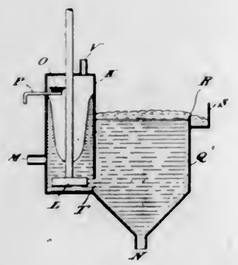
In an electric attachment plug, a contact clip formed from one piece of resilient conducting material slit and shaped to provide pairs of longitudinal contact jaws having opposed convex and concave surfaces, said sheet being bent at the center to dispose said jaws in parallel pairs.

1,508,475. CLIP. EUGENE PONS, Schenectady, N. Y. Filed June 9, 1923. Serial No. 644,451. Renewed Aug. 1, 1924. 3 Claims. (Cl. 24—81.)



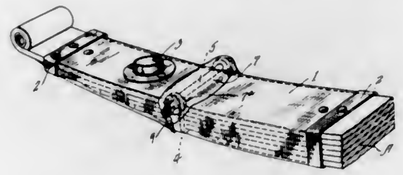
1. A clip including two like members each having a jaw at each end and an intermediate portion connected with one of said jaws by a bend provided with a slot, and with the other jaw by a bend of less width than said slot, said members being assembled in reverse position end for end with jaws opposed to each other at each end, each member having its narrower bend in engagement with the slot in the wider bend of the other, and a spring mounted under compression between said intermediate portions of said members.

1,508,476. FUEL IGNITION APPARATUS FOR INTERNAL COMBUSTION ENGINES. WILHELM RIEHM, Augsburg, Germany, assignor to the Firm Maschinenfabrik Augsburg-Nuernberg Aktiengesellschaft, Augsburg, Germany, a German Corporation. Filed Aug. 24, 1921. Serial No. 494,884. 3 Claims. (Cl. 123—139.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



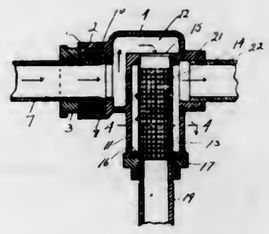
1. In a fuel injection apparatus for internal combustion engines, the combination with a fuel pump for injecting fuel into the engine cylinder at high pressure and a passage connecting the pump with the cylinder, of a combined injection and pressure valve adjacent the engine cylinder for spraying the pumped oil into the cylinder and for preventing return flow of oil to the passage, and a pressure valve located at the pump and adapted to be rendered operative only during the starting of the engine when the passage contains air, and when so operative serving to prevent the return of oil from the passage into the pump.

1,508,477. END-FLANGE ATTACHMENT FOR HORIZONTAL WARPING-BEAM ROLLS. ALBERT F. SCHMIDT, Hoboken, N. J. Filed Jan. 27, 1923. Serial No. 615,220. 1 Claim. (Cl. 242—124.)



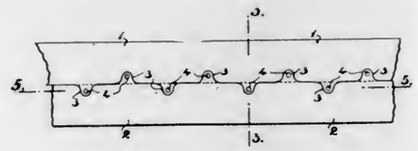
An end flange for beam rolls comprising a flange member having a hub portion disposed at the side thereof and which is adapted to be mounted upon a beam, said hub portion being provided at its interior with a recess having rectangularly disposed walls, the side walls of the recess converging toward each other, and the end walls of the recess being parallel, a plate located in the recess and having a concaved side adapted to lie opposite the beam, said concaved side being roughened by a series of corrugations which lie parallel with the side edges of the plate, the plate having plane parallel end walls which fit snugly against the end walls of the recess, the plate having converging side edge walls which lie opposite the converging side walls of the recess, and a screw passing transversely through the hub and engaging the plate to force the ridges in intimate contact with the beam transversely thereof and parallel with the outer face of the flange.

1,508,478. ORE-CONCENTRATION PROCESS. WALTER A. SCOTT, Chicago, Ill., assignor to Minerals Separation North American Corporation, a Corporation of Maryland. Filed Nov. 12, 1917. Serial No. 201,463. 5 Claims. (Cl. 83—85.)



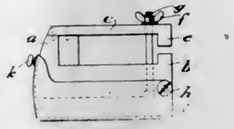
1. A process of concentrating ores comprising the operations of introducing a mixture of a non-frothing gas and a frothing agent in gaseous form into an ore pulp by agitating the ore pulp in the presence of said gaseous mixture, whereby fine bubbles are formed to which certain mineral particles in the ore adhere as said bubbles pass through the pulp, causing said mineral-bearing bubbles to form a froth above the pulp, and separating mineral carried by the froth from the remainder of the ore.

1,508,479. SPRING LUBRICATOR OR PROTECTOR. FRANK N. SEALAND, Cleveland, Ohio, assignor to The Jeavons Manufacturing Co., Cleveland, Ohio, a Corporation. Filed May 22, 1923. Serial No. 640,706. 8 Claims. (Cl. 267—37.)



2. A spring cover for automobile and like springs, combined with a clip cover united thereto, and fastening means for the spring cover engaging the clip cover to hold it in operative position.

1,508,480. TRAP FILTER FOR IRRIGATION. CHARLES W. SKINNER, Newfield, N. J. Filed Apr. 27, 1923. Serial No. 634,960. 2 Claims. (Cl. 210—165.)



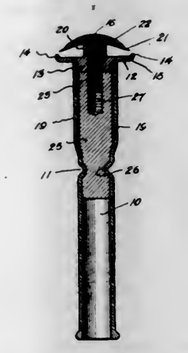
1. In combination with a main line or supply pipe of an irrigating system; a head so fitted upon the end of said main line as to be capable of oscillation; a barrel formed with the head and partly projecting in the latter; a chamber formed within the head communicating with the supply pipe; a tubular screen located within the barrel having its upper end in communication with the chamber; a coupling secured to the lower end of the barrel and adapted to hold the screen in place; a trap secured to said coupling, said trap being in a vertical line with said screen, and a sprinkler pipe communicating with the space surrounding said screen.

1,508,481. METAL BELT. AUGUST ERLAND SONESSON, Birmingham, England. Filed Aug. 18, 1923. Serial No. 658,096. 4 Claims. (Cl. 198—193.)

1. A metal belt including a plurality of component longitudinal belt sections arranged side by side their adjacent longitudinally disposed edges being joined together by means of projecting parts on one edge overlapping and being secured to the other edge, so that portions of each belt section alternately overlap and are overlapped by portions of the adjacent section.

1,508,482. SECURING DEVICE FOR USE IN SHARPENING SCISSORS. SAMUEL STEPHENS, Calgary, Alberta, Canada. Filed Jan. 22, 1923. Serial No. 614,162. 1 Claim. (Cl. 51—221.)

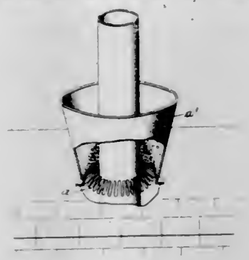
An article of the class described comprising a clamp built up in two parts, the upper part being demountable from the lower part and held in relation thereto by a clamping bolt, jaws at one end of the said clamp between which an article to be ground is securely held, a mounting in the form of a shoe pivoted to the end of the clamp beneath the jaws the other end of the shoe being in engagement with the clamping member by means of an adjusting screw.



1,508,483. PYROXYLINE COMPOSITION AND PROCESS. JOHN H. STEVENS, South Orange, N. J., assignor to The Celluloid Company, a Corporation of New Jersey. Filed Oct. 1, 1921. Serial No. 504,742. 21 Claims. (Cl. 106—37.)

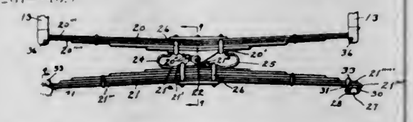
7. A plastic composition containing pyroxyline, a chloral, sufficient camphor to impart solvent power, and amyl acetate.

1,508,484. PYROXYLINE COMPOSITION AND PROCESS. JOHN HENRY STEVENS, South Orange, N. J., assignor to The Celluloid Company, a Corporation of New Jersey. Filed Aug. 14, 1923. Serial No. 657,430. 12 Claims. (Cl. 106—37.)



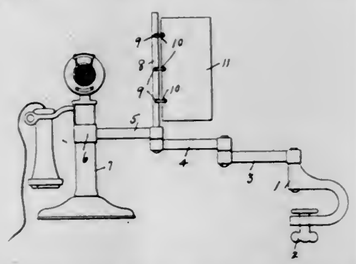
1. A plastic composition containing a mixture of pyroxyline, a chloral in predominant proportion, camphor in small proportion and ethyl acetate.

1,508,485. SAFETY RAZOR. CHARLES M. SZIRMAY, New York, N. Y. Filed Mar. 7, 1923. Serial No. 623,426. 2 Claims. (Cl. 30—12.)



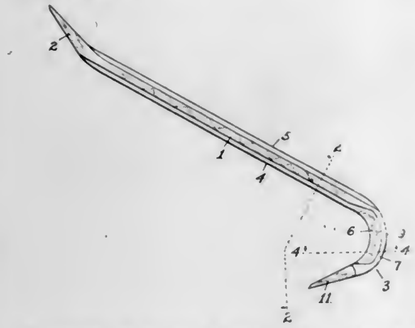
1. In a safety razor, the combination of a head adapted to support a razor blade, the under side of said head having a downwardly projecting threaded hub having a flat and smooth lower surface, a plate having a threaded shank projecting through the head and hub, a handle, the upper end portion of which is skeletonized into a yoke comprising a plurality of straps and a thimble threaded upon said hub, a nut journaled within the yoke between said straps and cooperating with said shank and plate and the lower hub surface to exert pressure upon the blade when the nut is rotated, by reaction against said lower surface.

1,508,486. DEVICE FOR INTRODUCTION OF THE ELECTRODES IN ELECTRIC FURNACES. FILIP THARALDSEN, Christiania, Norway. Filed Sept. 6, 1922. Serial No. 586,543. 6 Claims. (Cl. 204—64.)



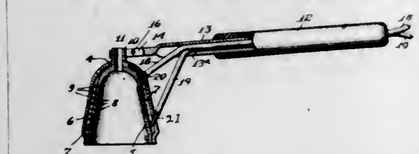
1. A device for protecting electrodes in electric furnaces comprising a hopper surrounding the electrode opening in the furnace, an elastic medium in the lower part of said hopper, and a layer of grained material on said elastic medium.

1,508,487. SPRING. LINDSAY H. TIMMONS, Des Moines, Iowa, assignor of one-half to George B. Frost, Des Moines, Iowa. Original application filed Aug. 3, 1922. Serial No. 579,490. Divided and this application filed Feb. 2, 1924. Serial No. 690,115. 18 Claims. (Cl. 267—46.)



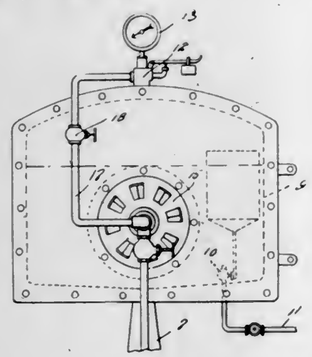
1. In a spring construction, the combination with a frame and rear axle, of rear side springs carried by said rear axle and pivoted to the frame at their forward ends, and rear end springs connected substantially at their centers and extending across the rear end of the frame and the rear ends of said side springs, one of said rear end springs pivotally connected at its ends to the rear ends of the frame and the other rear end spring overlapping the rear ends of the side springs, and rolling contact members interposed between said overlapping end portions of the springs.

1,508,488. TELEPHONE ARM AND CALL-CARD HOLDER. MICHAEL TRETICK, Baltimore, Md. Filed July 18, 1921. Serial No. 485,530. 1 Claim. (Cl. 248—1.)



A telephone arm and call card holder comprising a folding arm comprising a number of pivoted sections, a clamp pivoted to one end of said arm to hold the latter in position, a thumb-screw fitted in said clamp, means at the other end of said arm adapted to hold a telephone, a rod projecting upward from said arm and forming the pivot between two of the sections of said arm and having a number of apertures therein, a number of split rings fitted in said apertures, and a number of call cards adapted to be held to said rod by said rings.

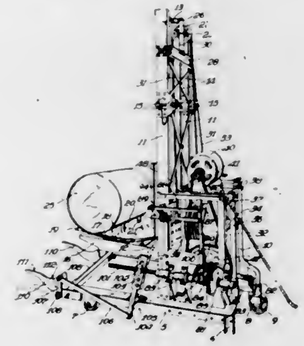
1,508,489. RIPPING BAR AND METHOD OF MAKING SAME. FRANK J. VLCHEK, Cleveland, Ohio, assignor to The Vlchek Tool Company, a Corporation of Ohio. Filed July 8, 1922. Serial No. 573,564. 3 Claims. (Cl. 254—25.)



3. A ripping-bar having a hook, the hook having a central rib and oppositely extending flanges at the rear side of the rib to provide a supporting surface for the hook, and a longitudinal extending groove pressed in the rear side of the hook, substantially as described.

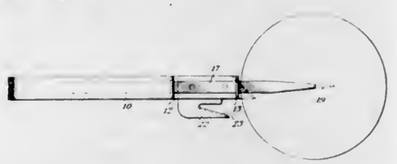
1,508,490. ELECTRIC HEATING DEVICE. GEORGE A. WIECHERT, Howard Beach, and JESSE E. JUDD, New York, N. Y., assignors to Casting Research, Inc., New York, N. Y., a Corporation of New York. Filed May 16, 1923. Serial No. 639,248. 7 Claims. (Cl. 219—19.)

1. A device of the character described comprising a handle, a heating dome mounted upon said handle and carried thereby, a heating wire carried by said heating dome, and electrical connections to said heating wire.



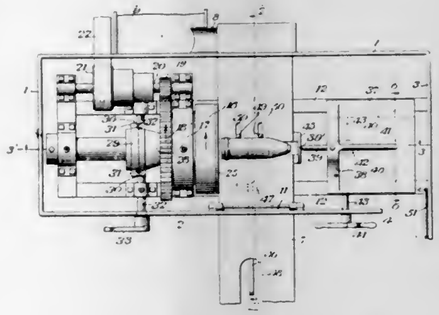
1,508,491. OIL BURNER. JOHN W. WOODS, Winnett, Mont. Filed June 1, 1923. Serial No. 642,732. 1 Claim. (Cl. 158—75.)

An oil burner comprising a water jacket body having an end portion adapted to serve as a stove opening closure and being diametrically reduced at its opposite end portion, a heater attached to the body, and disposed under the diametrically reduced end portion thereof,



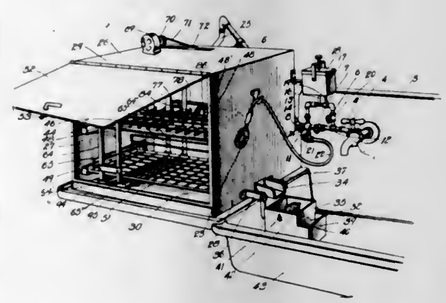
the opposite end walls of the body being provided with openings, a tube located interiorly of the body and traversing the length thereof, and spaced from the upper and lower and side walls of the body, the axis of the tube being in alignment with the centers of the openings in the end walls of the body, a valve controlled pipe for supplying water to the interior of the body, a float operatively connected with the valve of said pipe, and adapted to control the quantity of water admitted to the body, a damper structure connected with the end of said tube and passing through the opening in the larger end wall of the body, an oil nozzle extending into the chamber and positioned in alignment with the axis of the damper and the tube, and means for conducting steam from the upper portion of the larger end of the body to the nozzle.

1,508,492. HOISTING MACHINE. FRED WRIGHT, North Chicago, Ill., assignor, by mesne assignments, to Standard Conveyor Company, North St. Paul, Minn., a Corporation of Minnesota. Filed Jan. 3, 1922. Serial No. 526,569. 20 Claims. (Cl. 214—95.)



1. In combination, a load carrying surface, a pair of rigid stop members projecting from said surface and adapted for cooperation with one side of the load, a pair of yieldable studs for receiving the load upon delivery of the same to said surface, said studs being thereafter projected into engagement with the opposite side of the load to hold the same against displacement.

1,508,493. CAN OPENER. HERMAN O. ZBINDEN, Seattle, Wash., assignor of one-third to Joseph A. Marquis and one-third to Victor E. Graves, both of Seattle, Wash. Filed Sept. 1, 1923. Serial No. 660,590. 1 Claim. (Cl. 30—3.)

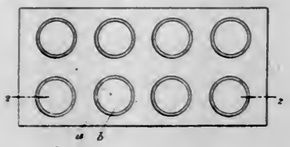


A can opener embodying a handle formed from a single length of material and including parallel members spaced apart for the major portion of their length, one of said members including a U-shaped end portion, the parallel sides of which are provided with aligned openings, a centering element slidable through said openings and in the space between the handle members, said element terminating to provide an offset pointed extremity, a cutting blade arranged on the other member of the handle and including an inclined cutting edge projecting forwardly of the handle, and a cutting edge projecting from one side thereof, and means for securing the cutting blade and the adjacent ends of the handle members together.

1,508,494. MACHINE FOR REMOVING THE BOOSTER CHARGE FROM A HIGH-EXPLOSIVE SHELL. GUSTAVE ALLISON, Perth Amboy, N. J., assignor to Columbia Salvage Corporation, New York, N. Y., a Corporation of New York. Filed Oct. 5, 1923. Serial No. 666,756. 15 Claims. (Cl. 29—88.2.)

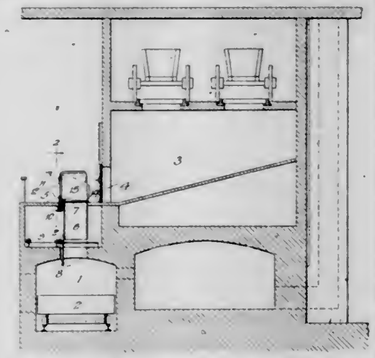
1. The combination of a casing, a rotatable chuck therein, means for delivering shells to said chuck within the casing, a removing tool within the casing, means for bringing said removing tool into engagement with the booster casing in the end of the shell to thereby force the shell into the chuck, and means for rigidly gripping the shell in the chuck.

1,508,495. DISHWASHER. ERIC W. BACHARACH, Kansas City, Mo. Filed Jan. 7, 1922. Serial No. 527,609. 3 Claims. (Cl. 141—9.)



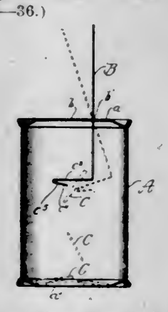
2. A washing machine comprising a casing, means for supporting dishes within the casing, a water distributor within the casing and mounted for reciprocatory movement, a driven belt within the casing, and means for connecting the water distributor to the belt.

1,508,496. MOLD FOR USE IN THE MANUFACTURE OF CHOCOLATES. ANTHONY ANGELO BALLATORE, Glasgow, Scotland, assignor to Carsons Limited, Glasgow, Scotland. Filed Mar. 28, 1921. Serial No. 456,134. 3 Claims. (Cl. 107—19.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



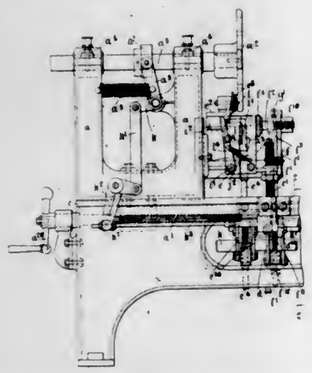
1. A flexible mold for use in the manufacture of chocolates, made of a gelatinous composition constituted by gelatine and glycerine mixed together in substantially

the proportions 36 lbs. of gelatine by weight and 3 gallons of glycerine by measure, whereby a permanently flexible mold is obtained whose surface becomes glossy



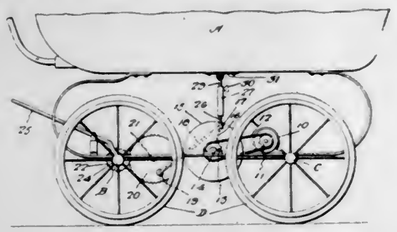
when immersed in hot water, thereby ensuring the easy and clean separation of the chocolates from the mold.

1,508,497. CHUTE GUARD. ROBERT BALMER, Toronto, Ontario, Canada. Filed Mar. 5, 1924. Serial No. 697,106. 6 Claims. (Cl. 214—35.)



1. A chute-guard composed of a plurality of vertically disposed members spaced apart and extending first upwardly, then horizontally, and then downwardly, and terminating at a height above the floor equal to the inside length of their horizontal extension.

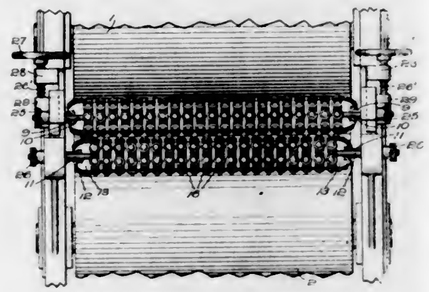
1,508,498. ADVERTISING NOVELTY. EDWARD E. BARNES, Chicago, Ill., assignor to Calumet Baking Powder Company, Chicago, Ill., a Corporation of Illinois. Filed July 17, 1922. Serial No. 575,526. 3 Claims. (Cl. 46—36.)



1. A device of the class described, comprising a receptacle, a movable member extending through a slot formed in the top of said receptacle, said member having shoulders formed on the outer edges thereof approximately mediate its length whereby said movable member is held in suspension through said slot, the upper exposed portion of said movable member having an image displayed thereon, the lower portion of said movable member terminating in a shelf extending at an angle to the body and in position to be struck by a coin deposited in the receptacle.

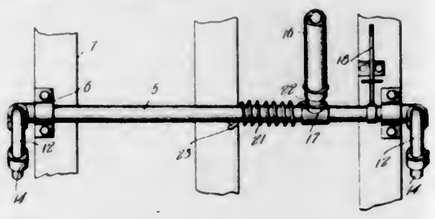
1,508,499. FLANGING AND SEAMING OF SHEET METAL. GEORGE WILLIAM BERRY, Wakefield, England, assignor of one-half to Charles Joseph Rhodes, Wakefield, England. Filed Feb. 21, 1924. Serial No. 694,220. 17 Claims. (Cl. 113—23.)

1. The method of connecting closures to the ends of cylindrical bodies, consisting in providing a cylindrical body and a flanged disk closure for the end of said body, inserting the flanged disk in the end of the cylindrical body, then flanging said body and disk flange laterally to extend in contiguous relation to each other, then curling said flange portion of the body and disk flange into interlocking relation, and then flattening the same, said flanging, curling and flattening being performed automatically in successive sequence.



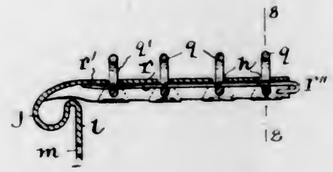
1,508,500. CARRIAGE-ROCKING DEVICE. WILLIAM JOSEPH BINGEN and HARRY WILLARD OLSEN, Larimore, N. Dak. Filed Feb. 3, 1922, Serial No. 533,997. Renewed Feb. 9, 1924. 3 Claims. (Cl. 180—1.)

1. An attachment for baby carriages comprising a motor mounted on the carriage frame, a pinion on one axle which has a pair of wheels secured thereto, the axle being rotatable through the frame, an intermediate segmental gear journaled on the frame and meshing with said pinion, a disk journaled on the frame, means for driving said disk from the motor, a pitman pivotally connected with the disk and with said segmental gear, and an arm member pivotally connected with the bottom of the carriage body and with said disk, whereby the carriage will be moved back and forth simultaneously with up and down movement of the body thereof.



1,508,501. CLOTH OR SHEET STRETCHING MECHANISM AND PROCESS. SYDNEY BIRCH, Mansfield, Mass. Filed June 15, 1922. Serial No. 568,638. 15 Claims. (Cl. 26—54.)

1. That process of stretching sheet like material comprising imparting relative travel in one direction and in substantially a straight path to said material and during such travel crimping the same while preventing inward



movement of the material from the lateral edges and also preventing longitudinal slippage, thereby causing stretching of said material between said edges.

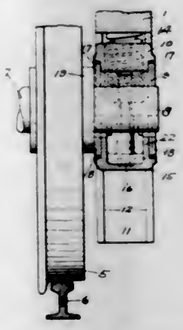
1,508,502. SWITCH CLEANER. WALTER W. BRISSON, Norway, Mich. Filed Oct. 2, 1923. Serial No. 666,138. 1 Claim. (Cl. 299—31.)

In a device of the character described, a pipe disposed in a horizontal plane and rotatable on its axis, rearwardly extended pipes connected with the first mentioned pipe, downwardly extended pipes having connection with the last mentioned pipes and carrying nozzles on their free ends, a spring coiled around the first mentioned pipe and acting thereon to hold said nozzles in their normal inoperative positions, means for rotating the first mentioned pipe to move said nozzles downwardly to operative positions, means for restricting the rotary movement, and means for supplying steam to said first mentioned pipe.

1,508,503. SHUTTLE TENSION. JACOB P. BROWN and JOSEPH A. STRANG, Paterson, N. J. Filed Oct. 24, 1923. Serial No. 670,582. 6 Claims. (Cl. 139—214.)

1. A tension device including a body member having openings therein at intervals, guides resting on said member at one side thereof and projecting through the respective openings and at the other side of said member, and means, at and bearing against the other side of said member and extending through the guides, for securing them to said member.

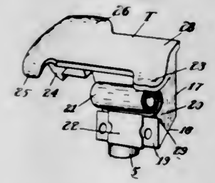
1,508,504. HEEL FOR BOOTS AND SHOES. JAMES DE SELDING BROWN, New York, N. Y. Filed July 28, 1922. Serial No. 578,102. 3 Claims. (Cl. 36—34.)



1. As an improved article of manufacture, a heel comprising a molded block composed of sawdust and a soluble binder, and saturated with nitrocellulose.

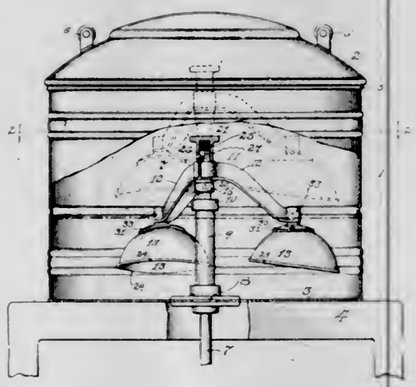
1,508,505. GRASS-EDGE TRIMMER OR CUTTER. GEORGE FREDERICK BULL, Birmingham, England, assignor of one-half to Charles H. Pugh Limited, Birmingham, England. Filed Dec. 29, 1922. Serial No. 609,574. 5 Claims. (Cl. 97—227.)

2. A grass edge trimmer comprising a ground roller of taper formation, a rotary cutter carried by the ground roller, and a forwardly-extending fixed cutter adjacent the larger end of the ground roller and having an upwardly-presented cutting edge disposed in a substantially horizontal plane.



1,508,506. JOURNAL BOX. FRED C. COSEO, Columbus, Ohio, assignor to The Jeffrey Manufacturing Company, Columbus, Ohio, a Corporation of Ohio. Filed Aug. 25, 1923. Serial No. 659,367. 3 Claims. (Cl. 64—24.)

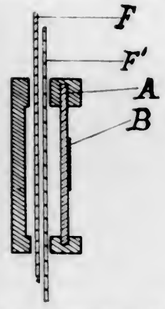
1. In a bearing of the class described, the combination with a journal box having a removable antifriction metal journal lining, an axle having a journal bearing upon said lining, an oil box secured to said journal box below said



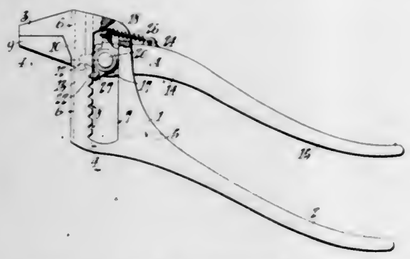
axle journal, and an antifriction metal plate attached to said oil box and cooperating with a flange of said linings to form a thrust bearing adapted to engage a member on said axle to limit its longitudinal movement relative to the journal box.

1,508,507. SHUTTLE. JEAN BAPTISTE DAUDELIN, Fall River, Mass. Filed Jan. 18, 1922. Serial No. 530,190. 8 Claims. (Cl. 139—223.)

1. In an automatically threading shuttle having a weft carrier, an eye, and a threader located between said weft carrier and eye, a guide carried by said threader and consisting of a plurality of spaced helical turns laid in a direction opposite to the unspooling action of the weft whereby the weft will automatically work itself inwardly towards the center of the guide as it runs from the weft carrier.



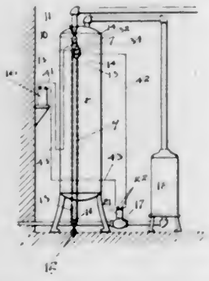
1,508,508. WASHING-MACHINE MECHANISM. JAMES W. DAWSON, Belvidere, Ill., assignor to National Sewing Machine Company, Belvidere, Ill., a Corporation of Illinois. Filed Jan. 4, 1924. Serial No. 684,312. 7 Claims. (Cl. 259—144.)



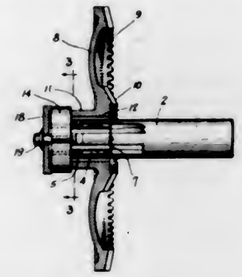
1. A reciprocating, non-rotatable shaft, a cap member mounted thereon, and interengaging elements removably locking said shaft and cap member together, in combination with a collar fixed to the shaft at a point below the cap member and a member, freely rotatable about the shaft, positioned between the cap member and said collar and resting upon the latter.

1,508,509. METHOD OF MASKING PHOTOGRAPHIC FILM WHILE EXPOSURE IS BEING MADE. LEON F. DOUGLASS, Menlo Park, Calif. Filed July 15, 1922. Serial No. 575,310. 3 Claims. (Cl. 95—79.)

3. The method of producing two separate images on a positive film which comprises inserting an opaque member of particular shape supported by a transparent member within a printing machine, exposing the positive film to the light rays proceeding through the transparent support and a selected negative film, substituting for the first mentioned opaque member another opaque member adapted to cover the portion of the transparent support not covered by the first opaque member, inserting the transparent support and the opaque member within the printing machine, and exposing the portions of the positive film not previously exposed to the light rays proceeding through the transparent support and a second selected negative film.

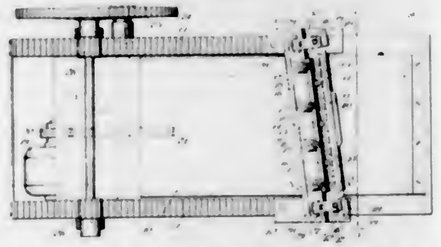


1,508,510. PLIERS. CHARLES S. EDWARDS, Prineville, Oreg. Filed Mar. 17, 1923. Serial No. 625,793. 8 Claims. (Cl. 294—42.)



1. In pliers of the class described, a relatively stationary body having a handle portion, a stationary jaw portion, cut out portions for forming guideways, and slotways for forming adjustable fulcrum supports; a movable jaw; a lever for actuating the movable jaw; and means for adjustably pivoting said lever for varying the working capacity of the fixed and movable jaws.

1,508,511. HEAT REGULATOR. ARTHUR F. ERICKSON, Portland, Oreg. Filed Sept. 6, 1921. Serial No. 498,832. 5 Claims. (Cl. 236—88.)



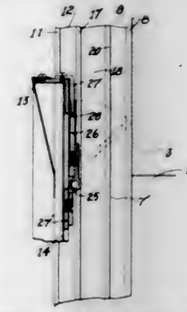
1. A thermostat; mechanism for slidably mounting said thermostat adjacent a hot water tank; an electromagnetically operated valve controlling the gas supply to a gas water heater; said valve and said thermostat being connected into an electric current circuit.

1,508,512. RATCHET MECHANISM. FRED E. FARLEY, Greenfield, Mass., assignor to Goodell-Pratt Company, Greenfield, Mass., a Corporation of Massachusetts. Filed June 21, 1923. Serial No. 646,774. 1 Claim. (Cl. 192—43.)

A ratchet mechanism, comprising a shaft provided with a pair of longitudinally extending recesses, a gear wheel mounted for rotation on said shaft and having a hub provided with internal ratchet teeth, a rockable pawl in each of said recesses and adapted to project beyond the periphery of said shaft into engagement with said ratchet teeth thereby to lock the shaft and gear wheel for rotation together, said shaft having a circumferential recess, a spring disposed in said recess engaging both of said pawls to retain them in operative position, a rotatable cam disc, and a pair of cam members for each of said pawls, one of said members being adapted to rock its pawls against the tension of said spring out of engagement with said ratchet teeth, and the other of said members being adapted to lock said pawl in its disengaged position.

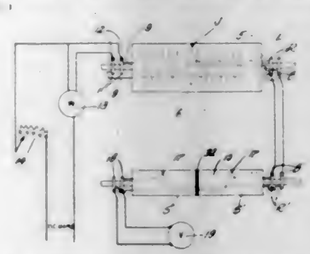
1,508,513. PLATE SHAVING MACHINE. WILLIAM A. FIELD, Chicago, Ill. Filed May 14, 1923. Serial No. 638,855. 7 Claims. (Cl. 30—25.)

7. In a plate-shaving machine, the combination with a plate-holding bed, a blade-carrying bar arranged transversely over the bed, a blade secured thereto, and means for moving said bar to cause the blade to operatively engage a plate on said bed, of two arms movably connected with end portions of said blade-carrying bar and projecting forwardly therefrom, said arms having elongated openings in their forward portions, means for locking said arms in operative position, a second bar having its ends projecting into said openings, resilient means carried by said arms for supporting the end portions of said second bar, said second bar having a downwardly and rearwardly inclined suface, and means secured against such inclined surface adapted to bear against such plate in close proximity to the edge of said blade.



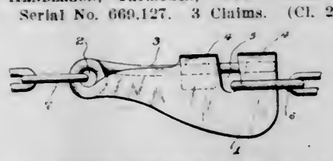
1,508,514. CIGAR-HOLDING DEVICE. LAWRENCE C. FURTON, Detroit, Mich. Filed Feb. 16, 1922. Serial No. 536,874. 2 Claims. (Cl. 131—10.)

2. A cigar or cigarette holding device for attachment to a holder and comprising a metallic band to embrace the holder and detachably hold the device in place upon the holder, said band being formed with an opening adjacent one end and a bendable tongue upon its opposite end to engage said opening, said band being also formed with integral laterally extending spring arms and pairs of outwardly extending lugs in longitudinal alignment with said spring arms, and holding arms pivotally supported intermediate their ends between said lugs with an end



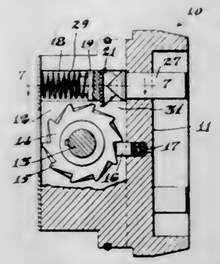
portion of each arm engaged by the adjacent spring arm to hold said arms turned upon their pivotal supports, said holding arms being formed with heads extended and curved transversely of said holding arms to embrace a cigar held in the holder, said holding arms being extended beyond the end of said holder to engage said heads with the cigar at a distance beyond the end of the holder.

1,508,515. ELEVATOR DOOR AND THE LIKE. WAINWRIGHT B. GERVAIS, Chicago, Ill., assignor to Variety Fire Door Company, Chicago, Ill., a Corporation of Illinois. Filed June 17, 1922. Serial No. 569,049. 7 Claims. (Cl. 189—46.)



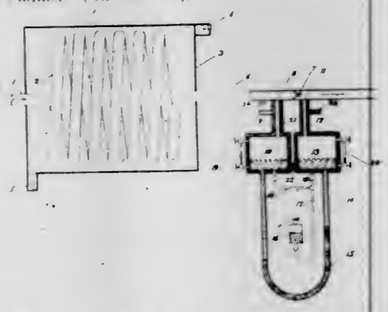
1. In combination, a wall having an opening therethrough, a door including a vertically movable portion spaced from said wall to form a pocket for the reception of a second vertically movable door portion, means carried by said first door portion for closing the space between said portion and the wall and means fusible at a predetermined temperature for retaining said closing means in open position.

1,508,516. INSTRUMENT FOR THE AUTOMATIC DETERMINATION OF MOISTURE IN PAPER OR TEXTILES. ARTHUR R. HARVEY, Middletown, Ohio. Filed Dec. 13, 1923. Serial No. 680,478. 6 Claims. (Cl. 73—51.)



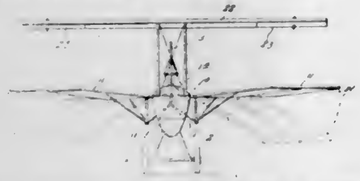
1. In an instrument for the automatic determination of moisture content in a web while moving during its course of manufacture, means for supplying heat to said web, means sensitive to the difference between the temperature of the heat supplying means and that of the web before being heated by said heating means, and an indicator under the influence of said heat sensitive means for indicating the moisture content of said web.

1,508,517. AUTOMOBILE CHAIN FASTENER. CLARA MAY HENDERSON, Yarmouth, Iowa. Filed Oct. 17, 1923. Serial No. 669,127. 3 Claims. (Cl. 24—237.)



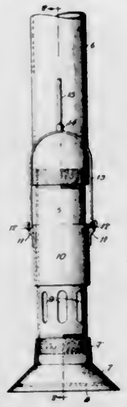
1. A chain fastener comprising a body having a spring element at one end and a securing bar extending from the spring element longitudinally of the body at one side thereof, a prong extending transversely from the other end of said body and a prong extending from the body in spaced relation to the first prong, said body being provided with a recess extending transversely thereof from between said prongs and adapted to receive a chain link put in place about the first prong, said securing bar when engaged with said prongs extending across the recess to retain the chain link in place.

1,508,518. PUSH BUTTON FOR OPERATING ROTARY-TUMBLER LOCKS. ELERT A. HILL, Los Angeles, Calif., assignor to Stop-Burglar Lock Company, Los Angeles, Calif., a Corporation of California. Filed Sept. 27, 1922. Serial No. 590,978. 5 Claims. (Cl. 70—54.)



1. In a push-button for operating rotary tumblers in combination with a revoluble tumbler having ratchet teeth, a slide block guided to move at right angles to the axis of rotation of said tumbler, a spring for exerting a retractive effort on said block, a push-button for advancing said block in opposition to said spring, and a pawl loosely supported between said block and push-button adapted to move in and out of engagement with the ratchet teeth on advancing and retracting said push-button.

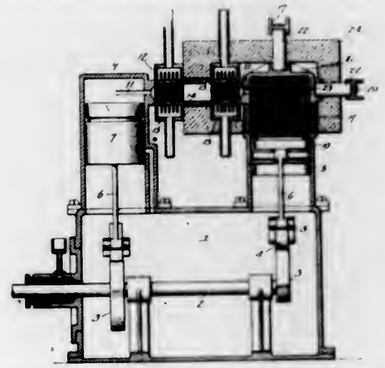
1,508,519. HEAD METER. GEORGE A. HORNE, Plainfield, N. J. Filed Dec. 29, 1923. Serial No. 683,527. 6 Claims. (Cl. 73—167.)



6. The combination with a conveyer for compressed and condensed volatile refrigerant, of means for supercooling said refrigerant as it passes thru said conveyer, and a head meter connected to said conveyer, said meter being provided with a cooling medium jacket for preventing any vaporization of the volatile fluid within said meter.

1,508,520. FLYING MACHINE. JAMES E. KEMPH, Washington, D. C. Filed May 28, 1923. Serial No. 641,859. 3 Claims. (Cl. 244—17.)

2. In combination, an aeroplane having a fuselage provided with a cock pit for the operator, elevating planes for controlling the ascent or descent of said plane, a lever pivotally mounted in the cock pit of said plane, a steering wheel rotatably mounted on said lever, operating connections between the elevating planes and the steering wheel for operating said planes in the rotation of the steering wheel in either direction, wings movably mounted on said aeroplane, and connections between said lever and said wings for effecting a movement of the wings in the movement of the lever, to position the wings into cooperation in one position for effecting a balancing, supporting and elevating action on the aeroplane, and into a nonsupporting relation in another position.

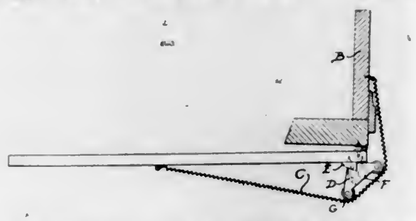


1,508,521. EXCAVATOR. JOHN W. KREUSER, Chicago, Ill. Filed Nov. 3, 1922. Serial No. 598,743. 3 Claims. (Cl. 37—58.)

1. In a hydraulic excavator, the combination of a depending suction tube having a port formed in the wall thereof near its lower end, a mouthpiece attached to the lower end of said tube and equipped with a screen, a sleeve valve mounted to slide endwise on said suction tube for opening and closing said port, manually operable means for actuating said valve, and stops for limiting the extent of movement of said valve.

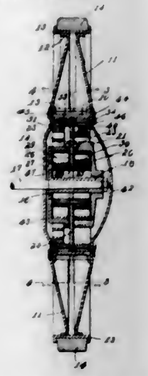
1,508,522. REFRIGERATING MACHINE. IVAR LUNDGAARD, Hartford, Conn., assignor to The Automatic Refrigerating Company, Hartford, Conn., a Corporation of New Jersey. Filed Nov. 21, 1923. Serial No. 676,053. 2 Claims. (Cl. 62—136.)

2. An air refrigerating machine of the closed cycle type comprising a crank case, a compression cylinder, an expansion cylinder, the said expansion cylinder having a heat insulating band between the head and the base of the cylinder, both cylinders opening into the crank case and having closed outer ends, a conduit connecting the closed ends of the cylinders, heat exchangers in said conduit for discharging heat into a cooling fluid and abstracting heat from a fluid to be cooled, a heat insulating section between the exchangers,



pistons in said cylinders, a driving shaft in the crank case, interconnected mechanism between the shaft and pistons operating to transfer the air from one cylinder to the other through the said exchangers, heat insulating cover for the expansion piston and a heat insulating jacket surrounding the expansion cylinder and its adjacent exchanger.

1,508,523. DISPLAY HOLDER. HENRY C. NATERMAN, Los Angeles, Calif. Filed July 3, 1923. Serial No. 649,312. 2 Claims. (Cl. 40—19.)



1. A device of the class described, comprising a frame provided with aligned bearings, a transparent tube mounted in said bearings for rotation, and means mounted on said frame and engaging said cylinder to prevent an accidental rotation.

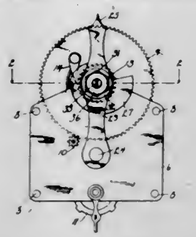
1,508,524. SCREEN-DOOR PROTECTOR AND SPRING GUIDE. OLAF W. OLSON, Burbank, Okla. Filed July 9, 1923. Serial No. 650,394. 5 Claims. (Cl. 16—72.)

1. The combination with a door and door casing, and a coil spring connecting said door and casing for normally holding the door in a closed position, of a bracket carried by said door, a supporting frame pivotally carried by said bracket, and a pair of spaced rollers carried by said frame and adapted to engage said spring in spaced relation to each other longitudinally of the spring and prevent the spring from contacting with said door when the latter is opened and to prevent the spring from being bent at a sharp angle when the door is opened.

1,508,525. SPRING WHEEL. JOSÉ ANGEL PARRA, El Paso, Tex. Filed Aug. 31, 1923. Serial No. 660,420. 4 Claims. (Cl. 152—44.)

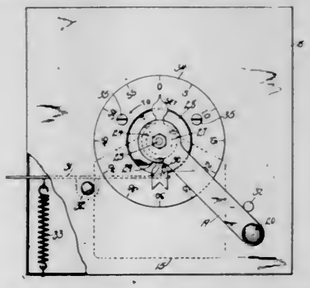
1. A spring wheel comprising a hub structure including a pair of sections of cup like formation secured together and adapted to be mounted upon a spindle, a drive connection between said sections, an outer wheel portion including a channeled ring carrying disks in turn carrying a rim, and a plurality of coil and leaf springs arranged in series between the hub structure and said channeled ring.

1,508,526. PLUG FOR OIL WELLS AND SIMILAR PURPOSES. BENJAMIN EUGENE PARRISH, Honeygrove, Tex., assignor of one-half to Darwin W. Maurer, Dallas, Tex. Filed Oct. 30, 1922. Serial No. 597,908. 16 Claims. (Cl. 166—13.)



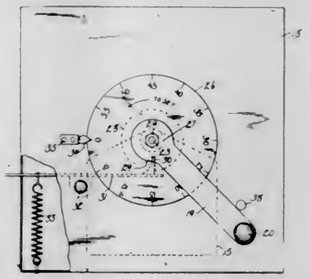
1. In an appliance of the class described, a substantially hollow body, lowering means, an internal valve seat and a cooperating valve, and means for closing the valve when the lowering means is disconnected, the lowering means being arranged when in active position to definitely prevent valve closing.

1,508,527. RESETTABLE TIMING MECHANISM. WILSON E. PORTER, New Haven, Conn., assignor to New Haven Clock Co., New Haven, Conn., a Corporation. Filed Jan. 4, 1924. Serial No. 684,439. 4 Claims. (Cl. 161—1.)



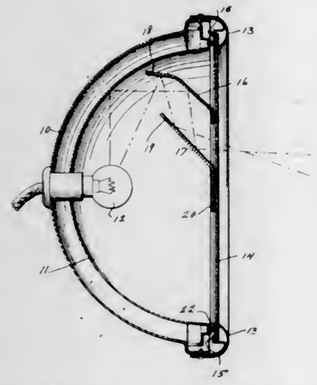
1. In a resettable timing-mechanism, the combination with the winding-arbor of a time-train, of a combined

winding-and-setting lever mounted upon the projecting outer end of the said arbor and having a tripping-cam rigidly connected with it, and a friction device also



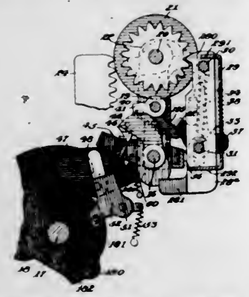
mounted upon the outer end of the arbor adjacent to the said combined winding-and-setting lever and frictionally connecting the same with the arbor.

1,508,528. TIMING MECHANISM. WILSON E. PORTER, New Haven, Conn., assignor to New Haven Clock Co., New Haven, Conn., a Corporation. Filed Feb. 11, 1924. Serial No. 691,972. 4 Claims. (Cl. 161—1.)



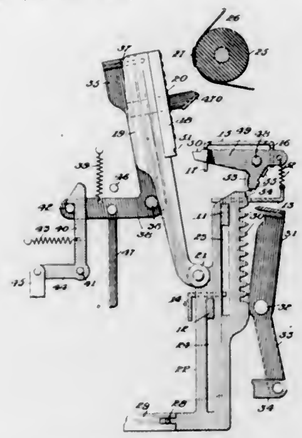
1. In a timing-mechanism, the combination with a time-train having a winding-arbor, of a winding-lever for rotating the said arbor, means for securing the said lever against outward displacement on the said arbor, a setting-manual, a plate-cam rotating therewith as a unit, an indicator for cooperation with the setting manual, and means interposed between the said winding-lever and setting-manual for frictionally coupling the said manual and cam with the arbor for normal rotation therewith.

1,508,529. TIMING MECHANISM. WILSON E. PORTER, New Haven, Conn., assignor to New Haven Clock Co., New Haven, Conn., a Corporation. Filed Feb. 11, 1924. Serial No. 691,973. 3 Claims. (Cl. 161—1.)



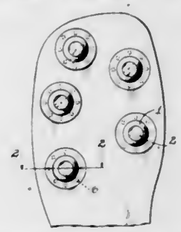
1. In a timing-mechanism, the combination with a time-train having a winding-arbor, of a winding-lever for rotating the said arbor, means for securing the said lever against outward displacement on the said arbor, an operating-unit frictionally mounted upon the arbor and comprising a graduated dial and a plate-cam in fixed relation to each other, a fixed indicating-member adjacent the edge of the dial, and means interposed between the said winding-lever and dial for frictionally coupling the said operating-unit with the arbor for normal rotation therewith.

1,508,530. GLARESHIELD. GEORGE W. POWELL, JOSEPH L. SMITH, and HOWARD E. DIXON, La Grande, Oreg. Filed Dec. 8, 1923. Serial No. 679,434. 6 Claims. (Cl. 240—484.)



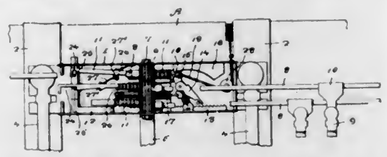
1. The combination with a headlight embodying the usual illuminating element, parabolic reflector and lens, of a glare preventer arranged within the headlight at the upper portion of the lens thereof intercepting upwardly inclining direct rays from the illuminating element to prevent their passage through the lens but permitting the passage of refracted rays about the edges thereof, said glare preventer comprising spaced upper and lower plates arranged above the horizontal plane of the headlight illuminating element, the portions of the plates adjacent the lens being spaced, one of said plates being positioned to reflect light from the headlight illuminating element upon the other of the plates for refraction thereby through such space.

1,508,531. TRANSFER MECHANISM FOR REGISTERS. WILLIAM P. QUENTELL, New York, N. Y., assignor to Quentell Corporation, New York, N. Y., a Corporation of New York. Filed May 21, 1923. Serial No. 640,432. 18 Claims. (Cl. 235—134.)



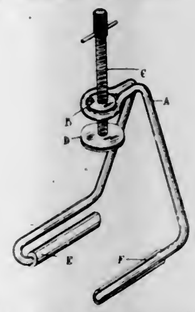
1. The combination with a plurality of registering elements, of means for carrying from an element of lower order to the element of next higher order, a member for controlling said carrying means, and means connected with said element of lower order for actuating said member, said member being adapted to permit said carrying means to operate only when it is moved by said actuating means and then released thereby.

1,508,532. PRINTING MECHANISM. WILLIAM P. QUENTELL, New York, N. Y., assignor to Quentell Corporation, New York, N. Y., a Corporation of New York. Filed May 21, 1923. Serial No. 640,433. 16 Claims. (Cl. 101—94.)



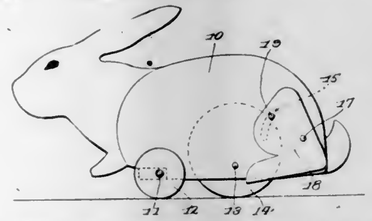
1. In a number printing mechanism, in combination, a series of printing members independently adjustable to print different figures, a common actuator for moving all of said members in the direction to effect the printing impression, means for arresting the effective printing movement of said members, and means for positioning said last named means to permit said members to print.

1,508,533. CLEAT FOR ATHLETIC FOOTWEAR. JOHN R. RICHARDS, Dallas, Tex., assignor of one-half to George Oscar Berg, Madison, Wis. Filed Feb. 7, 1921. Serial No. 443,125. 5 Claims. (Cl. 36—59.)



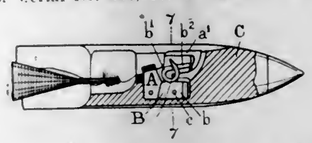
1. A detachable cleat for athletic footwear, said cleat being formed of a nonmetallic body portion and a cambered metallic base.

1,508,534. SHEET-MUSIC TURNER. JAMES PERCIVAL ROSS, Girvin, Saskatchewan, Canada. Filed July 10, 1922. Serial No. 573,887. 1 Claim. (Cl. 84—311.)



A leaf turner of the class described comprising a casing, a shaft therein, pinions mounted on the shaft, an arm connected with each pinion, a leaf holder adjustably mounted on each arm, a rack bar for engaging each pinion, an L-shaped member having a rack part thereon, a pawl carrying lever, a pawl thereon engaging the rack part, manually operated means for operating the lever, pins on the L-shaped member engaging notches on the rack bars, said notches being of different lengths, means for freeing the pins from the notches after a certain amount of movement of the parts, such means consisting of projections on the rack bars and stationary steps in the casing for engaging the projections for raising the rack bars.

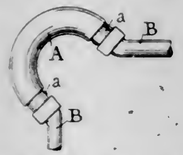
1,508,535. INK BOTTLE FOR DRAFTSMEN. HENRY ROTTENBURG, Cambridge, England. Filed Dec. 11, 1922. Serial No. 606,192. 4 Claims. (Cl. 120—73.)



1. A clamp for a draftsman's ink bottle comprising in combination a clamp body with parallel base and head members and a clamping screw threaded in said head member, said base being shaped to support the ink bottle in a stable position under the pressure of said clamping screw and also shaped to engage the shoulders of the ink bottle upon reversal of the clamp.

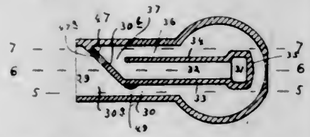
1,508,536. FIGURE TOY. GEORGE F. SCHENFIELD, San Francisco, Calif. Filed Apr. 5, 1922. Serial No. 549,848. 7 Claims. (Cl. 46—45.)

1. A figure toy comprising a body adapted to be drawn across the surface, a leg member movably carried by the body and normally gravitating toward the surface, and a rotatable surface engaging eccentric member mounted in the body and intermittently engaging with the leg member to lift the same away from the surface and simultaneously lower one end of the body toward the surface.



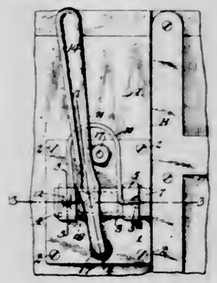
1,508,537. SHUTTLE FOR LOOMS FOR WEAVING. RICHARD STANDRING, Accrington, England. Filed Oct. 2, 1923. Serial No. 666,117. 1 Claim. (Cl. 139—222.)

The combination with a loom shuttle of a threading device formed in two parts, one part comprising a shank, top guide plate, and downwardly depending side



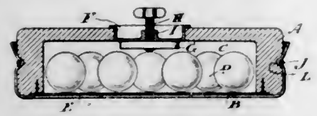
member turned inward with a hook at the bottom end which form passages for the yarn and the other part comprising a curl eye into which the yarn is directed and pins mounted transversely through the two parts to retain them rigidly in position.

1,508,538. CARPET SWEEPER. JAMES TAYLOR, Accrington, England, assignor to Entwisle and Kenyon Limited, Accrington, England. Filed Feb. 23, 1921. Serial No. 447,045. 1 Claim. (Cl. 15—45.)



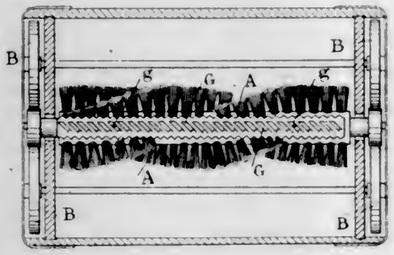
The combination with a carpet sweeper bail of a resilient rubber buffer of tubular formation adapted to embrace and surround the projecting corner of the bail and metal clips by which the buffer is affixed to the bail.

1,508,539. FUEL SAVER AND SMOKE CONSUMER. IRVING S. BENJAMIN and JOHN K. MARKWICK, Utica, N. Y.; said Markwick assignor to said Benjamin. Filed Feb. 25, 1924. Serial No. 694,960. 4 Claims. (Cl. 110—75.)



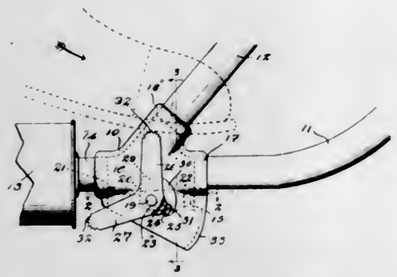
1. In a fuel saver and smoke consumer the combination of a hollow tubular mounting having its outer end adapted to be secured to the inside of the furnace fuel door and a heater member having its outer end secured to the inner end of said mounting with its inner end adapted to project into the combustion chamber of the furnace, said heater member having near its inner end an opening for the admission of hot gases and a passageway leading rearwardly therefrom an air inlet passage leading from the outer end of said heater member forwardly around said gas passageway and back nearly to the outer end of said heater member, a mixing chamber at the junction of said gas and air passageways and a mixture passage tending inwardly and discharging into said combustion chamber through a port in the inner end of said heater member.

1,508,540. LATCH. JOSEPH T. CANTRELL, Huntington, N. Y., assignor to J. T. Cantrell & Company, Huntington, N. Y., a Firm. Filed Nov. 3, 1922. Serial No. 598,927. 5 Claims. (Cl. 292—173.)



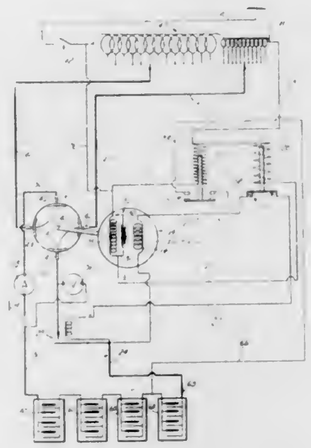
4. A latch comprising a plate, a guide loop arranged on the plate and provided with a recess, a bolt sliding in said loop, a lever pivotally connected with said bolt and plate, and a bow spring engaging said bolt and adapted to enter said recess.

1,508,541. COMBINED FLOOR WAXER AND POLISHER. HENRY JAMES STEWART CROSS, Toronto, Ontario, Canada. Filed Mar. 29, 1923. Serial No. 628,527. 6 Claims. (Cl. 91—37.)



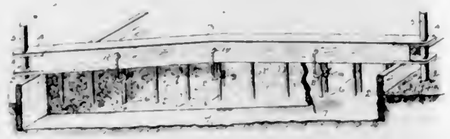
1. A device of the class described comprising a chambered container; a perforated member closing the bottom of said chamber, and a plurality of elements which while partaking of the movement of the device as a whole have individual momental movement apart from the horizontal movement of said member, and in the same and different directions within said chamber and adapted to force the wax therein through said perforated closure member, as said device is moved.

1,508,542. CLEARER FOR THE BRUSHES OF CARPET SWEEPERS. TOM DICKINSON, Accrington, England. Filed June 29, 1923. Serial No. 648,609. 1 Claim. (Cl. 15—48.)



In a carpet sweeper the combination with the rotary brush and the casing of a clearer depending from the top of the casing and provided with diagonal slots, a plurality of blades depending from the clearer to enter between the bristles of the rotary brush and pins projecting from the casing to engage in the slots and impart a longitudinal movement to the clearer as the brush rotates.

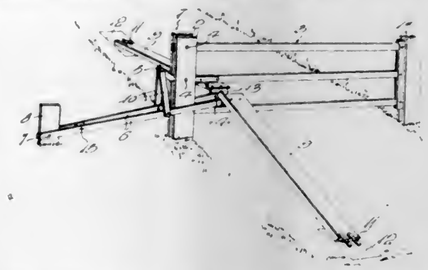
1,508,543. MOTOR-TESTING VALVE. CHARLES H. DIENER, Pottstown, Pa. Filed Aug. 1, 1921. Serial No. 488,844. 2 Claims. (Cl. 251—11.)



1. A motor testing valve comprising a casing having two inlets and a normal outlet, and having an auxiliary outlet port of large area, a valve to close the auxiliary port movable within the casing to a position intermediately of the inlets, whereby difference of direction in the sounds of exhaust from the two inlets will be produced.

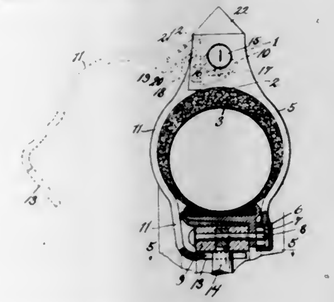
1,508,544. AUTOMATIC SYNCHRONOUS RECTIFYING MECHANISM. FRITZ W. FALCK, Los Angeles, Calif. Filed Jan. 31, 1921. Serial No. 441,195. 5 Claims. (Cl. 171—314.)

1. In apparatus of the character described, a synchronous motor, rectifying means operatively connected with the motor, a battery connected with the discharge of the rectifying means, and means for controlling the connection between the rectifying means and battery controlled by the amount of current drawn by the motor.



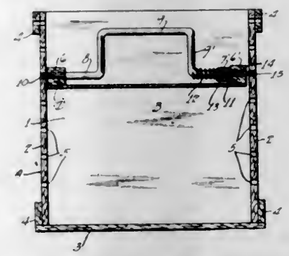
1,508,545. METHOD AND APPARATUS FOR INSTALLING INSERTS IN PLASTIC BODIES. HARRY C. FOSTER, Dayton, Ohio. Filed July 2, 1919. Serial No. 308,116. Renewed Aug. 7, 1924. 10 Claims. (Cl. 94—51.)

1. In a device of the character described, a supporting beam to be arranged transversely in elevated relation above the finished surface of a roadway, a plurality of pins projecting downward from the underside of said beam in fixed relation with each other and arranged in two parallel series between which an insert strip may be positioned, means for supporting the beam in elevated relation above the finished surface of the roadway.



1,508,546. VEHICLE-OPERATED GATE. DANIEL C. FENCHEON, Denver, Colo. Filed Sept. 4, 1923. Serial No. 660,854. 2 Claims. (Cl. 34—18.)

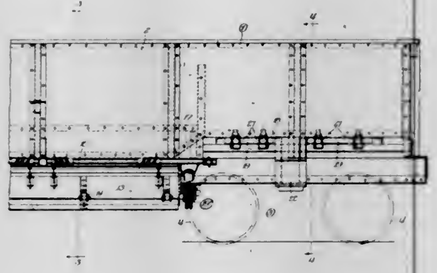
1. The combination with a gate post and a gate pivoted thereto for upward swinging; of an arm extending rigidly from the gate to a point beyond the side of the post remote from said gate, a pair of levers straddling said post and fulcrumed at a point spaced outwardly from the aforesaid side thereof, said levers inclining to points at opposite sides of the gate, a pair of depressible inclined wheel runways transverse to the gate and connected at



their upper ends to the upper ends of said levers, and means operatively connecting said levers with the aforesaid arm.

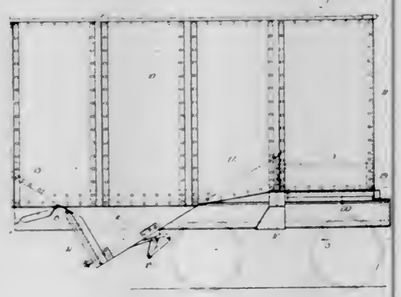
1,508,547. ATTACHMENT FOR VEHICLE WHEELS. THOMAS J. GENTLE and REGINALD V. TRYON, Los Angeles, Calif. Filed Feb. 20, 1923. Serial No. 620,194. 3 Claims. (Cl. 70—90.)

1. An attachment for a wheel comprising a tread body; a rigid arm integral with said body said arm having its free end enlarged and provided with a nut socket; a hinged arm pivotally connected to said body said hinged arm having a forked extension adapted to project across the inside periphery of a felly when attached to a wheel; and means connected with said body for locking said hinged arm.



1,508,548. RECEPTACLE OR CONTAINER. WALTER GOTTHEIMER, St. Louis, Mo. Filed July 16, 1923. Serial No. 651,816. 3 Claims. (Cl. 217—64.)

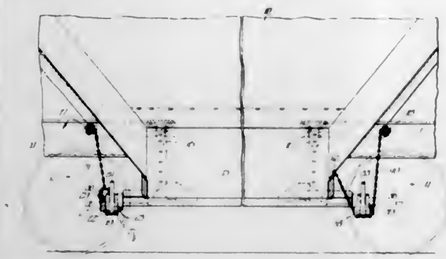
1. A receptacle comprising a contents-containing shell provided vertically upon its walls with a series of spaced aligning openings, in combination with a lid adapted to flatwise adjustably fit within the shell, and means for locking the lid in selected adjusted position to and within the shell, said means including a fixed pin upon the lid



adapted to fit selectively within the openings of one of said series, and a yielding pin upon the lid adapted to fit selectively within the aligning openings of the other series.

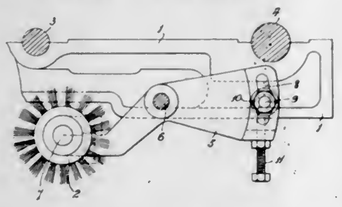
1,508,549. CAR CONSTRUCTION. HARRY S. HART, Chicago, Ill., assignor to Rodger Ballast Car Company, Chicago, Ill., a Corporation of Maine. Filed Oct. 22, 1923. Serial No. 669,928. 2 Claims. (Cl. 105—244.)

2. A dump car, including dumping mechanism for dumping intermediate of the length of said car, a sloping bottom wall at each end of said dumping mechanism for directing lading to said dumping mechanism, each of said bottom walls having a substantially straight upper edge, and a flat bottom wall coinciding with said edge, said flat bottom wall including downwardly and outwardly swinging walls for directing lading laterally of said car at the ends thereof.



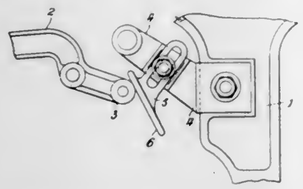
1,508,550. DUMP CAR. DAVID HINDAHL, Chicago, Ill., assignor to Harry S. Hart, Chicago, Ill. Filed May 5, 1922. Serial No. 558,586. 10 Claims. (Cl. 105—249.)

1. A dump car having sides, ends and a floor, the floor portions over the trucks of said car between the end of the car and the bolster being formed with a hopper on each side of the center sill, said floor portions comprising normally horizontal dumping members pivotally mounted along axes arranged longitudinally of said car adjacent to said center sill.



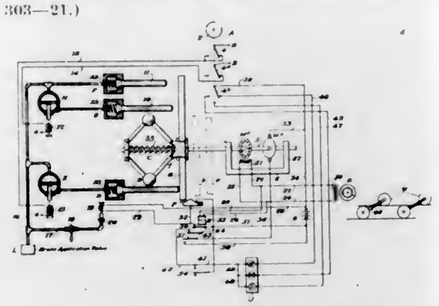
1,508,551. DUMP-CAR CONSTRUCTION. DAVID HINDAHL, Chicago, Ill. Filed Jan. 29, 1923. Serial No. 615,471. 10 Claims. (Cl. 105—250.)

1. Dump car construction comprising a pair of dump doors, a pair of rotatable shafts, said dump doors being provided with link mechanism for locking same in closed position and permitting the practically instantaneous opening thereof, one of said shafts being provided with flexible means for operating said doors to close same and move said link mechanism to holding position, and



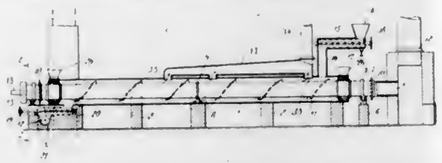
the other of said shafts being provided with means for operating said link mechanism to cause said doors to move to open position.

1,508,552. MACHINE FOR COMBING COTTON, WOOL, OR THE LIKE. JAMES HORRIDGE, Bolton, England, assignor to John Hetherington and Sons Limited, Manchester, England. Filed May 5, 1923. Serial No. 636,820. 2 Claims. (Cl. 19—116.)



1. In a machine for combing cotton, wool and the like, means for adjusting the stripping brushes, comprising a pivoted rocking lever, said lever at one end carrying the brush shaft upon which the brushes are mounted, and at the other end provided with a slot, a bolt on the frame adapted to work in said slot, a nut adapted to screw on to said bolt and bear against the face of the rocking lever, and an adjusting screw for adjusting said lever.

1,508,553. MACHINE FOR COMBING COTTON, WOOL, AND THE LIKE. JAMES HORRIDGE, Bolton, England, assignor to John Hetherington and Sons Limited, Manchester, England. Filed May 5, 1923. Serial No. 636,822. 1 Claim. (Cl. 19—116.)



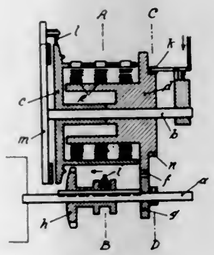
In a machine for combing cotton, wool and the like, means for lifting the top comb comprising a bracket, an arm adjustably mounted upon said bracket, an inclined plane carried by said arm, a bowl carried by the end of the comb arm, the arrangement being such that in the oscillation of the top comb arm the bowl thereof runs down the inclined surface of the adjustable arm and is depressed thereby thus depressing that end of the comb arm and lifting the other end thereof which carries the top comb substantially as herein set forth.

1,508,554. RAILWAY-TRAFFIC-CONTROLLING APPARATUS. LEMUEL F. HOWARD, Edgewood Borough, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Jun. 9, 1923. Serial No. 644,596. 14 Claims. (Cl. 303—21.)

1. In combination, a vehicle, an alternating current generator operatively connected with the running gear of said vehicle, a synchronous motor supplied with current by said generator, a speed-responsive device driven by said motor, and governing means on the vehicle controlled by said speed responsive device.

1,508,555. CALCINING FURNACE. EUGENE ARTHUR HULTS, Saltville, Va., assignor to Mathieson Alkali Works, a Corporation of New York. Filed June 24, 1921. Serial No. 479,082. 8 Claims. (Cl. 23—22.)

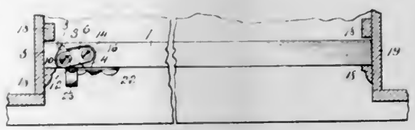
1. A calcining furnace, comprising a receiving tube, a heating tube mounted to rotate within the receiving tube, means operated by the rotation of the heating tube for moving the material longitudinally of the receiving tube, and a plurality of means for conducting the gases away from the receiving tube, said receiving tube being otherwise sealed to prevent dilution of said gases.



1,508,556. MAKING CASTINGS OF ALUMINUM ALLOYS. ZAY JEFFRIES, Cleveland Heights, and ROBERT S. ARCHER, East Cleveland, Ohio, assignors to Aluminum Company of America, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Jan. 4, 1921. Serial No. 435,024. 80 Claims. (Cl. 22—200.)

1. In the art of making aluminum alloy castings, the method comprising heating an alloy casting containing a substantial amount of silicon, to a temperature slightly below the melting point of the eutectic, and maintaining such temperature until the silicon particles have been sufficiently altered in shape to materially improve the physical properties of the cast alloy.

1,508,557. METHOD FOR PRODUCING CHROMIUM OR ALLOYS OF CHROMIUM. BO MICHAËL STUBE KALLING and SVEN DAGOBERT DANIELI, Trollhattan, Sweden, assignors to Aktiebolaget Ferrologeringar, Stockholm, Sweden, a Joint Stock Company Limited. Filed May 4, 1921. Serial No. 466,743. 4 Claims. (Cl. 75—17.)

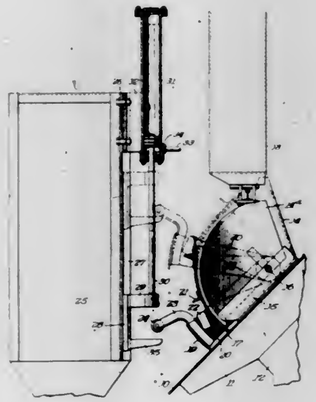


1. The process of producing chromium alloys having a low content of carbon and silicon, which consists in subjecting a chromium alloy rich in silicon, at a temperature above the melting point of the alloy, to the oxidizing action of free oxygen in a bessemerizing process, thereby to desilicate the charge, and adding to said charge during the early stage of desilication a slag obtained from a similar charge at a later stage of desilication.

1,508,558. ACCUMULATIVE BRAKE. HERMANN KOLLMANN, Rosenheim, Germany. Filed June 21, 1924. Serial No. 721,527. 3 Claims. (Cl. 185—41.)

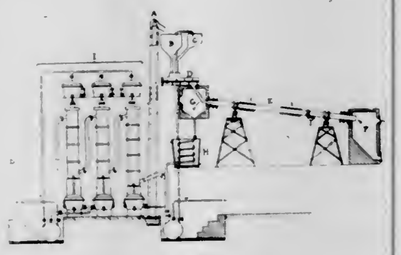
1. In an accumulative brake structure; the combination with a wheel axle, of a power collector including a spring motor located adjacent to said axle, means for connecting said motor to said axle, a friction disc, a braking lever having means to couple said wheel axle selectively with said power collector or with said disc and said collector, and a locking lever for engaging said power collector adapted to yield when said motor is overstrained, substantially as set forth.

1,508,559. WINDOW SCREEN. WILLIAM M. KOONS, Chanute, Kans. Filed Aug. 2, 1920. Serial No. 400,607. 4 Claims. (Cl. 156—14.)



2. In a window screen, a netting carrying frame having a vertical beveled edge, an end member of the same height as the frame having a vertical beveled edge arranged to register with the beveled edge of the frame when the latter and the end member are in the same vertical plane, two links respectively pivoted on vertical axes to the upper and lower ends of said end member and respectively pivoted on vertical axes to the upper and lower edges of the frame, and releasable means for holding the end member and the frame in the same vertical plane, substantially as set forth.

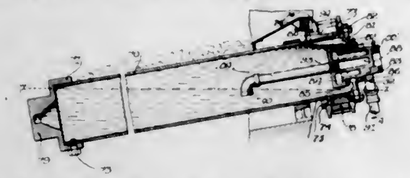
1,508,560. GATE-OPERATING DEVICE FOR ORE BINS. JEREMIAS H. LEDEBOER, The Hague, Netherlands, assignor to Freyn, Brassert & Company, Chicago, Ill., a Corporation of Maine. Filed May 29, 1922. Serial No. 564,438. 2 Claims. (Cl. 214—41.)



1. In combination, an ore bin having a discharge opening, a plurality of pivotally mounted spaced gates adapted to open and close said opening, a scale car, a cylinder secured to said scale car, a piston mounted in said

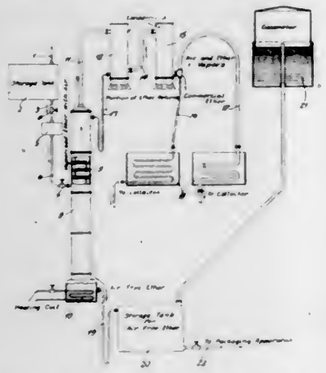
cylinder and projecting from one end thereof, a cross-head mounted on said piston, and an arm adapted to be engaged by the cross-head on said piston when said car

is in position to receive material discharged through said opening, the said gates being mounted upon common centers but swinging through different arcs.



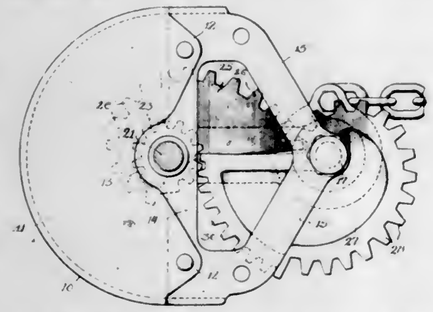
1,508,561. TREATMENT OF SULPHIDE ORE WITH NITRATES. GEORGE NELSON LIBBY, Berkeley, Calif. Filed Feb. 9, 1916, Serial No. 77,167. Renewed June 19, 1922. Serial No. 569,325. 3 Claims. (Cl. 75—18.)

1. The process of sulphating values in ores which consists in moistening a sulphide ore with a nitrate solution and passing the same through a heated zone whereby the metal values are sulphated and oxides of nitrogen liberated.



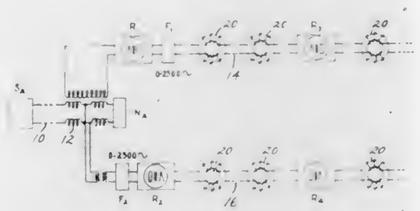
1,508,562. GRINDER MECHANISM FOR BOILER FURNACES AND THE LIKE. ALFRED LOTZ, Chicago, Ill., CHARLES J. DAVIDSON, Milwaukee, Wis., and WILLIAM J. KENNEY, Chicago, Ill., assignors, by mesne assignments, to Moloch Company, Kaukauna, Wis., a Corporation of Wisconsin. Filed Aug. 12, 1920. Serial No. 402,991. 21 Claims. (Cl. 83—14.)

2. In combination, a grinder for cleaning furnaces and the like, a member having fluid inlet and outlet passages extending into said grinder, an inlet pipe communicating with the outer end of said inlet passage for feeding water thereinto, an inlet pipe communicating with the inner end of the said inlet passage for feeding said water into the grinder, a discharge pipe for discharging water from said outlet passage, the inner end of said outlet passage opening into said grinder at a point with-



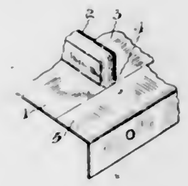
out said furnace for causing the entire portion of the grinder within said furnace to be subjected to a continuous flow.

1,508,563. PROCESS FOR RENDERING ETHER AIR FREE. EDWARD MALLINCKRODT, Jr., St. Louis, Mo., assignor to Mallinckrodt Chemical Works, St. Louis, Mo., a Corporation of Missouri. Filed Feb. 15, 1923. Serial No. 619,319. 4 Claims. (Cl. 260—151.)



2. The process of rendering ether air free, which consists in passing the liquid ether to be purified through a column still countercurrent to the ether vapor generated in the still whereby the vapor becomes progressively richer in air and finally carries with it the air as it passes from the still, while the liquid ether becomes progressively freer from entrained air, and collecting the air free ether.

1,508,564. GEARING. FRED MATHEWS, Chicago, Ill. Filed Mar. 15, 1924. Serial No. 699,516. 14 Claims. (Cl. 74—41.)

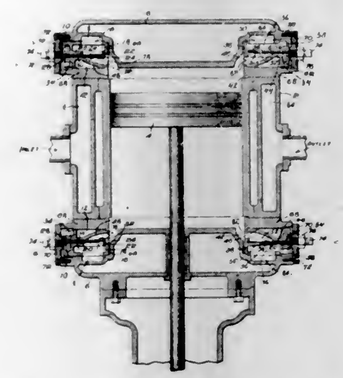


12. A gearing comprising two gear elements each having concentric and eccentric portions adapted to continuously interengage in sequence throughout rotation and in constantly changing planes of engagement.

1,508,565. LOADING SYSTEM. JOHN MILLS, Wyoming, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Mar. 29, 1923. Serial No. 628,507. 7 Claims. (Cl. 178—45.)

1. A telephone system comprising a loaded line having a critical frequency such that the higher speech frequencies are transmitted substantially slower than the frequencies of principal importance to intelligibility and means for reducing the efficiency of transmission of said higher frequencies.

1,508,566. PROCESS OF FORMING OVEN SIDE WALLS. FREDERICK W. MOFFAT, Weston, Ontario, Canada. Filed Jan. 19, 1924. Serial No. 687,230. 5 Claims. (Cl. 113—116.)



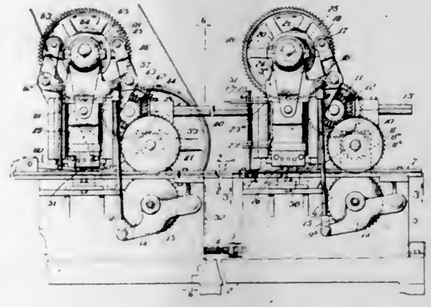
1. A process of forming a combined oven side wall and rack support, which consists in crimping a metal sheet to form a series of ribs separated by grooves, and then welding a sheet metal flange to the end of the bottoms of the grooves.

1,508,567. TREATING CHROMIUM IRON ALLOYS. JOHN H. NEAD, Middletown, Ohio, assignor to The American Rolling Mill Company, Middletown, Ohio, a Corporation of Ohio. Filed Oct. 4, 1923. Serial No. 666,626. 2 Claims. (Cl. 148—8.)

1. The treatment of chromium iron alloys, or steel of stainless quality, which consists in hot working a mass of the metal to desired shape, then box annealing the product, and then cold working the product sufficiently to extend the body thereof beneath the coating thereon and finally pickling the product.

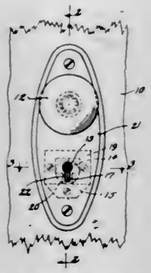
1,508,568. VALVE. SVEN T. NELSON, Chicago, Ill., assignor to Sullivan Machinery Company, Boston, Mass., a Corporation of Massachusetts. Filed May 17, 1915. Serial No. 28,756. Renewed Dec. 27, 1920. Serial No. 433,430. 29 Claims. (Cl. 230—34.)

1. In a valve mechanism, in combination, a valve cage having a closed end and an open end and a lateral opening communicating with the opening in its end, and a flexible valve member within said cage fixed at one end and having its free end adjacent the opening



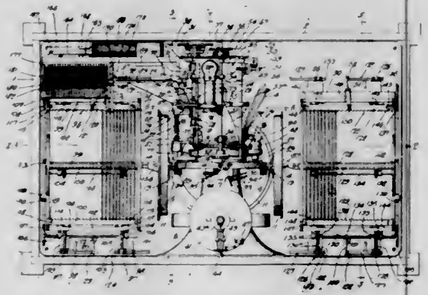
in the end of the cage and normally disposed over said lateral opening and moving towards the center of the end opening on opening movement.

1,508,569. GRAPE SUGAR. WILLIAM B. NEWKIRK, Riverside, Ill., assignor to Corn Products Refining Company, New York, N. Y., a Corporation of New Jersey. Original application filed Nov. 16, 1922, Serial No. 601,302. Divided and this application filed June 25, 1923. Serial No. 647,750. 5 Claims. (Cl. 127—30.)



1. Starch converted dextrose consisting of a mass of separate, unitary crystals of normal crystalline form substantially unmixed with deformed crystals of the needle like or flake like kind.

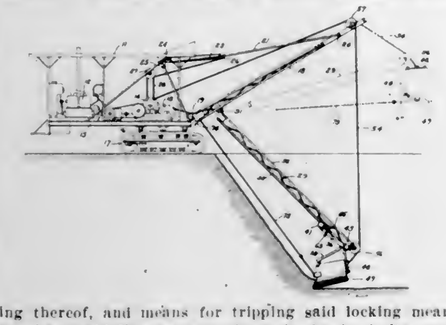
1,508,570. HOOP-MAKING MACHINE. RALPH H. NORTON, Chicago, and WILLIAM C. FORK, Hinsdale, Ill., assignors to Acme Steel Goods Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 10, 1921. Serial No. 443,771. 7 Claims. (Cl. 153—2.)



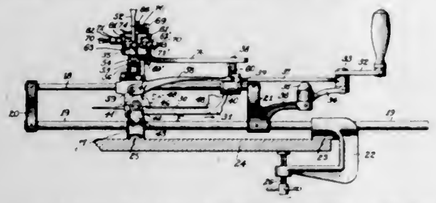
1. In a machine for making hoops, the combination of intermittent feeding, punching and cut-off mechanism, a stop member to check definitely the measured advance of the stock, said stop member being movable transversely to the path of travel of the stock, and adapted to engage the end thereof, means for periodically withdrawing and then restoring the stop member, other mechanism to which the cut-off piece of stock is fed past said stop member upon withdrawal thereof, the said machine having a continuous straight runway for the stock from the point of entrance to the point of discharge from said other mechanism.

1,508,571. KEY RETAINER. MAURICE J. O'NEILL, Stamford, Conn. Filed Sept. 21, 1922. Serial No. 589,570. 3 Claims. (Cl. 70—7.)

3. In a lock having an opening for a key, a piece of flexible material secured over said opening provided with a slit in alignmept therewith and normally tending to assume a position to close said opening, said material also arranged to yield to allow insertion and withdrawal of a key, a plate secured over said piece of material on the outside thereof and provided with projections engaging the outer surface of the material on opposite sides of the slit to cause greater resistance to removal of the key than to insertion thereof, and an escutcheon plate enclosing said first mentioned plate and provided with a key opening in alignment with the slit in the flexible material.



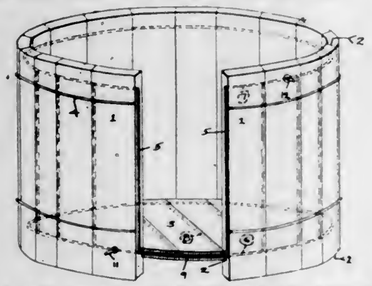
1,508,572. AUTOMATIC PHONOGRAPH. MALCOLM L. ORD, Independence, Kans. Filed Aug. 4, 1920. Serial No. 401,105. Renewed Jan. 19, 1922. Serial No. 530,494. 22 Claims. (Cl. 274—10.)



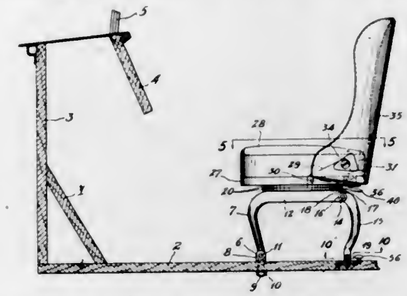
11. In an automatic phonograph, the combination of revoluble means for supporting a plurality of turntables, a plurality of turntables rotatably mounted on said revoluble means, means for holding in operative spaced position a series of disk records to be played, said means being arranged to permit of the removal and replacement of any record or records desired without disturbing other records, means for applying said records to the turntables, means for successively removing records from the turntables after the records have been played, means for holding the series of records that have been played, said means permitting of the removal of any desired record therefrom without disturbing other records.

1,508,573. EXCAVATING MACHINE. CLARENCE E. PARKER, Minneapolis, Minn. Filed Aug. 9, 1922. Serial No. 580,680. 9 Claims. (Cl. 214—102.)

1. The combination with a frame, of a mast pivoted thereon for vertical oscillation and adjustment, a boom pivoted on said mast and having a track thereon, a carriage mounted to slide on said track, a dipper having one end pivotally suspended from the carriage and its opposite end having a link connection to a swinging bar separably attached to the carriage, cables connected with said dipper for moving it back and forth on said boom, means for locking said dipper to prevent premature tilting thereof, and means for tripping said locking means to release said dipper at a predetermined point in its movement on said boom.

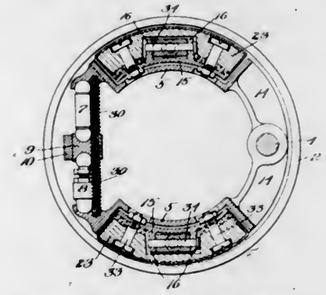


1,508,574. SAW FILING AND SETTING APPARATUS. DAVID PETERSON, Belleville, N. J., assignor of one-half to Robert Nyden, Brooklyn, N. Y. Filed June 24, 1922. Serial No. 570,646. 16 Claims. (Cl. 76—35.)



1. In a band saw filing apparatus, a frame constructed and arranged to be mounted upon the table of a band saw and having a member for the engagement and guiding of the saw blade at the side thereof; a file carrier; means to pivotally support the carrier and to have longitudinal reciprocatory movement; a fixed circularly arranged cam surface; a complemental cam member pivotally supported concentric of the fixed cam, said supplemental cam member being adapted to be adjusted by the file carrier at the extremity of its movement in one direction relative to the fixed cam to position the carrier with the file to engage a tooth space of the saw blade during the successive movement of the carrier and at the termination of such movement adjusted to permit the carrier to move by gravity away from the saw and maintain such position during the reverse movement of the carrier.

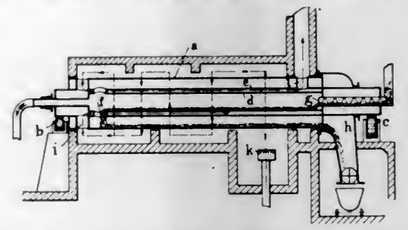
1,508,575. TANK. ELMER C. PITCHER and FRED W. SCHMITZ, San Francisco, Calif. Filed July 18, 1923. Serial No. 652,289. 6 Claims. (Cl. 217—97.)



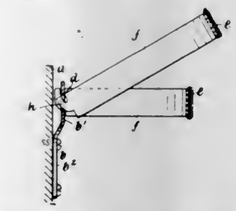
1. A tank consisting of a side wall and bottom, composed of staves and having grooves in the joints of said staves; and spaced passages in the opposite ends of each of said side wall staves communicating with said bottom grooves.

1,508,576. SEAT FOR VEHICLES. EDWARD H. REMDE, Cleveland, Ohio, assignor to The Baker R & L Company, Cleveland, Ohio, a Corporation of Ohio. Filed Feb. 4, 1922. Serial No. 534,267. 3 Claims. (Cl. 155—13.)

1. In mechanism of the class described, the combination with a vehicle having a floor, a front wall and a dash, of a seat having front and rear legs, a seat member and a back, means for pivoting the front legs to said floor, means for trunnioning the lower end of said back on said seat member to permit it to be positioned upon the latter, and means for revolubly supporting said seat member on said legs, whereby the back can be folded on said seat member and the seat member revolved and said seat swung forwardly below said dash and in close proximity to said front wall.



1,508,577. BRAKE FOR GYRATORY CENTRIFUGALS. EUGENE ROBERTS, Salt Lake City, Utah, assignor to The Western States Machine Company, Salt Lake City, Utah, a Corporation of Utah. Filed Aug. 30, 1920. Serial No. 406,857. 12 Claims. (Cl. 188—78.)



2. In a brake for a gyratory centrifugal or the like the combination of a rotary brake element secured to and rotating with the gyratory shaft, movable brake members mounted on a fulcrum support to be moved against and away from the rotary element, friction shoes mounted in said brake members upon universal joints whereby the friction shoes adjust themselves to the angular deflection of the rotary element out of the plane of movement of said brake members by reason of the pressure between the shoes and said rotary element in order to equalize the pressure on different portions of the friction surfaces, substantially as described.

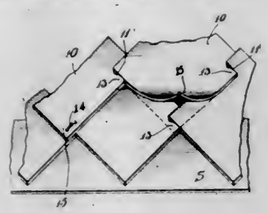
1,508,578. APPARATUS FOR THE DISTILLATION OF COAL AND OTHER SUBSTANCES. ARNOLD RÜHR, Nuremberg, Germany, assignor to Kohlenscheidungs-Gesellschaft m. b. H., Berlin, Germany, a Corporation of Germany. Filed Oct. 9, 1923. Serial No. 667,460. 3 Claims. (Cl. 202—4.)

3. Apparatus for distilling coal and the like, comprising a casing provided with a source of heat and a chimney near one end, a drum rotatably mounted in said casing and communicating with a discharge outlet at its end adjacent said end of the casing, the other end of said drum being closed, a jacketed tube carried coaxially within said drum, and means to feed the material to be treated into the end of said tube adjacent said discharge outlet, the other end of said tube having openings for the passage of the material into the said drum, and the jacket wall of said tube having openings for the admission of the heating gases at its end beyond the closed end of the said drum and for the escape of said gases into said chimney at its end adjacent said discharge outlet.

1,508,579. CURTAIN ROD. CHARLES SALTENBERGER, Paterson, N. J. Filed Jan. 22, 1923. Serial No. 614,096. 3 Claims. (Cl. 156—19.)

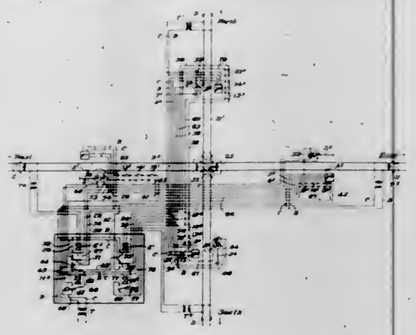
2. In combination, a curtain rod having its extremities bent off in the same direction and having upturned end portions forming hooks, and fixtures each having an upright wall formed with a hole receiving one of the hooks, each extremity bearing endwise against the corresponding wall below the hole thereof and the corresponding hook bearing against the relatively opposite face of said wall above the hole.

1,508,580. DOOR SWING. LOUIS F. SCHOELKOPF, Madison, Wis. Filed Dec. 4, 1922. Serial No. 604,891. 3 Claims. (Cl. 268—9.)



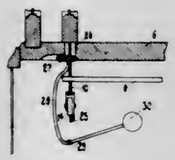
1. In a door swing, the pivoting of the opening and closing force in the angle of travel, by means of the combining of an air engine and springs, whereby the engine moves the door through a portion of its travel, and the springs complete the travel.

1,508,581. SHINGLING METHOD. JOHN SHEA, New York, N. Y. Filed Apr. 16, 1924. Serial No. 706,831. 4 Claims. (Cl. 108—9.)



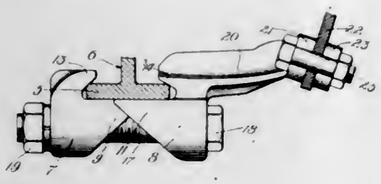
1. The herein described method of laying shingles which consists in laying rectangular shingles in courses substantially parallel to the lower edge of the roof, the adjacent shingles of the adjacent courses lying in rows

at an oblique angle with said edge of the roof, a corner portion of a shingle being slotted to form a tongue to pass beneath the side portion of the adjacent shingle in the next lower course, a shingle in the oblique row of the second mentioned shingle being positioned so as



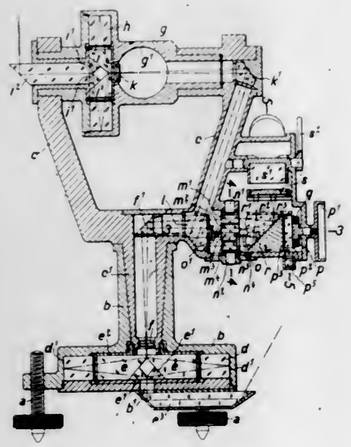
to abut against an edge of said slot opposite said tongue of the first mentioned shingle, and a shingle in the oblique row of the first mentioned shingle overlapping the side portion of the third mentioned shingle so as to cover and render said slot weather tight.

1,508,582. RAILWAY-TRAFFIC-CONTROLLING APPARATUS. JACOB B. STRUBLE, Oakland, Calif., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Feb. 23, 1922. Serial No. 538,658. 24 Claims. (Cl. 246—114.)



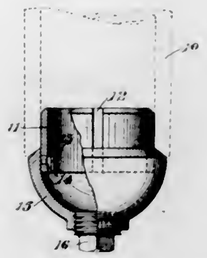
1. In combination, two intersecting railway tracks, a normally open derail in each track, and means set into operation by a train approaching the intersection on either track for closing the derail in such track provided the derail in the other track is open.

1,508,583. DUST-PREVENTING DEVICE. JOHANNES TACOMA and CAMILLE DE VLEESCHOUWER, Amsterdam, Netherlands. Filed Aug. 4, 1921. Serial No. 489,659. 1 Claim. (Cl. 20—16.)



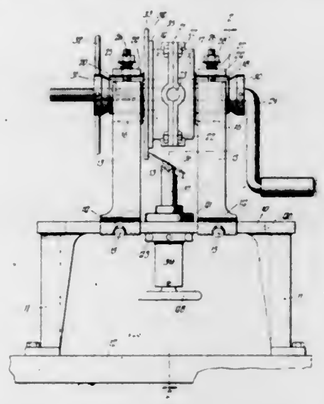
A dust preventing device for use in connection with mechanism for doors of show cases and the like having a slot therein for the reception of a part of said mechanism, comprising a lever pivoted on a horizontal axis, a bar having a bevelled edge connected to said lever, and a counterweight disposed on said lever for maintaining said bevelled bar over said slot.

1,508,584. BRACKET FOR SNUBBERS AND THE LIKE. HAROLD D. THOMAS and WILLIAM H. ODLUM, Chicago, Ill., assignors to Lincoln Products Company, Chicago, Ill., a Corporation of Delaware. Filed June 29, 1923. Serial No. 648,523. 4 Claims. (Cl. 267—10.)



1. The combination with a flange and the end portion of a snubber strap extending at an angle thereto, of a bracket therefor comprising a pair of bracket members, each having a pair of horizontal separated fingers adapted to engage the under surface of the flange and each having an inwardly projecting hook finger in its upper portion adapted to engage the edge of the flange at a point centrally above the two fingers aforesaid, the fingers of one bracket member being adapted to telescope between those of the other bracket member, there being a transversely extending through opening in each bracket member, enlarged at its inner end, a through bolt extending through said openings to draw them together, a bracket arm extending outwardly from one bracket member and having at its outer end a clamping surface lying substantially parallel to the direction of the snubber strap, and means for clamping the snubber strap against said surface, substantially as described.

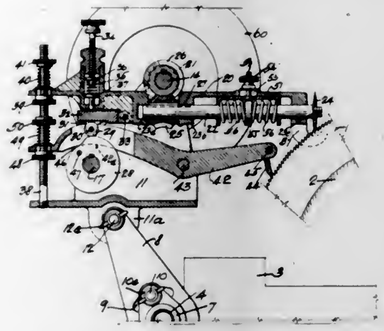
1,508,585. THEODOLITE. HEINRICH WILD, Heerbrugg, Switzerland. Filed May 13, 1921. Serial No. 469,195. 5 Claims. (Cl. 88—2.7.)



1. In a theodolite, a divided circle, a reading microscope, optical means for simultaneously imaging two opposite points of the divided circle in the field of said microscope, relatively movable pairs of plano-parallel glass plates, each pair inserted in the path of rays from a respective one of the two images, and means for adjusting the pairs simultaneously in opposite directions.

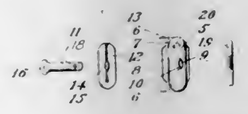
1,508,586. FLOATING PLUG FOR WELL CASINGS. REUBEN C. BAKER, Coalinga, Calif., assignor to Baker Casing Shoe Company, Los Angeles, Calif., a Corporation of California. Filed July 5, 1922. Serial No. 572,887. 5 Claims. (Cl. 166—4.)

1. In combination with a casing shoe an expansive sleeve extending into the lower end of the shoe and being frictionally held, and a plug carried by said sleeve to close the lower end of the shoe.



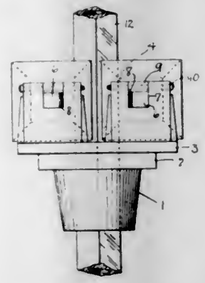
1,508,587. REFACING TOOL. ORREN E. BARBER, Chicago, Ill., assignor, by direct and mesne assignments, to Kirk-Barber Company, a Copartnership composed of W. T. Kirk, A. T. Kirk, and O. E. Barber, Chicago, Ill. Filed Jan. 30, 1924. Serial No. 689,499. 11 Claims. (Cl. 82—1.)

1. A device for refacing the ring gear seat of a differential cage, wherein the cage is provided with opposed hub portions, the peripheries of which determine the axis of the ring gear when in use, said device comprising spaced V-shaped bearings for journaling said hub portions, yielding means for holding said hub portions against said V-shaped bearings, a cutting tool, means for relatively rotating the cage and tool, and means for feeding said tool across said seat.



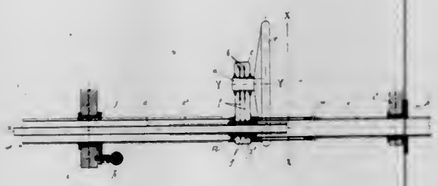
5. A device for refacing the ring gear seat of a differential cage wherein the cage is provided with opposed hub portions, the peripheries of which determine the axis of the ring gear when in use, said device comprising spaced bearing members having V-shaped bearing surfaces, plates cross the open sides of said bearing members for urging said hubs toward the converging surfaces of said bearing members to center said hub portions, means for clamping said plates to said device, and springs interposed between said plates and said device to permit said plates to yield.

1,508,588. SAW GUMMER AND SHARPENER. THOMAS C. BLACK, Memphis, Tenn. Filed May 2, 1923. Serial No. 636,018. 9 Claims. (Cl. 76—40.)



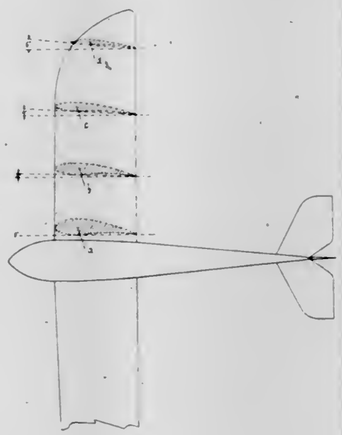
1. On a saw gummer and sharpener the combination with a longitudinal shaft, means for rotating the same, a disc file carried thereon and means for bringing the same into cutting relation to a tooth to be filed, a yoke surrounding said shaft, a collar on said shaft intermediate the arms of said yoke, resilient means interposed between the collar and each yoke arm, to permit the shaft to automatically adjust itself in both directions axially, to adjust the file to variations in tooth location.

1,508,589. WINDING KEY FOR CAMERAS. CARL A. BORNMANN, Jr., Binghamton, N. Y., assignor to Ansco Photo-Products, Incorporated, Binghamton, N. Y. Filed Jan. 29, 1924. Serial No. 689,268. 8 Claims. (Cl. 242—71.)



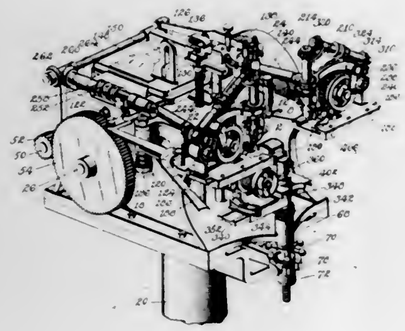
1. A winding key for cameras comprising a housing, a friction plate in said housing, and a stem engaged by said friction plate.

1,508,590. GRIPPING DEVICE FOR ROTARIES. BURWELL BOYKIN, Jr., Beaumont, Tex. Filed June 5, 1922. Serial No. 566,155. 3 Claims. (Cl. 255—23.)



1. A gripping device for rotary drive stems comprising a supporting base, two parallel shafts mounted in spaced relation on said base, and gripping blocks mounted on said shafts, each of said blocks having a polygonal periphery, one side of which contacts with said base the sides thereof being grooved to fit a drive stem.

1,508,591. MEANS FOR CONTROLLING AEROPLANES. LOUIS BREGUET, Paris, France, assignor to Societe Anonyme des Ateliers d'Aviation Louis Breguet, Paris, France. Filed Nov. 8, 1921. Serial No. 513,720. 5 Claims. (Cl. 544—29.)

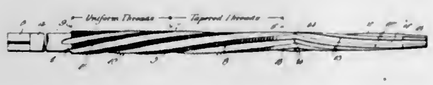


1. A single hand wheel support for the control of the warping and of the depth of aeroplanes and other aerial apparatus comprising means for causing the support to pivot at its lower end so as to be able to bring the wheel in front of one or the other of two pilots positioned side by side without exerting any action upon the controls, means for controlling the warping by rotation of the hand-wheel, and means for operating the depth rudder by a longitudinal displacement of the hand wheel along its axis.

1,508,592. CONSTRUCTION OF AEROPLANE WINGS OF VARIABLE RELATIVE THICKNESS FOR THE PURPOSE OF IMPROVING THEIR AERODYNAMIC QUALITIES. LOUIS BREGUET, Paris, France, assignor to Societe Anonyme des Ateliers d'Aviation Louis Breguet, Paris, France. Filed Nov. 3, 1922. Serial No. 598,909. 1 Claim. (Cl. 244—12.)

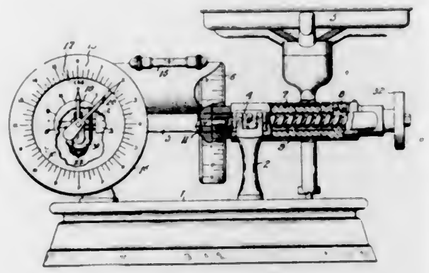
A method and form of construction of wings having a variable relative thickness for the purpose of improving their aerodynamic qualities and particularly the improvement in the flying shape and the mechanical efficiency, said construction being characterized in that the incidence of action upon the air of the different elements or outlines of the wings, as measured by the angle made by the chord of the outlines with the direction of the relative speed of the air, varies inversely with the relative thickness of said outlines.

1,508,593. MACHINE FOR USE IN THE LASTING OF BOOTS AND SHOES. ELI BROTHERS and WILLIAM E. SCARLETT, Lynn, Mass., assignors to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Jan. 17, 1920. Serial No. 352,195. 172 Claims. (Cl. 12—4.)



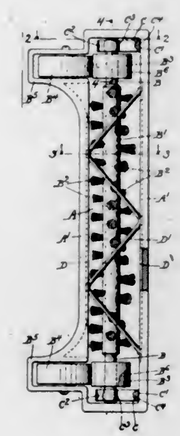
1. In a machine of the class described, the combination with means for working an upper over a last, of means for driving anchor tacks at the opposite sides of the shoe, and means for applying a binder round the end of the shoe and for bending it round said tacks at the opposite sides of the shoe successively.

1,508,594. STAY BOLT TAP. GORDON MARK BRUBAKER, Jr., Millersburg, Pa., assignor to W. L. Brubaker & Bros. Company, Millersburg, Pa. Filed Jan. 24, 1924. Serial No. 688,232. 3 Claims. (Cl. 10—140.)



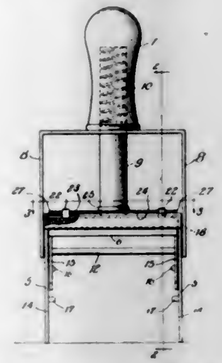
3. A staybolt tap having a reaming portion extending spirally in one direction and a tap portion extending spirally in the reverse direction.

1,508,595. METHOD OF MAKING STAY-BOLT TAPS. GORDON MARK BAUBAKER, Jr., Millersburg, Pa., assignor to W. L. Brubaker & Bros. Company, Millersburg, Pa. Filed Jan. 24, 1924. Serial No. 688,233. 4 Claims. (Cl. 76—101.)



1. The method of making a combined reamer and tap having reaming and threading portions arranged one in advance of the other, which consists in threading a suitable blank, milling flutes extending spirally in one direction along the tap portion of the blank, milling continuing flutes extending spirally in the reverse direction along the reaming portion of the blank, grinding out of the ridges between the intersecting ends of the flutes, and then suitably finishing the surfaces of the tool.

1,508,596. MICROMETER WEIGHING INSTRUMENT. CHARLES WILLIAM CALDWELL, Johannesburg, Transvaal, South Africa. Filed Nov. 19, 1923. Serial No. 675,654. 6 Claims. (Cl. 265—29.)



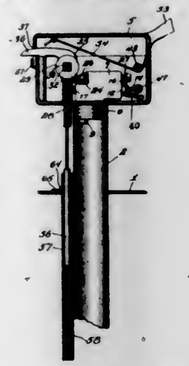
1. In a micrometer scale, the combination of a pivoted beam, a rotatable poise movable along the beam, a dial on the beam, counterweighted hands pivoted to rotate over the dial, a non-traversible shaft rotatably mounted on the beam for operating the poise, a hand wheel for rotating said shaft, gear wheels on said shaft, and gear trains operating the dial hands from said shaft, said gear trains having different velocity ratios whereby the hands are rotated at different angular speeds.

1,508,597. VACUUM CLEANER. GEORGE CLEMENTS, Chicago, Ill., assignor to Clements Mfg. Co., Chicago, Ill., a Corporation of Illinois. Filed Aug. 4, 1921. Serial No. 489,672. 1 Claim. (Cl. 15—157.)

In a vacuum cleaner, a suction nozzle, the opposed lips of said nozzle being grooved in a plane adjacent to and parallel with the lower edge of the nozzle, and a guard element adapted to be yieldingly and removably mounted in the suction nozzle, portions of said guard element penetrating said grooves on each side of the nozzle.

1,508,598. HAND STAMP. WILLIAM L. EDGARTON, Chicago, Ill. Filed Nov. 22, 1923. Serial No. 676,256. 9 Claims. (Cl. 101—104.)

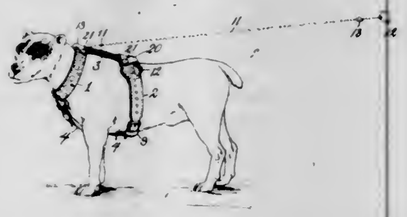
1. In a hand stamp, the combination with a supporting frame, of an inking pad mounted on said frame, and comprising a back plate, means on said plate for engaging said frame, and ink absorbing material carried by said plate



---

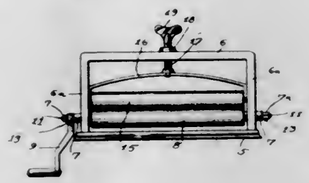
1,508,599. TRANSMISSION BAND BRACKET. CARL E. FLATTER, Anderson, Ind. Filed Apr. 16, 1923. Serial No. 632,424. 2 Claims. (Cl. 188—249.)

2. A transmission band having longitudinally spaced arched portions at one of its ends, and a detachable bracket provided with spaced lugs at one end and with a tongue extending beyond the lugs and slidably received in the outer arched portion, the intermediate portion of said bracket being cut out to form a second tongue engaging the remaining arched portion.



1,508,600. CIGAR LIGHTER. SAMUEL E. GUINN, Johnson City, Tenn. Filed June 16, 1923. Serial No. 645,882. 7 Claims. (Cl. 67—41.)

1. A cigar lighter, comprising a fuel pipe, an igniter casing carried thereby and including an operating section, a fuel block arranged within the casing and formed with a gas passage to establish communication between the gas pipe and a jet opening formed in the block, a valve



for controlling said gas passage, means cooperating with said valve for operating said valve to open position or permit it to move to closed position, a spark producing means arranged adjacent the jet opening and including a sparking disc, an automatic operating means for said disc, said operating means being set for operation in a predetermined movement of the operating section of the igniter casing and thereupon released to actuate the disc, the valve operating means being actuated in such predetermined movement of the operating section to open the valve prior to the release of the automatic operating means for the igniter disc.

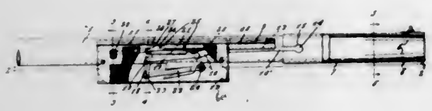
1,508,601. LEASH HARNESS FOR DOGS. GEORGE HUFF, Glendale, Calif. Filed July 3, 1922. Serial No. 572,578. 10 Claims. (Cl. 119—96.)

1. A harness for dogs comprising a collar; a saddle; and a leash line connected to said collar and saddle.

1,508,602. CLOTHES WRINGER. ALMA R. JONES, Cincinnati, Ohio. Filed July 13, 1923. Serial No. 651,325. 1 Claim. (Cl. 68—32.)

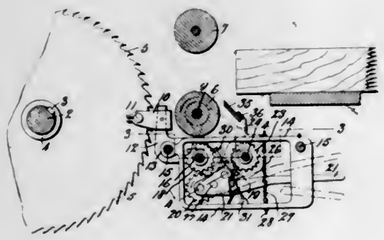
A clothes wringer having a frame, a rotatable wringer roll journaled in the frame, a spring-pressed wringer roll in the frame cooperating with said first-named roll, one of said rolls having a shaft extending beyond the frame on both sides thereof, detachable coupling means on said extended portions of the shaft for engaging a driving handle, and a driving handle detachably connected to one of the extended shaft portions.

1,508,603. PROCESS OF PREPARING BISMUTH SALTS OF MERCURATED ORGANIC COMPOUNDS CONTAINING AN ACID RESIDUE AND THE PRODUCTS OBTAINABLE THEREFROM. WILHELM KOLLE, HUGO BAUER, and ERNST MASCHMANN, Frankfort-on-the-Main, Germany, assignors to Farbwerke vorm. Meister Lucius & Brüning, Hochst-on-the-Main, Germany, a Corporation of Germany. Filed Jan. 23, 1923. Serial No. 614,471. 2 Claims. (Cl. 260—11.)



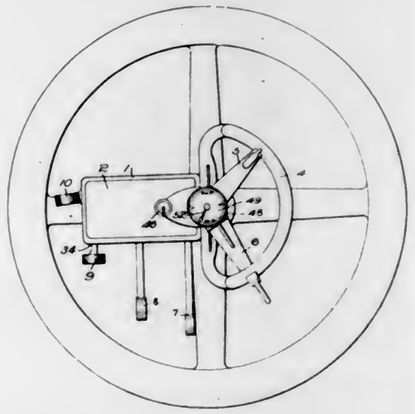
2. As new products, the bismuth salts of organic compounds of mercury each containing an acid residue, which can be obtained by the action of mercury-organic compounds containing an acid residue in the form of their alkali salts upon bismuth salts, said new products being of therapeutical efficiency in the treatment of syphilis and less toxic than would be expected from the amount of mercury which they contain.

1,508,604. AEROPLANE. WARD LEATHERS, Haworth, N. J. Filed Dec. 4, 1917. Serial No. 205,341. 10 Claims. (Cl. 244—12.)



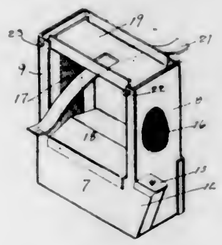
3. In an aeroplane, a series of tandem aerofoils having angles of incidence progressively increasing from forward to rear, but the increase in such angle of the rearward aerofoils being progressively less.

1,508,605. GUN CONSTRUCTION. ALBERT LEGETT and SHARED F. LEGETT, Jackson, Miss. Filed Feb. 1, 1923. Serial No. 616,425. 2 Claims. (Cl. 42—79.)



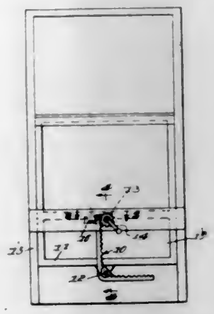
1. In a device of the character described, a gun barrel having longitudinally disposed slots formed at the discharge end thereof, a sleeve having a cam surface adapted to engage the portions of the gun barrel between the slots to reduce the diameter of the discharge end of the barrel, said sleeve having openings formed adjacent to the inner end thereof, link members having heads positioned in the openings, ribs formed laterally of the gun barrel, a sliding housing having inwardly extended flanges movable between the ribs of each side of the gun barrel, and means in the housing and engaging the inner ends of the link members for moving the sleeve longitudinally of the gun barrel.

1,508,606. GANG-SAW EDGER. JAMES T. MACKIE, New Westminster, British Columbia, Canada. Filed May 4, 1923. Serial No. 636,674. 5 Claims. (Cl. 143—37.)



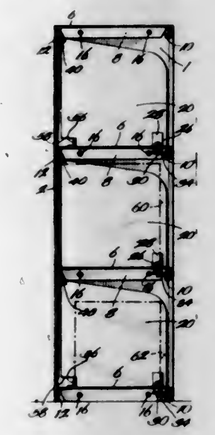
1. In a gang saw edger, the combination with the saw shaft and saws endwise movable thereon and rotatable with it, of means for separately moving each saw endwise on the saw shaft, said means comprising a screw secured against rotation across the frame of the machine to be parallel with the axis of the saw shaft, a nut for each saw rotatably mounted on the screw, a power means and means for engaging and disengaging each nut thereto for rotating the nut, and means for so connecting the nut to its saw that endwise movement of the nut due to its rotation on the screw will impart a corresponding endwise movement to the saw of its shaft.

1,508,607. OPERATING CONTROL DEVICE. EDGAR J MARTEL, Laconia, N. H. Filed July 12, 1920. Serial No. 395,652. 10 Claims. (Cl. 200—44.)



1. A switch control case for automobiles having switches therein and adapted to be positioned at one side of the steering post and supported thereby, and having also a laterally extended horn member with an illuminated switch control case thereon and switches therein positioned over the steering post head.

1,508,608. SPRING-OILING DEVICE. MILES F. MOORE, San Francisco, Calif., assignor of one-half to William F. Hills, Mountain View, Calif. Filed July 21, 1923. Serial No. 653,036. 1 Claim. (Cl. 184—1.)

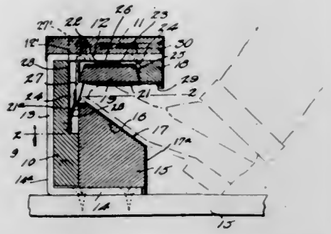


The combination with a leaf spring, of a device for lubricating the surfaces between the leaves, comprising a lubricant holding receptacle, wick-holding channel portions formed integral with the receptacle, a cover for the receptacle including side members terminating in curved extremities for positioning the ends of the wicks in the receptacle, a top plate secured to the extremities of the channel portions, and a spring secured to said top plate for engaging the leaf spring.

1,508,609. SASH-OPERATING MECHANISM. JOHN MCARTHUR, Detroit, Mich. Filed Feb. 14, 1922. Serial No. 536,480. 4 Claims. (Cl. 268—4.)

1. A sash operator having cooperative rack and pinion elements of which the former is of angular construction and pivotally mounted adjacent the angle, the pinion successively engaging the arms of the rack and rotating the same about its pivot to dispose the last engaged arm in parallelism with the path of movement of the sash.

1,508,610. SHELVING. JOHN B. O'CONNOR, Aurora, Ill., assignor to Lyon Metallic Manufacturing Company, Aurora, Ill., a Corporation of Illinois. Filed June 12, 1922. Serial No. 567,526. 2 Claims. (Cl. 211—16.)

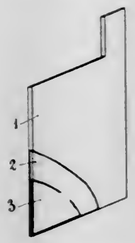


1. A storage rack having shelves and upright removable partitions, the shelves having upstanding clips open top and front for holding the partitions against lateral movement and permitting them to be inserted or removed by a substantially straight-in push or straight-out pull; and socket connections at the rear of the rack in position to engage the upper rear edge of the partitions, said socket connections forming abutments for limiting the rearward movement of the partitions.

1,508,611. BURGLAR ALARM. ANTHONY J. PARISSI, Cohoes, N. Y. Filed Nov. 5, 1920. Serial No. 421,934. 13 Claims. (Cl. 200—52.)

1. A control for an electrically operated alarm, comprising an inverted housing, a movable alarm control member mounted under the housing and adapted to be moved upwardly therein, and a forwardly projecting

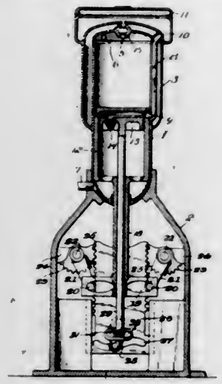
combined foot guide and guard the surface of which is above the floor and below and spaced from the housing and the alarm control member, whereby to prevent



accidental actuation of the alarm control member and consequent sounding of an alarm by an object thrust against or under the front of the housing.

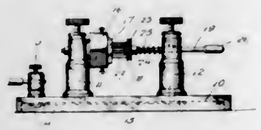
1,508,612. BRACELET HOOK. JAMES E. POTTER, Providence, R. I., assignor to A & Z Chain Co., Providence, R. I., a Corporation of Rhode Island. Filed Mar. 4, 1924. Serial No. 696,914. 5 Claims. (Cl. 24—238.)

4. A connector comprising a body having side walls, a hook secured to said body at one end thereof, an endways slidable tongue in said body for normally closing said hook, a spring in said body for urging said tongue to closed position, and a back plate for said body having end walls and secured to the body by folded-over edges of said side walls.



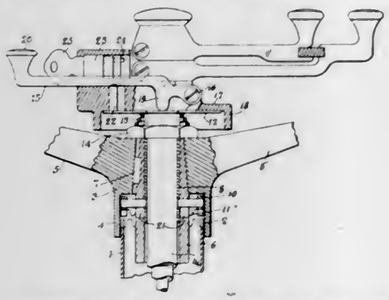
1,508,613. NEGATIVE PLATE FOR ELECTRIC ACCUMULATORS. ADOLFO POUCHAIN, Turin, Italy. Filed Aug. 18, 1920. Serial No. 404,453. 3 Claims. (Cl. 204—29.)

1. A negative electrode for an electric accumulator employing an acid electrolyte, comprising a metallic support, with a surface of silver and a zinc layer electrolytically deposited on said support.



1,508,614. ENGINE. ALVAH L. POWELL, Miles City, Mont., assignor, by mesne assignments, to A. L. Powell Power Company, Incorporated, a Corporation of Montana. Filed Dec. 10, 1919, Serial No. 343,953. Renewed Feb. 11, 1924. 4 Claims. (Cl. 123—66.)

4. In an engine of the class described comprising a power cylinder having an opening through the side wall thereof, a reciprocating hollow piston within the cylinder having a passage through the side wall thereof, a member arranged for movement within the hollow piston and adapted to precompress a charge therein and deliver the same through the passage in the piston and the opening in the cylinder at the limit of the outstroke of the piston, a storage chamber, a conduit for

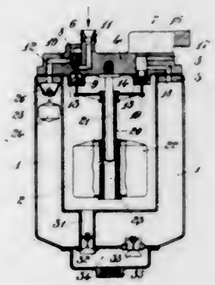


leading the precompressed charge from the cylinder to the storage chamber, a communication from the storage chamber to the head of the cylinder and means for moving the hollow piston and the said member at different rates of movement in the same direction.

1,508,615. CRYSTAL DETECTOR FOR RADIO APPARATUS. EUGENE C. ROWLEY, Seattle, Wash. Filed Dec. 27, 1922. Serial No. 609,292. 6 Claims. (Cl. 250—31.)

1. A multi-point contact element for a crystal detector comprising a conducting disk, a clamping disk, means for securing said disks together, and a plurality of cat whiskers secured between said disks.

1,508,616. STEERING-WHEEL LOCK. LOUIS R. RUTHENBURG, Dayton, Ohio. Filed Feb. 23, 1923. Serial No. 620,793. 4 Claims. (Cl. 70—129.)

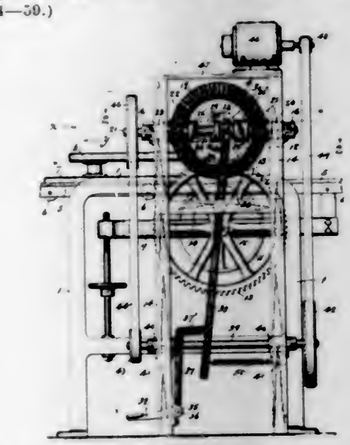


1. In combination, a steering wheel and steering column, a stationary member, a means of locking said stationary member and steering wheel and steering column to one another, means of locking said locking means in a predetermined position and means of moving said locking means into a predetermined position independently of the lock, said independently moving means and said lock wheel being located above said steering wheel.

1,508,617. DEHYDRATED LIGNITE AND PROCESS OF PRODUCING THE SAME. EUGENE P. SCHOCH, Austin, Tex. Filed July 17, 1922. Serial No. 575,656. 4 Claims. (Cl. 44—1.)

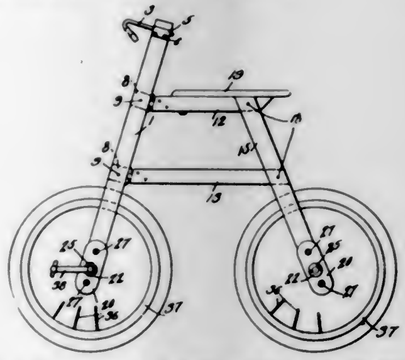
1. The process of treating lignite which comprises heating the same in contact with a hydrocarbon oil to drive off the moisture present, and removing the oil not absorbed by the material, substantially as described.

1,508,618. LIQUID-FUEL SUPPLY DEVICE FOR INTERNAL COMBUSTION OR LIKE ENGINES. OTTO SIEFERT, Berlin, Germany. Filed May 2, 1924. Serial No. 710,660. 6 Claims. (Cl. 103—236.)



1. A liquid fuel supply device comprising an inner chamber; an outer chamber; a ring forming a cover for said outer chamber; a cover for said inner chamber secured to said ring; a double suction valve in said cover adapted to control the suction for both chambers; an air inlet valve in said cover adapted to control the supply of air into the chambers; a bridge member secured to said valves; a float in said inner chamber adapted to actuate the valves by means of said bridge; a fuel inlet for each chamber; and a fuel outlet for each chamber.

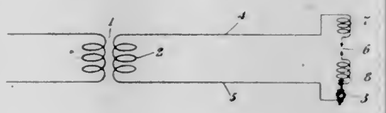
1,508,619. CLOTHESPIN. AXEL G. SIMONSON, County of Hansford, Tex. Filed July 6, 1923. Serial No. 649,882. 1 Claim. (Cl. 24—139.)



A clothes pin formed from a single length of wire and including a helical spring portion and gripping jaw portions connected therewith, each of the jaw portions being formed of two strands, the strands of one jaw being connected to corresponding ends of the helix turns of the spring portions and forming continuations thereof, one strand of the other jaw portion being connected with the other end of one of the helix turns, the other end of the other helix turn being coiled around the helix turns at one side thereof, the other strand of said other jaw being coiled around the helix turns at a point diametrically opposite to that of the coiled end of the said helix turn, the said ends of the strands of the jaw portions being curved concentrically with the helix turns of the spring portion adjacent their points of connection therewith.

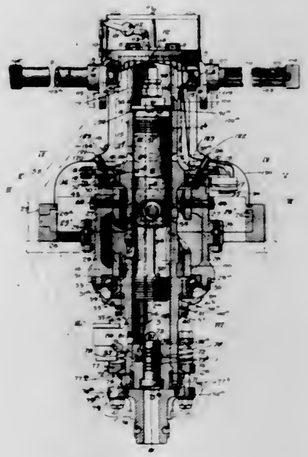
1,508,620. REVERSING MECHANISM FOR IRONING MACHINES. CHARLES N. SING, Newark, N. J. Filed Apr. 14, 1921. Serial No. 461,280. 2 Claims. (Cl. 74—50.)

1. A reversing transmission mechanism for attachment to ironing machines, comprising a supporting framework, a driven shaft mounted on said frame-work, a coupling means for operatively connecting said driven shaft to the ironing machine, a driven bevel gear on said shaft, a driving shaft supported by said frame-work in front of said driven bevel gear, bevel pinions loosely mounted on said driving shaft to respectively mesh with opposite sides of said driven bevel gear, each bevel pinion having clutch jaws, a shiftable clutch-member keyed on said driving shaft intermediate said clutch-jaws, a power source comprising an electric motor supported by said frame-work, a speed reduction transmission means intermediate said motor and said driving shaft, and means for actuating said clutch-member to engage one or the other of said bevel pinions.



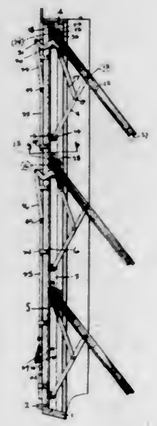
1,508,621. BICYCLE. FRANCIS M. SISK and HUDSON M. SISK, Atlanta, Ga. Filed Oct. 17, 1921. Serial No. 508,205. 1 Claim. (Cl. 208—93.)

In a bicycle, a fork including connected strips having cut away portions forming the arms of the fork, a frame including horizontal bars, and hinges each having a leaf



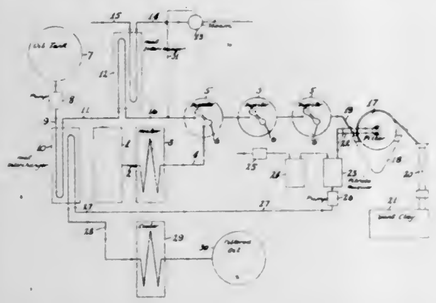
extending between and clamped by the strips of the front fork, a leaf extending into and secured to one of the horizontal bars, and a handle bar straddling and secured to the strips of the front fork to hold them against separation from the hinge leaves therebetween.

1,508,622. SPARK-AMPLIFYING DEVICE. RENSSELAER J. SMITH, South Bethlehem, N. Y. Filed Apr. 21, 1921. Serial No. 463,197. 9 Claims. (Cl. 123—148.)



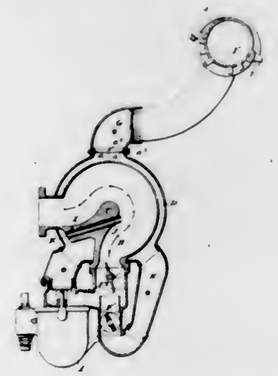
1. An ignition system comprising a secondary circuit having a secondary coil and spark gap, and a spark amplifying device in said secondary circuit comprising an inductance and an auxiliary spark gap in series with each other and also with said first-mentioned spark gap.

1,508,623. IMPACT OR PERCUSSIVE TOOL OF THE EXPLOSION-MOTOR TYPE. CHARLES S. SOMERVELL, Riverton, N. J. Filed May 31, 1922. Serial No. 564,825. 30 Claims. (Cl. 123—7.)



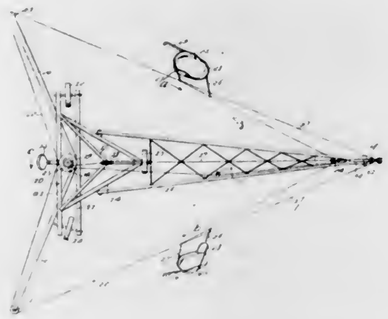
1. In an impact tool of the explosion type, the combination of a cylinder having a through bore, a piston-hammer slidably mounted in the bore of said cylinder, means for imparting movement to said piston-hammer in one direction only by an explosive force whereby said piston-hammer may be brought into forcible engagement with a tool bit or similar element, a rotor encircling the cylinder and journaled thereon, and comprising a fly wheel and a cam element carried by said fly-wheel and a cross-head carried by the piston-hammer and having ends projecting through the wall of the cylinder for cooperation with said cam, element whereby the latter may effect movement of the piston-hammer in one direction: said cam element being so related with respect to said cross-head as to permit rapid movement of the piston-hammer on its power stroke and receive its impetus therefrom and to impart a relatively slower movement to said piston-hammer on its non-working stroke: the movement of said fly-wheel being continuous at one speed.

1,508,624. WINDOW MOUNTING. ARTHUR C. SOULE, San Francisco, Calif., assignor to Simplex Window Company, San Francisco, Calif., a Corporation of California. Filed Nov. 9, 1921. Serial No. 513,930. 10 Claims. (Cl. 20—42.)



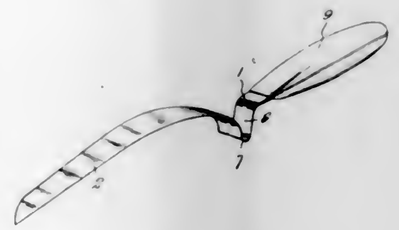
1. A window construction including a frame having guides on the opposite sides thereof; sashes in said frame; brackets on said sashes projecting beyond a face thereof; shoes slidably engaging said guides and pivotally connected to said brackets beyond the face of the sash and supporting means interposed between said sashes and frame.

1,508,625. METHOD OF BLEACHING PETROLEUM PRODUCTS WITH CLAY. CHARLES WALCOTT STRATFORD, San Francisco, Calif. Filed Mar. 21, 1921. Serial No. 454,209. 1 Claim. (Cl. 196—147.)



The method of clarifying and decolorizing petroleum products which consists in heating the clarifying agent, heating the petroleum product, continuously flowing the heated clarifying agent and heated petroleum product independently into a receptacle, mixing the hot petroleum product and hot clarifying agent therein, overflowing the combined hot mixed product from the said receptacle into a second receptacle, mixing the combined hot mixed product therein, overflowing the combined hot mixed product from the second named receptacle into a third receptacle and likewise mixing and overflowing the combined hot mixed product from the immediately preceding receptacle through a plurality of receptacles and filtering the combined hot mixed product overflowed from the last of said receptacles whereby to separate the clarifying agent and the decolorized petroleum product.

1,508,626. CARBURETOR. JOHN W. SWAN, Stamford, Conn. Filed Sept. 15, 1919. Serial No. 323,870. 6 Claims. (Cl. 48—180.)

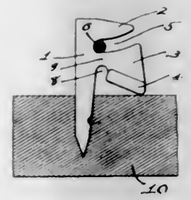


5. The combination with a carburetor and an intake manifold of an internal combustion engine, of a heating chamber surrounding said manifold for receiving heated air, a passage forming communication between the manifold and heating chamber, and an opening communicating with the passage intermediate its ends, said opening collecting the ungasified particles of fluid passing through the manifold with the gaseous mixture and introducing the same to the passage to be acted on by a current of the heated air and redelivered to the manifold in vaporized condition.

1,508,627. DITCHING, GRADING, AND BACK-FILLING MACHINE. CHARLES NATHANIEL TAYLOR, Hemingford, Nebr. Filed July 11, 1922. Serial No. 574,306. 8 Claims. (Cl. 37—116.)

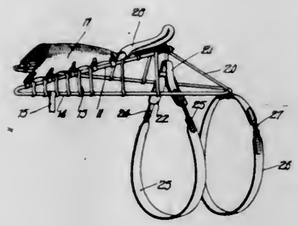
1. A machine of the type indicated having a truck carrying a laterally extending boom, and a scoop carrying hoisting cable provided with runs extending transversely respectively in front and in rear of the truck and between the longitudinal plane of the latter and the outer end of the boom and on transversely convergent lines.

1,508,628. PARING KNIFE. OLIVER CLARK TERRELL, Portland, Oreg. Filed May 8, 1924. Serial No. 711,855. 2 Claims. (Cl. 146—206.)



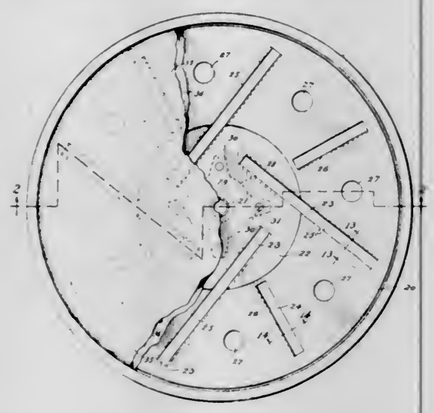
1. A paring knife blade having a plane end portion which merges into a series of successive and joined arcuate portions, the cords of each arc of the arcuate portions being of the same length and the arcs gradually increasing in depth from the plane end portion.

1,508,629. METHOD OF PRODUCING MOLYBDENUM AND MOLYBDENUM COMPOUNDS. GEORGE D. VAN ARSDALE, RUSH T. SILL, and HARLEY A. SILL, Los Angeles, Calif. Filed Nov. 6, 1922. Serial No. 599,430. 13 Claims. (Cl. 204—1.)



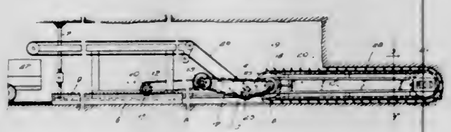
1. The process for extracting molybdenum from concentrates and ores, that includes roasting to convert sulphide compounds into oxides, then treating the calcine with dilute sulphuric acid to remove impurities, then treating the residue from the acid treatment to form an acid solution of sodium molybdate, then warming the resulting solution and electrolyzing it to precipitate molybdenum compounds at the cathode and to regenerate the depleted electrolyte for reuse as a solvent; then drying, dehydrating, and removing the deposit from the cathode.

1,508,630. PLASTERER'S NAIL. GEORGE F. VOIGHT, Oakland, Calif. Filed Sept. 22, 1921. Serial No. 502,387. 7 Claims. (Cl. 72—118.)



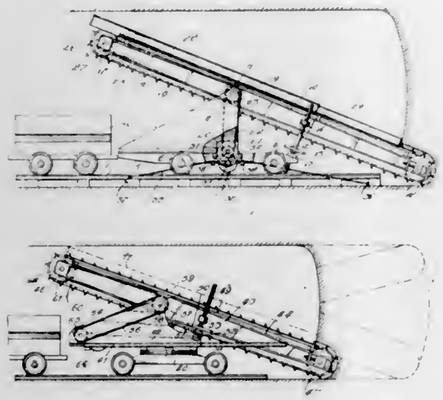
1. In a nail of the character described, in combination, a body portion comprising a shank member having an extension on one side at its upper end, a clamping member disposed below said extension, said extension and clamping member and shank disposed in the same plane, and a connection between said clamping member and said body portion, said connection having a notch cut in its lower side.

1,508,631. RIDING SADDLE. LOUIS PHILIP WELLMANN, Sr., Union Hill, N. J., assignor of one-fourth to Frances Bertha Victoria Wellmann, one-fourth to Charles Henry Wellmann, one-fourth to Louis Philip Wellmann, Jr., and one-fourth to Harry Edwin Wellmann, all of Union Hill, N. J. Filed June 27, 1923. Serial No. 648,148. 5 Claims. (Cl. 54—44.)



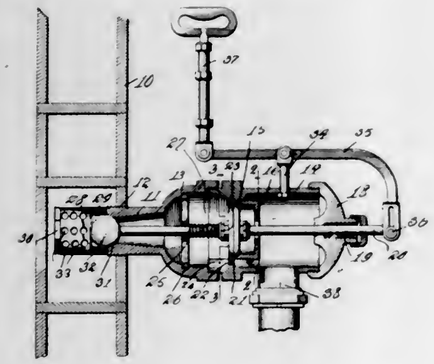
2. A saddle of the class described comprising a trussed frame, a neck piece connected to the sides of the frame, a seat mounted substantially centrally of the frame, and a girth for positioning the said frame over the withers.

1,508,632. TURNTABLE FOR PHONOGRAPHS. RAY B. WHITMAN, Bridgeport, Conn., assignor to Columbia Phonograph Company, Incorporated, Bridgeport, Conn., a Corporation of New York. Filed Dec. 19, 1921. Serial No. 523,361. 11 Claims. (Cl. 274—39.)



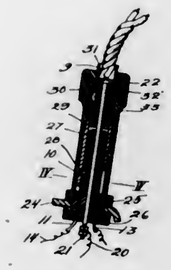
1. A turn-table for phonographs, comprising a sheet-metal disc having a plurality of perforations therein, to break up the diaphragm-effect of the turn-table.

1,508,633. MINING AND LOADING MACHINE. WALTER J. WILSON, Sewickley, Pa. Filed Oct. 9, 1917. Serial No. 195,560. 10 Claims. (Cl. 262—28.)



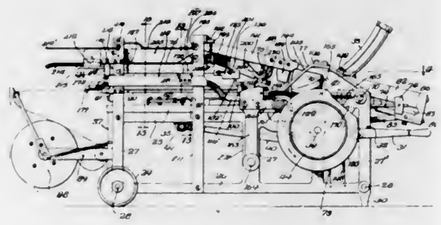
6. In a mining machine, the combination of a cutter bar and cutter chain adapted to cut all of the material within the path of the bar, and a guide whereby the excavated material may be supported as it is conveyed along the upper portion of said bar.

1,508,634. MINING AND LOADING MACHINE. WALTER J. WILSON, Sewickley, Pa. Filed Nov. 3, 1917, Serial No. 200,174. Renewed Apr. 18, 1924. 8 Claims. (Cl. 262—28.)



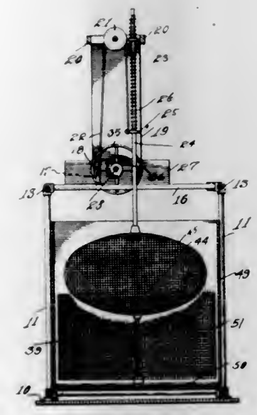
1. A mining machine of the cutter chain type, having a bar mounted on a horizontal axis with a chain having cutter bits coacting therewith and adapted to cut a kerf sufficiently wide to admit the bar, means for swinging said bar in a vertical plane to cut a vertical kerf, and means along said cutter bar adapted to keep the cuttings within the range of the cutter chain to provide a conveyor for conveying the excavated material.

1,508,635. SAFETY BLOW-OFF VALVE. RAYBON C. WOODHAM, Montgomery, Ala. Filed Sept. 16, 1922. Serial No. 588,727. 2 Claims. (Cl. 277—27.)



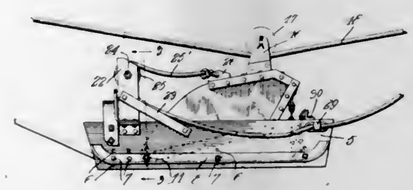
2. In combination, a body portion having a valve seat adjacent one end, and an enlarged extension at its other end a valve casing member threadedly mounted in said enlarged extension and provided with a valve seat intermediate its ends, a disk valve engageable with said latter valve seat, means for moving the disk valve from its seat, a stem projecting through the disk valve and through said body portion, a valve stem guide threadedly mounted in said body portion in its enlarged extension, said stem projecting through said guide, a spring disposed about the stem between the guide and the disk valve, a cage on the end of said body portion adjacent its valve seat, a check valve mounted in the cage and adapted to be moved from its seat by the stem when the disk valve is moved from its seat in the manner and for the purpose specified.

1,508,636. ELECTRIC SWITCH. ISABELL ALLEN, Kansas City, Mo. Filed Oct. 11, 1920. Serial No. 416,033. 2 Claims. (Cl. 200—6.)



1. An electric switch, comprising a sleeve of insulating material, a cylindrical insulating stem within the sleeve, and provided externally with a plurality of cavities, contacts in said cavities and projecting beyond the circumferential plane of the stem, a conducting sleeve fitting rotatably in the insulating sleeve and over said stem above said contacts and provided with a switch extension for successive engagement with said contacts, a fixed conducting sleeve engaging the first-named conducting sleeve, an insulating sleeve within the said second conducting sleeve, a third conducting sleeve, within the last-named insulating sleeve, a rod in electrical engagement with the third conducting sleeve, and carried by the said stem, and a pair of electrical conductors respectively connected to the first-named conducting sleeve and said third conducting sleeve.

1,508,637. WRAPPING MACHINE. HARRY Y. ARMSTRONG, Syracuse, N. Y., assignor of one-half to William L. Hall, Chicago, Ill. Filed Mar. 10, 1922. Serial No. 542,541. 62 Claims. (Cl. 93—2.)

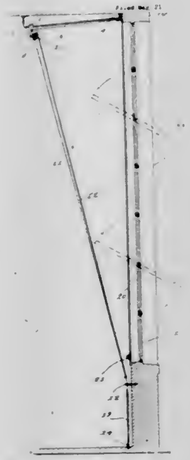


1. A machine for enfolding articles in the free end of a continuous wrapper web by a three stage feed of the wrapper web, comprising wrapping mechanism, including means to move an article thereto through, means to feed a length of the free end of the web across, and to assemble it with, the article to correspond with one vertical and a portion of the bottom dimension of the article, mechanisms successively operative while the said article is moving through the wrapper mechanism to draw the web in the respective second and third feed stages to correspond to the width dimension of the article, and to the other vertical and remaining bottom dimensions, and means to sever from the web the wrapper to permit its margins to be lapped one on the other and on the article.

1,508,638. WASHING MACHINE. WILLIAM C. AYERS, Scottsville, Ky. Filed Feb. 28, 1923. Serial No. 621,836. 9 Claims. (Cl. 68—19.)

1. A washing machine including a reciprocable dasher, means for reciprocating the dasher, a clothes containing basket, and connections between the basket and the dasher whereby during the final portion of the upstroke of the dasher the basket will be violently moved upwardly.

1,508,639. BUCKET. FITCH H. BEACH and FRED S. BEACH, Charlotte, Mich. Filed Mar. 19, 1924. Serial No. 700,285. 6 Claims. (Cl. 37—147.)



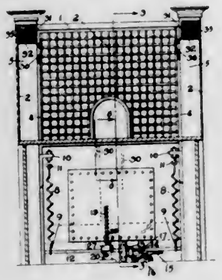
1. In a scoop, a supporting frame including side bars, a scooping member pivotally supported between the side bars of the frame, a flexible member having connection with the forward ends of the frame to move the frame and scoop in one direction, a flexible member having connection with the scoop and contacting with the frame to move the frame in the opposite direction and simultaneously move the scoop to a discharging position.

1,508,640. WINDOW SHADE. WILLIAM BLANCHARD, Boston, Mass. Filed May 21, 1923. Serial No. 640,458. 2 Claims. (Cl. 156—10.)

2. The combination with a pair of inclined tracks having upwardly directed terminal portions adapted for attaching the tracks to a ceiling, carriages mounted on said inclined tracks, holders pivotally suspended from said carriages, a roller having pintles connected to said holders, flexible elements connected to said holders and adapted for securing the holders in an adjusted position,

guide rods connected to said holders, contractile springs connected to the lower ends of the guide rods, a shade connected to said rollers and having eyelets receiving

said guide rods, and lengths of tape connected to said rollers adjacent the ends thereof and forming a means whereby to adjust said shade.

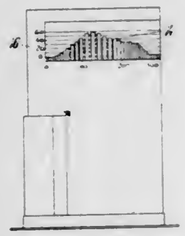


1,508,641. CLINKER REMOVER. ALEXANDER BOESRUP, Des Moines, Iowa. Filed July 2, 1923. Serial No. 649,602. 1 Claim. (Cl. 294—11.)

A clinker remover comprising a pair of similar members each composed of half round rods with their flat faces resting against each other, each of said members having clinker engaging fingers formed on one of their ends, handle loops formed on the opposite ends of said members, one of said members being longer than the other and having an inclined portion near the handle end thereof, a loop for holding the members together mounted on said members near the finger ends thereof, a stop for limiting the movement of the loop relative to one of the members, a second loop mounted on said members, the handle loop on one of said members being arranged on the opposite sides of said second loop for limiting its movement as and for the purposes stated.

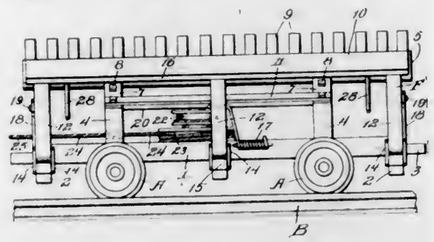
1,508,642. BANK CAGE. THOMAS BOND, Brantford, Ontario, Canada. Filed Oct. 25, 1922. Serial No. 596,849. Renewed July 23, 1924. 6 Claims. (Cl. 268—2.)

1. In a bank cage, the combination with the front thereof, of a vertically slidable bullet proof shutter, means for pulling the shutter down into its inoperative position, a tension spring secured at its upper end to the cage and its lower end provided with a hook adapted to engage the bottom edge of the shutter upon its being moved down into the inoperative position whereby such spring is distended, releasable means for normally holding the shutter in the inoperative position, and a pivotally mounted catch on the cage normally held by the shutter in its inoperative position upon such shutter being in the down position, the free end of said catch swinging



rearwardly and engaging the bottom of the shutter upon the latter being thrown upwardly into its fully closed position.

1,508,643. SELF-ADJUSTING CLAMP FOR CARD-TABLE COVERS. FRANK E. BROKAW, Schofield Barracks, Territory of Hawaii. Filed Nov. 24, 1923. Serial No. 676,847. 5 Claims. (Cl. 24—73.)

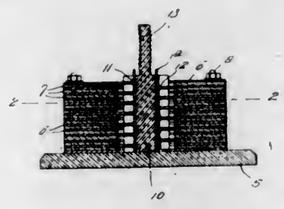


5. In a detachable clamp for table covers, a pair of clamping plates, a broad hooked end on each of said plates, said plates joined together by an elastic member, said plates having inner surfaces free from projections, perforations in each of said plates, the metallic web between said perforations being pressed out into a loop and a handle suspended from said loop.

1,508,644. SPEED-INDICATING APPARATUS. GUNNAR ELIAS CASSEL, Stockholm, Sweden, assignor to Artur Ledler, Djursholm, Sweden. Filed July 9, 1923. Serial No. 650,445. 10 Claims. (Cl. 235—1.)

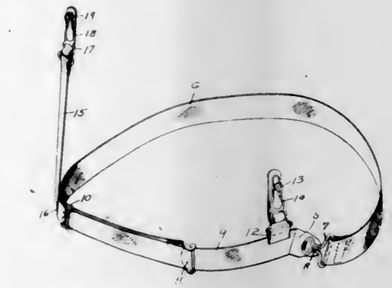
10. In a speed indicator operated by a centrifugal governor driven by a wheel of a vehicle, means under the control of said governor to indicate the momentary speed of the vehicle, an indicating mechanism, connections between said governor and said mechanism to operate said mechanism under the control of the governor when the vehicle exceeds a certain speed, said means being arranged to operate with a certain play corresponding to a certain distance traveled by the vehicle, and means to restore said mechanism to normal after the vehicle has travelled a certain distance.

1,508,645. DUMPING CAR. MELVIN A. CAUDLE, Vanwood, W. Va. Filed Jan. 19, 1924. Serial No. 687,341. 5 Claims. (Cl. 105—270.)



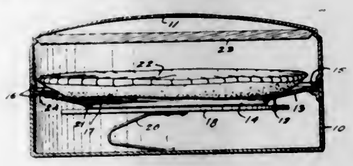
1. In combination with a car body, a tilting body mounted thereon, a swinging frame mounted upon the body and serving to hold the tilting body against movement, means for swinging the frame in one direction, and means carried by the tilting body engageable with said frame when moved in one direction to impart tilting movement to the tilting body.

1,508,646. LOW-QUARTER SHOE. MORRIS COOPER, Baltimore, Md. Filed Mar. 18, 1924. Serial No. 700,040. 3 Claims. (Cl. 36—50.)



1. A shoe having an upper formed of three pieces, an inner quarter, an outer quarter overlapping the inner at the front and attached thereto for a part of the extent of the overlapping, and a vamp attached to each of the quarters and having a strap integral therewith at the inner side which passes over the overlapped portions and rearwardly to a point of attachment to the outer quarter which is located considerably to the rear of the instep and below the top of the shoe.

1,508,647. VARIABLE CONDENSER. JOHN W. CORNELIUS, Kingman, Ariz. Filed Sept. 18, 1923. Serial No. 663,364. 5 Claims. (Cl. 250—41.1)

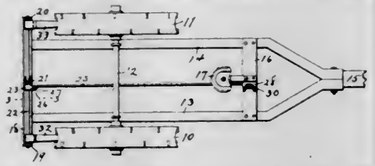


1. In a variable condenser, a pile of fixed plates, alternate ones of said plates being of conducting material, the remaining of said plates being of di-electric material, all of said plates being provided with central openings that register for providing a passage through the pile of plates, said conducting plates having projections extending into said passage, the projections of alternate ones of said conducting plates extending from one side of the passage, and the projections of the remaining plates extending from the other side thereof, a core longitudinally movable in the passage and having contact plates upon the sides thereof respectively engageable with the inner edges of the projections of alternate ones of the conducting plates, and means to facilitate adjustment of the core within said passage.

1,508,648. GARMENT RETAINER. AUGUST W. CROWN, Thief River Falls, Minn. Filed Sept. 29, 1922. Serial No. 591,240. 1 Claim. (Cl. 241—1.)

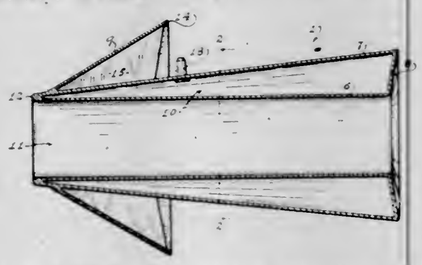
In combination, a leg encircling band of elastic material, a pair of garment retaining elements secured thereto and extending upward therefrom, one of said retaining elements formed longer than the other and adapted to be positioned at the outer side of the leg of the wearer, and the other of said elements formed comparatively short and adapted to lie adjacent the inner side of the leg of the wearer, an adjustable section located within the length of the encircling band and a section secured to the adjustable section at an angle with respect thereto, said last named section adapted to have connection with the encircling band for properly positioning said band upon the leg of the wearer.

1,508,649. VANITY CASE. GEORGE E. DAVIS, Des Moines, Iowa. Filed Mar. 19, 1924. Serial No. 700,412. 6 Claims. (Cl. 132—83.)



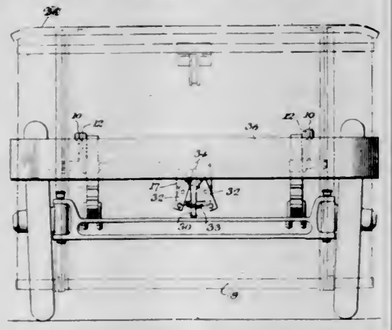
6. In a vanity case, a bottom receptacle, a top hinged thereto, a plate member hinged in said receptacle above the bottom thereof inclined from the wall of said receptacle downwardly and inwardly, and having a central opening, a disc below said opening and a spring supported on the disc for normally holding said disc against the lower edge of said plate and closing the opening therein.

1,508,650. WHEEL SCRAPER FOR LAND VEHICLES. CARL DUEKER, Cooper Township, Webster County, Iowa. Filed Oct. 28, 1920. Serial No. 420,086. 1 Claim. (Cl. 280—158.)



In a land vehicle having a frame and wheels supporting the same, an angle bar forming the rear end of said frame and projecting at its ends beyond the frame and across the paths of the wheels, bearings mounted in

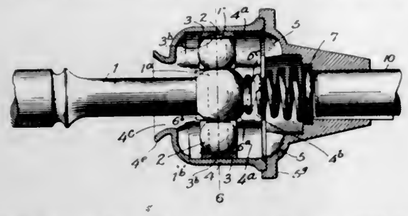
end portions of said angle bar, a bearing mounted in the central portion of said angle bar, a rock shaft journaled in said bearings, an arm fixed to and extending forwardly and downwardly from said rock shaft, draft means attached to said arm, and scraper blades fixed to said rock



shaft between the outermost bearings and the sides of the frame and extending forwardly and downwardly at the rear of and into proximity with said wheels, said blades lying wholly to the rear of the wheels and normally depending out of contact with the rims thereof.

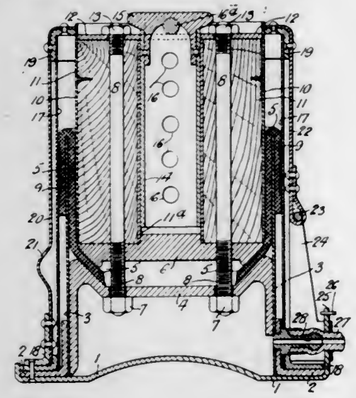
1,508,651. DEVICE TO AID SWIMMING. GEORGE EVANS, Redondo, Calif. Filed Nov. 7, 1923. Serial No. 673,295. 4 Claims. (Cl. 9—21.)

1. In a device of the character described, a hollow sleeve adapted for air inflation and capable of being placed over the human leg or arm whereby the pressure of air contained therein acts to hold said sleeve in place on the arm or leg.



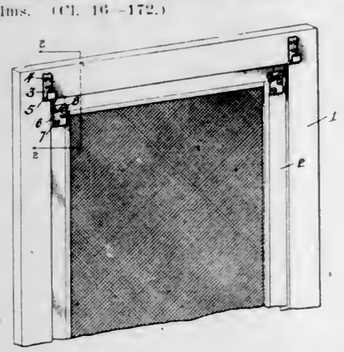
1,508,652. AUTOMOBILE FENDER. SAMUEL G. FITZ SIMONS, Charleston, S. C. Filed June 13, 1924. Serial No. 719,914. 8 Claims. (Cl. 293—41.)

3. An automobile fender comprising a pair of levers pivoted to the automobile, a curtain roller carried thereby, secondary levers pivoted to the first mentioned levers, a curtain roller carried by the secondary levers, a curtain connecting the two rollers, and flexible means for maintaining the seconday levers in substantially horizontal position at all times.



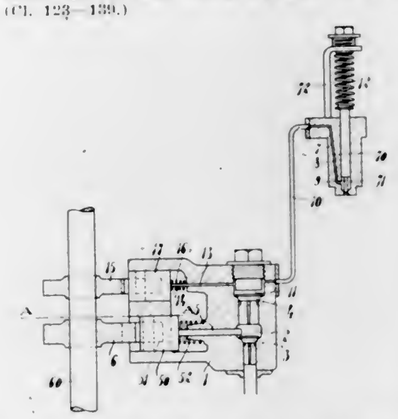
1,508,653. UNIVERSAL JOINT. JOHN BENJAMIN FLICK, Detroit, Mich. Filed Nov. 9, 1921. Serial No. 513,957. 6 Claims. (Cl. 64—103.)

1. For a universal joint as set forth, a member having a parti-spherical recess in its interior to conform with the spherical curvature of the ball, and its exterior shaped to slidably engage a guide slot; and having an



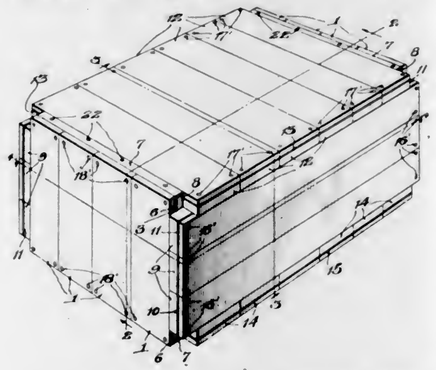
opening in its side less in width than the diameter of the ball to permit the introduction of the ball into the member.

1,508,654. PNEUMATIC APPARATUS. SIDNEY EALES HALES, London, England. Filed Feb. 14, 1923. Serial No. 618,934. 13 Claims. (Cl. 138—9.)



1. In pneumatic apparatus the combination of a cylinder, a piston, a flexible tube packing and a plate which clamps one end of the packing on to the piston to form an air tight joint between the piston and cylinder and whose outer periphery makes contact with the cylinder and guides the piston.

1,508,655. SCREEN HANGER. MARTIN HAUSER, Toledo, Ohio. Filed Nov. 20, 1922. Serial No. 601,973. 3 Claims. (Cl. 16—172.)

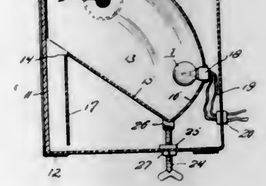


1. A device of the class described comprising a hook member, a hinged member having an eye, a Z-shaped wire member having one end portion in pivotal engagement with the hinged member eye and its other end portion in releasable holding engagement with the hooked member, the pintle member being rotatably and axially adjustable relative to the hinge member, and a set screw threaded through the pintle receiving portion of the hinge member and engaging the pintle to secure the parts in relative adjustment.

1,508,656. INTERNAL-COMBUSTION ENGINE. KNUT JONAS ELIAS HESSELMAN, Saltsjo-Storangen, Sweden. Filed Sept. 11, 1922. Serial No. 587,471. 3 Claims. (Cl. 123—139.)

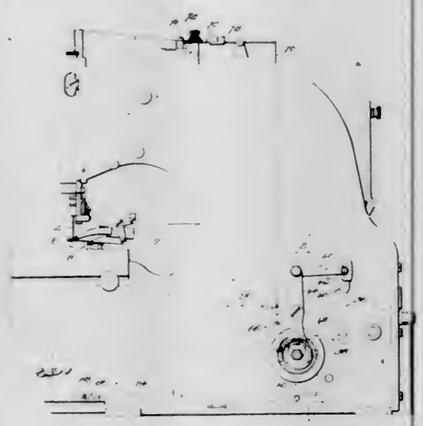
1. In a fuel supplying device for internal combustion oil engines, the combination with a fuel pump, comprising a casing, a plunger, a suction valve, a discharge conduit and a discharge valve in the latter, of a fuel injecting valve to be opened by the pressure within said discharge conduit and closed by a flexible member, an additional plunger operating beyond said discharge valve, and means for controlling said additional plunger to maintain same against movement during the whole discharge period of the fuel pump plunger and cause it immediately at the completion of said period or subsequent thereto to effect a certain reduction of the pressure existing beyond the discharge valve to allow the fuel injecting valve to be positively pressed against its seat by the said flexible member.

1,508,657. PILFERPROOF BOX. JOHN L. HOOD, Pawtucket, R. I. Filed Oct. 17, 1923. Serial No. 669,174. 6 Claims. (Cl. 217—69.)



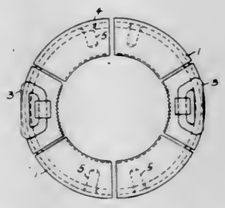
1. In a box, ends composed of boards having end tongues with kerfs on the outer sides of the tongues and shoulders adjacent to the inner sides thereof, J-shaped metal plates engaged over the tongues and in the kerfs, sides, a top and bottom each composed of boards having end kerfs located closer to the outer than to the inner faces of the last named boards, metal plates in the last named kerfs, the sides being arranged to lie between and flush with the respective shoulders of the ends, the top and bottom being seated on the shoulders and on the side edges of the sides, and headless roughened fastenings driven through the wide sides of the J-shaped plates and into the ends of the top and bottom, through the top and bottom and into the sides and through the sides into the ends, all of the fastenings having their roughened parts extending on the inner sides of the respective metal plates.

1,508,658. WALL BOARD. WILLIAM M. JENKINS, Chicago, Ill. Filed Jan. 17, 1924. Serial No. 686,858. 6 Claims. (Cl. 154—45.9.)



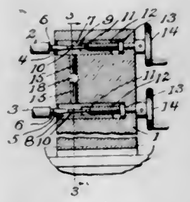
3. A wall board comprising a composition body provided along an edge thereof with a reenforcement including spaced legs straddling the edge of said body, one of said legs being longer than the other to provide a break joint connection with said body.

1,508,659. AUTOMOBILE LAMP. CHARLES J. KUNTZ and EDWARD A. LAURENT, Jeannette, Pa. Filed Nov. 5, 1923. Serial No. 672,853. 1 Claim. (Cl. 240—41.)



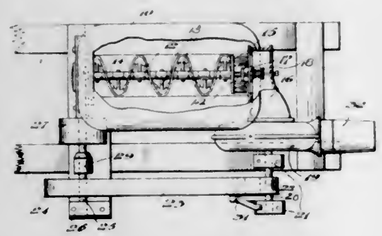
An automobile headlight comprising a substantially cylindrical casing open at its front end, a removable lens closing said front end, a substantially parabolic reflector disposed diagonally within the casing in a forwardly and upwardly inclined position, a forwardly and outwardly inclined flat bottom closing the lower side of said reflector, the upper end of said bottom terminating in spaced relation from the corresponding end of the parabolically shaped reflector and being bent laterally downward from the latter to provide a substantially semicircular shutter, the inner surface of said bottom being covered with light reflecting material, a lamp disposed within the reflector at the lower end thereof and spaced above the juncture of the lower end of the bottom with the corresponding end of the main reflector, means pivotally connecting the forward and upper end of said reflector to said casing, and adjusting means for the lower end of the reflector interposed between the latter and the casing.

1,508,660. BUTTONHOLE-SEWING MACHINE. BERNARD T. LEVEQUE, Wenham, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed June 6, 1921. Serial No. 475,222. 11 Claims. (Cl. 112—67.)



1. A sewing machine having, in combination, stitch forming mechanism, work feeding mechanism, and means for stopping the work feeding mechanism only, upon the breaking of the thread.

1,508,661. PIPE HOLDER. MILTON S. LIGNOSKI, Houston, Tex., assignor to Gerald R. Livergood, Houston, Tex. Filed Jan. 3, 1921. Serial No. 434,590. 2 Claims. (Cl. 24—263.)

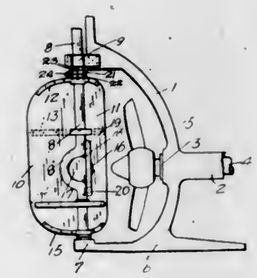


1. A pipe engaging means including a plurality of slips, each slip comprising a plurality of arcuate toothed jaws, and transverse flexible members intermediate the ends of said jaws to secure said jaws loosely together in the manner stated.

1,508,662. TAILSTOCK FOR MULTIPLE-SPINDLE LATHES. ZENONAS L. LITVINAS, Chicago, Ill. Filed Dec. 17, 1921. Serial No. 523,139. 3 Claims. (Cl. 82—31.)

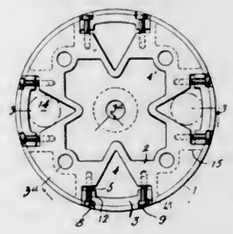
1. In a multiple spindle lathe, a tail stock having spindles, centers carried thereby for engaging the work, threaded bolts for adjusting said centers, hand wheels for operating the bolts, latches for engaging the spindles, a cone for operating the latches to lock the spindles, and means for operating the cone.

1,508,663. SPRAYING MACHINE. JOHN INGLIS LLOYD, Kentville, Nova Scotia, Canada. Filed June 23, 1922. Serial No. 570,371. 2 Claims. (Cl. 43—148.)



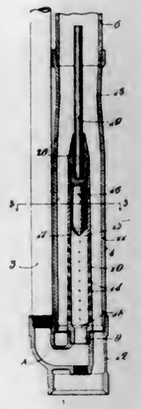
1. A power dusting machine comprising, in combination, a hopper, a horizontally arranged shaft within the hopper, conveyor means on said shaft, a pulverizing member adjacent one end of said shaft adapted to pulverize the material fed by said conveyor means, a feed chamber, a communicating passage between the feed chamber and the hopper comprising a plurality of radiating openings in the wall of the hopper adjacent said pulverizing member, and means for controlling the supply of material from the hopper to the feed chamber, a perforated disc member on the outer end of said shaft, and lever means for operating said disc whereby the orifices therein are designed to register with the orifices in the hopper wall, blower means for the feed chamber, a fan for the blower, and means for driving the fan and the conveyor shaft.

1,508,664. TRAVELING BLOCK. FRANK F. MIZE, Seal Beach, Calif. Filed Oct. 22, 1923. Serial No. 669,937. 4 Claims. (Cl. 254—192.)



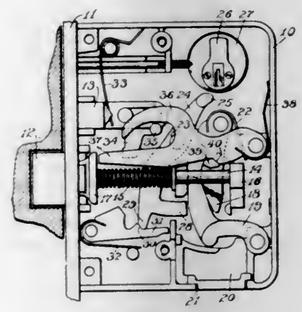
1. A traveling block embodying cheek pieces, sheave pins supported by the cheek pieces, sheaves on the pins and between the cheek pieces, becket pins extending between the cheek pieces near their ends, and beckets on the becket pins and having their outer side faces flush with the outer faces of the cheek plates.

1,508,665. RUDDER CONSTRUCTION. JAMES HENRY MCCUTCHEON, Collingwood, Ontario, Canada. Filed Feb. 12, 1924. Serial No. 692,379. 7 Claims. (Cl. 114—162.)



1. In a ship, the combination with the stern post and tail shaft, of a rudder turnably mounted upon the stern post and provided with an orifice adapted to be brought into alignment with the tail shaft when the rudder is turned at right angles to such shaft to permit the withdrawal of the shaft through the orifice.

1,508,666. ELECTRIC BOX. EDWARD NIEDERMAN, Norwich, Conn., and MORRIS J. KRINSKY, New York, N. Y. Filed Aug. 9, 1920. Serial No. 402,155. 2 Claims. (Cl. 247—15.)

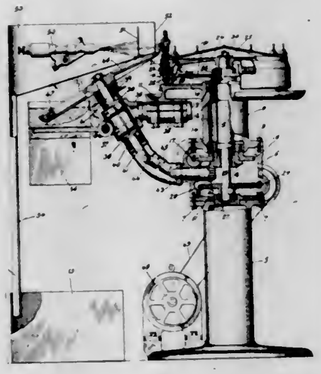


1. An electric box comprising a body formed with a plurality of notches in the periphery thereof; extending from the top to the bottom of the body, said notches having a V-shaped section merging into a substantially rectangular, enlarged section, a clamping plate formed with shoulders adapted to fit against the inner walls of said rectangular section arranged in each notch, said clamping plate being adapted to clamp in said V-shaped section cables passing therethrough and screw means passing through said plates adjacent the shoulder section thereof for clamping the same in position in front of the notches.

1,508,667. AIR-LIFT PUMP. JOHN OLIPHANT, Chicago, Ill., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed July 29, 1919. Serial No. 313,997. Renewed Feb. 11, 1924. 22 Claims. (Cl. 103—232.)

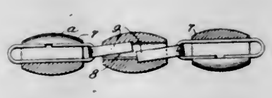
1. In an air lift pump, a perforated mixing tube, and floating means thereon adapted automatically to permit an increase in the rate of pressure fluid flow through the perforations therein.

1,508,668. LOCK. CARL J. PRINZLER, Indianapolis, Ind., assignor to Vonnegut Hardware Company, Indianapolis, Ind., a Corporation of Indiana. Filed June 26, 1922. Serial No. 570,846. 18 Claims. (Cl. 70—92.)



2. The combination with a latch normally projected into locking position, of key controlled means for locking said latch in retracted position and key controlled mechanism for retracting said latch, said locking means being set in operative position by the key and rendered active to lock the latch in its retracted position by the independent retraction of the latch.

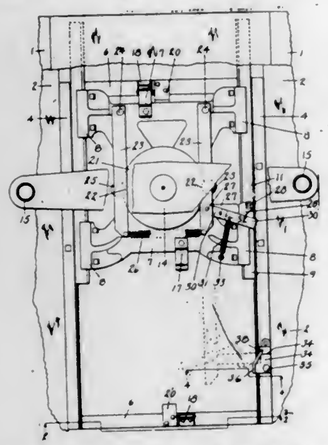
1,508,669. STENCILING MACHINE. HECTOR RABEZZANA, Flint, Mich., assignor to A C Spark Plug Company, Flint, Mich., a Corporation of Michigan. Filed Apr. 29, 1922. Serial No. 557,276. 11 Claims. (Cl. 101—114.)



1. In a stenciling machine, a rotatable carrier; means for supporting a plurality of articles to be stenciled in spaced relation with one another about the periphery of said carrier; a unitary rotatable stencil wheel formed as a single substantially rigid structure and the periph-

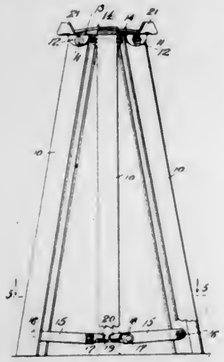
ery of which moves adjacent articles to be stenciled carried by said carrier; a plurality of stencils carried by and held in fixed relation to, and spaced about the pe-

riphery of said stencil wheel; means for supplying a stenciling material to said stencils; and means for rotating said stencil wheel and said carrier at definite speeds relative to one another.



1,508,670. CHAIN. SAMUEL TROOD, Haysville, Pa.: Sophia Trood, administratrix of said Samuel Trood, deceased, assignor of one-fourth to John H. Raney, Ingram Borough, Pa. Filed Feb. 17, 1922. Serial No. 537,166. 5 Claims. (Cl. 152—14.)

1. A unit for chains comprising a wearing member having a channel longitudinally thereof, substantially oblong in cross sectional dimension, and a connecting member consisting of a rod bent to form an elongated link corresponding in configuration with said channel, the intermediate portion and the separable ends of said connecting member being seated in the channel in said wearing member, and the curved ends projecting from opposite ends of said channel.

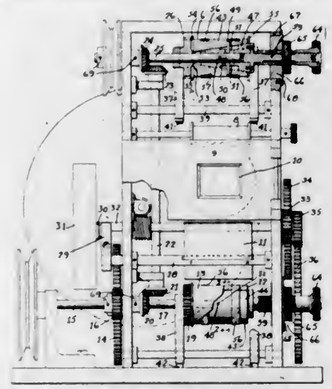


1,508,671. REVOLVING-RACK SHOWCASE. JOHN J. VERWYS, Sparta, Mich., assignor to The Welch Mfg. Co., Grand Rapids, Mich. Filed June 15, 1922. Serial No. 568,437. 5 Claims. (Cl. 211—16.)

1. In a revolving rack show case, the combination of a suitable carriage, a revolving rack on a suitable revolving column on said carriage, side rails for said carriage, a disk carried by the said columns with notches on opposite sides thereof, levers pivoted to the said carriage and carrying detent rollers adapted to engage the notches on said disk, a spring for drawing the said levers together to engage the said horizontal disk, a pivoted locking latch pivoted to one of said levers, a stop on the side of said carriage cooperating with the end of said latch to lock said lever against movement, an angularly disposed lever fulcrumed on the pivot of said latch and pinned thereto, a spring for drawing the same yieldingly forward, a double stop on the side rail with one stop portion to act upon said latch and swing it out of engagement and the lever to the right angle position when the carriage is pulled to the front position and the other stop to engage the said pivoted lever when the yielding lock lever is moved outward by

the turning of the rack to lock the carriage in front position until the rack is turned crosswise, coacting as specified.

1,508,672. SUPPORTING STAND FOR AUTOMOBILES AND OTHER PURPOSES. WILLIAM BARBER, Brooklyn, N. Y. Filed Sept. 28, 1921. Serial No. 503,969. 6 Claims. (Cl. 248—41.)



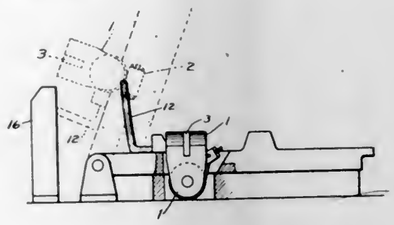
2. An automobile supporting stand comprising a supporting plate having portions pressed out therefrom to form pivot ears, and supporting legs having lips overlapping each other, said legs being pivotally connected at their upper ends to said pivot ears, a link pivotally connected to the lower end of each leg and a central plate to which all the links are pivotally connected, said links having extended ends to engage and bear on the upper surface of said central plate when said legs are spread apart from each other to form a limiting stop therefor.

1,508,673. MOVING-PICTURE MACHINE. GEORGE W. BINGHAM, New York, N. Y. Filed Jan. 8, 1924. Serial No. 684,925. 18 Claims. (Cl. 88—186.)

1. In a motion picture machine having an exposure opening, cooperating continuously rotating rolls for feeding the film to the exposure opening, a beater for intermittently advancing the film past the exposure opening and cooperating continuously rotating take-up rolls for

advancing the film and holding the same against retrograde movement during action of the beater, means for varying the peripheral size of one of the take-up rolls during the rotation of the same to regulate the length

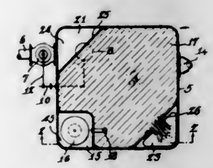
of film advanced at each stroke of the beater and means for correspondingly varying the peripheral size of one of the feed rolls during the rotation of the same to feed the film to the advancing mechanism at a proportionately greater or lesser peripheral speed.



1,508,674. DOUBLE HARDY. JOSEPH A. BROWNE, Melrose, Mont. Filed Nov. 6, 1923. Serial No. 673,230. 8 Claims. (Cl. 164—47.)

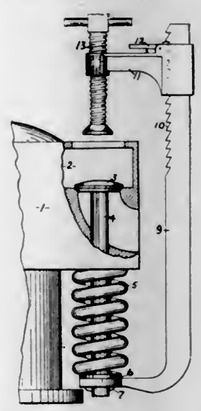
1. A double hardy, comprising a lower hardy, an upper hardy, channel bars attached to the end surfaces of the lower hardy, and quick-detachable means to hold the channel bars to the lower hardy.

1,508,675. PERMANENT-HAIR-WAVING DEVICE. GEORGE G. CAMPANA, New York, N. Y., assignor to Ernest O. Frederics. Filed Feb. 12, 1921. Serial No. 444,338. Renewed Aug. 1, 1922. Serial No. 579,063. 19 Claims. (Cl. 132—36.)



1. In a device of the class described, in combination, a tubular member, a shield having a plurality of parts adapted to be moved into engagement with a lock or tress of hair, said tubular member and said shield having mutually engaging interlocking parts.

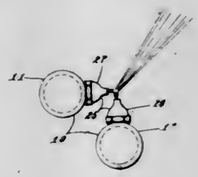
1,508,676. STAMP-OPERATING DEVICE. MACE E. CHARLESTON, Vancouver, British Columbia, Canada. Filed Mar. 27, 1924. Serial No. 702,210. 3 Claims. (Cl. 101—98.)



1. A device for inking numbering stamps or the like comprising a means for raising the stamp; another means for returning the stamp to the normal position; and an ink roller with a means for resiliently holding it in such a position that the stamp will pass over it.

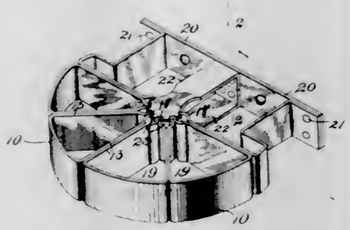
1,508,677. DIAGONAL-FLOW METER. LYLE G. CHASE, Philadelphia, Pa., assignor to Yarnall-Waring Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Apr. 28, 1920. Serial No. 377,361. 11 Claims. (Cl. 73—167.)

1. A weir meter having a weir plate, a chamber back of the weir plate of general rectangular horizontal cross section, and having the inlet to the chamber located in proximity to one of the corners of the rectangle, in combination with a baffle across the corner in which the inlet is located.



1,508,678. VALVE REMOVER. EDMUND L. CRIDGE, Passaic, N. J. Filed Oct. 19, 1921. Serial No. 508,764. 1 Claim. (Cl. 29—86.3.)

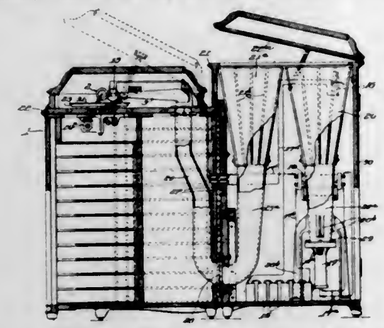
In a valve remover, a bent member, a series of saw-toothed notches upon the inner edge of said member, a slidable compression member, arranged at one end to slide upon the end of said bent member and at its other



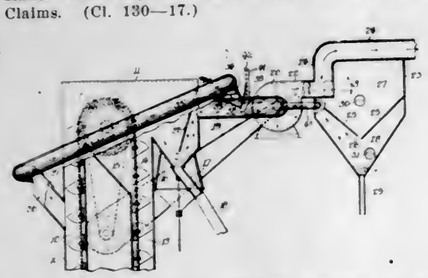
end having a compression-screw, said compression member having mounted thereupon, a spring-catch in such manner as will engage, progressively, each tooth of the series of saw-toothed notches upon the said bent member, whenever the said compression member is placed upon the said bent member and in such manner as will cause the said spring-catch to hold the compression member at any position upon the said bent member, whenever, the said compression-screw meets any resistance that would tend to push off the said compression member from the said bent member.

1,508,679. SOOT BLOWER. PHILIP W. DALRYMPLE, Baltimore, Md. Filed Sept. 12, 1919. Serial No. 323,290. 5 Claims. (Cl. 122—392.)

1. In a soot blowing or similar apparatus, means for directing and varying the direction of a fluid jet consisting of a plurality of converging nozzles, means for supplying fluid under pressure to each nozzle, and means for varying the relation which the pressure and velocity of the supply of fluid to one of said converging nozzles bears to the pressure and velocity of the supply to another of said nozzles.



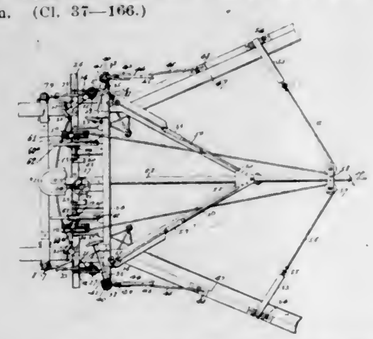
1,508,680. RACK. ANTHONY DANIELS, Newark, N. J. Filed Aug. 19, 1922. Serial No. 582,852. 5 Claims. (Cl. 211—13.)



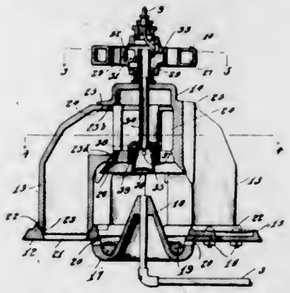
2. A rack formed of a strip of spring material, said strip being bent into a series of alternately arranged small closed loops and broad open loops with the sides of the open loops parallel and close together, and a back plate having claws to enter the closed loops and hold the strip in position.

1,508,681. SOUND-REPRODUCING MACHINE. LEON F. DOUGLASS, San Rafael, Calif., assignor to Victor Talking Machine Company, a Corporation of New Jersey. Filed Apr. 24, 1916, Serial No. 93,275. Renewed Apr. 27, 1922. Serial No. 557,035. 16 Claims. (Cl. 179—100.1.)

2. In a sound reproducing machine, the combination with reproducing means adapted to produce primary vibrations from a record tablet, and a conduit for such vibations, of a telephonic circuit whose transmitter is mounted on said conduit and out of contact with the sound box and stylus of the reproducer, and whose diaphragm is actuated solely by said primary vibrations, an amplifying chamber into which said conduit discharges the primary vibrations, a second amplifying chamber operatively communicating with the receiver of the telephonic circuit, a cabinet for said amplifying chambers, and means thereon for commingling and deflecting the amplified primary and secondary sound vibrations.

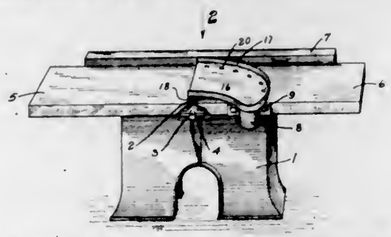


1,508,682. DEVICE FOR REMOVING DUST FROM GRAIN ELEVATORS. ROY L. DOWDALL, Oberlin, Kans., assignor of one-half to C. C. Palmer, Concordia, Kans. Filed Sept. 15, 1923. Serial No. 662,828. 8 Claims. (Cl. 130—17.)



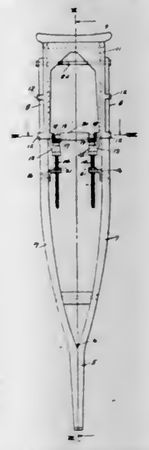
1. In an apparatus of the character described, the combination with a leg of a grain elevator, of a suction fan, a pair of suction pipes both communicating at one end with the suction side of said fan and at their other ends with said leg, and a single manually operable valve operative to direct the suction wholly through either of said pipes or to divide it in varying relative lengths between them.

1,508,683. ROAD GRADER. LEW B. EVANS, Marietta, Ohio. Filed Nov. 18, 1921. Serial No. 516,181. 1 Claim. (Cl. 37—166.)



In a road scraper, a frame, traction wheels separate from the frame, pivotally mounted means supported by the traction wheels, means for connecting the pivotally supported means to the frame whereby the frame is elevated or lowered, worm and gear mechanism for actuating the pivotally mounted supporting means, scraper blades having their rear ends pivotally mounted on the frame, links connected to the said blades, the blade operating mechanism being arranged in pairs each comprising an arm, a bracket on which the arm is oscillatably mounted, a segmental worm forming a part of each arm, a shaft on which the bracket is mounted, a worm wheel on the shaft for engaging the worm of the arm, means for rotating the shaft in opposite directions for oscillating the arm, and means for moving the blades transversely and for holding them in different positions of adjustment.

1,508,684. DOWNDRAFT OIL BURNER. OSCAR FALKENWALDE, Baltimore, Md. Filed Jan. 23, 1923. Serial No. 614,437. 8 Claims. (Cl. 158—91.)

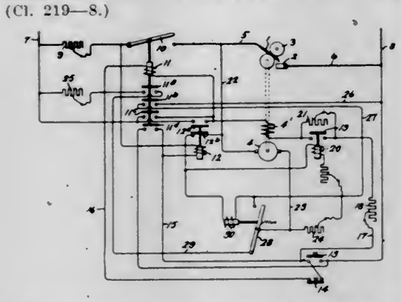


7. A burner of the character specified comprising a base plate having a centrally disposed fuel vaporizer and having a plurality of openings in the outer portion grouped about the fuel vaporizer, a plurality of air ducts having their lower ends fitted to the openings in the base plate, a hollow crown disposed above the fuel vaporizer and provided with openings corresponding in number and position with the openings in the base plate, the upped ends of said air ducts being inturned and reduced and having their top and vertical sides straight and having their bottom sides beveled, said openings in the hollow crown being surrounded by outwardly disposed flanges which receive the upper reduced and inturned ends of said air ducts, the top portions of each of said flanges being straight to obtain a horizontal bearing upon the top side of the inturned ends of the air ducts, the vertical side portions of the flanges being straight and parallel to receive the straight sides of the inturned ends of the air ducts, the lower portions of each of said flanges being outwardly flared to receive the lower beveled sides of the inturned ends of the air ducts, and said hollow crown having its lower end open to direct air downwardly in the direction of the fuel vaporizer.

1,508,685. SAFETY DEVICE FOR JOINTERS. ANDREW FLOHR, Colorado Springs, Colo. Filed Oct. 20, 1923. Serial No. 669,732. 2 Claims. (Cl. 144—251.)

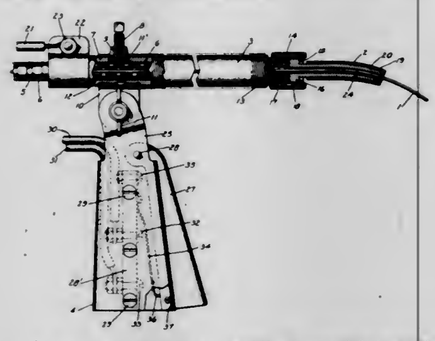
1. A guard adapted to be secured to a jointer table for covering the cutters, said guard comprising in combination a cylindrical casing provided with lugs on its outer surface for the reception of securing bolts, a tubular member rotatably mounted in said casing, a spiral spring in said casing, the outer end of the spring being secured to the casing and the inner end being secured to the tubular member, a sheet metal guard plate having a non-circular pin secured near one end for cooperating with the tubular member, said guard member having a convexly curved side, a flange along said convex side, and a downwardly extending flange at its free end.

1,508,686. ADJUSTABLE CRUTCH. EDWARD P. GAVETTY, Dyerville, Calif. Filed Oct. 2, 1923. Serial No. 666,176. 6 Claims. (Cl. 135—50.)



1. A crutch having a slidably extendible frame, an arm rest and a revolvable hand grip on one portion of the frame, and means revolvable with said hand grip adapted for sliding the frame portions positively in either direction relative to one another.

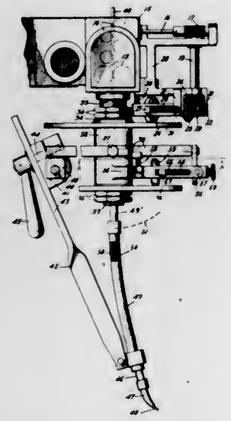
1,508,687. PLIERS. SCOTCH E. GILLEY, Warren, Ark. Filed Mar. 6, 1923. Serial No. 623,136. 1 Claim. (Cl. 7—3.)



The combination with oppositely disposed jaws of a pair of pliers, of removable plates carried by said jaws, said plates being provided with transveresly disposed crimping ribs, the ribs of one plate being out of registration with the ribs of the other plate, cutters carried by the inner ends of the plates and adjacent one side thereof, said plates being provided with dovetail-shaped ribs longitudinally disposed and in similarly shaped channels in the jaws, and pins extending through registering apertures in the jaws and registering channels in the outer faces of the dovetailed ribs of the plates.

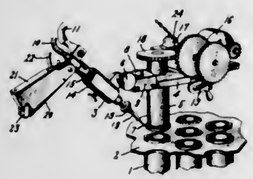
1,508,688. CONTROL SYSTEM FOR AUTOMATIC ARC-WELDING APPARATUS. CHARLES E. GLASSER, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Sept. 12, 1921, Serial No. 500,007. Renewed Apr. 9, 1924. 4 Claims. (Cl. 219—8.)

4. An arc welding system comprising a pair of constant voltage mains and a welding circuit adapted to supply welding electrodes, an electrode feed motor having one armature terminal connected to one of said electrodes, a pair of resistors connected across said constant voltage mains, a switch for controlling the welding circuit, a switch for controlling the electrode feed motor arranged in one position to connect the other terminal of the armature to a point between said resistors to give a Wheatstone bridge effect for operating said motor to start the arc, said feed motor control switch being arranged in another position to open the circuit between said resistors and connect said armature directly across the arc, and means operated by said welding circuit control switch to control the circuit through said resistors to prevent the flow of current therethrough when the welding circuit control switch is open.



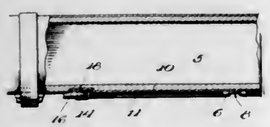
1,508,689. METALLIC ARC WELDING. CHARLES E. GLASSER, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Sept. 23, 1921, Serial No. 502,625. Renewed Apr. 9, 1924. 13 Claims. (Cl. 219—8.)

1. A device for electric arc welding comprising an electrode delivery member provided with an opening through which an electrode may be moved said opening being constructed to bend the electrode as it is passed therethrough whereby a good electric contact is made between the member and electrode.



1,508,690. WELDING MACHINE. CHARLES E. GLASSER, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Nov. 11, 1922. Serial No. 600,201. 16 Claims. (Cl. 219—8.)

1. In a welding machine of the class described wherein a welding arc is maintained between a metallic electrode and the work and wherein feeding means is provided for continuously feeding the electrode to the arc, the combination of a support, a flexible guide for guiding said electrode from the feeding means to the arc, a movable arm projecting from said support adapter to support the discharge

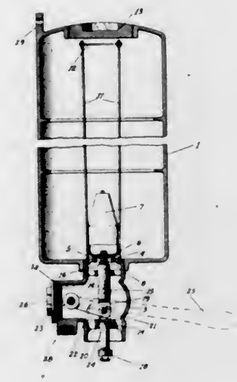


end of said flexible guide, and means for imparting oscillatory movements to said movable arm and the discharge end of said flexible guide, and means for imparting oscillatory movements to said movable arm and the discharge end of said flexible guide.

1,508,691. ELECTRIC-ARC WELDING. CHARLES E. GLASSER, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed May 15, 1923. Serial No. 639,196. 11 Claims. (Cl. 219—8.)

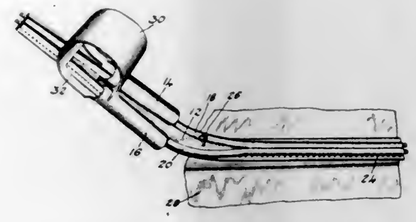
1. An arc welding apparatus of the type wherein a continuous electrode is fed from a source of supply to a welding tool located at a distance from said source and wherein said tool is mounted to rotate about an axis to produce welds of circular character comprising in combinations means for rotating said tool about its own axis as it rotates about said first mentioned axis.

1,508,692. CARD HOLDER. CHARLES T. GOEWEY, South Bend, Ind. Filed Sept. 24, 1923. Serial No. 664,568. 4 Claims. (Cl. 40—16.)



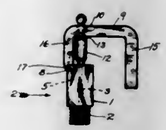
1. The combination with a base, of a frame attached along its longitudinal edges to said base and having one end open, a stud carried solely by the open end of said frame and adapted to engage said base whereby to receive a card beneath the base, said stud having its terminal portion provided with a disk-shaped head adapted to underlie cards beneath the frame.

1,508,693. STOP SIGNAL FOR AUTOMOBILES. CLYDUS GROVE, Sistersville, W. Va. Filed Nov. 14, 1923. Serial No. 674,676. 2 Claims. (Cl. 116—45.)



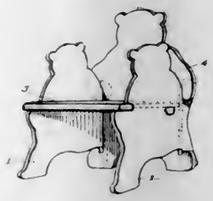
1. An automobile signal comprising a U-shaped bracket having an aperture midway the cross bar thereof to receive a fastening bolt, a pintle passing through the free ends of the arms of said bracket and having one end extended at right angles and bent to form an eye, a plate mounted on said pintle and having a lug extending laterally from one end thereof and engaged with the bent end of the pintle to provide for the turning of the plate on the turning of the pintle, coiled springs connecting said plate and bracket and adapted to normally hold the plate in raised position, and means connected with said pintle eye for swinging the plate downward in a plane at right angles to the bracket against the tension of the spring.

1,508,694. FLUSH VALVE. CHARLES H. GUNN, Oakland, Calif. Filed Nov. 27, 1922. Serial No. 603,521. 2 Claims. (Cl. 4—28.)



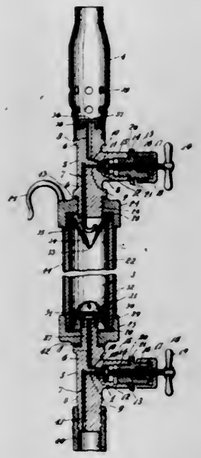
1. A flush valve structure comprising a hollow fitting adapted to be interposed between the lower end of a tank and a toilet bowl, a float valve to seat adjacent the upper end of the fitting, a vertical rod in the fitting below the valve and adapted to engage and raise the same, means for raising the rod, guide sleeves in the fitting for the latter, a shoulder on the rod resting on the upper face of one sleeve when the rod is in its lowermost position, and an adjustable nut on the rod and adapted to abut against the under face of the sleeve when the rod has been raised a predetermined amount.

1,508,695. SPREADING DEVICE FOR BINDERS. LEON ELLSWORTH HILL, Pontiac, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Feb. 28, 1923. Serial No. 621,961. 4 Claims. (Cl. 1—47.)



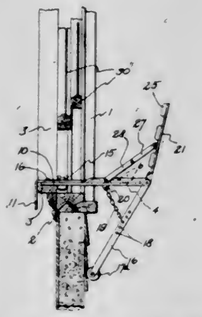
1. A spreading device comprising a piece of sheet metal having a central portion to engage the bottom of a welt strip and having opposite sides bent upwardly and inwardly and downwardly to form oppositelyl-disposed plow parts to spread apart a pair of strips of piping carried by the welt strip.

1,508,696. SAFETY VALVE. JOSEPH H. JACOBS, Denver, Colo. Filed May 5, 1923. Serial No. 636,815. 2 Claims. (Cl. 137—53.)



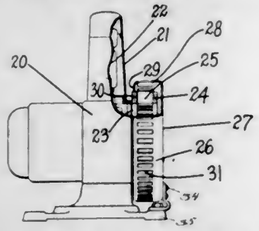
1. A safety valve comprising a body member having a longitudinal opening therein, a U-shaped lever consisting of a single piece of metal having the end of one of its side members pivotally connected to said body member near the top thereof an opening in the base of said lever and a valve member loosely mounted in said opening so as to be movable transversely of said lever and adapted to seat in the end of the opening and seal the same.

1,508,697. CHAIR. LEO HELMHOLZ JUNKER, New York, N. Y. Filed June 9, 1922. Serial No. 567,180. 2 Claims. (Cl. 155—196.)



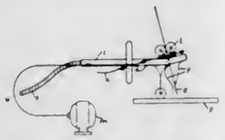
1. A knock-down chair comprising a rear-member having upper and lower locking grooves, side-members having upper locking grooves and lower locking means, the latter adapted to engage the lower locking grooves of the rear-members, said lower locking means comprising a step arrangement having horizontal and vertical bearing surfaces acting as an intermediate support during the assembling of the chair and also horizontal and vertical surfaces acting as the final support, and a seat pivotally journaled in the side-members and adapted to rest on the forward portions of said side members and hold the rear-member in position.

1,508,698. BLOWTORCH. MAYNARD KELL and WILLIAM CONNARE, Pittsburgh, Pa., assignors to Pumpless Blow Torch Company, Pittsburgh, Pa. Filed Feb. 15, 1923. Serial No. 619,140. 3 Claims. (Cl. 158—33.)



3. In a blow torch using gasified liquid as fuel, the combination of a fuel supply; a main fuel expansion chamber positioned intermediate said fuel supply and burner; valves for regulating and controlling the entrance and exit of said fuel into and from said main expansion chamber; an additional expansion chamber formed by a partition of screening of suitable fineness located adjacent and after the fuel inlet of said main chamber; a third expansion chamber positioned adjacent and in advance of the fuel exit of said main chamber; said third chamber being formed of a solid partition having an opening therein for the passage of the fuel; said additional chambers being positioned within the main chamber, and means to prevent the clogging by foreign matter of the valve controlling the fuel exit of said torch; said means consisting of a heat up tube inserted into the fuel duct connecting said valve with said third expansion chamber.

1,508,699. COLLAPSIBLE SAFETY WINDOW SEAT. ARTHUR KETELSEN, Port Richmond, N. Y. Filed Mar. 27, 1923. Serial No. 627,945. 1 Claim. (Cl. 304—27.)

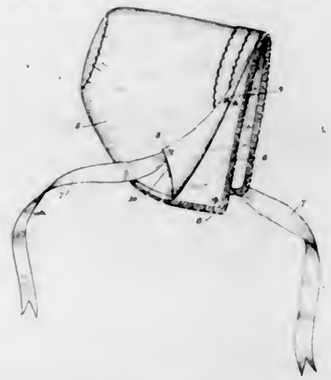


A device of the class described comprising a pair of spaced apart angle irons, slats on the same forming a seat, a back rest hingedly connected to the angle irons at one end thereof, slats covering the back rest brace rods pivotally connected to the outer ends of said angle irons and adapted to be suspended therefrom, said brace rods having a plurality of holes intermediate their length, chains adapted to engage one of its ends in any of said holes, the opposite ends of said chains being connected to the seat angles, a shaft member connecting the lower end of said brace rods, rollers mounted on said shaft, said brace rods being adapted to be retained in angular position, the rollers thereon contacting with a substantially vertical surface thereby supporting the outer ends of the seat angles, an angular hook releasably connected to each seat angle, means for extending said hang hooks, and means for retaining the back rest in substantially vertical position.

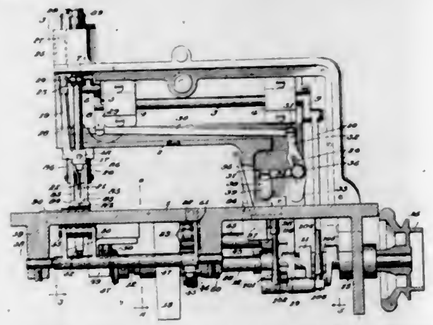
1,508,700. PROTECTING DEVICE. CHARLES F. KETTERING, Dayton, Ohio, assignor, by mesne assignments, to Delco-Light Company, Dayton, Ohio, a Corporation of Delaware. Filed Mar. 26, 1917. Serial No. 157,442. 12 Claims. (Cl. 123—171.)

1. In a device of the character described, the combination with a rotating element having a periphery adapted to function as a fan and having peripheral blades; of a guard for said rotating element including an end plate having a cylindrical portion adapted to lie concentric with the periphery of the moving element, said cylindrical portion being provided with ventilating openings and having ejector blades secured to said portion and extended toward the periphery of the rotating element.

1,508,701. HAND-OPERATED ARC-WELDING APPARATUS. CHRISTIAN KRÄMER, Berlin-Pankow, Germany, assignor to General Electric Company, a Corporation of New York. Filed May 13, 1922. Serial No. 560,829. 3 Claims. (Cl. 219—8.)



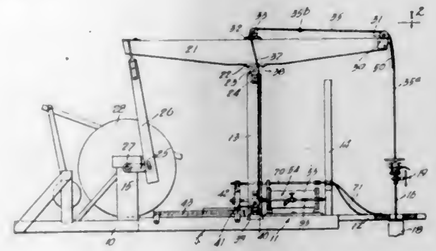
1. A hand welding apparatus for arc welding of the type wherein motor operated means is provided adapted to feed an electrode continuously to an arc between the electrode and the work characterized by the feature that the rotation of the motor is transmitted to the feeding means by a flexible shaft in order to provide a light and readily handled welding tool and by the feature that a switch is arranged on the welding tool for manually controlling the circuit of the feed motor.



1,508,702. BABY'S CAP. KATHERINE LARK, Brooklyn, N. Y. Filed Aug. 4, 1922. Serial No. 579,559. 2 Claims. (Cl. 2—204.)

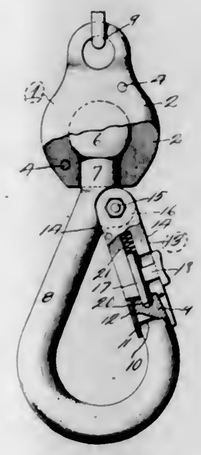
1. An infant's cap comprising a unitary permanently shaped outer cap member, full fashioned to itself completely fit the head of an infant and form a complete cap, a lining for said cap member, said lining also being a unitary completely formed permanently shaped full fashioned cap member to fit within and give shape to the outer cap member, both said permanently shaped cap and lining members having imperforate and continuous forward edges whereby the forward portion of the

cap member presents a complete finished appearance whether or not the lining is within the same and whereby such continuous edges provide bases for the attachment of fasteners and cooperating snap fastener elements secured on the inner face of the continuous forward edge of the cap member and on the outer face of the corresponding edge of the cap lining to detachably hold the permanently shaped lining in position within and imparting its shape to the cap member and permitting instant separation of the lining from the cap by simple separation of the snap fasteners at the forward edges of the lining and cap members.



1,508,703. SEWING MACHINE. JAMES LEATHEM, Lebanon, Pa. Original application filed Sept. 15, 1920. Serial No. 410,472. Divided and this application filed Jan. 10, 1922. Serial No. 528,258. 13 Claims. (Cl. 112—241.)

1. A high speed sewing machine including in combination, an oscillating needle operating means providing a relatively short reciprocation of the needle bar, a driving shaft, a crank on said driving shaft, means connecting said crank to the oscillating needle operating means, a take-up lever, means pivotally mounting said lever for movement longitudinally of the driving shaft, and means interposed between said connecting means and take-up lever for actuating the latter, said last named means being caused to move through a comparatively short path of travel determined by the crank operating said needle oscillating means.

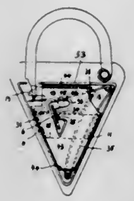


1,508,704. WELL-DRILLING APPARATUS. ROY E. LEONARD, Los Angeles, Calif. Filed Feb. 2, 1921. Serial No. 441,953. 9 Claims. (Cl. 255—15.)

1. In well drilling apparatus, a drilling line, operating mechanism for the drilling line, a slidable cross head, a flexible member conecting the drilling line and cross head and arranged in connection with the operating mechanism so that the drilling line is operated by said operating mechanism, a stationary cylinder, a piston in the

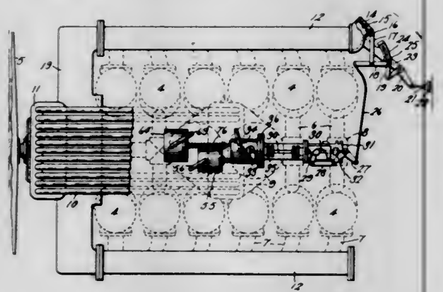
cylinder, and a connecting rod connected to the piston, arranged through one end of the cylinder, and connected to the cross head so that the drilling line is supported by fluid pressure in the other end of the cylinder.

1,508,705. SWIVEL HOOK. DAVID E. MAHAN, Portland, Oreg. Filed Apr. 4, 1924. Serial No. 704,278. 1 Claim. (Cl. 24—241.)



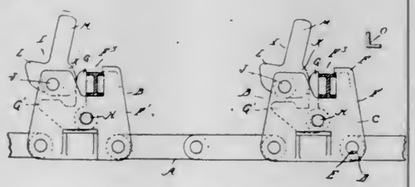
The combination with a swivelly mounted hook, said hook being provided with a pivoted catch, a rectangular shaped end carried by said hook and forming oppositely disposed shoulders, said pivoted member being provided with a spring actuated bolt slidably mounted in the pivoted member and cooperating with an aperture in the rectangular shaped end of the hook, said rectangular shaped end of the hook being disposed in a chamber in the free end of the pivated member and shoulders disposed in said chamber and cooperating with the shoulders formed by the rectangular shaped end of the hook, whereby the hook is braced when strain is applied thereon.

1,508,706. LOCKS OF ALL KINDS. FRIEDRICH WILHELM MEWS, Berlin-Steglitz, Germany, assignor to Oragwerk A. G., Wandsbeck, near Hamburg, Germany. Filed Sept. 17, 1921. Serial No. 501,379. 13 Claims. (Cl. 70—106.)



1. A lock comprising a case, a ward plate loosely inserted in said case and provided with lugs, bent only towards one wall of said case, a supplementary plate

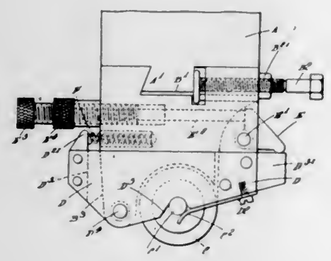
inserted between said case and said ward plate and provided with lugs, bent only towards the opposite wall



of said case, and a spring-pressed bolt having lugs, bent to the same side of said bolt which is guided in said case by said ward plate and said supplementary plate.

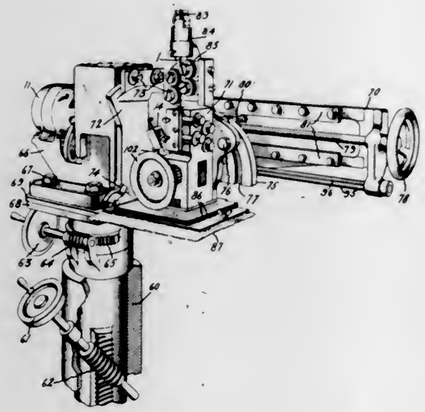
1,508,707. CONTROL MECHANISM FOR AEROPLANE SUPERCHARGERS. SANFORD A. MOSS, Lynn, Mass., assignor to General Electric Company, a Corporation of New York. Filed Apr. 8, 1922. Serial No. 550,931. 6 Claims. (Cl. 123—119.)

1. In combination, an internal combustion engine, a supercharger for supplying compressed air thereto, manually operated means for controlling said supercharger, means for limiting the degree of supercharging obtainable with said manually operated means, and means for preventing the supercharger pressure from exceeding the atmospheric pressure by more than a predetermined ratio.



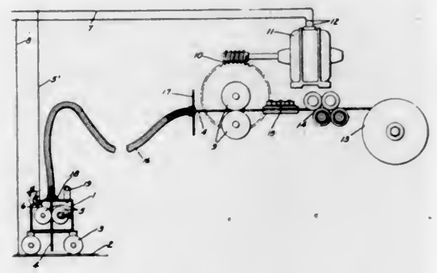
1,508,708. AXLE-ASSEMBLING MACHINE. JESSE E. MCBRIDE, Detroit, Mich., assignor to Palmer-Bee Company, Detroit, Mich., a Corporation of Michigan. Filed Dec. 19, 1919. Serial No. 345,930. 10 Claims. (Cl. 196—179.)

4. A work clamp comprising a stationary jaw, a movable clamping jaw, a rotatable cam for moving said clamping jaw toward and away from said stationary jaw, and means for rotating said cam.



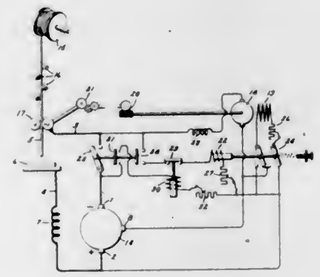
8. A work clamp comprising a stationary jaw forming a conveyor link, a movable clampign jaw, and a rotatable member carried by one of said jaws for moving said clamping jaw positively toward and away from said stationary jaw.

1,508,709. TOOL FOR SCORING CARDBOARD AND THE LIKE. JOHN IRVING NASMITH, Eltham, England, assignor to Vickers Limited, Westminster, London, England, a British Company. Filed Aug. 24, 1921. Serial No. 494,991. 7 Claims. (Cl. 164—70.)



1. A scoring tool of the kind in which the tool body is mounted on an angularly movable supporting rail, comprising an adjustable cutter frame mounted on said body and carrying the cutter, means for adjusting the frame according to the required depth of cut and a transmitting member interposed between the said cutter frame and the said adjusting means, which member forms a positive stop to take the thrust due to the cutting pressure in a direction normal to the supporting rail.

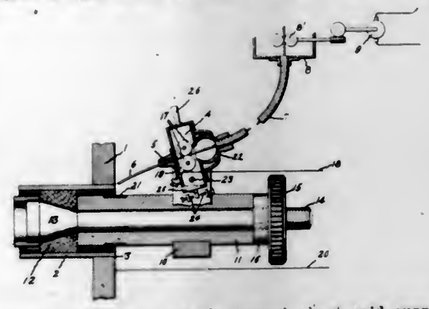
1,508,710. ELECTRIC ARC-WELDING SYSTEM AND APPARATUS. PAUL O. NOBLE, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Apr. 26, 1920. Serial No. 376,448. 12 Claims. (Cl. 219—8.)



1. An automatic arc welding machine of the type employing a metallic electrode comprising a support, a welding head mounted on said support including means adapted to guide a welding electrode through said head to the work to be welded, and means whereby said welding head may be angularly adjusted with respect to said support in two planes of adjustment at right angles to each other whereby the electrode may be delivered from the welding head at any desired angle.

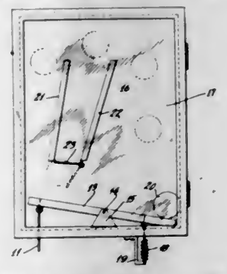
1,508,711. APPARATUS FOR ARC WELDING. PAUL O. NOBLE, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed July 27, 1921. Serial No. 487,875. 17 Claims. (Cl. 219—8.)

1. An apparatus for electric arc welding comprising a hand tool, electrode feeding mechanism and a flexible tube for guiding an electrode from the feeding mechanism to the hand tool.



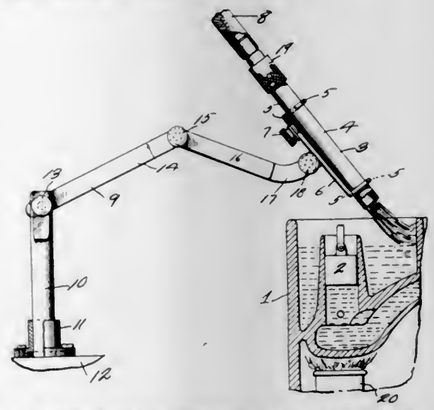
1,508,712. ARC WELDING. PAUL O. NOBLE, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Feb. 16, 1922. Serial No. 537,077. 18 Claims. (Cl. 219—8.)

1. An arc welding system of the class described wherein a welding circuit is supplied from a source arranged to produce arc voltage at the terminals of the source, and wherein said arc voltage is the resultant of a plurality of electromotive forces one of which varies sensitively upon changes in the arc length during welding, and wherein electrode feeding mechanism is arranged to be operated to feed the electrode toward the work, and wherein a motor is arranged to operate said feeding mechanism, characterized by the fact that said motor is provided with a regulating field winding connected to be energized in accordance with said sensitively varying electromotive force whereby the motor will be regulated to operate said electrode feeding mechanism at the proper rate to maintain the arc length substantially constant.



1,508,713. ARC-WELDING APPARATUS. PAUL O. NOBLE, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Mar. 24, 1923. Serial No. 627,487. 11 Claims. (Cl. 219—8.)

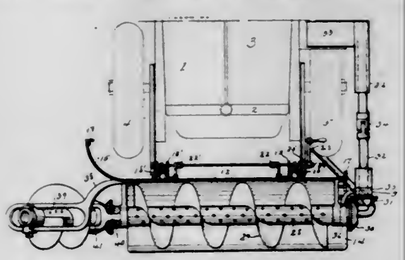
1. An arc welding apparatus comprising in combination an electrode delivery device, means adapted to feed an electrode continuously to said device, a flexible guide tube arranged to guide the electrode from said feeding means to said device, a support for said device, means



whereby said device may be turned about said support and means whereby said device may be thus turned without twisting said tube.

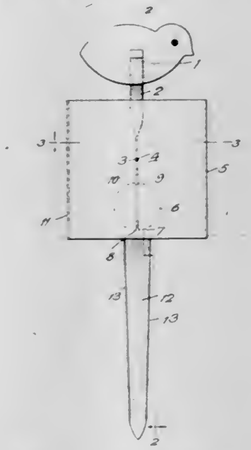
1,508,714. AMUSEMENT APPARATUS. ERNEST O. NORBERG, Patchogue, N. Y. Filed Mar. 29, 1923. Serial No. 628,676. 11 Claims. (Cl. 46—58.)

1. In an apparatus of the class described, means for projecting a ball, means for catching said ball, an escapement connected to said ball catching means and a figure and mounting connected to said escapement at all times and means for driving said mounting, the parts being so arranged and disposed that when the ball catching apparatus functions the figure may be shifted.



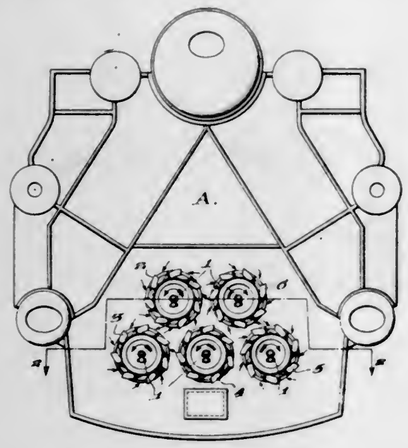
1,508,715. TYPE-FORMING MACHINE. FRED G. NORMAN, Davenport, Iowa. Filed Feb. 7, 1923. Serial No. 617,568. 2 Claims. (Cl. 22—71.)

1. A vertically and horizontally adjustable bracket for supporting a burner, said bracket comprising a vertically disposed pivoted shaft, an arm pivotally and adjustably



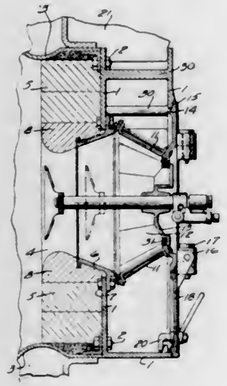
connected to the upper end of the shaft, said arm being formed in two sections pivotally connected together by means of a set screw, a yoke pivotally connected to the outer end of the outer section of the arm by means of a set screw, said yoke having adjustably mounted therein the burner.

1,508,716. AUTOMOBILE SNOWPLOW. GUSTAV OCHS, Orange, N. J., assignor to Ochs Snow Plow Co., Orange, N. J., a Corporation of New Jersey. Filed Oct. 29, 1921. Serial No. 511,464. 12 Claims. (Cl. 37—42.)



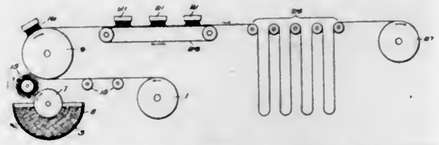
1. In an auto-snow plow, the combination of an upright plow body, means for supporting said body upon the forward end of an automobile chassis, bearing brackets mounted upon the lower part of said body, a horizontal spiral conveyor mounted in said brackets, power driven means for rotating said conveyor and a supplemental conveyor inclined laterally at an angle from and driven by said horizontal conveyor to direct snow laterally out of a roadway.

1,508,717. MOBILE FIGURE. GEORGIA W. PAGE, New York, N. Y. Filed Aug. 2, 1923. Serial No. 655,188. 3 Claims. (Cl. 46—40.)



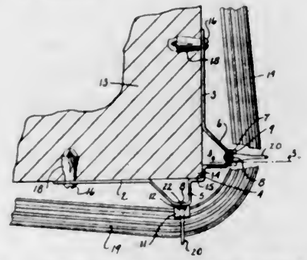
1. A mobile figure representing an animate object mounted rigidly upon a support consisting of a metallic strip, a casing laterally enclosing said strip and open at the top and bottom, pivots on said strip consisting of extensions thereof seating in openings in said casing, the weight of the strip below the pivots being sufficiently greater than the weight of the figure and its support above the pivots to tend to maintain the figure upright while permitting same to oscillate freely, and means for maintaining the casing in vertical position consisting of a downward extension thereof adapted to be thrust in the ground.

1,508,718. APPARATUS FOR BURNING LIQUID FUEL. ERNEST H. PEABODY, Pelham Manor, N. Y. Filed Mar. 9, 1922. Serial No. 542,263. 3 Claims. (Cl. 158—1.5.)



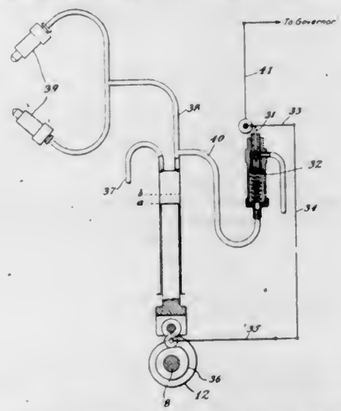
1. In a combustion chamber the combination of a plurality of burners for producing a plurality of flames or columns of burning gases, and an air director for each burner to supply air currents which will impinge upon the flames and thereby give the latter a rotary motion about their axes, some of said air directors arranged to rotate the air currents in one direction and others in an opposite direction.

1,508,719. FURNACE FRONT. ERNEST H. PEABODY, Pelham Manor, N. Y. Filed Aug. 28, 1923. Serial No. 659,708. 7 Claims. (Cl. 110—172.)



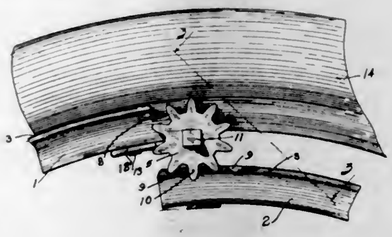
4. A furnace front comprising a ring like member adapted to fit into an opening in a furnace, and annular air register supported by the front by hinge joints enabling it to swing to either side, means carried by said register and engaging the ring like member to automatically center the air register when it is swung to operative position, an annular chamber surrounding said register, and a natural draft door and a forced draft duct both communicating with said chamber.

1,508,720. FINISHED SHEET MATERIAL AND METHOD OF FINISHING THE SAME. LLOYD M. PERRY, Nashua, N. H., assignor to Nashua Gummed & Coated Paper Company, Nashua, N. H., a Corporation of Massachusetts. Filed July 1, 1922. Serial No. 572,279. 4 Claims. (Cl. 91—68.)



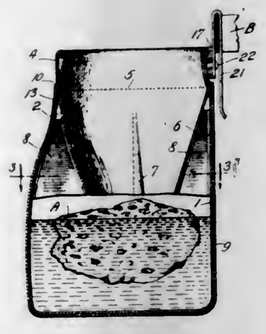
4. A surface coated, glazed paper having a surface coating only of a closely adherent and a permanent non-transferable glaze, the latter containing an insoluble salt of a fatty acid.

1,508,721. BRIDLE-WIRE SUPPORT OR BRACKET. HENRY W. PLEISTER, Westfield, N. J., assignor to Henry B. Newhall. Filed Mar. 30, 1923. Serial No. 628,891. 10 Claims. (Cl. 248—36.)



1. A new article of manufacture comprising a bridle wire support or bracket bent back upon itself to form base members at an angle to each other, and means carried by each base member to support runs of bridle wires at a distance from the base members to prevent rubbing or chafing of the bridle wires.

1,508,722. ENGINE-FUEL REGULATION. WILLIAM T. PRICE, Easton, Pa.; Helen C. Price, administratrix of said William T. Price, deceased, assignor to Price Engine Corporation, New York, N. Y., a Corporation of New York. Filed Dec. 31, 1919, Serial No. 348,703. Renewed May 15, 1923. 6 Claims. (Cl. 123—140.)

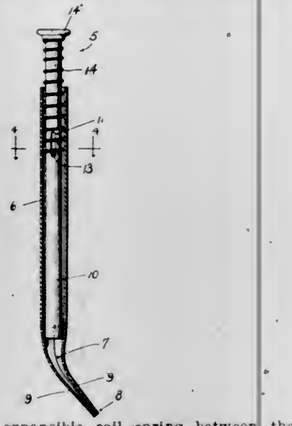


1. A fuel regulating system for airless injection type engines, comprising a fuel pump with an overflow valve variably opened during the latter part of the discharge stroke of the pump plunger, and means for controlling the cross area of said path so that for any position of the plunger beyond the point representing the end of the injection period, said cross area in square inches is less than the displacement volume in cubic inches of the plunger measured from said point and divided by 1 and greater than said volume divided by 150.

1,508,723. DEMOUNTABLE RIM WITH CONTRACTING AND EXPANDING MEANS. FRED D. RINGO, Limon, Colo., assignor, by direct and mesne assignments, of one-third to Milton N. Thompson, Limon, Colo., and one-third to Francis Blakeman, jr., Eads, Colo. Filed Feb. 19, 1923. Serial No. 619,897. 1 Claim. (Cl. 301—33.)

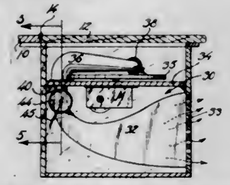
A demountable rim comprising a substantially circular split ring whose ends normally abut each other, said rim having a substantially channel-shaped cross section with outwardly curved flanges; a shaft journaled in the bottom of the rim near one end; a cog-wheel on each end of the shaft, the flanges being cut away to provide space for the wheels, the other end of the rim having its flanges provided with perforations to cooperate with the cogs on the wheels and means to lock the wheels against rotation.

1,508,724. FLEXIBLE WATER BAG OR BUCKET. WALTER E. ROSE, Boulder, Colo. Filed July 19, 1922. Serial No. 575,951. 8 Claims. (Cl. 150—1.)



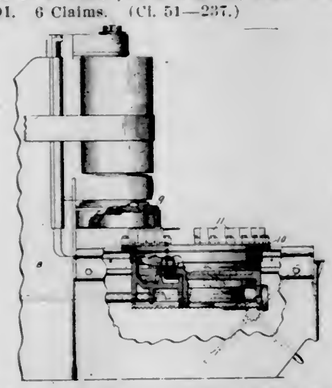
1. A water bag of flexible material provided with a funnel-shaped splash apron, extending part-way into the bag, and interposed members connected respectively to the bag and the apron, for holding the latter out of contact with the bag.

1,508,725. TWEEZERS. HARRY SCHLOESSER, Fairland, Ind. Filed July 9, 1923. Serial No. 650,443. 1 Claim. (Cl. 81—3.)



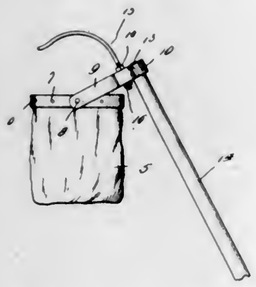
A tool of the character set forth, the combination of a tubular handle having a slit deflected outer end, a

plunger extending within the handle and terminating adjacent the slit end thereof, a knob on the outer end



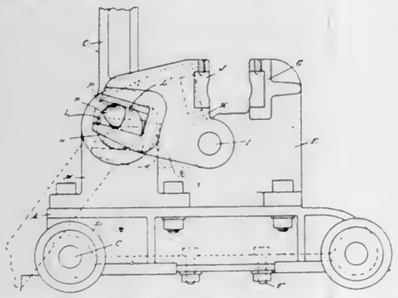
of the plunger, an expansible coil spring between the handle and plunger, and means retaining the plunger in the handle.

1,508,726. RADIOPHONOGRAPH. ISRAEL SHAPIRO, Denver, Colo. Filed May 29, 1923. Serial No. 642,325. 1 Claim. (Cl. 179—100.)



In a sound amplifying device, in combination, a tone arm, a horn having a large end and a small end, a connection between said tone arm and the small end of the horn, a mechanical reproducer connected to the tone arm, and an electrical receiver, adapted to be operated by an electric current from a radio amplifier, connected with said connection whereby sound is transmitted from said horn, both from the tone arm and from the electric receiver.

1,508,727. KNIFE GRINDER. THOMAS CORNELIUS SHEEHAN, Upper Montclair, N. J., assignor to Durham Duplex Razor Company, New York, N. Y., a Corporation of New York. Filed Aug. 31, 1921. Serial No. 497,191. 6 Claims. (Cl. 51—237.)

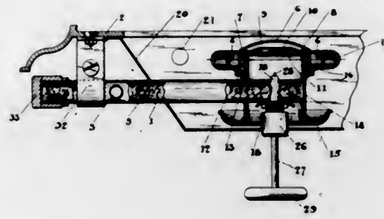


1. In a grinder, the combination with a support, of means coacting with said support and adapted to twist a longitudinally and transversely tapered blade on said support to cause one surface thereof to lie in a plane which intersects the median plane of the blade equidistant from its edge substantially throughout its length, and a coacting grinding device adapted to act on the surface so disposed.

1,508,728. FRUIT GATHERER. RENKO H. SIEFKEN, Marshalltown, Iowa. Filed Feb. 4, 1924. Serial No. 690,563. 1 Claim. (Cl. 56—339.)

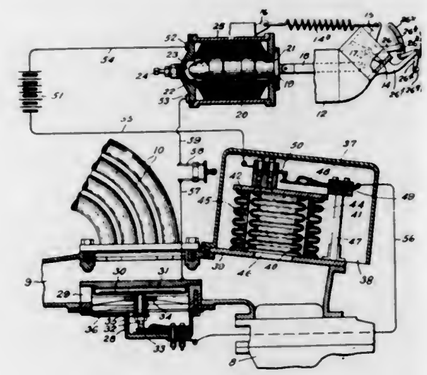
In a fruit gatherer, a bail, a bracket integral with the intermediate portion of said bail, said bracket being provided with means to permit a handle to be connected thereto, and also provided with a pair of openings, a pair of longitudinally curved fruit engaging and pulling fingers having threaded portions on one end thereof, the free ends of said fingers extending outwardly beyond the pivoted ends of said bail, the threaded ends of said fingers being passed through said openings, and retaining nuts fitted on said threaded portions of said fingers and bearing against opposite faces of said brackets for maintaining the fingers in a set position.

1,508,729. WORK-HOLDING CLAMP. WILLIAM E. SIMPSON, Detroit, Mich., assignor to Palmer-Bee Company, Detroit, Mich., a Corporation of Michigan. Filed Dec. 5, 1919. Serial No. 342,749. 5 Claims. (Cl. 81—25.)



1. A work clamp comprising a stationary jaw member, a movable jaw member pivotally connected thereto, a rock shaft, and a cam on said rock shaft eccentric to the axis thereof and engaging said movable jaw member, said cam having a portion for imparting a quick movement of relatively great amplitude to said jaw member, and a succeeding portion for imparting a slow powerful movement of slight amplitude in the same direction.

1,508,730. LIQUID-FUEL BURNER. ARTHUR TAYLOR SPROWL, Sacramento, Calif. Filed Dec. 21, 1922. Serial No. 608,186. 9 Claims. (Cl. 158—68.)



9. In a liquid fuel burner, a generator tube, a burner at its inner end comprising an outer member open at top and bottom having at its upper end an inverted cup provided with perforations in its sides and having about

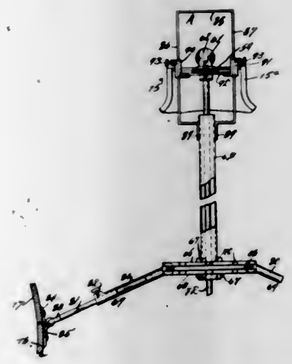
the inverted cup at a distance therefrom a heat retaining ring above the generator tube in position to be heated by flame from the perforations in the inverted cup and to radiate heat against the generator tube, the generator tube being provided within the outer member of the burner with a dischage opening adapted to discharge

vaporized fuel upward into the inverted cup, means for regulating the discharge comprising a valve and a valve stem extending downward through the bottom of the pan and provided below the bottom of the pan with means for operating it, the outer member of the burner being also provided below the generator tube with a trough adapted to contain liquid fuel for preheating.

1,508,731. CONTROL MECHANISM FOR AEROPLANE SUPERCHARGERS. REGINALD G. STANDERWICK, Lynn, Mass., assignor to General Electric Company, a Corporation of New York. Filed Apr. 8, 1922. Serial No. 550,932. 4 Claims. (Cl. 123—119.)

1. In combination, an internal combustion engine, a supercharger for supplying compressed air thereto, regulating means for the supercharge, electromagnetic operating means for said regulating means, an electric circuit therefor, and means responsive to the supercharger air pressure and to the ratio between the supercharger air pressure and the altitude atmospheric pressure for controlling said electric circuit.

1,508,732. STORAGE BATTERY. FRED CURTIS THORNLEY and FRANK FORD TAPPING, Knightsbridge, London, and OTTO REYNARD, Inkerman Terrace, London, England; said Tapping and said Reynard assignors to said Thornley. Filed July 21, 1923. Serial No. 653,052. 6 Claims. (Cl. 204—29.)

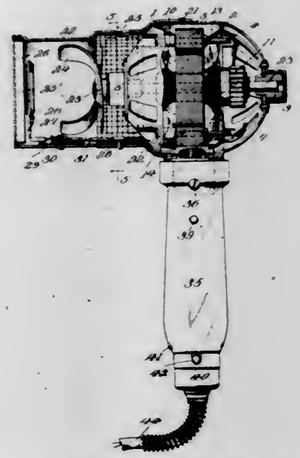


4. A plate for an electric storage battery in which the lead compound comprises ammonium alginate mixed with lead oxide.

1,508,733. NONCOMBUSTIBLE VISITING CARD. FRANK W. TRABOLD, New York, N. Y. Filed Apr. 18, 1922. Serial No. 554,859. 2 Claims. (Cl. 281—43.)

1. As a new article of manufacture, a unitary rectangular metallic appropriately imprinted visiting card having an ink retaining granular surface, and having weakened lines adjacent to the edges of the card defining the margins thereof, and being further provided with suitable weakened lines at the junctions of the margins thereof; said weakened lines permitting manually bending each of the margins of the card upwardly in a substantially permanently disposed position to constitute a tray.

1,508,734. GARMENT FORM. CHARLES A. UFFORD, Dorchester, Mass. Filed Apr. 1, 1922. Serial No. 548,720. 7 Claims. (Cl. 223—18.)

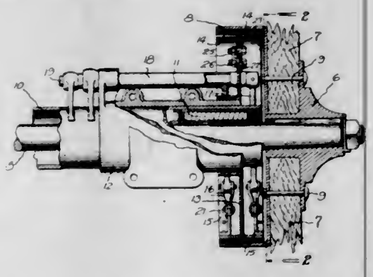


1. In a garment form, a post member, adjustable sections carried thereby, a sleeve slidable longitudinally of the post member, adjustable arms connecting said sleeve and certain of said adjustable sections, a handle connected to said sleeve and protruding from the upper part of the form and adapted to be drawn upwardly to cause an inward movement of said arms, oppositely disposed block members through which the handle slides connected with said post member and located exteriorly of the neck portion of the form to lock the handle in adjusted positions.

1,508,735. ELECTRIC HAIR DRIER. THEOBALD C. WEISS, Racine, Wis., assignor to The Fitzgerald Manufacturing Company, Torrington, Conn., a Corporation of Connecticut. Filed Dec. 6, 1921. Serial No. 520,386. 9 Claims. (Cl. 34—26.)

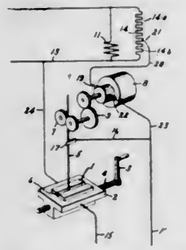
8. In a hair drier or the like, the combination of a casing formed with an air nozzle, a motor shaft arranged in said casing, a propeller connected to the motor

shaft and disposed in said nozzle so as to discharge air therethrough, electrical leads in said nozzle, a heating



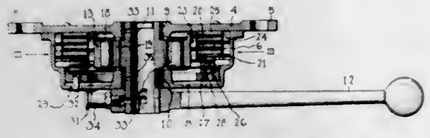
element arranged in said nozzle between said propeller and the discharge end of said nozzle, said heater having a quick detachable connection with said electrical leads.

1,506,736. PROCESS FOR THE PRODUCTION OF AMMONIUM COMPOUNDS. JOHN HENRY WEST, Bayswater, London, and ARTHUR JAQUES, Waterloo, near Liverpool, England. Filed Feb. 1, 1924. Serial No. 690,076. 18 Claims. (Cl. 23—13.)



1. A process for the production of ammonium salts consisting mainly of ammonium sulphate and some ammonium sulphite which consists in admixing ammonia, water vapour, sulphur dioxide and air in such relative proportions that (*a*) the concentration of the sulphur dioxide does not exceed 4.2 per cent of the whole volume of the gases (*b*) the ammonia is present in such quantity that the reaction mixture is non-acid, and (*c*) the amount of water vapor employed is sufficient to render the ammonium sulphite which is initially produced as a result of the reaction sensitive to rapid oxidation but is insufficient to make it sensibly wet after cooling the reaction products.

1,508,737. ADJUSTABLE BRAKE-BAND SUPPORT. JOHN W. WHITE, Detroit, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Dec. 1, 1920. Serial No. 427,599. 6 Claims. (Cl. 188—79.)



1. In brake mechanism of the class described, a brake drum; a non-rotatable supporting disc within and of approximately the same diameter as the interior of said drum; two brake bands located one upon each side of said supporting disc; means for moving said brake bands into frictional engagement with the interior of said brake drum; a plurality of stops carried by said supporting disc and arranged some upon one and others upon the other side thereof, and against which said brake bands rest when in their off positions; and a plurality of adjusting devices all operable from one and the same side of said supporting disc for adjusting said stops to thereby vary the positions of the peripheries of said brake bands relative to the internal surface of said brake drum.

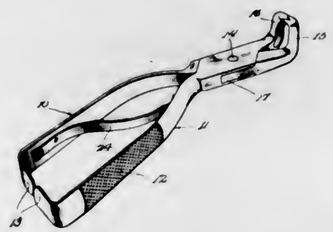
1,508,738. METHOD OF AND APPARATUS FOR AUTOMATIC ARC WELDING. MAX A. WHITING, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Feb. 15, 1919. Serial No. 277,309. 37 Claims. (Cl. 219—8.)

1. The method of operating a welding arc between a fusible electrode and a cooperating electrode which consists in causing the welding electrodes to approach and recede from each other in accordance with the difference between the arc potential, and a substantially fixed potential which is less than a desired arc potential.

1,508,739. RECOIL CHECK FOR USE WITH AUTOMOBILES. BENJAMIN H. ANIBAL, Detroit, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed June 25, 1919. Serial No. 306,703. 4 Claims. (Cl. 188—130.)

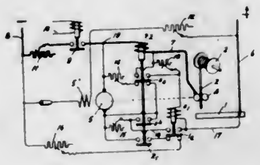
1. In a shock absorbing device of the class described a hollow casing having oppositely disposed bearings in its end walls; an oscillating hub the ends of which are supported in said bearings; a rotatable clutch ring located within said casing and supported by said hub; a plurality of clutch members operating in recesses provided in said hub and adapted to engage the inner surface of said clutch ring to thereby drive the same; a plurality of friction discs located within said casing and some of which are interlocked with said clutch ring so as to rotate therewith, while others are interlocked with said casing and remain stationary; a rotatable adjusting ring located within said casing and having a threaded periphery in engagement with a threaded portion of the interior of said casing; and a spring interposed between said adjusting ring and said discs.

1,508,740. CATAMENIAL SACK OR NAPKIN HOLDER. ANNA BRAND, Chicago, Ill., assignor, by mesne assignments, to Health-Tex Products Corporation, a Corporation of Illinois. Filed June 22, 1923. Serial No. 647,130. 1 Claim. (Cl. 128—290.)



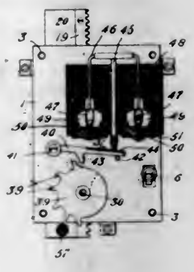
A catamenial sack comprising a strip of rubber sheeting having at each end a tab of non-elastic fabric, the opposed side portions of said strip being turned inwardly

to provide a pocket for an absorbent pad, and having a tubular seam along the edges of said inwardly turned opposed side portions, and a serpentine or springlike cord



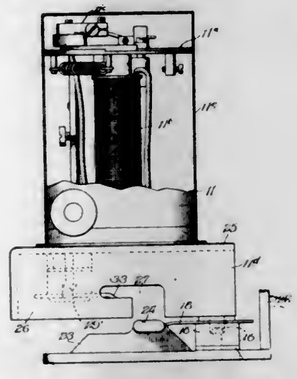
of nonelastic material located in said seam and fastened at both ends thereof for the purpose of controlling the elasticity of said sack and restraining its stretching capacity from reaching a breaking point.

1,508,741. PIG-TOOTH NIPPERS. RUDOLPH W. BRUENE, Cushing, Iowa. Filed June 29, 1923. Serial No. 648,511. 2 Claims. (Cl. 32—35.)



1. A tooth nipper comprising a pair of hinged shanks having stops for limiting the closing movement of the shanks, jaws at the forward ends of the shanks, said jaws being bent at substantially right angles to the hinge portion of the nipper, and a pair of diverging cutting edges at the extreme end of each jaw, said cutting edges and jaws forming integral parts of said shanks and the jaws on one shank overlapping those on the other shank when said stops abut.

1,508,742. ELECTRIC-ARC WELDING. EUGENE B. CARICHOFF, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Dec. 14, 1923. Serial No. 680,728. 14 Claims. (Cl. 219—8.)

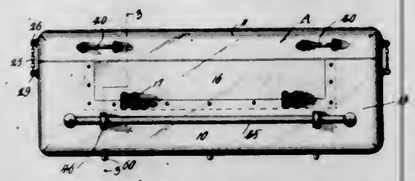


1. Apparatus for arc welding of the type wherein the welding arc is maintained between the work constituting one electrode and a welding pencil constituting the other electrode, and wherein a reversible electric motor is provided for feeding the pencil toward and away from the work to start the arc and for feeding the pencil toward the work to maintain the arc after the arc is established, and wherein contactors are provided for controlling the circuit of the motor to govern its direction of operation, characterized by the fact that one of said contactors is controlled by a coil responsive to current flowing between the electrodes and another of said contactors is controlled by a coil responsive to the voltage across the electrodes.

1,508,743. SIGNAL BOX. RALPH W. CARNAHAN, Canton, Ohio, assignor of one-fourth to Orpha G. Sigler, Cleveland, Ohio. Filed Apr. 15, 1919. Serial No. 290,175. 3 Claims. (Cl. 177—378.)

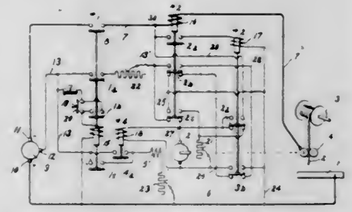
2. In a signal transmitter, a make and break device comprising a mercury cup, a fixed contact point within said cup, a movable contact point within said cup, an open tip upon said movable contact arranged to engage the fixed contact and to allow the mercury in the cup to flow through said open tip.

1,508,744. SUPPORTING BASE FOR RELAYS OR OTHER ELECTRICAL UNITS. JOHN O. CARR and HOWARD L. KRUM, Chicago, Ill., assignors to Morkrum Company, Chicago, Ill., a Corporation. Filed June 8, 1921. Serial No. 475,939. 11 Claims. (Cl. 175—298.)



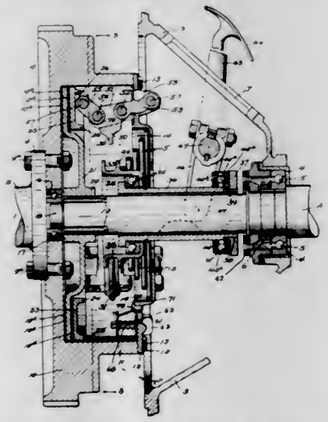
1. In combination, an electrical apparatus, a supporting base therefor, a table bracket, and cooperating sets of connector clips mounted respectively on said base and bracket and adapted to be engaged by the relative horizontal movement of said parts, said base and bracket having cooperating lugs and grooves for preventing relative vertical movement of said parts when said connector clips are engaged.

1,508,745. BURIAL CASKET. JAMES CASSEL, Peru, Ind. Filed Nov. 10, 1923. Serial No. 674,042. 5 Claims. (Cl. 27—8.)



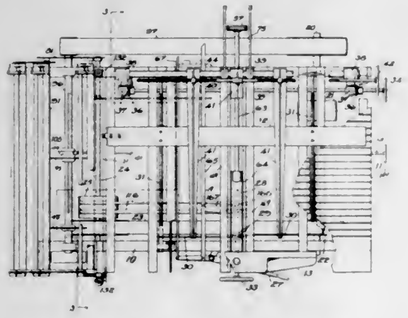
1. A burial casket formed of vitreous material comprising an integral molded body portion, an integral molded cover portion, a drop side for the body portion, the

upper edge of the drop side being flushed with the upper edges of the walls of the body, the upper edges of the walls of the body and the drop side being rabbeted, the lower



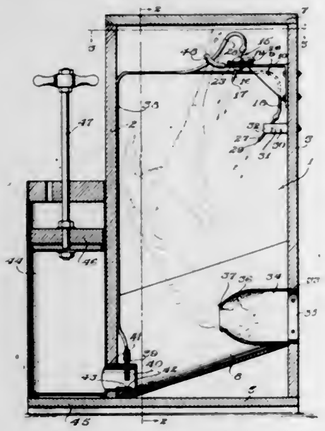
edge of the cover being rabbeted to engage the rabbeted edges of the side walls and drop side, and means for connecting the cover with the body.

1,508,746. AUTOMATIC ARC-WELDING CONTROL SYSTEM. WILLIAM B. CLARKSON, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Dec. 22, 1923. Serial No. 682,341. 8 Claims. (Cl. 219—8.)



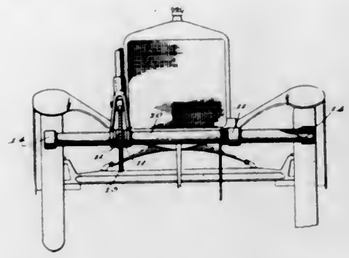
1. An arc welding system of the type wherein the welding arc is maintained between the work constituting one electrode and a welding pencil constituting the other electrode, and wherein an electric motor is provided for feeding the pencil, and wherein a dynamic braking circuit is provided for stopping the motor, characterized by the fact that circuit controlling means connected to be operated in accordance with the counter-electromotive force of the motor is provided for controlling the circuit of the motor field winding for the purpose described.

1,508,747. FRICTION CLUTCH. CLARENCE H. DOOLEY, Rock Island, Ill. Filed May 1, 1922. Serial No. 557,667. 6 Claims. (Cl. 192—111.)



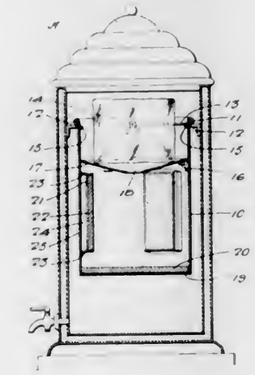
1. In combination, a driving member, a driven member, a plate rotatable with the latter, a friction plate movable into and out of engagement with said plate, a radially-adjustable link pivotally connected at one end with said driving member, movable means pivotally connected with the other end of said link and adapted when moved in one direction to force said friction plate against said other plate, and means engaging with an intermediate portion of said link for holding it against movement in its different radially-adjusted positions.

1,508,748. MACHINE FOR MAKING BOX SHOOKS. HENRY A. GALE and ORNAN S. COOK, Fitchburg, Mass.; said Cook assignor to said Gale. Filed Oct. 23, 1922. Serial No. 596,186. 23 Claims. (Cl. 144—7.)



1. In a box shook machine, the combination of a table on which the matched boards for forming the box shooks are adapted to be placed, of a clamp shaft extending along the table near one edge thereof, and a plurality of clamp arms fixed on said shaft and adapted to be swung, about the axis of the shaft, down toward the table into horizontal position across the table to hold down the boards and prevent their buckling, the arms not being connected with the table at their free ends at the front edge of the table.

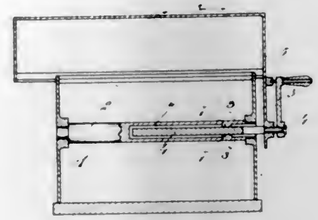
1,508,749. APPARATUS FOR APPLYING INSECTICIDES. HENRY F. KUEHN, Seattle, Wash. Filed Apr. 18, 1922. Serial No. 554,712. 8 Claims. (Cl. 119—159.)



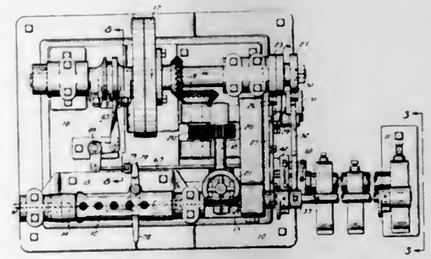
1. In apparatus of the class described, means for suspending a fowl in head-down position, and insecticide blast means supported adjacent the suspension means and arranged to direct the blast in a general downward direction against the body of the fowl.

1,508,750. COMBINED BUMPER AND WINCH FOR MOTOR CARS. WILLIAM CAMPBELL NABORS, Mansfield, La. Filed Dec. 10, 1923. Serial No. 679,806. 1 Claim. (Cl. 254—166.)

A bumper for automobiles and motor cars consisting of a bumper bar or beam, supports in which the said bar or beam is mounted to rotate, and a lever journaled on the said bar or beam and having ratchet connections therewith whereby the beam may be rotated and utilized as a winch, said lever extending slightly beyond the periphery of the ratchet wheel and having a handle receiving socket, and said beam or bar being hollow and having removable end closures, and a handle for the lever adapted to be housed in the beam or bar when not in use.



1,508,751. FILTER. WILSON NOLES, Indianapolis, Ind. Filed Nov. 17, 1922. Serial No. 601,525. 3 Claims. (Cl. 210—105.)

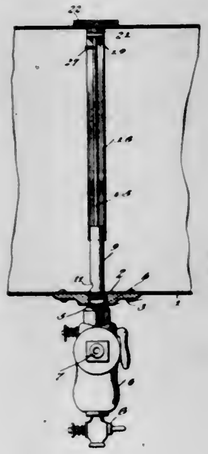


1. A filtering device comprising an outer receptacle provided with a drain, an inner receptacle suspended within the outer receptacle in spaced relation to the walls thereof, rectangular frames secured upon the inner periphery of the inner member, flat slabs of porous material held within said frames, said frames fitting snugly against the inner wall of the inner receptacle whereby they together with the slabs will define a plurality of compartments, the inner receptacle having its wall provided with openings communicating with said compartments.

1,508,752. MEANS FOR ATTACHING CRANKS TO CALCULATING MACHINES. VALENTIN JAKOB ODHNER, Stockholm, Sweden. Filed Mar. 29, 1922. Serial No. 547,941. 4 Claims. (Cl. 235—73.)

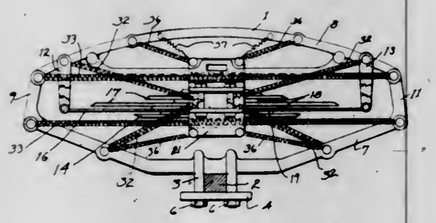
1. A calculating machine of the character described including a framework, a carriage slidably mounted on the framework and adapted to support a totalizing-counter, a shaft journalled in the framework and adapted to support the calculating wheels, a crank, means for mounting the crank on the carriage and means for operably connecting the crank mounting means with the calculating wheel supporting shaft so that the said shaft may be turned by means of the crank in any position of the carriage.

1,508,753. MACHINE FOR CUTTING WIRE INTO LENGTHS. FRANK H. SLEEPER and JAMES A. HORTON, Worcester, Mass., assignors to Sleeper & Hartley, Inc., Worcester, Mass., a Corporation of Massachusetts. Filed Feb. 3, 1923. Serial No. 616,804. 13 Claims. (Cl. 140—140.)



1. In a wire feeding and cutting-off machine, the combination with a guide for the wire, of a blade for cutting the wire off at the end of the guide, a slide stop for limiting the length of the wire, a lever connected with said stop and being operated by it, a driving fly wheel, a shaft on which said driving wheel is mounted to rotate freely, a clutch keyed to said shaft, and means located adjacent to the blade and connected with said lever for operating the clutch to control its connection with the wheel.

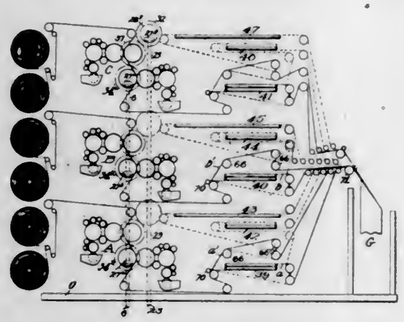
1,508,754. VALVE. PAUL D. SPRENGER and CHARLES W. MCPHERRON, Seattle, Wash. Filed Feb. 7, 1924. Serial No. 691,228. 2 Claims. (Cl. 158—46.5.)



1. The combination with a liquid fuel tank having an opening through the upper part thereof and also having an opening in the lower part thereof in vertical alignment with said first opening, of a tubular valve casing supported at its lower end in said second-named opening and upstanding within the tank for part of the height of the latter, said tubular valve casing having a lateral port adjacent to the lower end thereof, a rotary valve in said valve casing for controlling said port, a valve stem for operating said valve, said valve stem extending vertically within the tank through the opening in the upper part thereof, a valve stem guiding and supporting member supported upon said valve casing and extending vertically within said tank, a packing washer surrounding said valve stem and compressed between said valve

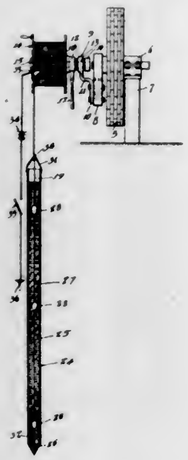
stem guiding and retaining member and the upper wall of said tank, and a hand-wheel secured to the extending upper end portion of said stem, said valve casing, valve

stem, packing washer and stem guiding and supporting member being insertable in the tank through the opening in the lower part of the tank.



1,508,755. VEHICLE SPRING. WILLIAM ELY STANFORD and ELMA LETTIE STANFORD, Calexico, Calif. Filed May 18, 1922. Serial No. 561,889. 6 Claims. (Cl. 269—28.)

1. Spring mounting means for a vehicle comprising a rigid frame supported on a vehicle axle in a vertical plane, a main spring pivotally supported inside of the frame having a block associated therewith with means thereon for supporting the vehicle body, and a plurality of auxiliary springs between the frame and the block, said springs being stretched to different degrees of tension so as to be called into play successively.

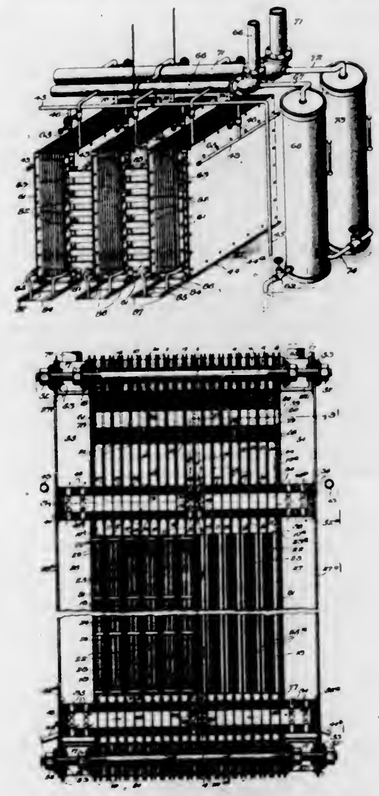


1,508,756. WEB-PRINTING PRESS AND DRIVE THEREFOR. HENRY A. WISE WOOD, New York, and JOHN A. ISBELL, Middletown, N. Y., assignors to Wood Newspaper Machinery Corporation, New York, N. Y., a Corporation of Virginia. Filed Jan. 24, 1916, Serial No. 73,834. Renewed Feb. 27, 1924. 12 Claims. (Cl. 270—5.)

1. In a printing press, the combination of a plurality of series of decks, a plurality of motors, said series being arranged adjacent and parallel to each other, and the couples being capable of being connected to run in three

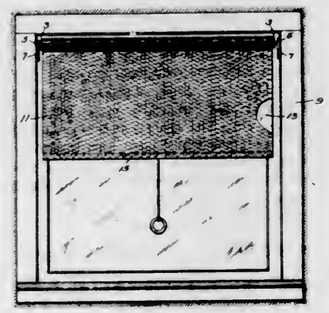
quads, and means whereby each motor can be connected independently of the others with any of said quads or with a plurality of them.

1,508,757. DEVICE FOR TORPEDOING WELLS. FORD I. ALEXANDER, Los Angeles, Calif., assignor to The Ford Alexander Corporation, Los Angeles, Calif., a Corporation of California. Filed June 28, 1923. Serial No. 648,284. 4 Claims. (Cl. 102—4.)



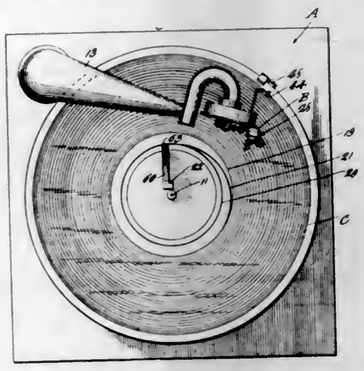
2. Mechanism for torpedoing oil wells which includes a derrick, a band wheel, an engine for driving the band wheel, a crank carried by the band wheel, an arm secured to the crank and having an opening aligned with the axis of the band wheel, a reel supported on a shaft extending into the opening and aligning with axis of the band wheel, said reel being rotatable on the shaft, a clutch for locking the reel to the shaft, and a line wound on the reel extending over the derrick.

1,508,758. ELECTROLYTIC APPARATUS. WILLIAM G. ALLAN, Toronto, Ontario, Canada, assignor, by mesne assignments, to John P. Scott, Toronto, Canada. Filed Feb. 3, 1920, Serial No. 355,991. Renewed May 28, 1923. Serial No. 569,014. 34 Claims. (Cl. 204—5.)



1. Electrolytic apparatus comprising, in combination, a plurality of cells, each having an anode chamber and

cathode chamber, anolyte container means, catholyte container means, and conduit means whereby each of said anode chambers is individually connected to said anolyte

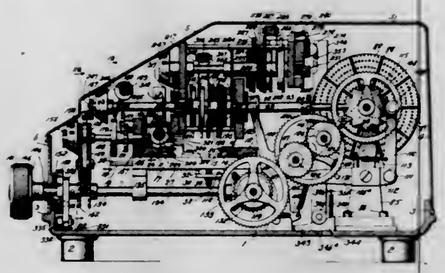


container means, and each of said cathode chambers is individually connected to said catholyte container means, for circulation of anolyte and catholyte, respectively.

1,508,759. WINDOW CURTAIN. EDWARD H. ANGIER, Framingham, Mass. Filed Jan. 31, 1922. Serial No. 532,971. 5 Claims. (Cl. 156—10.)

4. A window shade embodying in its construction as a flexible light modifying element a duplex sheet of craped paper having an intervening flexible coating layer.

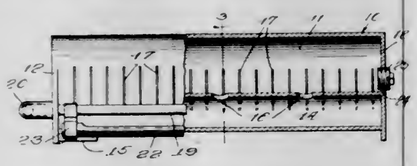
1,508,760. PHONOGRAPH STOP. GLEN L. ARDERY, Woonsocket, S. Dak. Filed Mar. 27, 1924. Serial No. 702,433. 5 Claims. (Cl. 192—120.)



1. The combination with a phonograph including a cabinet, a turntable, a swinging tone arm, and a sound box, and a record on the turntable, of a stop for the phonograph including a brake for engaging the turntable, a trip lever associated with the brake for normally holding the same from out of engagement with the turntable, means carried by the tone arm for lifting the tone arm above the record and toward the brake trip, means carried by the tone arm lifting means for actuating the brake trip, when the tone arm is moved toward the brake trip, means normally holding said tone arm lifting means in an inoperative position, and means disposed adjacent to the inner sound groove of the record for operating said last mentioned means to permit the raising of the tone arm.

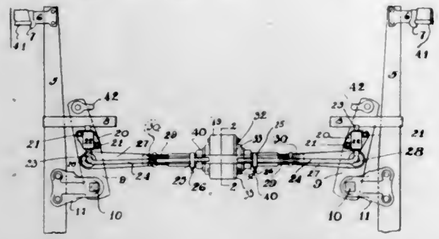
1,508,761. VISUAL WEATHER SCREEN. SAMUEL AUGUSTINE DE NORMANVILLE, London, England. Filed Oct. 10, 1922, Serial No. 593,599. Renewed June 3, 1924. 5 Claims. (Cl. 20—40.5.)

1. In combination, a stationary transparent screen, a rotary transparent screen, a frame for supporting said rotary screen, said supporting frame being situated between said screens, clamping means for securing said frame to the upper and lower ends of said stationary screen, and a water seal between it and each of said screens, substantially as and for the purpose hereinbefore set forth.



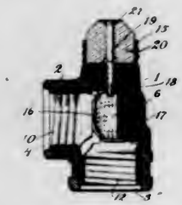
1,508,762. MULTIPLYING MACHINE. GEORGE M. BACON, Salt Lake City, Utah, assignor to Bacon Multiplier, Incorporated, Salt Lake City, Utah, a Corporation of Utah. Filed Dec. 8, 1920. Serial No. 429,107. 86 Claims. (Cl. 235—61.)

1. In a multiplying machine, the combination of a plurality of differential wheels, comprising concentric circles of crown teeth arranged in the same plane, said teeth being arranged in ten sets of ten radially extending teeth forming continuous connections between the several circles of teeth, a pinion mounted for sliding movement radially of each of said differential wheels along one of the continuous teeth thereof, a single manually movable means for simultaneously positioning selected groups of one or more of said pinions according to the respective digits of the multiplicand, and means for simultaneously rotating all of said differential wheels in accordance with multiplier digits after the selection of each group of pinions.



86. In a multiplying machine, the combination of a plurality of differential wheels, a plurality of pinions adapted to be brought into cooperative relation with the respective differential wheels, manual means for selecting and positioning said pinions in groups corresponding to the number of places in the multiplicand or divisor for each denominational position of the multiplier, means for rotating said differential wheels in the different denominational positions, and means for reversing the direction of rotation of said differential wheels for division.

1,508,763. LIQUID-FUEL BURNER. JOHN BEATHAM, Rio Vista, Calif. Filed Aug. 27, 1923. Serial No. 659,620. 1 Claim. (Cl. 158—66.)

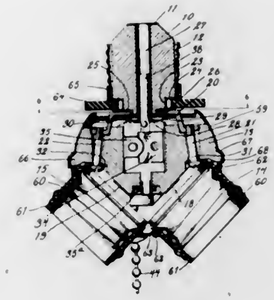


In a hydrocarbon burner, a casing formed to provide substantially cylindrical main and auxiliary compartments, said auxiliary compartment being formed in the lower wall of the main compartment and being disposed partially within and partially without the main compartment, openings formed in the wall of the auxiliary compartment connecting the compartments, an opening in the auxiliary compartment adjacent one end thereof communicating with the air, and the end wall of the main compartment being provided with an opening affording access thereto, a removable closure for said opening, and vertical slots formed in the wall of said main compartment having their lower ends disposed immediately adjacent the wall of the auxiliary compartment and their upper ends spaced thereby to provide in the upper end of the main compartment a gas pocket.

1,508,764. BRAKE ADJUSTER. THOMAS C. BENISH, St. Louis, Mo. Filed Apr. 3, 1922. Serial No. 549,020. 12 Claims. (Cl. 188—202.)

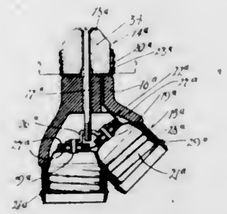
5. In a brake-adjuster, the combination with a brake live-lever, of a central shaft having a connection with said lever which is adjusted when the shaft is rotated, a ratchet and a housing so mounted on the shaft to rotate therewith, pawls attached to the said housing, a connection between the said housing and the brake lever adapted to rotate the housing with pawls in one direction when the braking power is applied and in the opposite direction when it is released, the said ratchet having a plurality of sets of teeth and a plurality of pawls in engagement therewith, the said teeth of each set being so arranged that the said pawls are adapted to engage the same alternately in series and means for regulating the effective movement of the housing and pawls.

1,508,765. PLURAL LAMP SOCKET. REUBEN B. BENJAMIN, Chicago, Ill., assignor to Benjamin Electric Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 23, 1919. Serial No. 292,197. 14 Claims. (Cl. 173—335.)



1. A two-way plug comprising a plug portion and a receptacle sub-assembly, said plug portion comprising shell and center contacts, and insulation for positioning and insulating said contacts with respect to each other, said receptacle sub-assembly comprising a pair of threaded shell contacts, a pair of center contact members, a pair of stampings electrically and mechanically connecting said receptacle shell contacts and located on opposite sides of the plane through the axes of said receptacle shell contacts, a stamping member lying substantially in said plane for supplying current to said center receptacle contact members, and means for securing said receptacle sub-assembly to said plug portion and for electrically connecting the plug contacts with the receptacle contacts comprising three substantially parallel screw members threaded into said stamping respectively, and lying in a plane perpendicular to the plane through the axes of the receptacle shell contacts.

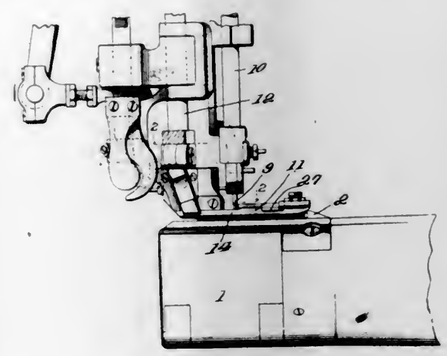
1,508,766. ELECTRICAL CONNECTER DEVICE. REUBEN B. BENJAMIN, Chicago, and CHESTER E. WARNER, Berwyn, Ill., assignors to Benjamin Electric Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed May 10, 1920. Serial No. 380,378. 6 Claims. (Cl. 173—335.)



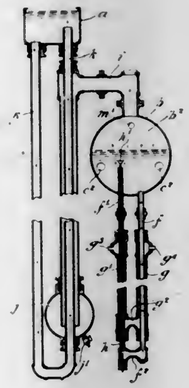
6. A plug receptacle comprising a plug portion and a receptacle portion, said plug portion having a center contact and shell contact swiveled with respect to said

center contact, and said receptacle portion comprising two receptacles, each having a center contact and a shell contact, and means for use in mechanically connecting

said receptacle portion to said plug portion comprising a metal member electrically connected with said plug shell contact and with said receptacle shell contact.



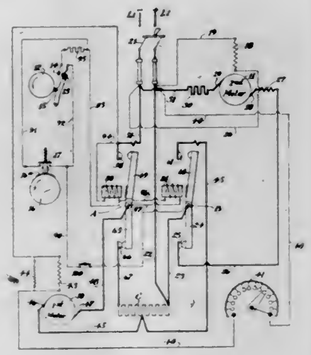
1,508,767. PLUG CLUSTER. REUBEN B. BENJAMIN, Chicago, and CHESTER E. WARNER, Berwyn, Ill., assignors to Benjamin Electric Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed May 18, 1921. Serial No. 470,563. 9 Claims. (Cl. 173—335.)



1. A plug cluster comprising a plug portion and two receptacle portions, said plug portion comprising a threaded shell contact, one of said receptacle portions comprising a threaded shell contact, the axes of said shell contacts being parallel but offset with respect to each other less than the radius of the threaded shell contact, the axes of said two receptacle portions meeting at an acute angle.

1,508,768. PRESSER FOOT FOR SEWING MACHINES. JOSEPH BERGER, Utica, N. Y., assignor to Union Special Machine Company, Chicago, Ill., a Corporation of Illinois. Filed May 23, 1921. Serial No. 471,751. 7 Claims. (Cl. 112—236.)

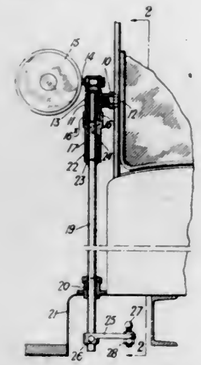
1. The combination with a stitch forming mechanism for forming covering stitches including a plurality of needles, of a feed dog and a presser foot, said presser foot including means for overlapping the edge portions of fabric sections in advance of the stitch forming mechanism, said presser foot having an opening for the needles and a recess extending from said opening to the rear end of said presser foot, and a vertically yieldable presser foot section disposed in rear of said needles in said recess and cooperating with the feed dog to feed said overlapped portions of the fabric sections and for automatically compensating for different thicknesses in said overlapped edge portions.



1,508,769. PROCESS OF AND APPARATUS FOR TREATING OILS. ROBERT W. BISSELL, New York, N. Y., assignor to Vegetable Oil Securities Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Apr. 15, 1920. Serial No. 374,006. 16 Claims. (Cl. 87—12.)

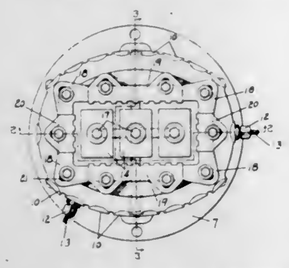
1. The herein described process of treating oils consisting in continuously withdrawing a small quantity of oil from a large volume thereof, flowing the oil thus withdrawn in a small stream through a confined space, subjecting the flowing oil to an elevated temperature, and simultaneously charging it with a refining gas, delivering said flowing oil with said refining gas to and within the volume from which the soil is withdrawn, permitting the refining gas and the constituents of the oil volatilized as a result of the action of the heat and of the refining gas upon the oil, to commingle with the oil in the volume from which it is withdrawn, and thereafter separate therefrom and withdrawing the refining gas and the volatile matter from adjacent the oil.

1,508,770. SYSTEM OF MOTOR CONTROL. HAROLD L. BLOOD, Plainfield, N. J., assignor to Niles-Bement-Pond Company, New York, N. Y., a Corporation of New Jersey. Filed Nov. 8, 1920. Serial No. 422,592. 13 Claims. (Cl. 172—239.)



1. A motor control system comprising in combination, two motors, field and armature circuits therefor, two main switches for opening and closing said armature circuits, cam controlled means for operating said switches, movement of said switches in one direction opening the armature circuit of one motor and closing that of the other, and movement of the switches in the opposite direction opening the armature circuit of the second motor and closing that of the first.

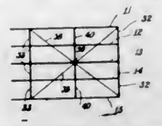
1,508,771. BAILER BOTTOM. ALEXANDER BOYNTON, San Antonio, Tex. Filed May 8, 1922. Serial No. 559,362. 10 Claims. (Cl. 166—19.)



1. A bailer for wells comprising inner and outer sleeves having mud passages adapted for registration, the outer sleeve having its forward portion tapered and provided with an end wall formed with a centrally arranged opening, a lifter shaft extended through the opening in the forward end wall of said outer sleeve, a bushing carried by the inner sleeve and engaged by said lifter shaft, set screws connecting said bushing to said inner sleeve and connecting the lifter shaft to the bushing, said set screws also providing a sliding connection between the inner and outer sleeves, and a spring urging said outer sleeve to its advanced position on said inner sleeve.

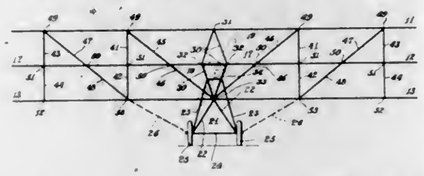
1,508,772. SPOTLAMP FOR AUTOMOBILES. THOMAS MILTON BRAGG, of Mungeribar, New South Wales, Australia. Filed Feb. 26, 1924. Serial No. 695,199. 2 Claims. (Cl. 240—61.)

1. The combination of a vehicle lamp, a bracket having a bore, a socket member rotatably mounted in the bore, a lamp horizontally pivoted to one end of the socket member, a spindle projecting into the bore from the other end of the socket member, means connecting the spindle to the steering mechanism of the vehicle, a clutch collar fixed to rotate with the socket member, and a clutch sleeve surrounding and keyed to the spindle, and normally urged into engagement with the clutch collar to form a connection between the lamp and the steering mechanism whereby the lamp is automatically turned as the vehicle is steered, said clutch being adapted to be manually disengaged from the clutch collar when it is desired to adjust the lamp independent of the steering mechanism.



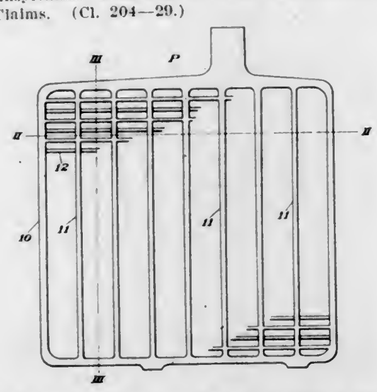
1,508,773. CLAY-FORMING DIE. DAVIS BROWN, Bucyrus, Ohio. Filed July 18, 1923. Serial No. 652,222. 1 Claim. (Cl. 25—17.)

In a clay forming die, a former, a finisher formed of corner and side sections, and means for adjustably securing the sections relative to the former and to each other.



1,508,774. FLYING MACHINE. GIANNI CAPRONI, Milan, Italy. Filed May 14, 1920. Serial No. 381,307. 2 Claims. (Cl. 244—12.)

1. A pentaplane flying machine comprising in combination its five planes with their structural frames (11, 12, 13, 14, 15), a nucleus, and at each side a series of spaced apart rigid uprights (32, 33) connected to the frames of all of the planes, and forming a series of trellises symmetrically arranged, each trellis space divided into four cells by the intermediate planes (12, 13, 14), the said trellis spaces spanned by long diagonal brace members (38 or 42) and free from other diagonal resistance-producing brace members, said diagonal members each extending from the junction of one of said uprights with the top frame to the junction of the other upright with the lowest frame, and subdividing the trellis space

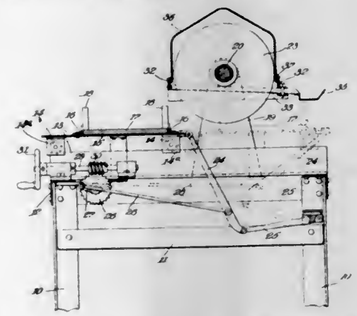


into triangles and trapezoids, and said diagonal members, secured to the middle frame where they cross the same.

1,508,775. FLYING MACHINE. GIANNI CAPRONI, Milan, Italy. Filed May 14, 1920. Serial No. 381,308. 3 Claims. (Cl. 244—12.)

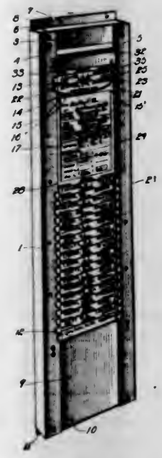
1. A triplane having spaced apart uprights each connected to the frames of all the planes and forming a plurality of trellises at each side of the nucleus, and a rigid diagonal member in each trellis space, extending from corner to corner and giving reinforcement both of tension and compression, with a rigid nucleus formed by an arrangement of inclined struts meeting at and joined with the plane frames.

1,508,776. STORAGE-BATTERY PLATE. THOMAS R. COOK, Pittsburgh, Pa., assignor to Westinghouse Union Battery Company, Swissvile, Pa., a Corporation of Pennsylvania. Filed Aug. 10, 1920. Serial No. 402,664. 2 Claims. (Cl. 204—29.)



1. A storage battery comprising a positive grid having a relatively large amount of grid material, and a negative grid having a relatively small amount of grid material, said grids being constructed to hold substantially the same amounts of active material.

1,508,777. PROCESS FOR PRODUCING AND UTILIZING ALKALIES AND ALUMINA. ALFRED H. COWLES, Sewaren, N. J., assignor to The Electric Smelting & Aluminium Company, Sewaren, N. J. Filed Nov. 20, 1915. Serial No. 62,486. 13 Claims. (Cl. 23—22.)

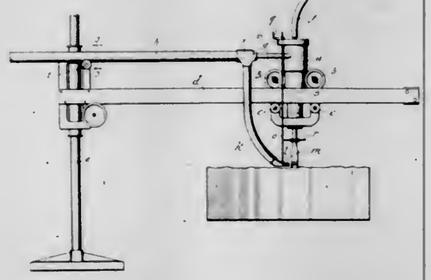


1. A process of treating leucite, feldspar and like alkali-alumina-silicates, which consists in subjecting them to a sintering process with such proportions of sodium metal carbonate and an alkali earth metal carbonate as will give a sintered product containing one molecular weight of silica to two molecular weights of alkali earth oxide and less than one and seventy-six hundredths molecular weights of alkali metal oxide to one of alumina, and leaching the sintered product.

1,508,778. ICE-CREAM-CUTTING MACHINE. HENRY H. DOERING, Chicago, Ill. Filed July 18, 1921. Serial No. 485,572. 6 Claims. (Cl. 107—22.)

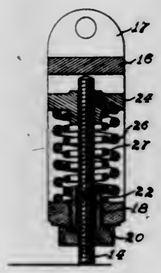
6. A machine of the character described, comprising a supporting frame provided with a runway, a table adapted to move along said runway, means pivotally connected to the table and to the supporting frame and provided with an intermediate yielding point, gear mechanism having crank and link connection with said means at a point intermediate of said yielding point and the point of connection of said means with the table, the intermediate yielding point, crank and link connection being so correlated that one revolution of the gear mechanism will cause complete reciprocation of the table, a series of cutting discs rotatably mounted above said runway, a cream-holding member, provided with slotted sides for the passage of said cutting discs, adapted to be carried by the table, and means whereby the position of the cream-holding member, relative to the cutting discs, may be controlled.

1,508,779. DIRECTORY RACK. JOSEPH R. DUMONT, Kansas City, Mo. Filed Sept. 19, 1921. Serial No. 501,757. Renewed July 10, 1924. 7 Claims. (Cl. 129—16.)



2. A card rack comprising spaced guides and card-receiving holders, each having oppositely disposed flat fingers spaced from the body portion of the holder and

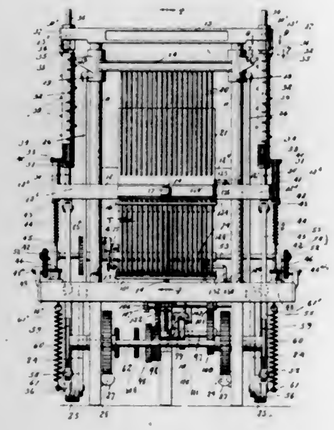
directly opposite to the same at all points to provide guide-receiving grooves to be engaged by the guides on opposite sides of the rack.



7. A directory comprising a frame having vertical guide rails, a plurality of vertically movable card holders supported one upon the other and engaged by the guide rails, and a vertically slidable weight normally bearing against the topmost card holder.

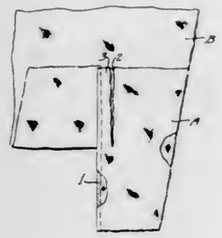
1,508,780. STONE-SURFACING APPARATUS. HARVEY E. EDGINGTON, Kankakee, Ill., assignor of one-half to Albert C. Tanner, Kankakee, Ill. Filed Mar. 7, 1921. Serial No. 450,243. 4 Claims. (Cl. 125—8.)

1. In an apparatus operated by compressed gas, the combination with an engine cylinder having an exhaust pipe leading therefrom, of a piston in the cylinder, a tool operated by the piston, a suction nozzle adjacent the working end of the tool and in use freely open to the air, a flexible pipe leading from the nozzle into which the exhaust pipe opens to create a draft therethrough, sucking air into the nozzle and adjustable means for supporting the nozzle.



1,508,781. YIELDABLE PITMAN FOR JUMPER PRESSES. HERMAN EHRLICH, Chicago, Ill. Filed Mar. 15, 1923. Serial No. 625,242. 2 Claims. (Cl. 74—48.)

2. In a device of the class described, a screw-threaded rod, a frame having an opening in one of its end members, a nut on said rod, a sleeve connected with said nut and surrounding said rod, said sleeve lying between said rod and the walls of said opening, whereby motion of the rod relative to the frame will cause no wear upon the threads on the rod.

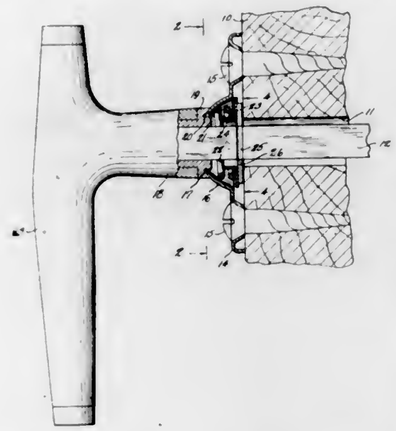


1,508,782. CORK-PACKING MACHINE. MAX ELLRICH, Jersey City, N. J., assignor, by mesne assignments, to Marie Christensen, Brooklyn, N. Y. Filed Jan. 21, 1921. Serial No. 438,907. 30 Claims. (Cl. 18—5.)

1. In a machine of the character described, a plunger adapted to enter a stationary chamber containing material to be compressed, and two independently propelled means, one to permit the said plunger to move at variable and

the other at constant strokes within said chamber to compress successive charges therein to a predetermined density.

1,508,783. SHIRT SLEEVE. WILLIAM B. FIELDS, St. Louis, Mo., assignor to Ferguson-McKinney Manufacturing Company, St. Louis, Mo., a Corporation of Missouri. Filed July 28, 1923. Serial No. 654,443. 1 Claim. (Cl. 2—121.)

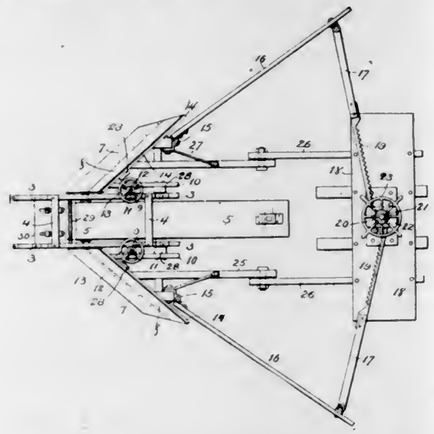


A shirt sleeve provided with a placket, a reinforcing element formed by a piece of material arranged on the underside of the sleeve at one side of the placket and extending upwardly from the cuff towards the elbow portion of the sleeve, the piece that constitutes said reinforcing element being slit longitudinally and said slit portion being doubled over so as to form a portion of the placket facing, and a top facing for the placket secured to said doubled over portion and to the sleeve material.

1,508,784. DOOR HANDLE. LOUIS W. GATES, New Haven, Conn., assignor to C. Cowles & Company, New Haven, Conn., a Corporation of Connecticut. Filed Sept. 1, 1923. Serial No. 660,519. 12 Claims. (Cl. 292—347.)

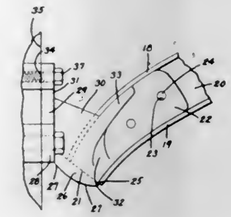
1. In a device of the character described, an escutcheon plate adapted to be secured to a door and provided with a laterally extending concavo-convex flange having an

opening therethrough, a latch operating spindle extending through said opening, said spindle carrying a shoulder engaging one side of said flange, a spring engaging the



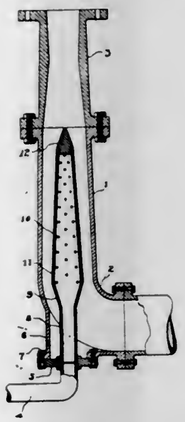
other side of the flange, and means secured to the spindle forming an abutment for the other end of the spring.

1,508,785. VEGETABLE HAIR TONIC. FRANK P. GIANNANDREA, Rosebank, N. Y. Filed June 7, 1921. Serial No. 475,763. 2 Claims. (Cl. 167—5.)



2. A hair tonic comprising an extract composed of approximately two ounces of cinnamon bark, three ounces of oats, seventy ounces of water, the same being mixed as the water is being boiled, and approximately fifty-one ounces of pure grain alcohol to be added when the mixture is cooled.

1,508,786. APPARATUS FOR REMOVING SNOW FROM ROADS AND STREETS. HOWARD GRIMES, Ticonderoga, N. Y. Filed Apr. 18, 1923. Serial No. 632,904. 3 Claims. (Cl. 37—44.)

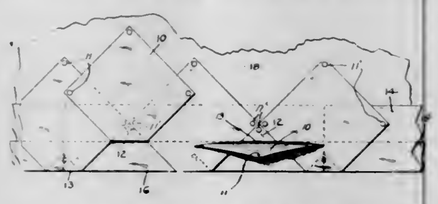


1. The combination of runners, means for coupling the runners to a tractor to travel in advance thereof, plows carried by the runners, and blocks adjacent the rear ends of the runners against which the front end of the tractor may abut.

1,508,787. CHASSIS CONNECTER FOR AIR SPRINGS. KARL WILLIAM HALLDEN, Waterbury, Conn. Filed Dec. 7, 1922. Serial No. 605,350. 3 Claims. (Cl. 267—54.)

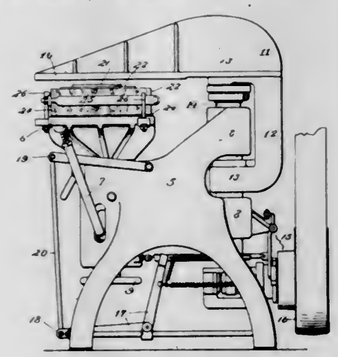
1. In an automobile-air spring combination, an adapter in the form of a bracket-like structure having on one side a supporting plate for connecting with the air spring and on the other side a stem for connecting with the chassis-frame end, said plate and stem cooperating to form a substantially V-shaped structure with ends that are adjacent and merging one with the other, and a web-like connecter plate filling part of the gap between said plate and stem, being connected on one side to said plate and on the other side to said stem, and said stem being adapted to lie and fasten within the channeled horn at said chassis-frame end.

1,508,788. PRESSURE-FLUID LIFT PUMP. HALBERT B. HALVORSEN, Chicago, Ill., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed July 27, 1917. Serial No. 183,171. 9 Claims. (Cl. 23—232.)



1. In an air lift pump, the combination with a riser member provided with a lateral inlet for fluid to be pumped, of an air supply nozzle connected to said riser member and extending within it past said inlet in a direction transverse to said inlet and longitudinal to said riser and discharging into said riser member only in the portion thereof beyond said inlet.

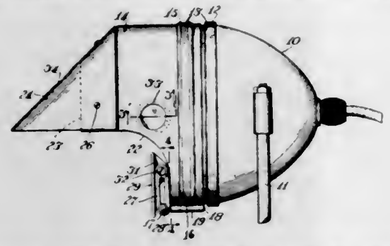
1,508,789. ARTIFICIAL SHINGLE. CHARLES H. HARRIS, Cranston, R. I., assignor of one-fourth to David E. Wood, College Point, N. Y., and one-fourth to Alfred E. Wood, Brooklyn, N. Y. Filed June 7, 1922. Serial No. 643,902. 3 Claims. (Cl. 108—8.)



1. In shingle roofing, a plurality of like shingles of substantially rectangular form having predetermined holes in the four corner portions thereof, said holes being spaced uniformly from the edges of said shingles, one corner of

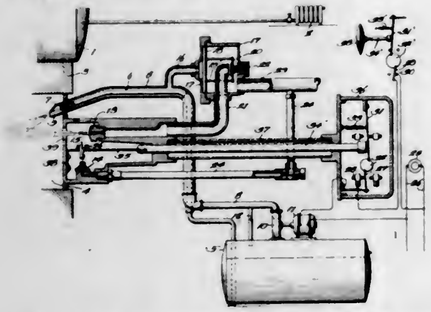
each of said shingles being folded under forming a flat crease parallel to a diagonal of the shingle and equidistant therefrom in the several shingles, a fastener adapted to pass through the hole of said folded under portion so that the head thereof will be covered by the main portion of the shingle, and a series of starting strips

of uniform dimensions spaced from each other to allow the passage therebetween of one of said fasteners, each strip having a predetermined hole formed therethrough of uniform location with respect to the ends and bottom edge thereof for co-operation with the corresponding hole in the folded under corner of a shingle.



1,508,790. PRESS FOR CUTTING OR PUNCHING SHEET MATERIAL. GEORGE C. HILL, Boston, Mass., assignor to Reece Shoe Machinery Company, Boston, Mass., a Corporation of Maine. Filed Oct. 18, 1922. Serial No. 595,373. 1 Claim. (Cl. 164—19.)

In a clicking machine or power press for dieing out leather or like sheet material by a loose cutting die selectively positioned upon the material, the combination of a flat rigid supporting bed, a cutting block of substantial thickness and weight overlying said bed and adapted to give support to the material to be cut, a layer of resilient material between the bed and block and of an area to wholly underlie and yieldingly support the block, means clamping the block and layer in place upon the bed, a heavy head above the block, means mounting said head at one side only in a manner to swing laterally whereby it may be positioned above a cutting die placed selectively upon the material and swung therefrom, and power mechanism operating to cause the head to descend and strike a sudden sharp blow upon the die and them to return.



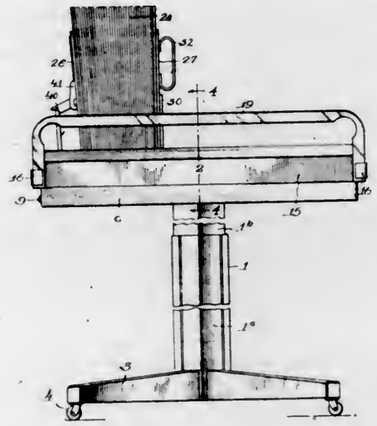
1,508,791. SEARCH OR HEAD LIGHT DEFLECTOR. PETER M. HOFFMAN, Desplaines, and CHARLES DOERING and HENRY H. DOERING, Chicago, Ill., assignors to Doering Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed June 13, 1921. Serial No. 476,973. 7 Claims. (Cl. 240—48.4.)

1. A deflector of the character described, comprising a split cylindrical shell section adapted to encircle a lamp casing, the forward end of said shell section being provided with a forwardly and downwardly presented flange having slots radiating from a common center, means whereby the split ends may be contracted, an arcuate hood section arranged in telescopic relation with said flange, means secured to said hood section and adapted

to extend through said slots whereby the hood section may be raised or lowered, and a shield section adjustably secured to said first means and disposed transversely of the lower portion of said shell section so as to move toward or away from the shell section.

1,508,792. HEATING SYSTEM. JOHN C. HORNUNG, Glencoe, Ill. Filed May 11, 1922. Serial No. 560,107. 5 Claims. (Cl. 158—28.)

1. In a heater, the combination with a heating nozzle; of an ignition burner in igniting relation to fuel flowing through the nozzle; a pilot burner in igniting relation to fuel flowing through the ignition burner; means for establishing flow of fuel through the heating nozzle; and means, operated by the aforesaid means, for establishing and cutting off flow of fuel through the ignition burner while flame is maintained at the pilot burner.

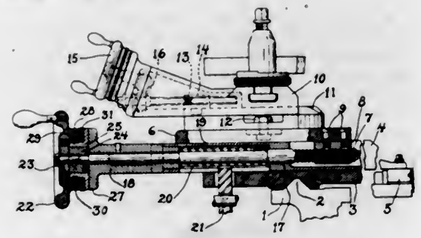


1,508,793. POSTING TRAY. DAVID E. HUNTER, Muskegon, Mich., assignor to Shaw-Walker Company, Muskegon, Mich., a Corporation of Michigan. Filed July 26, 1922. Serial No. 577,564. 12 Claims. (Cl. 129—16.)

1. In a device of the character described, the combination of a tray having a central longitudinal channel and a follower plate provided with tongues at its lower edge adapted to engage within slots arranged along said channel and consisting of connected portions formed in the vertical and horizontal walls along the sides of said channel, said horizontal portions acting to retain the plate in upright position, and said vertical portions being of tapered form to permit said plate to be tilted when said tongues are released from one of said horizontal portions.

4. In a device of the character described the combination of a tray, a sliding carriage mounted on said tray, a follower plate pivotally mounted on said carriage and a hinged brace mounted on said plate and adapted to engage said carriage to hold said plate in vertical position.

11. In a device of the character described the combination of a tray, consisting of side and end frame members, a contents-supporting track extending between said end



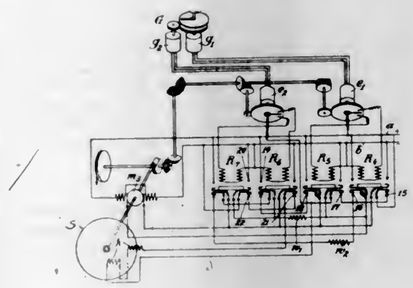
frame members and fixed thereto, said side frame members being provided with end portions overlapping said end frame members, fastening means for adjusting the

side frame members transversely to vary the width of said tray, and rails extending along said side frame members and spaced above the level of said supporting track,

---

1,508,794. LATHE-TOOL MECHANISM. WALTER E. INGHAM, Newington, Conn., assignor to Pratt & Whitney Company, New York, N. Y., a Corporation of New Jersey. Filed Dec. 22, 1921. Serial No. 524,267. 29 Claims. (Cl. 82—24.)

1. The combination of a support, a tool supporting slide thereon, a screw for actuating the slide, a hand wheel on the screw, adjustable graduated means operatively connected with the screw, such means being adapted to be accurately adjusted to a position indicative of the respective tool feeding movement it is desired to give to the screw, means on the support adapted to cooperate with the graduated means, movement of the hand wheel and screw to move the adjustable graduated means, after the proper tool feeding adjustment thereof, to a position to register a definite location thereon with the said cooperating means on the support being adapted to always place the tool in its advanced cutting position, and means cooperating with the said adjustable graduated means for always indicating the total depth of tool cut taken.

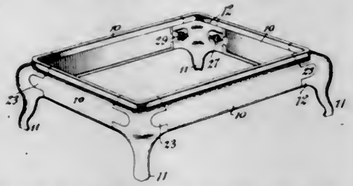


25. The combination of a support, a slide thereon, a screw operatively connected to the slide, a bearing threadedly engaging the support, the screw being rotatable within the bearing, a hand wheel mounted on the screw, rotation of the screw within the bearing being adapted to slowly actuate the slide, means operatively between the screw and bearing for relatively rotating the screw and bearing, graduated means for indicating the amount of such relative movement, the hand wheel being adapted to rotate the bearing and screw together to move the same bodily in an axial direction for rapidly actuating the slide, a stop on the support, and a cooperating stop on the bearing adapted to engage the first stop to limit the rotation of the bearing.

1,508,795. PENCIL. CLIFFORD N. JOHNSON, Toledo, Ohio, assignor to The Conklin Pen Manufacturing Company, Toledo, Ohio, a Corporation of Ohio. Filed Nov. 28, 1921. Serial No. 518,193. 5 Claims. (Cl. 120—18.)

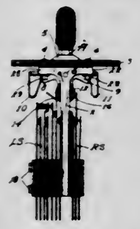
5. In a pencil of the class described, a barrel having a side opening, a longitudinally corrugated magazine sleeve fitted in the barrel and having a notch in a rib thereof, a clip carrying member projecting through the barrel opening and thence lengthwise of the barrel in close fitting relation between the barrel wall and the notched rib of the sleeve and having an inwardly angled notched tail-piece straddling the notched rib and interengaged with the notch of the rib.

1,508,796. SYSTEM FOR ADJUSTING AT A DISTANCE GUNS, SEARCHLIGHTS, OR OTHER APPARATUS. PAUL KAMINSKI, Berlin-Pankow, Germany, assignor to Siemens & Halske, Aktiengesellschaft, Siemensstadt, near Berlin, Germany, a Corporation of Germany. Filed May 12, 1921. Serial No. 468,966 4 Claims. (Cl. 172—239.) (Granted under the provisions of the act of Mar. 3, 1921. 41 Stat. L., 1313.)



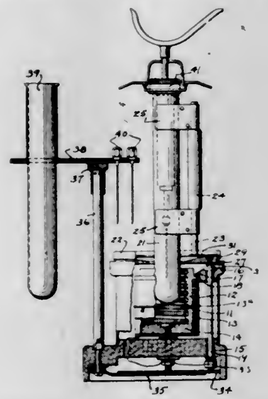
1. In a signalling system for the tele-control of motor operated objects, two sets of electrical transmitters and receivers adapted to transmit different kinds of object adjustments, means, electrically controlled by the adjustment of one of said receivers, adapted to control the motor operation, other means electrically controlled by the adjustment of the other of said receivers also adapted to control the motor operation, and contact means suitably controlled by said first-named means and adapted to make operative said other means to permit both controlling means only successively to cause the motor operation according to the adjusted positions of said receivers.

1,508,797. FASTENING FOR STOVE-BASE MEMBERS. EDWARD KENER, Jr., Buffalo, N. Y., assignor to Buffalo Co-Operative Stove Co., Buffalo, N. Y., a Corporation of New York. Filed Mar. 27, 1924. Serial No. 702,186. 3 Claims. (Cl. 126—304.)



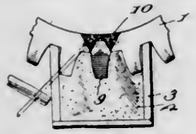
1. A stove base comprising a bar member, a leg member, one of said members being provided with a recess and the other member having a tenon engaging with

said recess, the bottom of said recess having an opening and said tenon having a lug extending through said



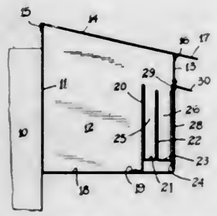
opening, and a pin extending through said lug and engaging with that side of the member having the recess opposite to where the same is engaged by said tenon.

1,508,798. KEY. ALBERT KLAY, Chicago, Ill., assignor to Kellogg Switchboard and Supply Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 23, 1920. Serial No. 405,220. 11 Claims. (Cl. 179—176.)



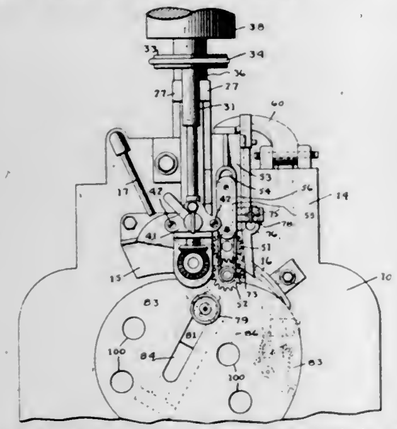
1. An operator's key including an escutcheon plate, a vertically disposed mounting plate secured to said escutcheon plate, sets of contact springs secured to the opposite sides of said mounting plate, a cam member pivotally secured to said mounting plate for actuating said springs, said cam member being provided with integrally formed ears for limiting the operation of the same, and auxiliary devices attached to said mounting plate for co-operation with the ears on said cam to prevent an overthrow operation of the cam when it is returned to its normal position from one of its operated positions.

1,508,799. STERILIZER. ROBERT E. KLETT, Ridgefield Park, N. J., assignor to Klett Manufacturing Company, Inc., a Corporation of New York. Filed Sept. 23, 1922. Serial No. 590,003. 8 Claims. (Cl. 219—38.)



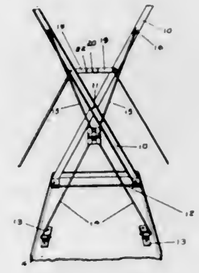
1. The combination with an electric heater, of an object to be heated thereby, a contact adjacent the heater adapted to support said object, and a conductor supporting said object on said contact, held in engagement with said contact under the weight of said object, secured to the object, and removable from the heater therewith.

1,508,800. METHOD AND APPARATUS FOR REPAIRING METALLIC STRUCTURES. ROYAL MATTICE, Philadelphia, Pa. Filed June 15, 1922. Serial No. 568,460. 20 Claims. (Cl. 22—190.)



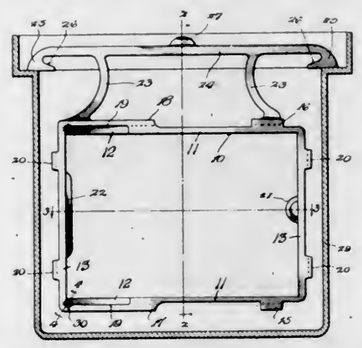
2. The method of replacing portions of a metallic structure which consists in molding a pattern from a portion of the structure similar to the portion to be replaced, forming a replacement portion from said pattern, and finally welding said replacement portion in position in the structure.

1,508,801. MAIL BOX. HUGO MILLER, Colby, Wis., assignor of one-half to Martha Schild, Chicago, Ill. Filed Aug. 27, 1923. Serial No. 659,431. 2 Claims. (Cl. 232—24.)



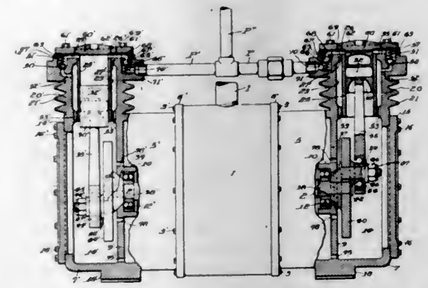
1. A letter box having a transparent panel in one of its side walls, a hinged cover on said box and a pair of longitudinal partitions in said box, said partitions forming narrow compartments visible through said panel, one of said partitions being cut away to disclose the adjacent compartment.

1,508,802. HAT-BRIM-CURLING APPARATUS. STEPHEN J. MILLER, Danbury, Conn. Filed Sept. 13, 1921. Serial No. 500,350. 19 Claims. (Cl. 223—22.)



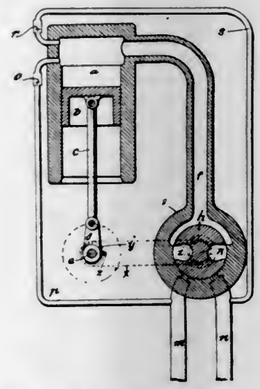
1. In apparatus of the character described, in combination, a curling shackle, means co-operating with said shackle for producing a curl in a hat brim, means for preliminarily guiding said hat brim to said means, an adjustable gauging member associated with said guiding means for predetermining the amount of material of said brim passed between said gauging member and said guiding means to be formed into a curl by said shackle and said cooperating means, and means operative to automatically adjust said gauging member with respect to said guiding means to compensate for varying thicknesses of said material.

1,508,803. FOLDING BRACE. EARL E. MCGREW, Lincoln, Nebr. Filed Feb. 20, 1923. Serial No. 620,224. 5 Claims. (Cl. 45—48.)



1. A pair of pivotally connected crossed arms, a rod, a connection between said rod and one end of each of said crossed arms, said connection permitting independent sliding movement of either or both arms on the rod and permitting also pivotal movement of both arms together on the rod, and a folding brace for preventing both pivotal and sliding movements of the arms, said brace comprising a brace arm which is pivoted at a fixed position with respect to the aforesaid rod, a pair of brace arms pivotally connected to said first brace arm, said pair of brace arms being pivotally connected with the crossed arms, and a yielding latch for preventing pivotal movement between the brace arms.

1,508,804. DEVELOPING-FILM HANGER. GEORGE D. PAPPAJION, Danielson, Conn. Filed Aug. 23, 1922. Serial No. 583,802. 6 Claims. (Cl. 95—100.)

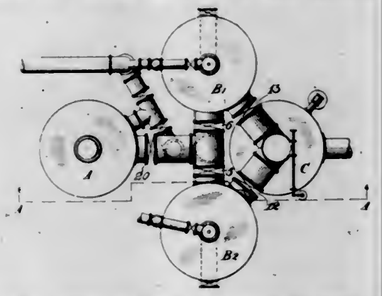


1. A developing film hanger including a hanger frame comprising spaced complemental frame members to receive a film therebetween and having spaced webs thereon rigidly connecting the members and disposed to sustain the film limiting the film against displacement from between the members.

1,508,805. COMPRESSOR. ARTHUR D. SHAW and JOSEPH R. THOMAS, Philadelphia, Pa., assignors, by mesne assignments, to Widmer Compressor, Inc., Philadelphia, Pa., a Corporation of Delaware. Filed Apr. 14, 1922. Serial No. 552,511. 5 Claims. (Cl. 230—6.)

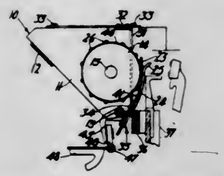
1. In a compressor, the combination with a motor having a field ring, of a closed crank case supported at each side of the ring, a partition provided with ports between each crank case and the ring, a cylinder supported on each crank case and having inlet and exhaust valves, a piston in each cylinder, means for actuating the piston from the motor, and an inlet connection communicating with the interior of the motor whereby the gases to be compressed in the cylinders are first directed into the motor and thence led through said ports and the respective inlet valves of the cylinders.

1,508,806. PUMP WITH VARIABLE OUTPUT AND CONSTANT NUMBER OF STROKES. GIULIO SILVESTRI, Rodaun, near Vienna, Austria. Filed Jan. 12, 1921. Serial No. 436,793. 5 Claims. (Cl. 103—37.)



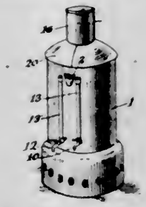
1. A pump, a delivery and a suction pipe associated therewith, means for withdrawing a quantity of liquid from said delivery pipe upon the suction stroke of said pump and forcing an equal quantity of liquid into said suction pipe upon the succeeding delivery stroke, and means for adjusting said other means whereby the output of said pump may be varied during the uniform operation thereof.

1,508,807. METHOD OF MANUFACTURING CARBURETED WATER GAS. GEORGE WALLACE SMITH and FRANK L. WEISSER, San Antonio, Tex. Filed June 9, 1920. Serial No. 387,717. 13 Claims. (Cl. 48—205.)



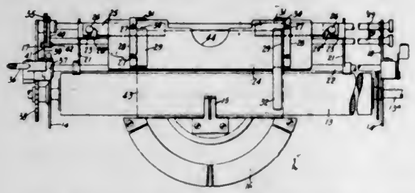
6. The method of manufacturing carbureted water gas by the utilization of interchangeable carburetor and super-

heater members and which method comprises directing the flow of gas from the generator into one of said members and through the other of said members and



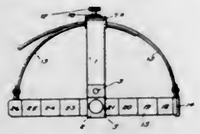
separately creating a localized oxidizing zone in the member functioning as a superheater to remove the carbon deposits therein.

1,508,808. TYPEWRITING MACHINE. JOHN WALDHEIM, Elizabeth, N. J., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Jan. 19, 1922. Serial No. 530,238. 6 Claims. (Cl. 197—135.)



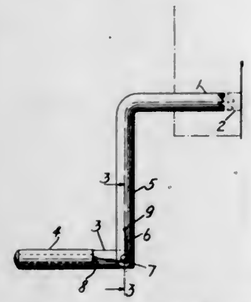
1. In a front-strike typewriting machine, the combination with typing instrumentalities, of an introducer for a stencil card that is inserted downwardly, bottom end foremost, at the printing point, said introducer comprising a revoluble platen forming one member of the introducer, and also comprising resilient guiding lips diverging from the front of the platen above the printing line at their upper ends, and permitting the insertion of the lower end of the card between them and the platen, said lips extending down in front of the platen and terminating below the platen at the front thereof and guiding the card downwardly below the bottom of the platen in approximately straight condition, and also comprising rows of teeth at opposite ends of the platen and protruding into perforations in the sides of the card, said lip extensions overlying said teeth and holding the card in co-operation with the teeth and platen at the printing line.

1,508,809. COFFEE PERCOLATOR. ALFRED N. WHITE, Los Angeles, Calif. Filed Feb. 12, 1923. Serial No. 618,464. 22 Claims. (Cl. 53—3.)



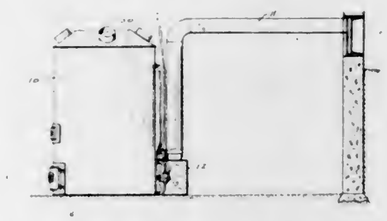
1. A percolator having a container adapted for percolation of liquid therethrough, means for supplying a liquid, means for discharging material into said container, and means for controlling said discharge in proportion to the liquid supply.

1,508,810. TYPEWRITING MACHINE. JAMES C. ANDERSON, Phoenix, N. Y., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Oct. 7, 1921. Serial No. 505,983. 10 Claims. (Cl. 197—127.)



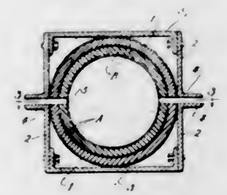
1. In a typewriting machine, in combination, a platen, a sheet-supporting table above said platen, side-edge guides for a work-sheet on said table having projections to overlie the sides of the work-sheet and hold it on the table, and a resilient finger carried by said table and positioned to press said work-sheet against the platen.

1,508,811. HEAD MEASURE. MARIA PERKINS-KELLY, Los Angeles, Calif. Filed Aug. 8, 1922. Serial No. 580,481. 5 Claims. (Cl. 33—176.)



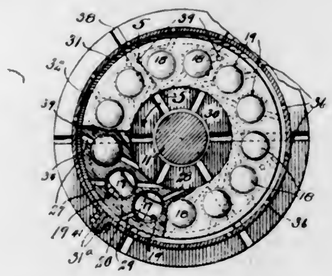
1. In a head measure, a holder made from a single piece of sheet metal having therein two slots and a perforation and having its ends bent over adjacent to each other to provide a passageway therethrough, two pair of members, one pair of said members being slidably arranged in the said slots, the other pair of members having one end of each member slidably arranged in the passageway, a set screw arranged in the said perforation in the holder and adapted to engage the uppermost member and a band connected with the lower ends of the members.

1,508,812. CRANKING HANDLE FOR AUTOMOBILES. GUSTAVE LEVESQUE, Montreal, Quebec, Canada. Filed Aug. 4, 1923. Serial No. 655,743. 2 Claims. (Cl. 74—33.)



1. A crank handle for automobiles comprising a bar having a slot at one end, and a portion bent at right angles provided with a clutch at the other end; a pivot pin mounted through said bar at the slotted end; a handle bar mounted in said slot on said pivot pin; and a pair of spring members, each secured at one end in the bar and the other end in the handle bar and in its intermediate portion wound around said pivot pin in order to force the handle bar in alignment with said bar.

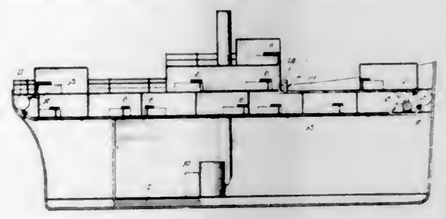
1,508,813. HOT-AIR HEATING SYSTEM. JAMES C. MILES, Cleveland, Ohio. Filed Dec. 13, 1920. Serial No. 430,160. 14 Claims. (Cl. 98—27.)



1. In a device of the character described, the combination with a heating chamber, of a fan for forcing air into said chamber, means normally allowing the passage of air into said chamber, said means being arranged to yieldably resist the escape of air therefrom, and adapted at a predetermined pressure to permit the passage of air in a reverse direction.

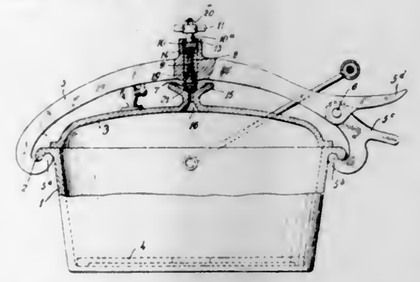
1,508,814. APPARATUS FOR VULCANIZING TIRE LINERS AND THE LIKE. EDWARD J. MORAN, Chicago, Ill. Filed May 5, 1922. Serial No. 558,681. 2 Claims. (Cl. 18—38.)

1. A multiple mold for vulcanizing tire-liners comprising two semi-cylindrical sheet metal troughs housed in openwork cradles, and a sheet metal open-ended cylinder somewhat smaller in diameter than said troughs.



1,508,815. THRUST BEARING. GEORGE S. NEELEY, Hartford, Ill., assignor of one-half to Griffin Watkins, Alton, Ill. Filed Aug. 15, 1923. Serial No. 657,574. 11 Claims. (Cl. 64—49.)

1. A thrust bearing comprising a pair of oppositely disposed ball race members, a ball bearing retaining member interposed therebetween, and a casing enclosing said members and spaced therefrom, said retaining member being provided with a series of bores extending therethrough each of said bores being disposed at an angle to the radius of said maintaining member whereby the lubricant is caused by centrifugal action to be discharged outwardly through said bores when said retaining member is rotated.

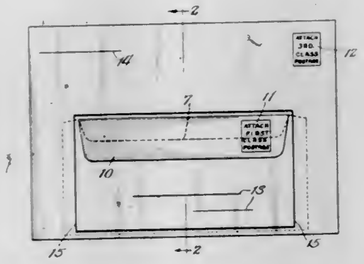


326 O. G. 11

1,508,816. EMERGENCY MEANS FOR FLOATING SHIPS. FREDERICK Y. NICHOLS and SAMUEL R. DRUM, Chicago, Ill.; said Samuel R. Drum assignor to William Henry Drum, Gridley, Ill. Filed Dec. 30, 1920. Serial No. 434,116. 1 Claim. (Cl. 114—68.)

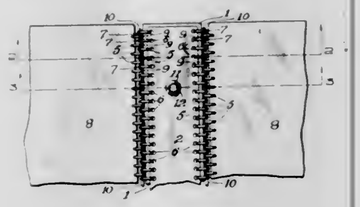
In a ship, a plurality of expansible air receptacles located in various parts of the vessel; an air reservoir located at each end of the vessel; means near each reservoir for controlling the reservoirs in the event that the other reservoir-controlling means has become inaccessible; pipes connecting the receptacles and the reservoirs; an air compressor for charging the reservoirs selectively; means for operating said compressor independently of the power means that drives the ship and means on the deck of the ship by which an air conducting hose may be connected to the system.

1,508,817. COOKING UTENSIL. HERMAN G. PFAEHLER, New York, N. Y., and CHARLES J. MARKS, Paterson, N. J. Filed Apr. 18, 1924. Serial No. 707,344. 9 Claims. (Cl. 53—1.)



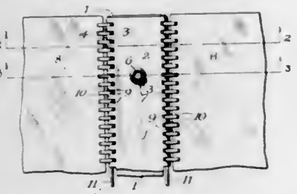
9. A vessel provided with a lid having an outlet passage, a yoke, and means for detachably securing the yoke to the vessel over the lid, said yoke having a bore, a plunger slidable in the bore, the plunger having a valve to control the flow from said passage, a spring normally pressing the plunger toward the lid, and means cooperative with the valve independent of the plunger to load the said valve.

1,508,818. BEADWORK LOOM. WILLIAM A. POPPA, Chicago, Ill. Filed June 7, 1923. Serial No. 643,893. 8 Claims. (Cl. 28—15.)



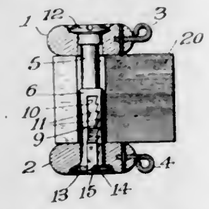
1. A bead work loom comprising a base member, supporting members resettably mounted on said base member, extensible resilient means removably mounted on each supporting member for receiving and spacing the warp threads of articles to be made on said loom, and means for holding the warp threads taut during construction.

1,508,819. DUPLEX ENVELOPE. JOSEPH SAWDON, Quincy, Ill. Filed Dec. 22, 1921. Serial No. 524,102. 10 Claims. (Cl. 229—72.)



1. In a duplex envelope for two kinds of mail matter, a wall forming the outer surface of the envelope and provided with an opening therein formed by cutting the material in a manner to form a flap, an inner wall extending over the surface of said flap and secured thereto, so that said wall is secured in place inside of the envelope, and an outer flap integral with said inner wall and extending over said opening, whereby the envelope has two compartments, with a place for postage on the address side of the envelope for each compartment, so that postage may be applied separately to each compartment, and a place below the outer flap for a single address for the entire envelope.

1,508,820. BOOK COVER. JOHN SCHADE, Holyoke, Mass., assignor to National Blank Book Company, Holyoke, Mass., a Voluntary Trust Association of Copartnership, having as trustees F. B. Towne, E. S. Towne, J. M. Towne, and F. W. Wilson. Filed July 28, 1923. Serial No. 654,297. 2 Claims. (Cl. 281—29.)

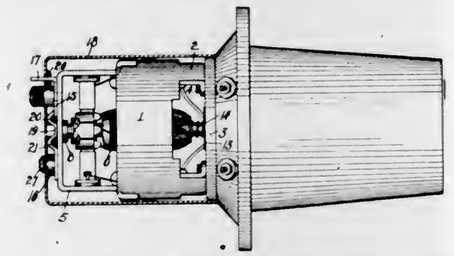


1. The herein described improvement in book covers, which consists of a flexible back having superimposed on its inner face a metal plate having a series of spaced perforations extending along its side edges, a metal hinge strip having extending from opposite side edges series of staggered spaced fingers, the fingers of one series being bent around and clenched through the outer face of the leather back, while the fingers of the other series are bent around to form alined spaced eyes the extremities of these latter fingers being then clenched through the perforations in the metal plate into the inside face of the leather back, pliable covers, metal strips having extending from opposite side edges series of staggered spaced fingers which are bent around and clenched into the inner edges of the covers on the inside and outside faces thereof, one set of these last named fingers before clenching being formed into alined spaced eyes which are interengaged with the eyes along the side edges of the back portion to form complementary hinge elements, and pintles inserted within said elements.

1,508,821. BOOK COVER. JOHN SCHADE, Holyoke, Mass., assignor to National Blank Book Company, Holyoke, Mass., a Voluntary Trust Association of Copartnership, having as trustees F. B. Towne, E. S. Towne, J. M. Towne, and F. W. Wilson. Filed July 28, 1923. Serial No. 654,299. 1 Claim. (Cl. 281—29.)

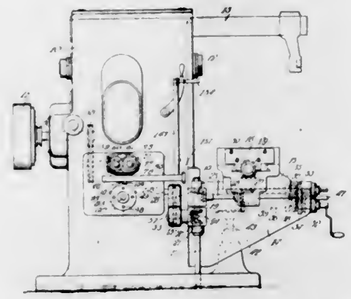
The hereindescribed improvement in book covers, which consists of a back portion of non-metallic penetrable material, a metal plate superimposed upon the inner face of said portion said plate having integral therewith along its side edges a series of fingers that are bent and formed into space alined projecting eyes, the extremities of said fingers being clenched into the outer face of said back portion, flexible covers having secured along their inner edges a series of alined and spaced projecting eyes, the eyes of the back portion and covers being interengaged, and pintles inserted through said eyes.

1,508,822. UNITARY TELESCOPING ELEMENT AND LOCKING MEANS. JOHN SCHADE, Holyoke, Mass., assignor to National Blank Book Company, Holyoke, Mass., a Voluntary Trust Association of Copartnership, having as trustees F. B. Towne, E. S. Towne, J. M. Towne, and F. W. Wilson. Filed Sept. 22, 1923. Serial No. 664,277. 4 Claims. (Cl. 129—13.)



2. A device for holding loose sheets, consisting of hollow telescoping elements, one of which has ratchet teeth thereon and the other a projection for engaging said teeth, and spring means contained within said elements for exerting both a propelling and torsional effect.

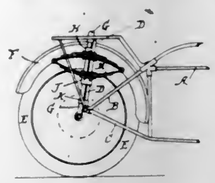
1,508,823. SCRATCH-PAD FILLER BOOK. JOHN SCHADE, Holyoke, Mass., assignor to National Blank Book Company, Holyoke, Mass., a Voluntary Trust Association of Copartnership, having as trustees F. B. Towne, E. S. Towne, J. M. Towne, and F. W. Wilson. Filed Sept. 22, 1923. Serial No. 664,279. 1 Claim. (Cl. 281—19.)



In a scratch pad filler book, flexible cover portions, a resilient sheet metal tongue which is backed by a body portion that is secured to one of the cover portions with the tongue extending lengthwise of the book and toward the back thereof, and a bound scratch pad provided with a comparatively thick face cover having a slit extending crosswise through the comparatively thick cover and binding, whereby said pad may be detachably secured between the cover portions by inserting said tongue through said slit.

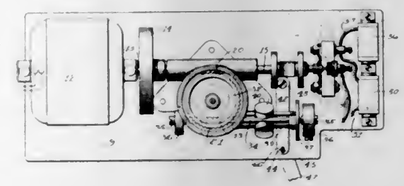
1,508,824. ADJUSTABLE THRUST BEARING. ADOLF P. C. SCHRAMM, New York, N. Y., assignor to United Electrical Manufacturing Company, Adrian, Mich., a Corporation of Michigan. Filed July 31, 1922. Serial No. 578,529. 9 Claims. (Cl. 64—52.)

1. In combination, a shaft, a frame member disposed crosswise of the shaft and having a bearing opening through which an end of the shaft projects, a lever disposed lengthwise of the frame member and fulcrumed for movements transversely thereof, said lever having a transversely inclined portion for end bearing coaction with the adjacent end of the shaft.



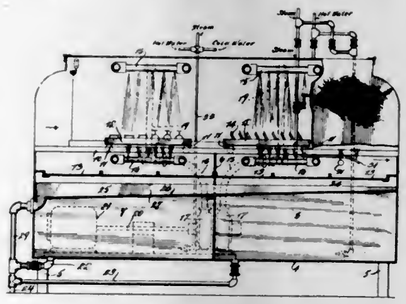
1,508,825. SKIP-FEED MILLING MACHINE. GUSTAF DAVID SUNDSTRAND, Rockford, Ill., assignor to Rockford Milling Machine Company, Rockford, Ill., a Corporation of Illinois. Filed Feb. 16, 1920. Serial No. 359,081. 40 Claims. (Cl. 90—21.)

1. In a machine of the class described, a column, a table, a source of power for said column, a feed box portion in said column, a power transmission for said table comprising a drive gear and a driven gear projecting into said feed box portion, and means adapted to be interpolated to form a part of said power transmission in said column between said drive gear and said driven gear in said feed box portion to automatically control the motion of said table.



1,508,826. CYCLE FRAME. HERBERT WILLIAM TURNER, Auckland, New Zealand. Filed Nov. 14, 1922. Serial No. 600,797. 2 Claims. (Cl. 208—101.)

1. In a cycle frame, the combination with the main frame, of a forked frame arranged to extend down on both sides of the rear wheel and fixed at its lower ends to the main frame, and a second frame of similar shape, between the lower ends of which the rear wheel is journalled, such frames being so disposed that their side members extend parallel with one another on each side of the

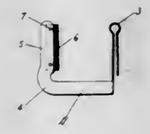


wheels, means whereby the two frames are linked together so that they may move relatively up and down, and spring cushions interposed vertically between the two said frames.

1,508,827. DRIVING MECHANISM FOR PHONOGRAPHS. LOUIS P. VALIQUET, Chicago, Ill. Filed Sept. 4, 1923. Serial No. 660,711. 8 Claims. (Cl. 171—222.)

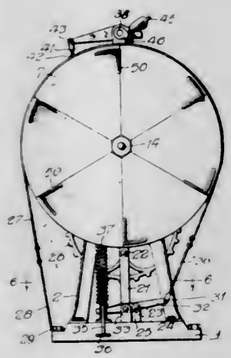
1. In driving mechanism for talking machines, the combination of an electric motor, a record turn-table, a slip-connection connected to drive said turn-table, gearing between the motor and the slip connection, an electric circuit for said motor, a resistance connected to said circuit, speed-controlled means for automatically cutting the resistance into and out of the circuit and speed-controlled means applied between the slip connection and the turn-table for regulating the speed at which the turn-table is driven through the slip connection.

1,508,828. WASHING MACHINE. JOHN F. WHOLEY, New York, N. Y., assignor to Faspray Corporation, New York, N. Y., a Corporation of Delaware. Filed July 14, 1922. Serial No. 574,865. 7 Claims. (Cl. 141—9.)



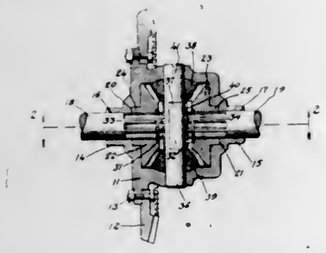
1. In a washing machine, a casing having a plurality of separated compartments at its base, and an overflow drainage means extending along the same side of the compartments and common to said compartments with its bottom inclined relatively to the overflow edge of said drainage means.

1,508,829. ELECTROLYTE-LEVEL INDICATOR FOR STORAGE BATTERIES. JOSEPH L. WOODBRIDGE, Philadelphia, Pa. Filed Oct. 31, 1922. Serial No. 598,068. 2 Claims. (Cl. 136—118.)



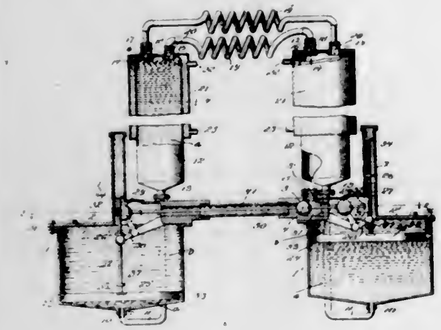
2. An electrolyte level indicator for storage batteries comprising the combination of a cover having an opening for both filling and venting and said cover being otherwise substantially imperforate, a seat element provided on the wall of said opening, a vent cap for the opening, and a detached indicator float arranged for guidance by the seat element and buoyant to protrude through the opening when the cap is removed and to be submerged by the cap when in place.

1,508,830. VIOLIN-BOW GUIDE AND MUTE. LORENZ J. ZAHN, Astoria, N. Y. Filed June 27, 1923. Serial No. 648,123. 9 Claims. (Cl. 84—283.)



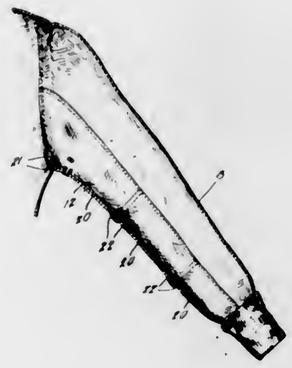
1. In a combined bow guide and mute for a stringed instrument having a bridge, a part to slip over the top of the bridge and acting as a mute, a single member fastened to the mute part and having a portion extending approximately parallel to the mute part, said portion acting as a guide for a bow.

1,508,831. HEMP AND PINA STRIPPING MACHINE. MARINO ZALVIDEA, Manila, Philippine Islands. Filed Dec. 27, 1923. Serial No. 683,067. 6 Claims. (Cl. 19—34.)



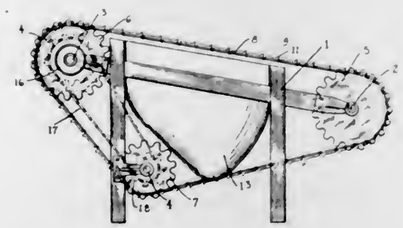
3. A machine of the character described comprising in combination with a supporting frame, a fiber pulling and carrying wheel rotatably mounted thereon, laterally extending arms upon said wheel, movable supported means for transmitting rotary motion to the wheel, a knife adjustably supported in the upper end of the frame, a table pivotally supported on the frame in proximity to said knife, and means for simultaneously moving the motion transmitting means into engagement with the wheel, the table into operative engagement with respect to said knife and releasing said braking means from a peripheral portion of the wheel.

1,508,832. DIFFERENTIAL MECHANISM. KARL W. ZIMMERSCHIED, New York, N. Y., and ORMOND E. HUNT, Detroit, Mich., assignors to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Aug. 24, 1922. Serial No. 584,037. 4 Claims. (Cl. 74—99.)



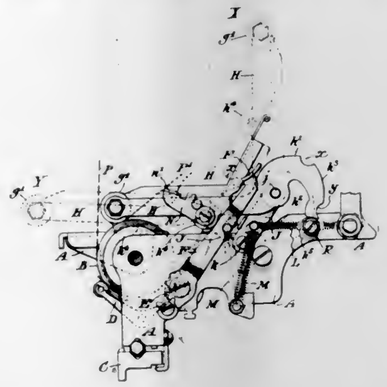
1. A differential and rear axle mechanism comprising, in combination, a differential housing, alined axle sections extending into the housing on opposite sides, a pinion shaft supported in the housing at right angles to the axle sections and between their ends, said pinion shaft having a flattened portion opposite the axle sections and terminating in shoulders at opposite ends, a spacer block having a cylindrical bore to receive the pinion shaft and a communicating opening along one side to slide over the flattened portion, the pinion shaft being angularly movable to change the relation of the flattened portion to the side opening of the spacer block, and differential gearing in the housing arranged to prevent removal of the spacer block when the pinion shaft is in its normal angular position.

1,508,833. REFRIGERATING APPARATUS. FREDERICK C. WEBER, New York, N. Y., and FRANK M. ALLEN, Washington, D. C. Filed May 29, 1919. Serial No. 300,613. Renewed Feb. 18, 1924. 4 Claims. (Cl. 62—115.)



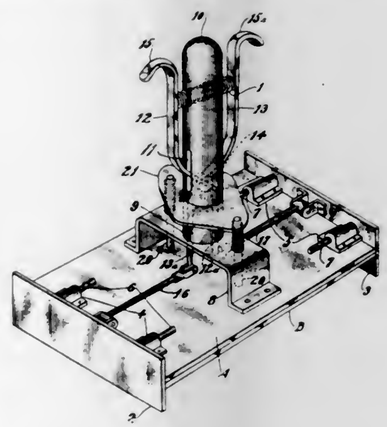
1. A refrigerating apparatus having, in combination with means for cooling the compressed refrigerant and means for expanding the same to secure the refrigerating effect, means for compressing the refrigerant actuated by liquid pressure and having a liquid piston between the power liquid and the refrigerant.

1,508,834. SLEEVE LINING. SAMUEL COHEN, St. Paul, Minn. Filed Nov. 29, 1922. Serial No. 603,967. 5 Claims. (Cl. 2—97.)



1. In a leather sleeve the combination of a front part and a back part secured thereto by suitable rows of stitching, a lining strip arranged adjacent to the inner surface of the back part of the sleeve and secured by said rows of stitching thereto, said lining strip consisting of non-elastic easily flexed material and being slightly larger within said rows of stitching than the rear part of the sleeve to permit a slight stretching of the leather of the rear part before the lining strip comes into active play to resist excessive or deleterious strain on said rear part.

1,508,835. GRADING OR SORTING MACHINE. WILLIAM A. CONTANT and LLOYD E. CONTANT, Rochester, N. Y., assignors of one-half to F. B. Pease Company, Rochester, N. Y., a Corporation of New York. Filed Mar. 7, 1924. Serial No. 697,630. 4 Claims. (Cl. 130—32.)

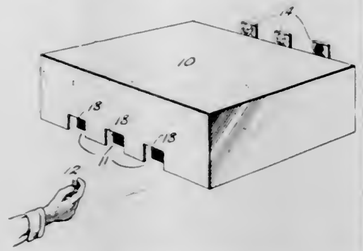


1. A grader or sorting machine comprising an endless conveyor having grading openings and having its upper lap arranged on an incline and having the upper end of the incline portion turning downwardly, and a drum arranged under the upper lap of the conveyor at the downwardly turned portion and operating at a different peripheral speed from the surface speed of the conveyor to displace articles from the openings in the conveyor at such downwardly turned portion.

1,508,836. TYPEWRITING MACHINE. GUSTAVE O. DEGENER, Hartford, Conn., assignor to Royal Typewriter Company, Inc., New York, N. Y., a Corporation of New York. Filed Jan. 9, 1924. Serial No. 685,237. 13 Claims. (Cl. 197—138.)

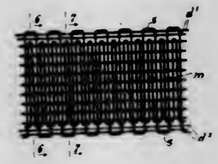
1. In a typewriting machine a pressure roll and a frame therefor movable about an axis in rear of the platen to lift the roll to a position above the platen and movable also fore and aft of the machine to shift the pressure roll to a position in front of the platen and a considerable distance therefrom.

1,508,837. CUBE-SUGAR PACKING DEVICE. HENRY DIPPEL, San Francisco, Calif. Filed Oct. 10, 1923. Serial No. 667,649. 6 Claims. (Cl. 294—87.)



1. A device of the character described comprising a base plate, a pair of gripping plates mounted thereon, means for opening and closing the plates in unison, and a pusher plate disposed between the gripping plates.

1,508,838. GAME APPARATUS. JOHN C. DOLGONAS, Chicago, Ill. Filed May 25, 1922. Serial No. 563,519. 2 Claims. (Cl. 46—61.)

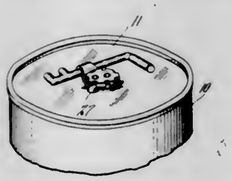


2. A game apparatus comprising a box having an opening in its front wall and through which a game piece is adapted to be projected, a target movably mounted rearwardly of the rear wall of the box and movable

toward and away from the rear wall thereof, a rod slidable through the rear wall of the box and in position to move the target away from said rear wall, a hanger

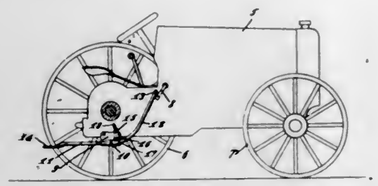
in the box adjacent the said opening and slidably receiving the rod, and a transverse head on the end of the rod inwardly of the opening for engagement by a game piece for movement of the rod into target striking position.

1,508,839. SAFETY FUSE. OTTO DREYER, Essen-Ruhr, Germany. Filed Feb. 4, 1922. Serial No. 534,242. 4 Claims. (Cl. 200—135.)



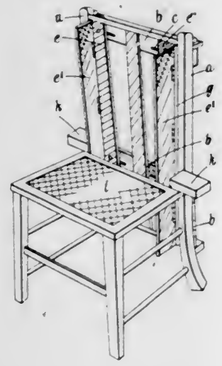
1. A safety fuse comprising a strip- or band-shaped carrier of insulating material, a conductor on each longitudinal edge of said carrier and a continuous wire extending in a plurality of zigzag windings across said carrier between said conductors and in multiple conductive contact with each conductor.

1,508,840. FABRIC AND ARTICLE. CAMILLE DREYFUS, Basel, Switzerland, assignor to The American Cellulose & Chemical Mfg. Co., Ltd., New York, N. Y., a Corporation of Delaware. Filed Dec. 22, 1921. Serial No. 524,277. 4 Claims. (Cl. 8—13.)



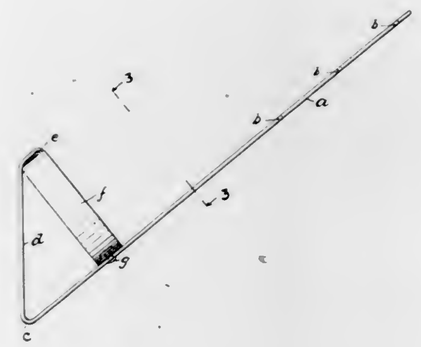
4. Ribbons and other fabrics comprising silk threads non-immune to weighting, associated with threads of cotton provided with a resistant dressing of cellulose acetate whereby they are substantially immune to weighting.

1,508,841. AGITATOR AND LOCK THEREFOR. CHARLES E. FARRINGTON, Phoenixville, Pa. Filed Jan. 23, 1924. Serial No. 687,966. 11 Claims. (Cl. 259—134.)



1. A combined closure and coupling member for a container having means for engaging an agitator, and a locking ring adapted to secure said member against removal, said locking means having means for engagement with the container and said member.

1,508,842. AUTOMATIC CLUTCH RELEASE. WILLIAM P. FITZGERALD, Princess Anne, Md. Filed May 14, 1921. Serial No. 469,697. 1 Claim. (Cl. 180—82.)

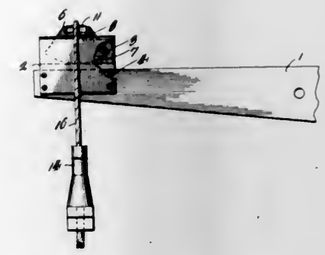


In combination with a tractor and the clutch pedal thereof, a plate having a pivot pin extending laterally therefrom, secured to the tractor, a relatively long arm having an upwardly extended end supported on the pivot pin, said upwardly extended end adapted to normally engage the clutch pedal, a locking arm pivotally connected to the plate at a point adjacent to one end of the arm, and laterally with respect to the pivot pin, one end of the locking arm being curved to cooperate with the first mentioned arm to lock the arm in its active position, and said locking arm having an enlarged end adapted to be engaged by the foot of the operator to lift the locking arm to its inactive position.

1,508,843. TROUSERS AND LIKE PRESS. DYSON FULLER, Southend, England. Filed June 14, 1921. Serial No. 477,606. 2 Claims. (Cl. 155—188.)

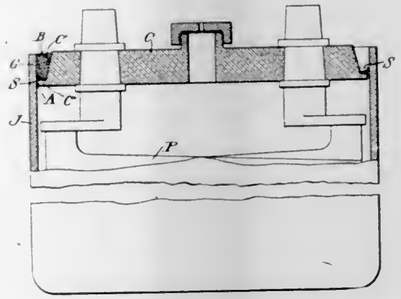
1. A combined chair and trousers press comprising a chair having an opening between the chair back and the chair seat, a pair of press members each composed of two vertical pivotally connected slats, positioned adjacent, and supplementing, the chair back and extending through said opening to below the seat level, means for adjustably securing one slat of each pair of press members to the chair back, the other slat of each pair being free to swing away from its companion slat and into the opening, wedging blocks hinged to the side edges of the seat and swingable inwards into the opening and between the back edge of the seat and the slats, whereby to thrust the swinging slats into pressing relation with the other slats and also to supplement the normal seat area.

1,508,844. SNOW GUARD. GEORGE B. GEISER, Philadelphia, Pa., assignor to Berger Brothers Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Apr. 24, 1924. Serial No. 708,627. 4 Claims. (Cl. 108—27.)



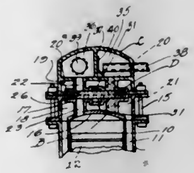
3. A snow guard comprising a base member, a stop member secured to the base, and a brace member extended between said base member, and said stop, all of said members being formed from a single length of material.

1,508,845. COUPLING FOR SUCKER RODS. WALTER D. GILES, Leesville, La. Filed June 4, 1923. Serial No. 643,474. 3 Claims. (Cl. 255—29.)



1. A coupling of the class described including a socket, a stud threaded in the socket, a head on the stud, arms pivoted to the head and provided with hook extensions for engaging the socket, and rollers mounted on the arms.

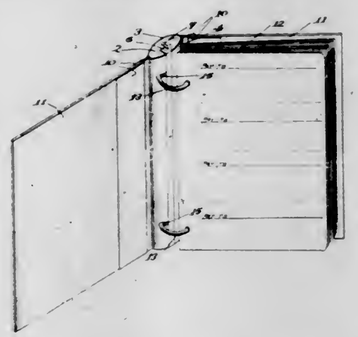
1,508,846. ATTACHMENT FOR WALKING BEAMS. WALTER D. GILES, Leesville, La. Filed June 4, 1923. Serial No. 643,475. 6 Claims. (Cl. 74—5.)



1. An attachment of the class described including a block, a rocker mounted on the block, and a roller journaled in the rocker.

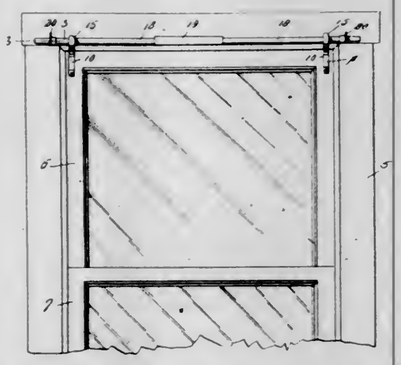
1,508,847. COVER SEAL FOR STORAGE BATTERIES. HELEN C. GILLETTE, Elmhurst, N. Y., assignor to The Prest-O-Lite Co. Inc., a Corporation of New York. Filed Nov. 8, 1921. Serial No. 513,736. 9 Claims. (Cl. 204—29.)

3. In a storage battery, the combination of a jar, a cover fitting into and substantially closing said jar, and means for sealing the joint between said cover and jar comprising congealed asphaltic sealing compound in strip form bridging the joint between said cover and jar, and additional asphaltic sealing compound united to the sealing compound comprising said strip and covering the same and adjoining parts of said jar and said cover.



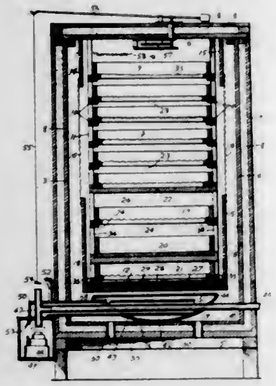
1,508,848. INTERNAL-COMBUSTION ENGINE. HARRY CLARENCE HANSON, St. Paul, Minn. Filed Nov. 11, 1920. Serial No. 423,248. 1 Claim. (Cl. 123—59.)

An internal combustion engine having a plurality of jacketed cylinders, a cap piece providing a cylinder head for the cylinders and formed with lower valve seat portions therein, one for each cylinder, a manifold casing covering said cap piece, said casing being formed at its



under side with upper valve seat portions, one for each cylinder, and at its upper side with an intake and an exhaust compartment, each common to all of said cylinders, meshing disc valves mounted to turn within the seats formed by said valve seat portions, said cap piece and casing having ingress and egress ports therein, intermittently closed by said valves, and respectively bringing said cylinders into communication with said intake and exhaust compartments, the cap piece and casing being formed with jackets for a cooling medium, the same communicating with each other, and with the jackets of the cylinders, said jackets being arranged to segregate the valves from the cylinders and from said compartments to cool said valves from both sides at the centers and at the margins thereof.

1,508,849. LOOSE-LEAF BINDER. HENRY M. KEHN, Los Angeles, Calif. Filed Oct. 12, 1922. Serial No. 593,977. 4 Claims. (Cl. 129—23.)

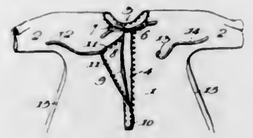


1. A loose leaf binder comprising a back-bone having a rounded outer face and a rounded inner face and having a longitudinally extending dovetail slot in its inner face and having transverse bow seats in its inner face, bows mounted in the bow seats, one end of each bow extending under the dove-tail slot, and a dovetail key slidingly mounted in the slot to hold the bows in place.

1,508,850. COMBINED SHADE AND CURTAIN HOLDER. HIRAM M. LINDSAY, Chickasha, Okla. Filed Apr. 24, 1923. Serial No. 634,241. 1 Claim. (Cl. 156—24.)

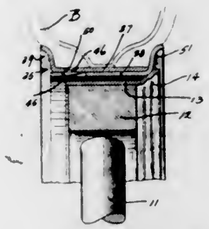
A combined window shade and curtain pole holder comprising spaced metallic strips secured together at a point between the ends and provided beyond the point where they are secured with angularly disposed extremities adapted to be applied to a window frame, other strips located between the spaced portions of the first mentioned strip and provided with longitudinally disposed slots, the securing bolt passing through spaced portions of the first mentioned strip and passing through the slots, the last mentioned strips having vertically disposed parallel end portions which are spaced from each other, a curtain pole disposed in the space between the vertically disposed portion of the last mentioned strip and shade roller hangers mounted upon the curtain pole.

1,508,851. METHOD OF ARTIFICIALLY INCUBATING EGGS. FREDERICK LEONARD MOLL, Turramurra, near Sydney, New South Wales, Australia. Original application filed Oct. 8, 1919, Serial No. 329,343. Divided and this application filed Sept. 15, 1920. Serial No. 410,494. 3 Claims. (Cl. 119—42.)



1. An improved method of artificially incubating eggs in an incubating chamber to which artificial heat and atmospheric air are supplied, from which waste gases and vapors are discharged, and wherein heated atmospheric air is distributed by natural draft to separate fixed primary and secondary zones so that the primary zone will receive air of greater temperature than the other zones which receive air of lower temperature in descending order but not by carrying the units of heat from eggs in a more advanced stage of incubation to those in a less advanced stage, said method consisting in subjecting a batch of eggs to heated atmospheric air in the primary zone of said chamber, wherein said eggs are partly incubated; removing said eggs from said chamber and replacing them in a secondary zone in said chamber and simultaneously adding to said primary zone another batch of eggs; subjecting said latter eggs to heated atmospheric air until they are partly incubated whilst said eggs in the secondary zone are undergoing further incubation with heated atmospheric air of lower temperature; removing said eggs from said chamber and replacing them in other zones in said chamber to those previously occupied by them and simultaneously adding to each zone rendered vacant by such removal a batch of eggs, and continuing said removal and replacement and addition of other batches of eggs.

1,508,852. BABY'S NIGHTGOWN. SAMUEL M. MOSES, Portland, Oreg. Filed Sept. 15, 1921. Serial No. 500,759. 1 Claim. (Cl. 2—114.)



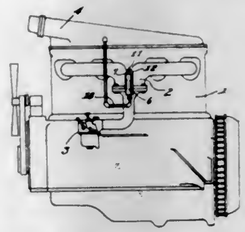
An infant's garment comprising a front and a back and sleeves all in one piece and including a neck opening, the said garment front being slit from the neck opening a predetermined distance downwardly, a triangular flap sewed to the garment adjacent one border of the slit thereof and extending the full length of the said slit and

being adapted for extending over the said slit, the free portion of said flap substantially constituting a right angle, tie tapes fastened one to each of the two neck points formed by the slit and adapted to be tied to close the top of said slit, a tie tape secured to the point formed by the substantially right angled flap portion,

and a tie tape secured to the body of garment at a point adjacent the slit and on the side opposite that to which the flap is sewed, the latter tie tapes being adapted to be tied to close the slit throughout its length, the said flap extending from that edge of the garment to which it is sewed across below the slit and being sewed at this place to the garment.

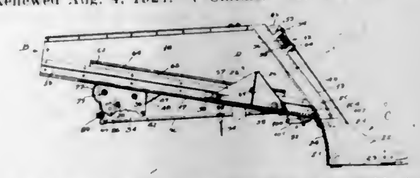
1,508,853. DEMOUNTABLE RIM. JOHN N. MCQUEEN, Preston, Idaho. Filed Nov. 10, 1922. Serial No. 600,131. 4 Claims. (Cl. 301—11.)

1. As an article of manufacture, a demountable tire rim section having apertures extending radially therethrough for receiving locking lugs of a second rim section and being slotted transversely inwardly from a circumferential edge of the same adjacent said apertures to permit radial flexing of the apertured portion of the rim section.



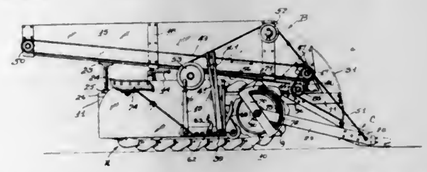
1,508,854. DETACHABLE CHAIN. JESMOND T. NICHOLSON, Wilkes-Barre, Pa. Filed Jan. 17, 1924. Serial No. 686,833. 2 Claims. (Cl. 74—32.)

1. A detachable chain comprising a single center link; a pair of side links spaced apart by said center link; a connecting pin for said links rotatable in each of said links; and a plurality of projections formed integrally on said center link, shaped to overlap the ends of said side links and comprising the sole means for retaining said side links on said pin in the operation of the chain.



1,508,855. HUMIDIFIER. GEORGE F. OISTER, Canton, Ohio, assignor of one-half to Ira W. Royer, Canton, Ohio. Filed May 8, 1920. Serial No. 379,733. 1 Claim. (Cl. 123—25.)

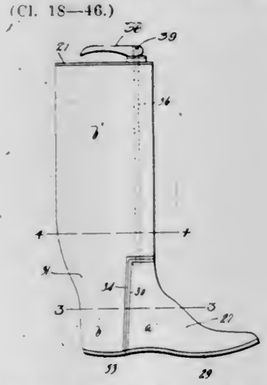
In a humidifying device adapted for attachment to an internal combustion engine comprising a cylindrical casing closed at its upper end and open at its lower end to admit air and provided with an outlet in the upper portion, an annular shoulder in the lower end of the cylinder forming a valve seat, a water inlet pipe attachable to the water cooling system of the engine extended into the open end of the cylinder concentric with the valve seat, a valve stem slidably mounted through the upper end of the cylinder and provided with a tapered



lower end arranged to normally seat in the end of the water pipe, a hollow conical air valve mounted upon the valve stem, the edge of said conical valve being arranged to normally seat upon the shoulder, and a coil spring encircling said valve stem between the upper closed end of the cylinder and the conical valve to normally close the air and water valves.

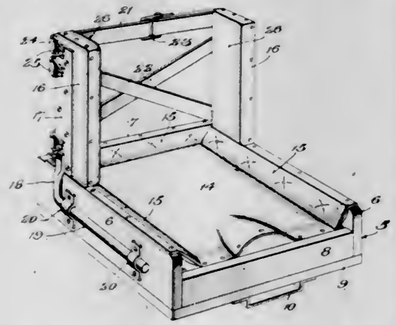
1,508,856. LOADER. ERNEST CHESLEY PRATT, Minneapolis, Minn. Filed Oct. 1, 1921. Serial No. 504,344. Renewed Aug. 4, 1924. 7 Claims. (Cl. 214—89.)

1. In a device of the class described, a portable hopper, a shovel adapted to discharge loads into the forward end thereof, a distributing and ejecting carrier shiftable back and forth between the forward and rear ends of said hopper, a source of power including a power shaft, a clutch shaft connected with and adapted to reciprocate the carrier, a pair of clutch sets on the clutch shaft having oppositely rotatable driving members geared with the power shaft and connected driven members slidable oppositely on said clutch shaft, a spring to engage the members of one clutch set, whereby the carrier is moved forward in the hopper, means controlled by an operator for disengaging said clutch set and engaging the second clutch set against the action of said spring, whereby the carrier is shifted toward the rear of the hopper, and a stop, engageable by the carrier at its foremost limit, said stop being adapted to disengage the first clutch set against the action of said spring without engaging the second clutch set.



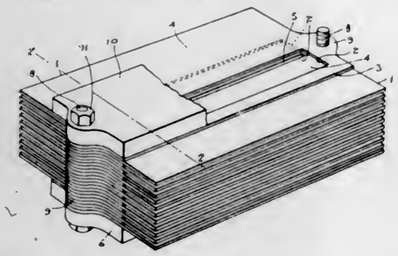
1,508,857. LOADER. ERNEST C. PRATT, Minneapolis, Minn. Filed Sept. 30, 1922. Serial No. 591,440. 6 Claims. (Cl. 214—90.)

1. In a loader of the class described, a truck, a conveyor on the truck for receiving, temporarily storing and discharging material, a shovel for picking up loads and discharging the same on said conveyor, a source of



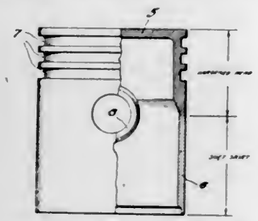
power for propelling the truck, operating the shovel and driving the conveyor and means for automatically causing said conveyor to advance when the shovel is positioned to empty its contents, whereby material falling from the shovel is spread upon said conveyor.

1,508,858. HOLLOW METAL LAST. WILLIAM SANDBORG, Belmont, and ERNEST V. GRANLUND, Boston, Mass. Filed Mar. 13, 1923. Serial No. 624,836. 2 Claims. (Cl. 18—46.)



1. A hollow last comprising a fore part section, composed of body members, a bottom member, and an angular rear end member, said members being of sheet metal and united to form a closed hollow structure, the angular rear end member having upper and lower portions meeting to form a salient angle; a rear section composed of body members, a top member, a bottom member, and an angular forward end member, said members being also of sheet metal and united to form a closed hollow structure, the body members being extended to form a leg portion surmounted by the top member, the angular forward end member having upper and lower portions meeting to form a reentrant angle, so that the forward end member is adapted to be seated on the rear end member, the said end members being provided with offset portions forming a tongue-and-groove connection between the two last sections; and securing means for releasably securing the fore part section to the rear section, said means cooperating with said angular end members and with the tongue-and-groove connection therebetween in confining the fore part section against displacement in any direction.

1,508,859. CUSHION SEAT. PETER J. SCHOENHOFF, Plains, Kans. Filed Feb. 16, 1923. Serial No. 619,437. 3 Claims. (Cl. 155—164.)

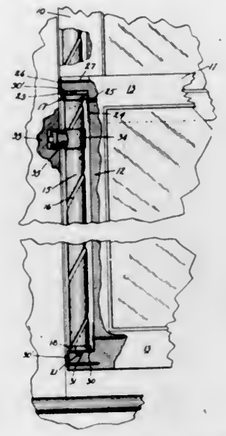


1. In a seat structure, the combination with a supporting seat, of a pair of upwardly extending side arms respectively connected to said seat to swing outwardly about horizontal pivots, a yieldable back, for said seat connected to said side arms, and an elastic connection between said side arms constituting both a yieldable back for the seat and means for permitting outward swinging movement of either side arm relative to the other.

1,508,860. RADIATOR. ALEXANDER T. STUART, Detroit, Mich. Filed Aug. 22, 1921. Serial No. 494,063. 4 Claims. (Cl. 257—139.)

3. A radiator, comprising, a plurality of thin flat plates of metal each being perforated longitudinally, a base formed with a channel therein, said plates being placed upon said base with the longitudinal perforations in overlapping register and the plates projecting alternately on either side of the base, and a cap having a longitudinal channel adapted to communicate with the zig-zag passage formed by the perforations in the series of plates arranged between the base and the cap.

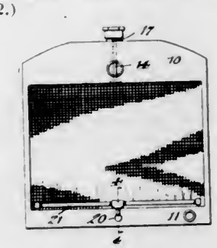
1,508,861. PISTON. ALEX TAUB, Detroit, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Mar. 8, 1922. Serial No. 542,038. 5 Claims. (Cl. 74—108.)



1. A piston formed in one piece from metal softer than cast iron and having the head portion harder than the skirt portion.

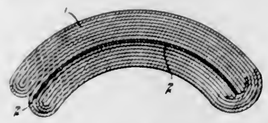
1,508,862. ART OF PREPARING LEGUMES OR SEEDS OF THE BEAN FAMILY BY LOW-TEMPERATURE COOKING. CHARLES B. TRESCOTT, Chicago, Ill. Filed Mar. 29, 1923. Serial No. 628,510. 2 Claims. (Cl. 99—11.)

1. The process of preparing for consumption legumes or seeds of the bean family, in moist condition, by cooking them at a temperature below the boiling point of water, thereby extracting therefrom into the cooking water their contained flavor and nutritive properties, thereupon heating them at said temperature in the extract-containing water and meanwhile exhausting the resultant water-vapors, for the purpose set forth.



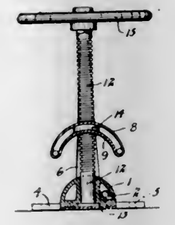
1,508,863. SASH BALANCE. GEORGE C. WEBSTER, Los Angeles, Calif. Filed Oct. 21, 1922. Serial No. 595,948. 6 Claims. (Cl. 16—197.)

1. A yielding sash counterbalance comprising upper and lower brackets, a roller adapted to be countersunk in a stile of a window sash, a spindle extending through the roller and adapted to be mounted and held against rotation in said brackets, a spring surrounding said spindle and secured thereto and inclosed in said roller, and being attached at one end thereto, and a ball and race device attachable to a contiguous member of the



window frame for supporting a ball engaging and causing the roller to rotate during movement of the sash and thereby vary the reaction of the spring.

1,508,864. MEANS FOR THAWING AUTOMOBILE RADIATORS. GUY WHITE, North Tonawanda, N. Y. Filed Jan. 2, 1923. Serial No. 610,397. 2 Claims. (Cl. 137—72.)



1. The combination with a radiator for automobiles having an upper header, a lower header and a water passage connecting said headers, of a steam conduit applied to the lower end of said water passage and extending through a wall of said lower header, the exterior portion of said conduit extending across the radiator and having discharge openings for directing the steam against the same.

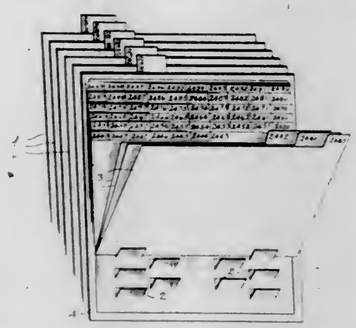
1,508,865. WIPER CLOTH FOR PIPE JOINTS. GEORGE E. WILLIAMS, Minneapolis, Minn. Filed Apr. 23, 1923. Serial No. 634,200. 7 Claims. (Cl. 113—111.)

1. A wiper cloth for wiping joints comprising a sheet of cloth folded into a plurality of plies and having a sheet of asbestos between two plies thereof which are adjacent the center of the folded cloth, said cloth being given a permanent curve of substantially semi-cylindrical form.

1,508,866. STEAM-HEATED PRESS FOR SHAPING WIPER CLOTHS. GEORGE E. WILLIAMS, Minneapolis, Minn. Filed Apr. 23, 1923. Serial No. 634,201. 2 Claims. (Cl. 34—16.)

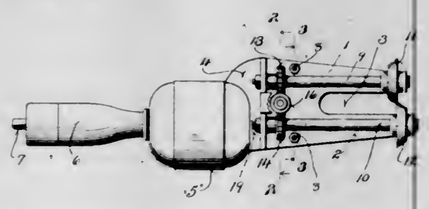
1. A device for shaping wiper cloths comprising an elongated form substantially semi-cylindrical in cross section and having a convex upper surface and a flat base member at each end thereof adapted to be attached to a support, standards rising vertically from said base members having vertical ribs projecting therefrom, said form having a hub at its central portion provided with a central bore having an enlarged lower portion, a screw journaled in said bore having a head seated in said enlarged portion thereof, a plate secured to the bottom of said hub holding said screw in place, said screw having a hand wheel at its top, an elongated form disposed above said form having a concave lower surface adapted to fit over said first mentioned form and having lugs at each end embracing and slidable on said ribs, said last mentioned form having a central hub forming a nut in which said screw travels, and means for supplying steam to said form.

1,508,867. CONTAINER FOR WIPER CLOTHS. GEORGE E. WILLIAMS, Minneapolis, Minn. Filed Apr. 23, 1923. Serial No. 634,202. 3 Claims. (Cl. 206—1.)



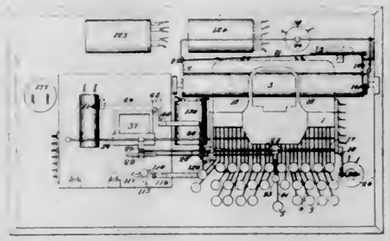
1. A container adapted to receive and retain in shape curved wiper cloths and comprising plane end walls, parallel semi-cylindrical front and rear walls shaped to correspond to the curvature of said cloths, said rear wall having plane end portions a bottom member and a cover for said container hinged about an axis extending at right angles to said end walls.

1,508,868. FILING SYSTEM. RODNEY J. WOOD, Dayton, Ohio. Filed Feb. 7, 1921. Serial No. 443,210. 13 Claims. (Cl. 129—16.5.)



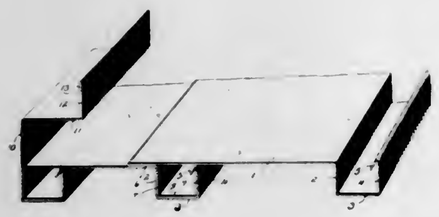
1. A card index embodying a plurality of independent data sheets, a support card common to a plurality of

such data sheets and a plurality of spaced tongues carried by the support card and projecting from the



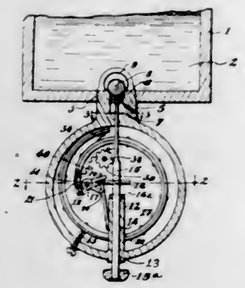
face thereof upon which the data sheets loosely rest in overlapping relation for to and fro oscillatory movement independent of the support.

1,508,869. CUTTER. ANDREW ASTRUP, Racine, Wis., assignor of one-half to Sylvester E. McKee, Racine, Wis. Filed May 17, 1923. Serial No. 639,475. 2 Claims. (Cl. 164—77.)



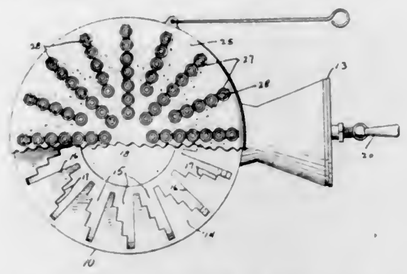
1. A portable power driven machine for cutting sheet material comprising a frame, an electric motor secured thereto, a pair of parallel shafts carried by said frame, co-operating rotary shear cutters carried by the outer ends of said shafts, a pair of worm wheels spaced from each other and carried by the inner ends of said shafts, and a worm operatively coupled to said motor shaft and positioned between said worm wheels and in driving relation thereto.

1,508,870. ELECTRICALLY-OPERATED TELEGRAPHIC TYPEWRITING SYSTEM. ORIN BENNETT, San Francisco, Calif., assignor to Pacific Coast Typewriter Co., San Francisco, Calif., a Corporation of California. Filed May 27, 1922. Serial No. 564,013. 6 Claims. (Cl. 178—23.)



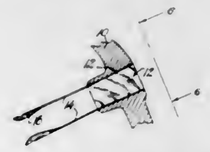
1. A telegraphic typewriting system including a sending and a receiving typewriter, each provided with a key board and a printing mechanism, electrically actuated mechanism connecting said typewriters, whereby the depression of a key of the sending typewriter causes the operation of the printing mechanism of the receiving typewriter, which latter operation subsequently causes the operation of the printing mechanism of the sending typewriter, and switches within said electrical mechanism for changing said sending typewriter to a receiving typewriter and vice versa.

1,508,871. SHEET-METAL BUILDING. HENRY BLOEDOW, Shorewood, Wis. Filed Apr. 24, 1923. Serial No. 634,209. 1 Claim. (Cl. 189—85.)



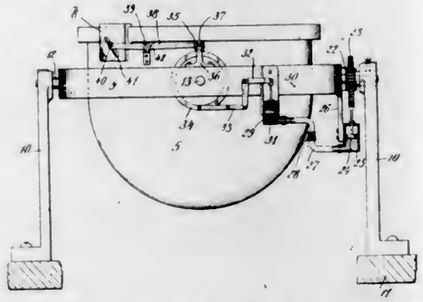
A panel for a sheet metal building comprising a body portion having at one edge an inwardly opening channel having an outer wall provided with an inturned lip, a portion folded against the outer side of the body portion, and a second inwardly opening channel formed of a continuation of the folded portion and having an outer wall terminating adjacent, and slightly spaced from, said body portion, said folded portion preventing the outward turning of successive inter-engaged panels.

1,508,872. THERMOSTATIC CONTROL. GEORGE A. BONELLI, Kingman, Ariz. Filed Nov. 11, 1920. Serial No. 423,473. 11 Claims. (Cl. 137—34.3.)



8. A thermostatic control comprising a thermal-responsive element provided with a slot, a movable member including an extension engaging within the slot to effect movement of the movable member upon expansion or contraction of said element, spaced fingers formed on the movable member, an operating member, a projection on the operating member adapted to be engaged by either of the fingers of the movable member for actuating the operating member, a projection on the movable member, and a yieldable member supported independently of the movable member and engaging the last mentioned projection for the purpose described.

1,508,873. REGULATING BURNER CAP. HENRY C. CALDWELL, Buffalo, N. Y. Filed Aug. 31, 1922. Serial No. 585,402. 3 Claims. (Cl. 158—117.)

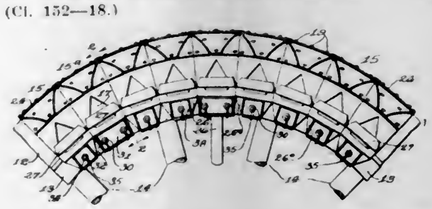


1. A gas burner comprising a base portion, and a muffle, the base portion being formed with a flat top and provided with radially arranged recesses, each recess being of varying width, whereby a number of passageways in the muffle may be closed by the oscillation thereof.

1,508,874. HAMMER AND HANDLE ASSEMBLY. HANS CHRISTENSEN, Golden, Colo. Filed Nov. 29, 1921. Serial No. 518,534. 2 Claims. (Cl. 306—32.)

1. In combination, a hammer head having a socket tapering from its outer face inwardly whose front and rear walls extend transversely of the length of the head, a handle positioned in said socket having its socket end tapered as is said socket, and separate retaining straps positioned between said front and rear walls and the front and rear sides of said handle, the outer ends of said straps having means for positively engaging said head and terminating within the outlines of the outer face of said head, said straps having means for positively engaging said handle the grip portion of the handle being too large to pass through said socket.

1,508,875. COMPASS. ARTHUR P. DAVIS, Brooklyn, N. Y. Filed Mar. 18, 1919. Serial No. 283,382. 7 Claims. (Cl. 33—222.)

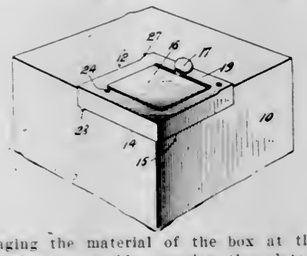


1. The combination of a compass, a support, a universal mounting between the support and compass whereby the compass does not partake of the rolling and pitching motion of the support, a movable member associated with said compass and bearing the reference line therefor, and means controlled by the relative movement of the universal mounting, compass and support, to displace said member in accordance with combined rolling and pitching motions of said support.

1,508,876. COMBINED ILLUMINATING AND TIME-INDICATING MEANS. CHARLES E. DRESSLER, New York, N. Y., assignor to Carlotta M. Dressler, New York, N. Y. Filed Oct. 18, 1920. Serial No. 417,697. Renewed Mar. 19, 1924. 9 Claims. (Cl. 58—50.)

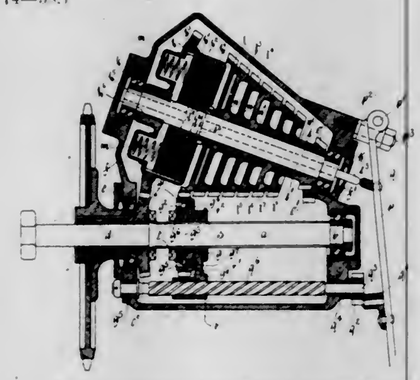
1. In a combined illuminating and time indicating means, the combination of a portable stand having a bifurcation at the extremity, a casing carrying a clock movement adjustably mounted in said bifurcation, a globe having circularly arranged time indications operatively connected to and suspended from a rotatable member of the clock movement, and an illuminating device for said globe.

1,508,877. TIRE ARMOR. PREDA A. EFTOFIE, Chicago, Ill. Filed Feb. 18, 1924. Serial No. 693,499. 1 Claim. (Cl. 152—18.)



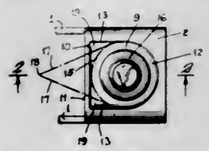
A protector for tires consisting of a plurality of arcuate metal sections or bands located in juxtaposition on the tread portion of a tire embracing the same with their free ends disposed inwardly near the sides of the wheel felly and each having an opening therein, a plurality of reinforcing plates mounted on the tread portion of each of said sections or bands and having outwardly extended projections to create resistance against the road surface, and an outwardly extended member secured to each side of said felly and interlockingly engaging each of said sections for radial movement of the later.

1,508,878. ATTACHABLE AND REMOVABLE CAP FOR MERCHANDISE CONTAINERS. WILLIAM A. EVALENKO, New York, N. Y. Filed Oct. 14, 1921. Serial No. 507,712. 3 Claims. (Cl. 229—7.)



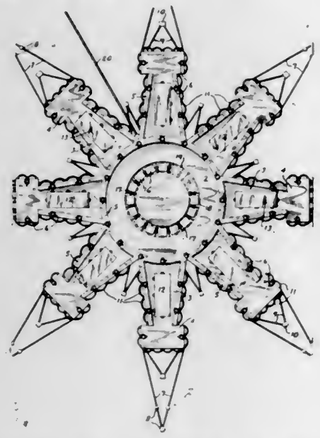
1. In combination with a pasteboard box of the character described having sides and a fixed top and in which top at a convenient location for pouring from the box is formed a discharge hole, leaving the other portion of the top intact and rigid with said sides, an attachable and

removable cap applied against said top over and surrounding said hole comprising a plate having an opening therein aligned with said hole, a lid on and carried by said plate normally closing the opening therein and the hole in said top, and clamping members carried by said plate and extending downwardly through said hole



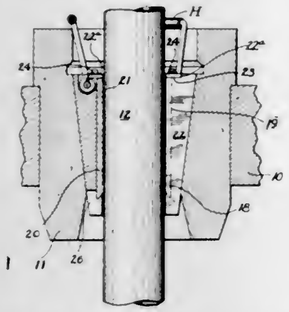
for engaging the material of the box at the sides of said hole and removably securing the plate stationary on said top, one of said clamping members being a lip integral with said plate and bent outwardly from said opening and below the plate and to be slipped below the material of the box-top and bind the same against said plate.

1,508,879. VARIABLE VELOCITY-RATIO GEARING. FRANCIS JEREMIAH HEALEY, London, England. Filed Oct. 18, 1923. Serial No. 669,210. 3 Claims. (Cl. 74—58.)



1. In variable velocity ratio gearing having a plurality of toothed wheels the external peripheries of which are disposed in the surface of a cone, a shaft parallel with the surface of said cone and a displaceable toothed wheel on said shaft for engaging with one or other of the toothed wheels in said plurality, in combination, dog teeth on each of the toothed wheels in said plurality to enable each of said wheels to engage with an adjacent wheel, a spring for maintaining the dog teeth on the several wheels in engagement and means for disengaging said dog teeth.

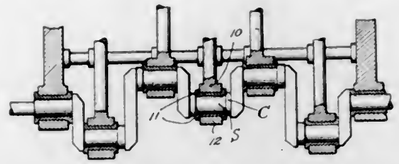
1,508,880. CASTER. WALTER F. HEROLD, Newark, N. J., assignor to The Bassick Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Apr. 28, 1924. Serial No. 709,343. 5 Claims. (Cl. 16—31.)



1. In a caster, a horn having a transverse top portion and fowardly and downwardly extending arms, said top portion having an upwardly-extending reinforcement of substantially D shape, with the base thereof adjacent and parallel to the front edge of said top portion, said reinforcement having a pintle opening therethrough.

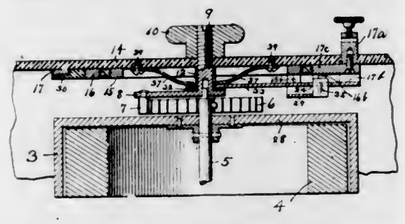
1,508,881. LIFE RAFT. HARRIETTE E. HODGSON, New York, N. Y. Filed May 9, 1923. Serial No. 637,632. 6 Claims. (Cl. 9—8.)

1. A life-buoy or raft, comprising a firm buoyant island body, with integral radiating arms of like capability for support with the body, substantially as described.



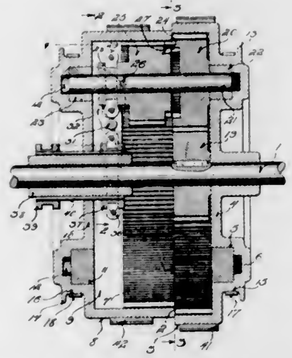
1,508,882. ROTARY-DRILL PIPE SLIP. CHESTER C. HOSMER, Huntington Beach, and CARLETON H. WINES, Whittier, Calif. Filed Jan. 19, 1923. Serial No. 613,616. 10 Claims. (Cl. 24—263.)

1. In a pipe slip, a segment adapted to cooperate with a rotating table and provided with a longitudinal channel adapted to retain a liner against outward displacement therefrom said liner being of substantially uniform thickness and engaged at its edges by the sides forming the channel.



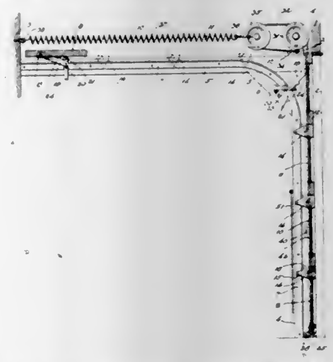
1,508,883. ADJUSTABLE THRUST BEARING. LOUIS T. HUNTER, Chappaqua, N. Y. Filed Feb. 20, 1924. Serial No. 693,981. 2 Claims. (Cl. 64—55.)

1. In a thrust bearing, the combination of a relatively fixed bearing member, a cap cooperating with said member, clamping means including a bolt securing initially said cap and member in definite alignment transversely of the axis of the bearing, said cap being so formed as to provide endwise bodily adjustment of the cap as a unit with respect to the bearing member and bolt, and take-up means including a filler member extending in substantially parallel relation to said bolt and having direct bearing relation between said bolt and said bearing for varying the lateral adjustment of the bolt to the bearing



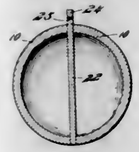
so as to hold said bolt as adjusted, said bolt co-operating with said cap to hold the same from endwise movement when in fixed adjustment.

1,508,884. SIGNALING DEVICE. GEORGE JACOBS, Detroit, Mich. Filed Jan. 15, 1921. Serial No. 437,518. 6 Claims. (Cl. 175—355.)



1. In a signaling device for vehicles, the combination of a support, a series of contacts arranged thereon insulated from each other, a movable contact adapted to move over said series of contacts according to the speed of the vehicle, said movable contact embodying a driving part connected to a current source and a driven part adapted to engage the series of contacts, one of said parts having a pair of stops adapted to be engaged by the other part, one of said stops providing electrical connection between said parts and the other being an insulator, so that current will pass to the series of contacts when the driving part moves the driven part in one direction.

1,508,885. REDUCTION TRANSMISSION. WINFIELD SCOTT JENNINGS, Antigo, Wis. Filed Jan. 14, 1924. Serial No. 686,129. 3 Claims. (Cl. 74—34.)

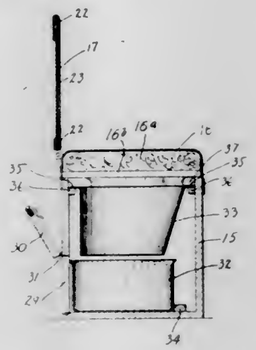


1. A reduction transmission comprising a driving shaft, a pair of internal gears carried thereby, a pinion keyed to said driving shaft, and a pair of pinions carried by a shaft having its axis paralleling the driving shaft, said pinions being adapted for mutual inter-locking engagement, one of said pinions meshing with one of said internal gears and with the pinion carried by said driving shaft, the other of said pinions meshing with the other of said internal gears, means for holding either of said internal gears temporarily stationary, and means for moving said mutually engageable pinions into and out of inter-locking engagement.

1,508,886. OVERHEAD DOOR. OWEN L. DAUTRICK, CLARENCE G. JOHNSON, and ARTHUR KRASKA, Detroit, Mich., assignors to Dautrick Johnson Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed Oct. 16, 1922. Serial No. 594,725. 6 Claims. (Cl. 20—20.)

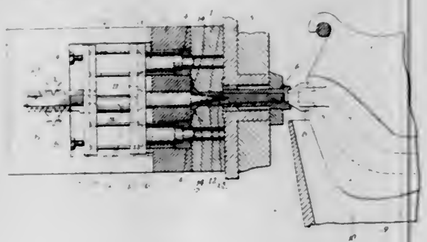
1. A door installation for a building having a doorway, comprising inverted L-shaped side units adapted to be mounted at the sides of the building doorway, each unit including a horizontal member longer than the height of the door-way, rails carried by the confronting sides of said units, a sectional foldable door slidable on said rails and adapted to close said doorway and when open occupy a horizontal overhead position above the horizontal plane of the horizontal members of said units, and a counterbalance for said door extending above and along the horizontal member of each unit.

1,508,887. BEAD FOR JEWELRY. HENRY F. JUERGENS, Providence, R. I. Filed July 24, 1922. Serial No. 576,989. 3 Claims. (Cl. 63—32.)



3. As an improved article of manufacture, an ornamental bead designed for jewelry and comprising two opposed substantially hemispherical cups and a substantially circular disk having a diameter substantially equal to the maximum diameter of each of the cups, said disk being interposed between the flat edge faces of the cups with the peripheries of the disk and cups coinciding to form with said cups a continuous surface, the adjacent faces of the disk and cups being adhesively united, said bead having means for its suspension.

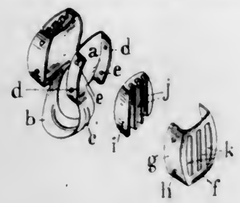
1,508,888. AUXILIARY SEAT FOR AUTOMOBILES. ALBERT H. KLATT, Los Angeles, Calif. Filed Sept. 8, 1922. Serial No. 586,831. 3 Claims. (Cl. 4—135.)



1. In combination, a receptacle having an open top and an opening in one side thereof, a door controlling said opening, a receptacle within the first receptacle, a rib

within the receptacle adjacent the open top thereof, a spout including a flange engaging said rib, a seat member engaging said flange and supported on said rib, and

a seat including a seat portion hingedly sustained upon the first receptacle and normally closing the top of said receptacle and a back portion hingedly supported upon the seat portion.

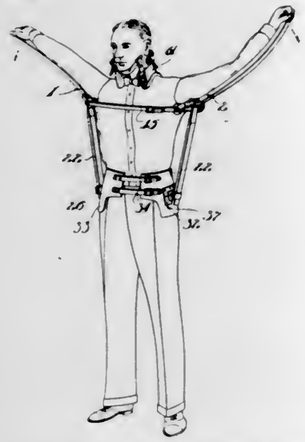


1,508,889. METHOD OF AND APPARATUS FOR MAKING CASTINGS. JOHN KENNEDY and CLARENCE H. DUCKWORTH, Brooklyn, N. Y., and MARCUS STERN, Toledo, Ohio, assignors to Doehler Die Casting Company, Brooklyn, N. Y., a Corporation of New York. Filed June 18, 1920. Serial No. 389,821. 12 Claims. (Cl. 22—209.)

6. In casting apparatus, the combination of a mold having two separable sections defining a mold cavity and a gate opening in one of said sections, and a metallic pin mounted on the other section and adapted when said sections are together to extend centrally into said opening and to provide a core for metal remaining in said opening to shrink upon when cooling, so as to prevent the metal in said opening from so adhering to the walls of said opening as to become broken from a casting in said cavity when the sections are separated, said pin having a roughened surface to effect a more positive adhesion of cooling gate-metal thereto.

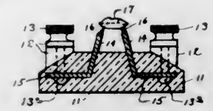
1,508,890. NASAL INHALER. MARCEL ANDRÉ LASSIAUX, Paris, France. Filed Nov. 26, 1923. Serial No. 676,895. 1 Claim. (Cl. 128—198.)

A nasal inhaler comprising a clip made of resilient metal adapted to embrace the median wall of the nose, a reinforcing rib on this clip,—two cups with convex edges, open at their lower and upper parts and formed on the two ends of the clip, two noncombustible discs impregnated with volatilizable medicine, having the same shape as that of the cups and fitting in the latter,—two covers with convex or bulged edges, closing the cups, said covers leaving the cups open at their base and at their top part and providing a certain interval between their inner face and the outer face of the discs,—means for securing these covers,—longitudinal grooves or flutes in the discs



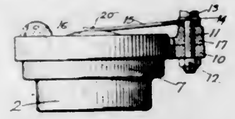
for increasing the surface of evaporation of the discs and facilitating the passage of the air,—and longitudinal openings in the covers for permitting the easy passage of the air and the cleaning of the discs.

1,508,891. COLLAR-FASTENING CLIP. SAMUEL B. LAVICK, Chicago, Ill., assignor to Comfort Collar Clip Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 21, 1921. Serial No. 454,005. 1 Claim. (Cl. 24—101.)



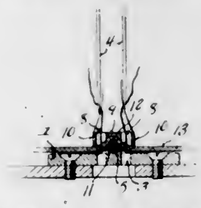
A one-piece sheet-metal clip for fastening a collar to a two-fold shirt-band, comprising a vertically disposed transverse body portion with arms at the ends thereof extending straight downwardly, a central downwardly and rearwardly extending collar attaching tongue to pass rearwardly through the collar button hole, and a hook elongation of the tongue shaped substantially like a sector of a ribbon helix but formed so as to lie substantially flat against the collar and permit sliding of the tie over the hook.

1,508,892. EXERCISING AND SPINE-STRETCHING APPARATUS. MARIAN MIKÄLSEN, San Pedro, Calif. Filed Jan. 15, 1924. Serial No. 686,255. 7 Claims. (Cl. 46—69.)



1. An exercising and spine-stretching apparatus comprising arm levers, fulcrums for supporting the arm levers, body harness for supporting the fulcrums, and a shoulder and head harness for raising the head when the shoulders are raised.

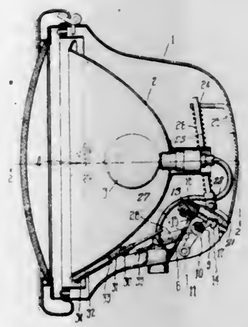
1,508,893. CRYSTAL DETECTOR FOR RADIORECEPTION. FREDERICK G. MITCHELL, Ridgefield Park, N. J. Filed June 24, 1922. Serial No. 570,533. 2 Claims. (Cl. 250—31.)



1. In a crystal detector for radio reception a base and a pair of plates connected thereto, each of said plates being in electrical connection with a radio circuit, and said plates having a pair of serrated edges situated opposite each other, combined with a crystal placed in contact with the serrations, of said edges, thereby completing the circuit.

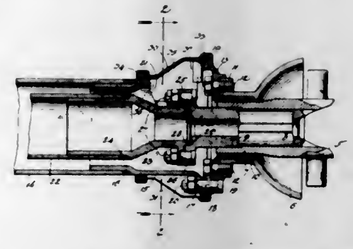
1,508,894. TANK CAP. DONALD R. MORRISON, Los Angeles, Calif. Filed May 16, 1922. Serial No. 561,360. Renewed July 5, 1924. 5 Claims. (Cl. 220—24.)

1. A filling cap device for receptacles, comprising a collar adapted to be secured to the filling nipple or mouth of the receptacle and having an overhanging flange, and a cap member movably connected to said collar and closable against and under said flange.



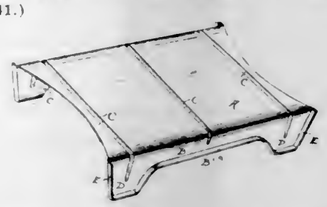
1,508,895. EMBOSSED-STITCHING ATTACHMENT. HENRY L. PATZER, Milwaukee, Wis. Filed Apr. 24, 1923. Serial No. 634,294. 2 Claims. (Cl. 112—139.)

1. In a sewing machine for forming an imitation moccasin seam, the combination of a pair of needles, a guide plate having a pair of parallel slots through which said needles work and having a grooved supporting portion intermediate said slots, said supporting portion being slightly recessed with respect to the upper surface of said guide plate said guide plate having a horizontal slot for guiding a tape across said supporting position, and over said parallel slots and having a cord guide above said horizontal slot and centrally thereof, and a presser recessed to permit the passage of the needles therethrough and having a concaved upwardly arched bottom portion ending in two parallel flanges adapted to contact with the work and force it downwardly on each side of said cord.



1,508,896. ADJUSTABLE MOUNTING FOR LAMPS. ERNEST W. SEAHOLM, Detroit, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Nov. 14, 1919. Serial No. 337,988. 6 Claims. (Cl. 240—41.)

1. In a lamp mounting, a pivotally supported reflector, a rock shaft connected to the reflector to swing the same about its points of support, a lever fixed to said rock shaft to operate the same and having stop lugs, a stop device cooperating with said lugs to determine the



limits of movement of said reflector, and resilient means operative to retain the lugs in engagement with said stop device.

1,508,897. TORQUE-TUBE CONNECTION. ERNEST W. SEAHOLM and GUY E. PARKER, Detroit, Mich., assignors to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed June 10, 1921. Serial No. 476,544. 8 Claims. (Cl. 180—85.)

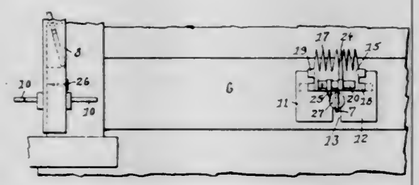
1. In driving mechanism, the combination of a driving member, a shaft, means for securing said member to said shaft to rotate therewith, and a housing surrounding said parts and having an opening permitting access to and detachment of said securing means, the engaging portions of the parts being shaped to permit removal of said shaft laterally from said driving member upon removal of said securing means.

1,508,898. PLATFORM. FRANK H. SMITH, Cleveland, Ohio, assignor to The Hydraulic Pressed Steel Company, Cleveland, Ohio, a Corporation of Ohio. Filed Oct. 15, 1919. Serial No. 330,695. 1 Claim. (Cl. 248—41.)

A sheet metal platform comprising a top and sides, the intermediate portions of the sides being removed providing foot portions for the corners of the platform and outwardly extending flanges from the lower edges of said sides and foot portions.

1,508,899. COMPOSITION OF MATTER FOR USE IN LIEU OF LEATHER OR FOR OTHER SUITABLE PURPOSES AND METHOD OR PROCESS OF MANUFACTURING SAME. WILLIAM STOCKS, Fitzroy, Victoria, Australia. Filed Nov. 8, 1918. Serial No. 261,734. 8 Claims. (Cl. 18—52.)

1. A new article of manufacture, a composition of matter, comprising comminuted old or waste vulcanized rubber, virgin rubber, sulphur, white lead, castor oil, pontianac gum and dissolved resin, made by associating, blending, kneading and grinding said ingredients together substantially as described.

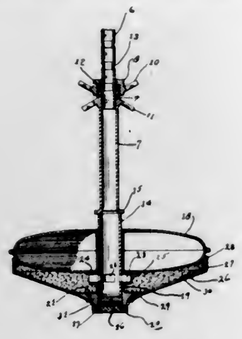


1,508,900. PROCESS FOR PRODUCING A COMPOSITION OF MATTER FOR USE IN LIEU OF RUBBER, LEATHER, OR FOR OTHER SUITABLE PURPOSES. WILLIAM STOCKS, Fitzroy, Victoria, Australia. Original application filed Nov. 8, 1918, Serial No. 261,734. Divided and this application filed Oct. 21, 1920. Serial No. 418,581. 8 Claims. (Cl. 18—52.)

1. The process of producing a new composition of matter, consisting of comminuting old or waste vulcanized rubber under heated conditions, blending virgin rubber therewith by mastication and the application of heat to form a plastic mass, and adding to the plastic mass during the masticating thereof white lead, castor oil, viscous gum and dissolved resin as and for the purpose set forth.

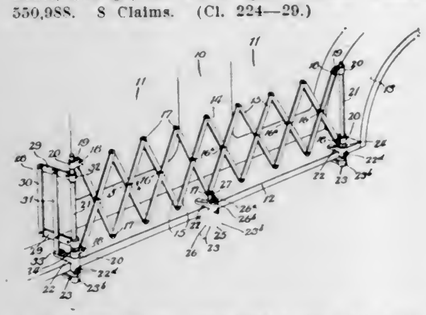
1,508,901. METHOD OF TREATING VULCANIZED RUBBER AND OF MIXING SAME, ETC. WILLIAM STOCKS, Miramar, near Wellington, New Zealand. Filed Oct. 21, 1920. Serial No. 418,562. 4 Claims. (Cl. 18—52.)

1. A new and improved method of treating vulcanized rubber consisting essentially in the simultaneous masticating and heating of vulcanized rubber at a temperature exceeding that at which the vulcanized rubber has previously been vulcanized by heavy revolving rollers in a heated condition, substantially as and for the purposes set forth.



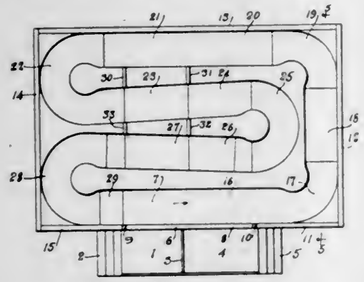
1,508,902. BIRD-GUARD AND ANTIBLIND RATTLER. CHARLES STOEFFLER, Providence, R. I. Filed June 6, 1923. Serial No. 643,679. 5 Claims. (Cl. 70—44.)

3. In a bird guard and antiblind rattler, a flat plate, a V-shaped member on the plate and having a plurality of pointed members, a spring arm on the V-shaped member and means for securing the plate in place, for the purpose as described.



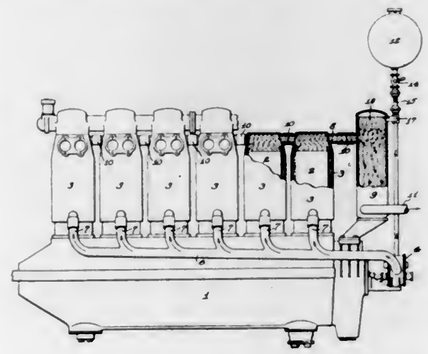
1,508,903. MILK-BOTTLING MACHINE. GUSTAV STRANDT, Milwaukee, Wis., assignor to Milwaukee Dairy Supply Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Apr. 14, 1922. Serial No. 552,746. 9 Claims. (Cl. 137—104.)

1. The combination with a tank, of an upright supply pipe therein closed at its bottom and provided with a lateral port, an annular slide valve guided upon said pipe and adjustable axially thereof to open and close said port, a float operatively connected with the valve, and a screen connected with said valve above and below said port and extending circumferentially about said valve and pipe with a portion projecting radially from



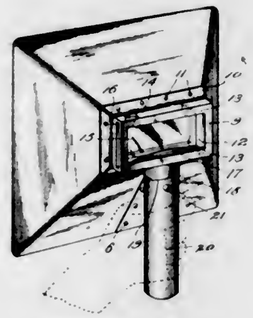
said valve, whereby to screen all material passing through said port while attaining an area adequate to ensure against its stoppage.

1,508,904. LUGGAGE CARRIER FOR AUTOMOBILES. ELON J. VAN FLEET, Joliet, Ill., assignor to William E. Pratt, Chicago, Ill. Filed Apr. 10, 1922. Serial No. 550,988. 8 Claims. (Cl. 224—29.)



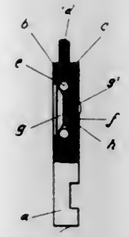
1. A luggage carrier comprising a side wall, a rod engaging said side wall, and a pair of jaws operated by said rod.

1,508,905. AMUSEMENT DEVICE. AUREL BASZIN, Dayton, Ohio. Filed Feb. 12, 1923, Serial No. 618,713. Renewed Aug. 11, 1924. 10 Claims. (Cl. 104—58.)



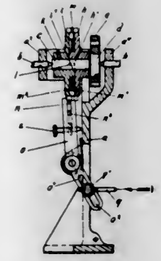
3. In an amusement device, a building, a track therein consisting of two U-shaped tracks having their free ends connected by semi-circular track portions, said track portions being adapted to support and guide a vehicle, a vehicle traveling thereon and means to supply the source of power for actuating said vehicle, said power means being associated with said track, and means associated with said track for alternately elevating and depressing portions of said track without making the track impassable to the vehicle.

1,508,906. METHOD AND MEANS OF PREVENTING SALT-WATER REACTION AND GALVANIC ACTION IN WATER-COOLED ENGINES. GARFIELD A. WOOD, Detroit, Mich. Filed June 29, 1922. Serial No. 571,846. 6 Claims. (Cl. 123—170.)



1. Means for rust proofing the walls of a water jacket about an engine cylinder in which jacket a corrosive agent is circulated for cylinder cooling purposes, said means comprising, in combination with a pump, a tank adapted to supply oil to the pump, and oil and water separating means communicating with the water jacket and adapted for discharging water and returning the oil to the pump.

1,508,907. WELDER'S FACE SHIELD. EDGAR L. WORK, Columbus, Ohio, assignor of one-third to Frank J. Williams, Columbus, Ohio. Filed June 22, 1920. Serial No. 390,934. 1 Claim. (Cl. 2—11.)

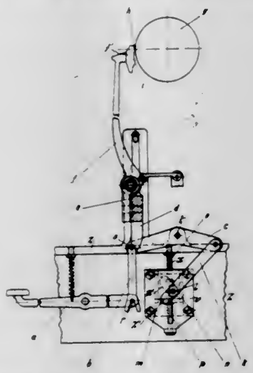


A method for producing welders' face shields which consists in utilizing a single piece blank of pliable material cutting the blank so as to provide a triangular slot and a central five sided opening, the sides of the opening corresponding in number with the side edges of the blank, folding the blank so that the side edges of the triangular slot are brought into parallel overlapping relationship and securing them at the overlapped points to hold the entire body in substantially pyramidal formation and with the side edges of the central opening in rigid angular relation.

1,508,908. TYPE-BAR BALL BEARING. GOTTLOB AICHELE, Nellingen, near Esslingen, Germany. Filed Jan. 23, 1924. Serial No. 687,902. 1 Claim. (Cl. 197—39.)

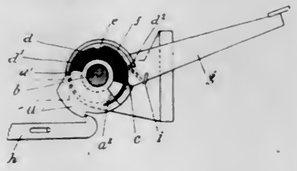
A combined ball-bearing and type-bar for typewriting machines, comprising, in combination, a type-bar provided at its supporting end with an annulus constituting the outer race for the balls of the ball-bearings; a forked member, the prongs of which embrace said annulus and are each provided with an aperture, two conical members located in said aperture and forming at their adjacent sides the inner race, and a screw threaded projection comprising an integral part of one of said conical members and projecting axially into the other conical member for detachably securing said members together.

1,508,909. ESCAPEMENT MECHANISM. GOTTLOB AICHELE, Nellingen, near Esslingen, Germany. Filed Jan. 23, 1924. Serial No. 687,903. 4 Claims. (Cl. 197—86.)



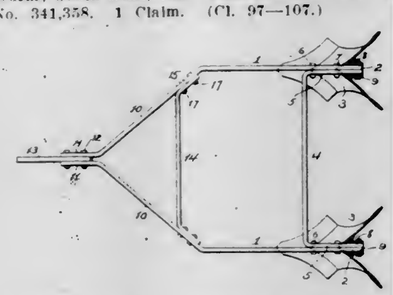
2. In a typewriter, an escapement comprising a plurality of co-axial gears, a movable dog cooperating with said gears to produce a step by step feed thereof, the cooperating surfaces of said dog and the teeth on said gears being correspondingly inclined and arranged to slide along each other during the movement of the dog to provide a gradual rotation of said gears in the feeding steps thereof and means for actuating said dog.

1,508,910. SHIFT MECHANISM FOR TYPEWRITING MACHINES. GOTTLOB AICHELE, Nellingen, near Esslingen, Germany. Filed Jan. 23, 1924. Serial No. 687,904. 3 Claims. (Cl. 197—74.)



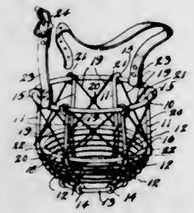
2. In a typewriting machine, a case shift element, means for selectively shifting said element from a normal position to a case shift position, a shiftable means operatively connected to the case shift element, and re-

silient means on opposite sides of said shiftable means for providing a gradually increasing resistance respectively to the shifting movements of said element from its



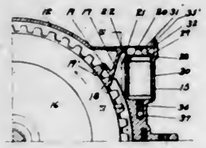
normal position and to its return movements to said normal position to neutralize impact shocks incidental to such shifting and return to normal position.

1,508,911. COLUMN-STOP MECHANISM OF TYPEWRITING MACHINES. GOTTLOB AICHELE, Nellingen, near Esslingen, Germany. Filed Feb. 7, 1924. Serial No. 691,106. 5 Claims. (Cl. 197—70.)



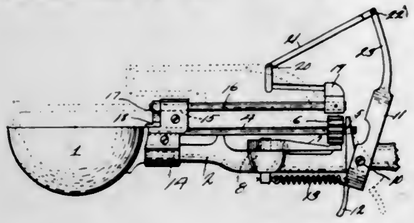
1. In a typewriting machine, the combination of a rotatably mounted cylindrical section provided with recesses, rotatably mounted column stops and means carried by said stops and cooperating with the recesses of said cylinder section for fixing said column stops in operative position.

1,508,912. LISTER PLOW. RUDOLPH J. ALTGELT, South Bend, Ind., assignor to Oliver Chilled Plow Works, South Bend, Ind. Filed Nov. 29, 1919. Serial No. 341,358. 1 Claim. (Cl. 97—107.)



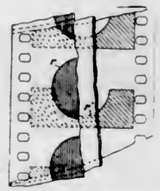
A frame for a plow comprising two parallel beams terminating at their rear ends in standards to receive soil-engaging members, the forward portions of said beams having integral converging members provided at their forward ends with parallel extensions, a draw bar secured between said parallel extensions, a brace secured between the forward converging portions of the beams, and a brace secured between the rear portions of the beams and having extensions forming re-inforcements for the standard portions of the beams.

1,508,913. GRAZING MUZZLE. FREDERICK D. ARNOLD, Manteca, Calif. Filed May 14, 1923. Serial No. 638,872. 3 Claims. (Cl. 119—133.)



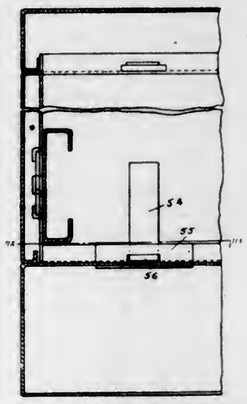
1. A grazing muzzle comprising a supporting means, rigid bars depending therefrom, a feed ring secured to said bars and having an unobstructed opening of substantially one half the diameter of the supporting ring to determine the area of pasturage, a bracing ring intermediate the supporting and feed rings, and a meshing portion comprising wires encircling the rigid bars and extending parallel to the feed ring to form a relatively close mesh.

1,508,914. LUBRICATING SYSTEM FOR ENGINES. EDWARD H. BELDEN, Toledo, Ohio, assignor, by mesne assignments, to The Willys-Overland Company, Toledo, Ohio, a Corporation of Ohio. Filed July 25, 1918. Serial No. 246,785. 9 Claims. (Cl. 184—11.)



5. In combination with the casing of a rotating element of an engine and oil collecting reservoir located in the plane of the casing and having a connecting passage with the interior of said casing, means for deflecting oil thrown from said element into said passage and a conduit formed integrally with said casing for delivering oil collected in said reservoir to the bearings of said engine.

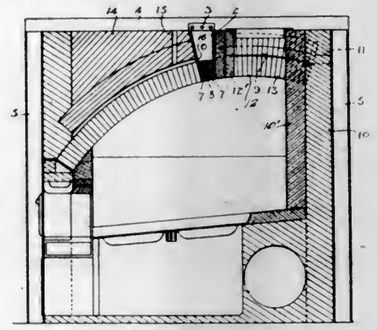
1,508,915. ICE-CREAM SCOOP. EARL E. BIDWELL, Omaha, Nebr. Filed Oct. 2, 1923. Serial No. 666,110. 3 Claims. (Cl. 109—48.)



1. The combination with an ice cream scoop having a handle, a bowl carried by said handle, of a striking off device for said bowl, said device comprising a bracket disposed on the handle adjacent the bowl, a shaft slidably mounted in a bearing of said bracket, a transversely disposed knife carried by the forward end of said shaft adapted to be moved across the bowl and means disposed adjacent the rear end of the handle for moving said shaft across the bowl and returning the shaft and knife to normal position.

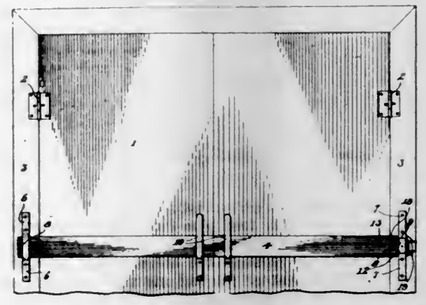
1,508,916. COLOR PHOTOGRAPHY. PERCY D. BREWSTER, East Orange, N. J., assignor, by mesne assignments, to Brewster Patents Corporation, New York, N. Y., a Corporation of New York. Filed June 6, 1914. Serial No. 843,351. 2 Claims. (Cl. 88—164.)

1. A cinematographic positive for the projection of unitary images in substantially the natural colors of the object or objects represented, comprising a strip of film bearing two complementary series of differently colored monochrome images, one series on each side, the images on one side being paired with the corresponding images on the other, the images of each pair being congruent at one point but progressively different in size from such point to the margins.



1,508,917. SINGLE-UNIT KNOCKDOWN SECTION. RAYMOND G. BULLOCK, Baltimore, Md. Filed June 16, 1920. Serial No. 389,500. 15 Claims. (Cl. 45—2.)

15. A case having a frame with a channel shaped strike at the top, a top for said case having a channel shaped front edge, a locking button extending thru said strike and engaging in the channel shaped front edge of the top.

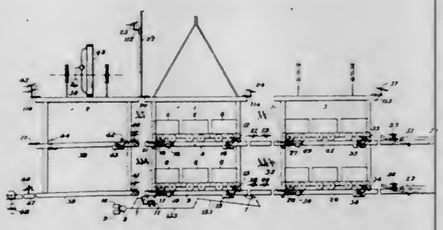


1,508,918. INCINERATOR FURNACE. JOSEPH ALFRED BURNETT, Toronto, Ontario, Canada. Filed Dec. 14, 1922. Serial No. 606,903. 5 Claims. (Cl. 110—1.)

5. An incinerator furnace or the like having an arched roof formed with a space above the arched roof, vent openings leading upwardly to the top of the furnace structure, a transverse hollow casting rigidly supported from the ends and forming the forward side of the arch, said casting having openings communicating with the space above the refractory roof of the furnace, a front wall tubular supports connected with the ends of said hollow casting and extending fowardly to the front wall, open-

ings communicating through the wall with the tubular supports, and refractory linings charging openings supported by said tubular supports and casting.

1,508,919. BURGLARPROOF LOCK BAR. ERNEST R. CAIN and ANDREW F. STONE, Kingstree, S. C. Filed Jan. 23, 1924. Serial No. 687,972. 2 Claims. (Cl. 292—259.)



1. In a lock for doors and the like, the combination with a pair of keeper straps and a pair of intermediate stirrups, of a lock bar supported in the keeper straps, stirrups and automatically operable lock mechanism carried by one end of the bar engaging the adjacent keeper strap, said lock mechanism including a pair of tensioned latch levers pivotally carried by the bar, the adjacent keeper strap having an offset portion engaged by the latch levers, and the lock supporting end of the bar and latch levers being cooperatively constructed to provide side-recesses receiving the sides of the offset portion of the keeper strap.

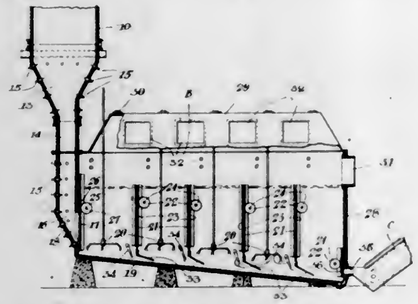
1,508,920. CURTAIN ROD. GUSTAF A. CARLSON, Chicago, Ill., assignor to The Boye Needle Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 5, 1923. Serial No. 622,868. 1 Claim. (Cl. 156—19.)

A curtain-rod comprising a coiled wire section, a wire-rod section having one end provided with means for attachment to a frame and having the other end crimped and extending into the coiled wire section, and a sleeve embracing the coiled wire section at the portion thereof which embraces the crimped end portion of the wire rod and clamping said sections together.

1,508,921. LOADING AND UNLOADING GEAR FOR HOISTING PLANTS. FRANK M. CASTLEMAN, Rotherham, England, assignor, by mesne assignments, to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Mar. 17, 1920. Serial No. 366,714. 82 Claims. (Cl. 214—126.)

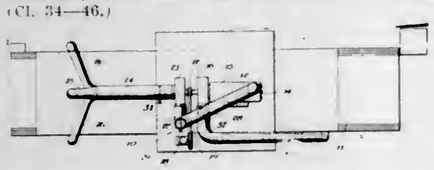
1. A colliery decking plant comprising a hoisting cage, indication means for giving a cage-lowering signal, a back stop in said cage having operative and inoperative positions, and means for preventing said indication means from giving said signal unless said stop is in the operative position.

1,508,922. AIR CONTROL FOR CARBURETORS. CECIL EDGAR CAWLEY, Parsons, Kans. Filed Mar. 6, 1923. Serial No. 623,206. 1 Claim. (Cl. 251—125.)



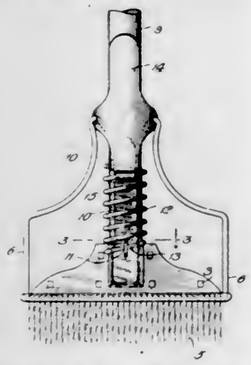
In an air control for carburetors, the combination with the outer end of an air feed pipe for a carburetor and a hot air stove having a pipe extension, of means for controlling the flow of air through the hot air pipe interposed between the outer end of the hot air pipe and pipe extension carried by the stove and telescopically associated with each member, said air controlling means including a collar, an annular enlargement at one end thereof inclosing the pipe extension on the hot air stove with the collar extending into the outer end of the hot air pipe, an outwardly opening plate valve hinged at one end at the inner end of the collar with the free swinging edge thereof overlying the inner edge of the collar to form an abutment for the plate valve during closing movement, the collar being circular and said valve being oval to provide constant air passages at opposite sides of the valve plate and a coil spring anchored at one end to the outer end of the collar and having its other end secured to the plate valve adjacent the swinging edge for normally holding the valve in closed position engaging the inner end of the collar.

1,508,923. APPARATUS FOR SEPARATING OIL FROM OIL SANDS. NICHOLAS SHOULDICE CLARKE, New York, N. Y., assignor to Athabasca Oil Products Limited, Edmonton, Alberta, Canada. Filed July 5, 1923. Serial No. 649,758. 7 Claims. (Cl. 196—14.)



2. In apparatus of the character described, a separating tank having an inclined bottom and a plurality of adjustably sliding gates to control the passage of material therethrough, and a plurality of rotary spray pipes in the said treating chamber, the said spray pipes being located between the gates.

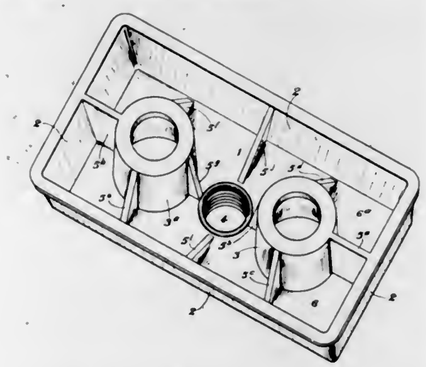
7. An apparatus of the character described comprising a vertically extending stack, means for spraying the material passing therethrough, a separating tank connected to the bottom of the stack, means for causing the material to pass therethrough, controlling gates in the separating



tank, and spray nozzles between the said controlling gates, and a continuous conveyer leading from the separating tank.

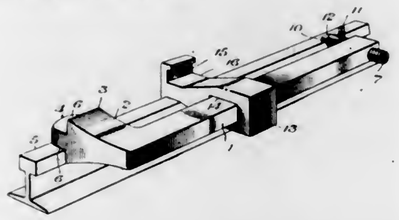
1,508,924. DRIER FOR SHEET MATERIAL. WILLIAM H. COLLIER and ARTHUR J. VANCE, Painesville, Ohio. Filed July 31, 1922. Serial No. 578,769. 3 Claims. (Cl. 34—46.)

1. The combination with a drying chamber having a supply or wet end and delivery or dry end; of means to supply heated fresh air to the dry end of said chamber, other means to draw off the air from the wet end of the chamber including a suction fan and suction pipes connecting said fan with the top and lower side portions of the wet end of the chamber, and a recirculating duct connecting said fan with the first means.



1,508,925. MOPSTICK HEAD. BELDEN L. CONCHAR, Maplewood, N. J. Filed June 16, 1923. Serial No. 645,745. 3 Claims. (Cl. 15—152.)

1. A mop comprising a cross head having therein a socket of non-circular cross section, a stick having one end corresponding in periphery and size to the socket and fitting tightly therein, whereby the cross head will be mounted upon and held against rotation relatively

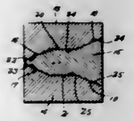


to the head, a coil spring surrounding the stick adjacent the head, and having a turn conforming closely to the non-circular periphery of the stick whereby rotation of the spring on the stick will be resisted by the resiliency of the said spring turn, means for securing the head against separation from the stick and for anchoring the end of the spring adjacent the head against movement lengthwise of the stick, a lever hinged to the other end of the spring, and a clamping bail arranged in clamping relation to the head and connected to the lever for operation thereby into and out of clamping engagement with the head.

1,508,926. STORAGE-BATTERY-CELL COVER. THOMAS R. COOK, Pittsburgh, Pa., assignor to Westinghouse Union Battery Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Oct. 8, 1921. Serial No. 506,322. 1 Claim. (Cl. 204—29.)

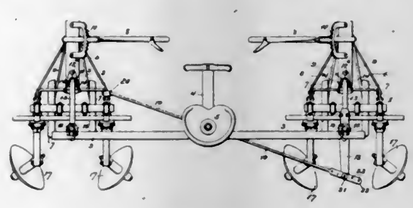
A storage battery cell cover comprising a plate having a depending marginal flange, two spaced depending terminal post sockets, and a vent hole located between said sockets, a rib extending from each socket on the side opposite said vent hole to the adjacent flange, and two other ribs between each socket and the marginal flange, whereby two pockets are formed by each socket and said flange and ribs, the two last-mentioned ribs for each socket being so formed as to leave a path for the flow of gases from each pocket to said vent hole along the under surface of said plate.

1,508,927. RAIL BENDER. GEORGE W. CURTIS, Jacksonville, Fla. Filed Nov. 7, 1923. Serial No. 673,315. 5 Claims. (Cl. 153—38.)



1. A rail bender including a beam provided at one end with an abutment head having upper and lower recesses, either one of which may receive the head of a rail, a gripping member slidably mounted on said beam and adapted to hook over the head of a rail, and a bending head provided at the opposite end of said beam and provided with a screw for moving the same away from said beam.

1,508,928. PLASTIC CONTAINING CELLULOSE ACETATE. HENRY DREYFUS, London, England. Original application filed Aug. 5, 1920, Serial No. 401,380. Divided and this application filed Mar. 13, 1923. Serial No. 624,805. 4 Claims. (Cl. 106—40.)

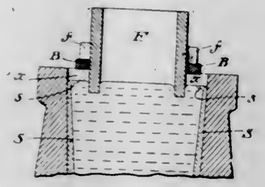


2. A composition of matter comprising cellulose acetate and a plasticizing agent comprising a toluene dialkyl sulfonamid preparation which sulfonamid preparation is liquid at ordinary room temperature and is a jelly at temperatures somewhat below 0° C. and which is a solvent of cellulose acetate at all temperatures below the boiling point of said sulfonamide preparation.

1,508,929. PISTON RING. FRED H. FUNCHESS, Hanford, Calif., assignor to Super Seal Piston Ring Company, Hanford, Calif., a Corporation of California. Filed Sept. 27, 1921. Serial No. 503,610. 3 Claims. (Cl. 74—109.)

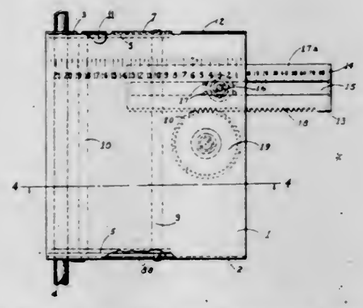
1. A packing comprising a pair of outer resilient split rings and an intermediate split resilient ring interposed between said outer rings, the body portion of said intermediate ring diverging from its outer edge to a point adjacent one side of the center of said body portion and further converging from its inner edge to a point adjacent the other side of the center of said body portion, and the body portion of each outer ring having its inner face formed with a pair of spaced bevelled surfaces, one extending inwardly from the outer edge and the other inwardly from the inner edge of said body portion, one of the bevelled surfaces of each of the outer rings riding against the diverging portion of the inner ring and the other bevelled surface of each of the outer rings riding against the converging portion of the inner ring.

1,508,930. AGRICULTURAL IMPLEMENT. ARTHUR D. GALLAGHER, South Bend, Ind., assignor to Oliver Chilled Plow Works, South Bend, Ind. Filed Mar. 11, 1922. Serial No. 543,050. 4 Claims. (Cl. 97—143.)



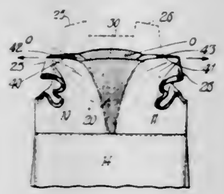
3. The combination with two agricultural units, an interposed seat-supporting beam, and levers connecting said units with said beam, of a lever extension projecting from the lever connected with one only of said units, and a single means connecting said lever extension with the frame of the other unit.

1,508,931. METHOD OF FORMING INGOTS. EMIL GATHMANN, Baltimore, Md. Filed Feb. 12, 1924. Serial No. 692,317. 8 Claims. (Cl. 22—209.)



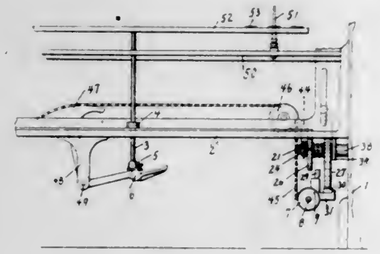
1. The method of forming an ingot, which consists in pouring molten metal through a sink head supported on the top of a mold with its lower portion within the mold chamber until the mold chamber is filled with

molten metal to the desired extent and surrounds the lower portion of the sink head and extends within it; allowing the metal to partially solidify and the sink head to descend, then pouring molten metal into the



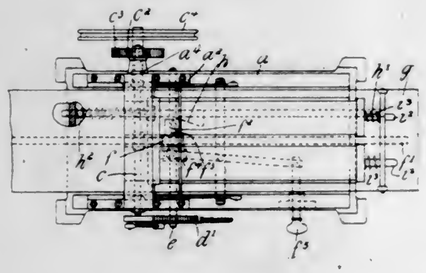
sink head while supported on the partially solidified ingot until the sink head is filled to the desired extent and then allowing the entire mass of metal to completely solidify.

1,508,932. WORK SUPPORT FOR PRINTING APPARATUS. ALTON L. GRAY, Rochester, N. Y., assignor to Todd Protectograph Company, Inc., Rochester, N. Y. Filed July 15, 1922. Serial No. 575,185. 4 Claims. (Cl. 197—6.2.)



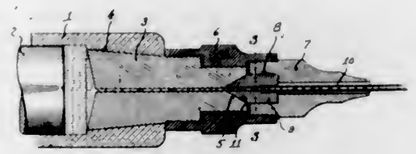
1. A work support for printing apparatus comprising a gauge adjustable to different positions on the support to suit the work and provided with gear teeth, a toothed wheel rotatable on the support with its teeth in mesh with those of said gauge, and a device for variably limiting the rotation of said wheel and thereby stopping the movement of said gauge in different positions of adjustment.

1,508,933. COMBINATION GARMENT. NATHAN HATCH, Albany, N. Y. Filed June 12, 1923. Serial No. 644,835. 5 Claims. (Cl. 2—78.)



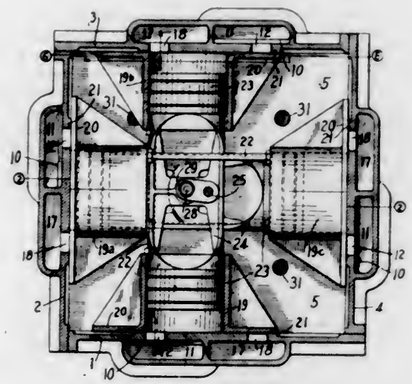
1. A bifurcated garment constructed largely of substantially non-elastic fabric which fabric extends around the sides and under the arms thereof, said garment being provided with shoulder straps and with a longitudinally disposed relatively small insert in the upper portion thereof, positioned between the loops or arm holes formed by the shoulder straps of opposite shoulders, the said insert being of a fabric of greater elasticity than that of the main fabric of the garment which when stretched permits the shoulder portions to be displaced to enable the body of the wearer to pass therebetween as the garment is donned or doffed and upon being released when donned draws the shoulder portions and straps to their proper positions and closes the garment snugly about the neck.

1,508,934. BUNCH BUILDER FOR BOBBINS. WILLIAM NORMAN HEATH, Waco, Tex. Filed Sept. 4, 1923. Serial No. 660,898. 4 Claims. (Cl. 242—43.7.)



1. In a machine of the character described having a traverse motion operated by a primary cam fixed on a driven shaft and a builder arm carrying a primary cam follower, in combination, a secondary cam follower secured to the builder arm, a secondary bunch builder cam slidably disposed on the driven shaft and adapted to be removed and replaced without disturbing the primary traverse motion mechanism, and means for moving the secondary cam into and out of engagement with its follower.

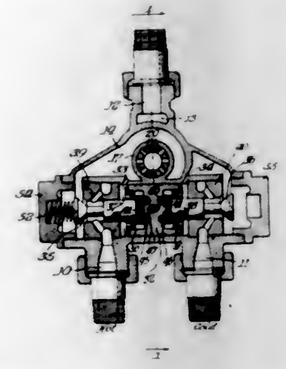
1,508,935. BISCUIT-CUTTING MACHINE. GEORGES BARTHELEMY PERTUISET, Geneva, Switzerland. Filed Apr. 15, 1920. Serial No. 374,198. 1 Claim. (Cl. 107—21. (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



In a biscuit cutting machine, a frame, a dough holder formed in the frame and having slots therein for receiving the dough, a reciprocating slide, plungers yieldingly mounted on the said slide and lying within the said recesses in the dough holders to move the dough when the slide is moved, a knife, a crank shaft by which the knife is operated, an auxiliary shaft, means for operating the auxiliary shaft from the said crank shaft, a gear slidably mounted on the auxiliary shaft, a rack on the said reciprocating slide, and means for sliding the said gear into and out of mesh with the said rack.

1,508,936. WASHERLESS REMOVABLE-TIP HYPODERMIC SYRINGE. FRANK L. PLATT, GEORGE N. HEIN, and ROBERT R. IMPEY, San Francisco, Calif. Filed Aug. 17, 1922. Serial No. 582,376. 6 Claims. (Cl. 128—221.)

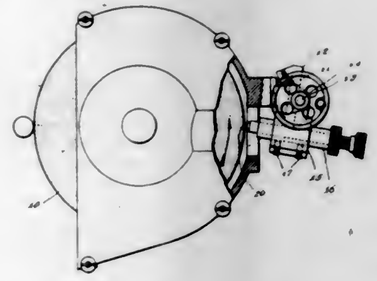
3. A hypodermic syringe needle comprising a tubular needle and a tubular base mounting the same, said base being polygonal in cross section and formed with a conical end.



1,508,937. METER. PAUL C. POCOCK, Sidney, and AUGUSTINE J. POCOCK, Dayton, Ohio, assignors, by direct and mesne assignments, to The Micro Meter Company, Sidney, Ohio, a Corporation of Ohio. Filed Nov. 4, 1921. Serial No. 512,795. 12 Claims. (Cl. 73—30.)

1. In a meter, a casing having a plurality of inlets and outlets arranged in pairs, a plurality of cylinders movably mounted in said casing, each cylinder being adapted when in one position to communicate with the inlet only of one pair and when in another position to communicate with the outlet only of that pair, a piston in each cylinder, said pistons and said cylinders being connected in pairs, and means actuated by said pistons alternately to cause the pistons of one pair to impart movement to the cylinders of another pair.

1,508,938. PRESSURE-EQUALIZING SHOWER MIXER. FRED W. POWERS and MORTON O. SNEDIKER, Chicago, Ill., assignors to The Powers Regulator Co., Chicago, Ill., a Corporation of Illinois. Filed Mar. 16, 1923. Serial No. 625,472. 14 Claims. (Cl. 277—21.)

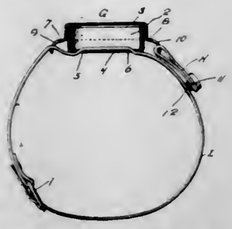


1. In a device of the class described, the combination of a casing, means providing separate passages for hot and cold fluids, and a controlling valve of cylindrical tubular form a separate screw-threaded actuating member, said valve having a plurality of rows of radial openings positioned to be successively brought into register with

said passages and said valve being provided with a plurality of additional radial openings adapted to provide for the passage of the combined fluids

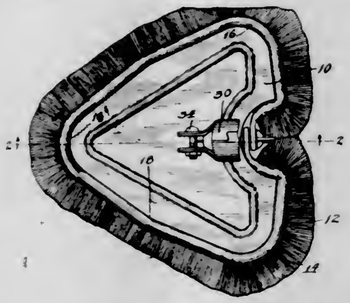
---

1,508,939. GRINDING-WHEEL DRESSER. MILTON O. REEVES, Columbus, Ind., assignor, by mesne assignments, to The Heim Grinder Company, Danbury, Conn., a Corporation of Connecticut. Filed July 30, 1920. Serial No. 400,125. Renewed Aug. 16, 1924. 1 Claim. (Cl. 125—11.)



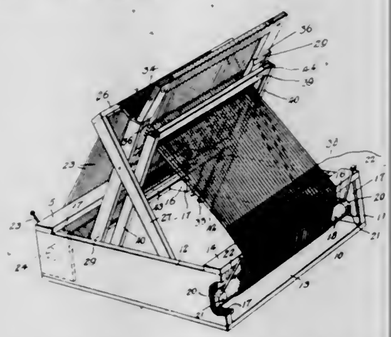
A grinding wheel dresser comprising a guideway associated with the grinding wheel, a carriage movably mounted on said guideway, a sleeve mounted in said carriage at an acute angle to the surface to be dressed and capable of independent rotative and axial movement, means for holding said sleeve in adjusted position, and a dressing tool holder threaded in said sleeve.

1,508,940. WRISTBAND ADAPTED FOR CARRYING ARTICLES. SAMUEL SEDRANSKY, Bronx, N. Y., assignor to Samuel Marcus, Brooklyn, N. Y. Filed May 27, 1921. Serial No. 473,117. 1 Claim. (Cl. 224—28.



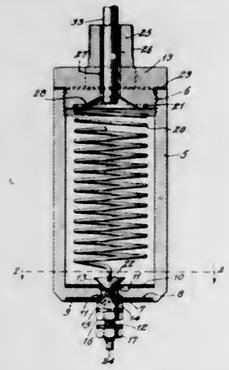
A device of the character described comprising a box body having a bottom and sides and which bottom is slotted at opposite points, a removable cover for said body and having a rim fitting downwardly over and encompassing the sides thereof, said rim at the opposite sides of its lower edge having integrally therewith outwardly and downwardly extending slotted ears, a strap to extend around the wrist and having a buckle for tightening the same upon the wrist, said strap being threaded from one

end inwardly through one of said slotted ears and then upwardly through the adjacent slot in the bottom of said body and then downwardly through the other slot in said bottom and thence extending to said buckle, and a



strap fastening tab connected with the other slotted ear of said cover and thence extending outwardly over said wrist strap and at its outer end being detachably secured thereto for securing said cover in closed position.

1,508,941. MOP. WILLIAM SEVERNS, Chicago, Ill. Filed Aug. 17, 1921. Serial No. 493,015. 7 Claims. (Cl. 15—229.)



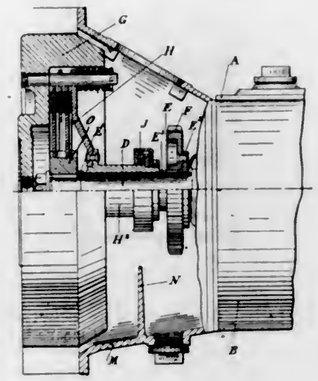
1. A mop including in combination a plate comprising a holding frame adapted to receive a mop body, a removable mop body attached to said frame, an upwardly extending lug inserted through the frame for attaching a handle socket, and mop body attaching means secured to the bottom portion of said lug.

1,508,942. HAND LOOM. ANNA NOTT SHOOK, New York, N. Y. Filed Apr. 11, 1923. Serial No. 631,248. 5 Claims. (Cl. 139—33.)

1. In a loom, the combination with a base including a breast beam and a lease bar, of a warp support extending upward above said base in position to hold the shed at an inclination above the breast beam, means including rotatable beams adapted to be locked against rotation to control the forward adjustment of the warp, and a heddle between the support and the breast beam, said warp support comprising a frame with spaced parallel legs connected to the base and comprising also a pair of brace legs pivoted to the first mentioned legs, the lower ends of the brace legs being detachably connected to the bottom of the base.

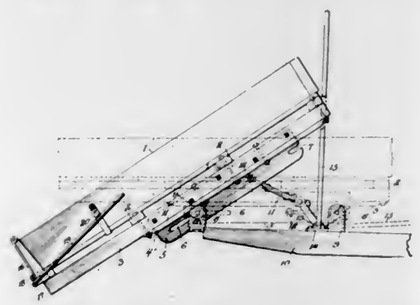
1,508,943. FUEL-PREHEATING ATTACHMENT FOR INTERNAL-COMBUSTION ENGINES. LOUIS T. SICKA, Bonne Terre, Mo. Filed Jan. 2, 1923. Serial No. 610,121. 3 Claims. (Cl. 219—38.)

1. A fuel pre-heating device for internal combustion engines comprising a casing to receive the liquid fuel, a detachable head closing one end of said casing, an electric terminal member centrally mounted in the opposite end wall of the casing and insulated therefrom, an electrical resistance coil enclosed within said casing and having an end coil thereof permanently attached to said head whereby the head and said resistance coil may be removed as a unit from the casing, and said coil at its other end having means for removable engagement with the terminal member.



1,508,944. VALVE. SELIG SIMON, St. Louis, Mo. Filed Aug. 6, 1923. Serial No. 655,797. 1 Claim. (Cl. 251—8.)

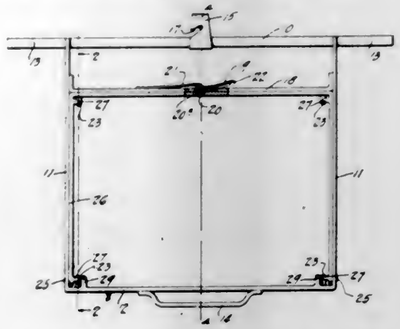
A valve comprising a member composed of a relatively large barrel having internal threads, a relatively small stem extending from one end of the barrel and having a passage therethrough opening into the barrel, and a flanged head near the end of the stem; in combination with another member having a threaded flat inner end screwed into the barrel and having a passage from the other end to a point near the inner end and thence radially through the side thereof, a flanged head near the outer end of said second member, and an elastic gasket seated against the inner end of said barrel and engaging the threads of said barrel.



1,508,945. GENERATOR DRIVE. HENRY MANN AINSWORTH, Coventry, England, assignor to Société Anonyme des Anciens Etablissements Hotchkiss et Compagnie, St. Denis, Seine, France. Filed Sept. 20, 1921. Serial No. 501,977. 1 Claim. (Cl. 290—46.)

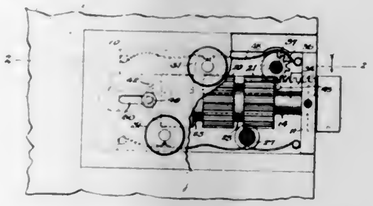
In combination with an engine driven fly-wheel, a clutch behind the fly-wheel composed of driving and driven elements, a clutch shaft made fast to the driven element, a hub loose on the shaft and fixed to the driving element, a sprocket fixed to rotate with said hub, a chain engaging said sprocket, an electrical machine adapted to function both as a generator and as a motor

supported in rear of said fly-wheel, a sprocket made fast to said electrical machine and also engaged by said chain, a gear box, and means to support said machine at the side of the gear box.



1,508,946. BOX DUMP. CHARLES N. ALDERMAN, Streator, Ill. Filed Oct. 7, 1922. Serial No. 593,139. 2 Claims. (Cl. 298—14.)

1. In a dump wagon, the combination of a wagon frame, a dump box slidably mounted on the frame, a plate secured to the underside of the box, slots arranged adjacent one end of the plate, and slots formed in the opposite end of the plate and open at their forward ends, a shaft secured to the frame and having pulleys thereon, a shaft secured to the approximate forward end of the frame and having pulleys thereon adapted to normally seat in the open slots, a shaft fulcrumed in the plate and movable therewith, arms depending from the ends of the shaft, a crank arm secured to the frame by brackets at one end and at its opposite end to the arms and a lever arranged alongside the frame and comprising an extension of one end of the crank arm.

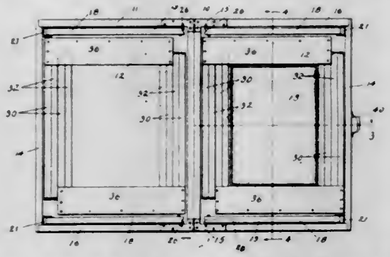


1,508,947. FILM DEVELOPING, FIXING, AND DRYING FRAME. JOHN O. ALLEN, Salt Lake City, Utah. Filed Oct. 18, 1922. Serial No. 595,438. 5 Claims. (Cl. 95—100.)

1. A film holder comprising a rectangular supporting frame having supporting means, a rectangular clamping frame within the supporting frame and pivoted thereto, coacting film engaging jaws projecting inward from

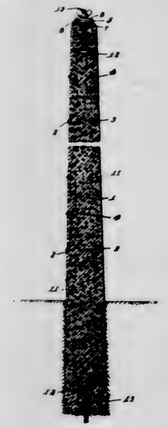
the supporting and clamping frames, and means for latching the clamping frame within and parallel to the supporting frame.

1,508,948. COMBINATION LOCK. GUSTAVE ARNOLD ANDERSON, New York, N. Y. Filed July 10, 1923. Serial No. 650,717. 5 Claims. (Cl. 70—53.)



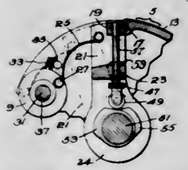
1. A lock construction which includes a slidable bolt having a longitudinal groove therein and a plurality of transverse grooves, a plurality of gears embracing said bolt and having inwardly projecting pins thereon adapted to extend into said grooves, a plurality of manually operable gears engaging with the first-mentioned gears for rotating said first-mentioned gears whereby the pins thereon can be brought into alinement with the longitudinal groove, a manually engageable element connected to the bolt permitting its movement forward or back with respect to said gears when the alinement is effected, a latch bar associated with and connected to the said first-mentioned gears, a latch element operated by the movement of the bar, and means on said latch element to latch with the casing on one side thereof when the bar is moved to a definite position, said latching action between the elements and the casing occurring when the first-mentioned gears are moved forward by the movement forward of the bolt when the pins on said gears are not in alinement with the longitudinal groove.

1,508,949. TABLE CASE. JOHN S. ANDERSON, Jamestown, N. Y. Filed Sept. 13, 1922. Serial No. 587,925. 2 Claims. (Cl. 45—116.)



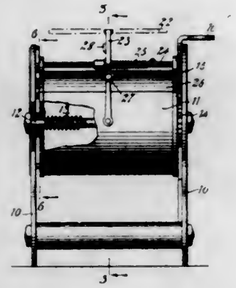
1. A table case comprising a folding table, a plurality of stools, and a box, said table consisting of two sections hinged together, each section comprising a rigid rectangular frame to which a portion of the table top is secured, brackets at the outer corners of said frames, legs pivoted to said brackets each leg being in two sections the upper section being of channelled cross section and the lower section being pivoted to the lower end of said upper section whereby the lower section may be swung on said pivot into the channel of said upper section, the

length of the upper section of said legs being somewhat less than the width of said table sections whereby the legs may be folded across the ends of said table sections



to provide rectangular spaces for foldable stools and a box said stools being so formed and assembled that the legs thereof form a rectangular space in which said box may be received.

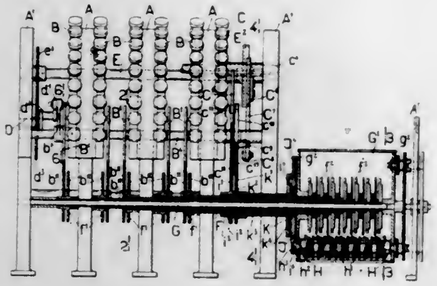
1,508,950. FENCEPOST. ANACLETO ANGELI, West Frankfort, Ill. Filed May 19, 1923. Serial No. 640,188. 1 Claim. (Cl. 256—51.)



A post of the class described formed of concrete and having grooves in one face thereof and holes passing through the post parallel with the grooves, brackets embedded in the post adjacent each end thereof, reinforcing wires connected with the brackets, screw rods connected with the brackets and passing through the ends of the post and a clamp connected with the top of the post by the upper screw rod.

1,508,951. TYMPAN CLAMP. ALEXANDER F. BAKER, Quincy, Mass. Filed June 1, 1923. Serial No. 642,753. 22 Claims. (Cl. 101—415.1.)

1. A cylinder having a tympan clamp organized to swing about the center of the cylinder, grippers carried by the clamp and a shaft disposed centrally of the cylinder for operating the grippers.

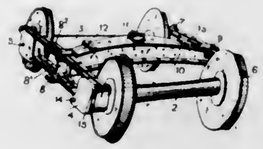


1,508,952. DISPENSING DEVICE. CHARLES HARRISON BENNETT, Mount Morris, N. Y. Filed Nov. 28, 1921. Serial No. 518,375. Renewed Mar. 12, 1924. 11 Claims. (Cl. 211—44.)

1. A dispensing device including a rotatable drum, a trough member within said drum, means for removing elements to be disposed within said trough member, and means projecting radially inward of said drum for deflecting elements within said drum towards said trough member.

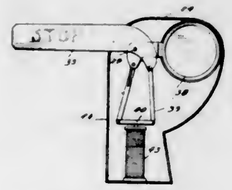
2. A dispensing device including a rotatable drum, a trough member within said drum, a pair of jaws independent of said trough for removing elements to be disposed within said trough member, means for deflecting elements within said drum towards said trough member upon said drum being rotated.

1,508,953. COUPLING DEVICE FOR CASH REGISTERS, CALCULATING MACHINES, OR THE LIKE. ERNST BREITLING, Essen, Germany, assignor to Fried. Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Filed Dec. 29, 1921. Serial No. 525,768. 4 Claims. (Cl. 235—6.)



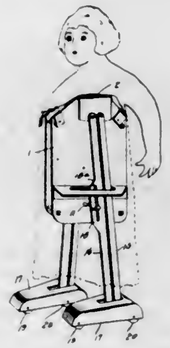
1. In a machine of the class described a plurality of registering mechanisms, a set of operating members common to said registering mechanisms, a gearing member, means carried by said registering mechanisms and engaged by said gearing member whereby said gearing member may be selectively coupled to one of said registering mechanisms, said gearing member comprising further a displaceable block for moving the selected registering mechanism into engagement with said set of operating members.

1,508,954. BOGIE FOR ROLLING STOCK. FERNAND LOUIS BROUSSOUSE, Paris, France. Filed Feb. 21, 1923. Serial No. 620,496. 7 Claims. (Cl. 105—197.)



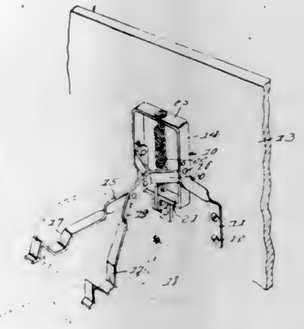
1. A bogie for rolling stock of any description, characterized by the fact that the side members of the bogie frame are constituted by the suspension springs of the

said bogie, which are directly pivoted upon the axle boxes, and are provided with different curvatures and



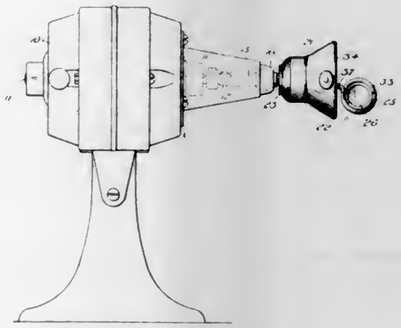
dimensions in order to maintain constant the distance apart of the axle boxes and consequently of the axles, whatever the flexion of the said springs may be.

1,508,955. DIRECTION SIGNAL FOR MOTOR VEHICLES. CHARLES R. BRYAN, New York, N. Y. Filed Sept. 23, 1921. Serial No. 502,730. 3 Claims. (Cl. 177—327.)



1. A signaling device including a casing provided with a source of light, a signal arm pivotally mounted and normally retracted within the casing, a lens in line with the source of light and to be viewed from the exterior thereof, a carrying frame for said lens pivotally mounted and normally retracted within the casing, a head, connections from said head to said arm and frame, said arm and frame being movable in opposite directions, and means to actuate said head whereby said arm will be projected from the casing and said lens will be disposed in the path of rays from said source of light.

1,508,956. WALKING DOLL. LOUIS M. BUTTERFIELD, Raymond, N. H., assignor of one-half to Hermann Glove Sumner, Raymond, N. H. Filed July 5, 1923. Serial No. 649,570. 3 Claims. (Cl. 46—40.)

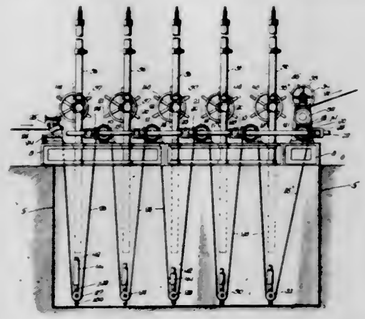


1. In a walking doll embodying a spring motor, and a shaft having oppositely disposed cranks, legs comprising parallel bars pivoted at one end to the body of the doll, one of each pair of bars provided with an elongated slot intermediate their ends to receive said cranks, and feet pivoted to the lower ends of the respective bars.

1,508,957. RECEPTACLE-HOLDING DEVICE. BASCOME E. COLLINS, Calnesville, Mo. Filed Sept. 29, 1922. Serial No. 591,244. 1 Claim. (Cl. 248—20.)

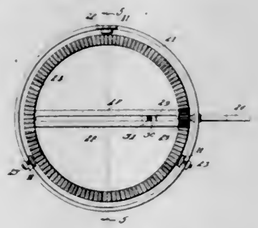
A device for holding and locking a receptacle upon a vehicle body comprising a U-shaped bracket having offset end portions adapted to be attached to the body, a holding lever fulcrumed between the sides of the bracket and having diverging inner and outer end portions, the outer end portions being adapted to resiliently engage the edge of the receptacle, a loop depending from the inner diverging end portions of the arm and located under the intermediate portion of the bracket, and a spring located within the bracket and having one end attached to the intermediate portion of the bracket and its opposite end attached to the intermediate portion of the loop, whereby the intermediate portion of the spring may swing transversely across the fulcrum point of the arm as the arm is rocked upon the fulcrum point.

1,508,958. AMALGAM MIXER. GEORGE E. COX, Wilmington, Del. Filed Mar. 15, 1923. Serial No. 625,377. 6 Claims. (Cl. 259—72.)



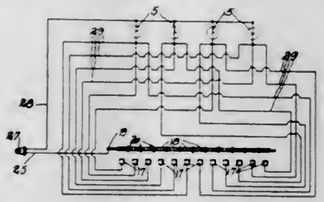
1. In combination, a gyrating shaft, a flexible support at one end of said shaft, an amalgam mixing capsule and a holder adapted to detachably secure said capsule to said flexible support so as to position said capsule entirely to one side of the axis of the gyrating shaft.

1,508,959. SATURATOR. HARRY A. CUMFER, Chicago, Ill., assignor to Guyton & Cumfer Mfg. Co., a Corporation of Illinois. Filed July 22, 1921. Serial No. 486,860. 11 Claims. (Cl. 91—46.)



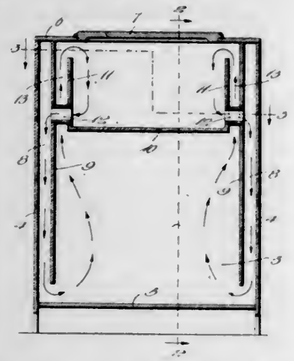
1. A saturator comprising a tank; a series of spaced-apart pairs of parallel driving rolls extending across

the tank and rotatably supported near the top thereof; means for rotating the rolls; parallel loop-extending



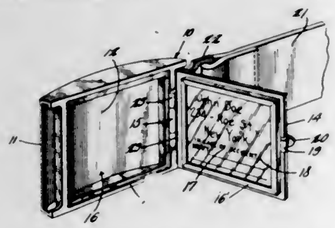
rolls located in vertical planes between adjacent driving rolls and means for raising and lowering said loop-extending rolls.

1,508,960. CAN OPENER. FRITZ DAHLIN, West Moshannon, Pa. Filed May 22, 1922. Serial No. 562,897. 1 Claim. (Cl. 30—3.)



A can opener comprising a frame like structure, a hinged cover for said frame like structure, a ring gear supported by the cover for rotation, a crank handle journalled on said supporting structure, a pinion carried by said handle and meshing with the gear to rotate the latter, a cross bar arranged centrally of said gear and carried thereby and having a longitudinal slot, the opposed sides of said slot being of channel like formation in cross section, a block arranged in said channel like portion for movement longitudinally of the cross bar, a threaded element passing through said block and arranged vertically on said cover and adapted to be adjusted toward and away from the can, and a cutting blade carried by the lower end of said adjusting element and adapted to be forced through the top of the can and removing the latter as said gear is rotated.

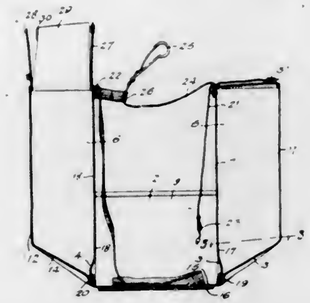
1,508,961. BASEBALL GAME. CHARLES DIETRICK, Pittsburgh, Pa. Filed Oct. 1, 1921. Serial No. 504,745. 2 Claims. (Cl. 46—61.)



1. In a device of the character described, an inclined base, a downwardly opening door hinged to said base at the lower end thereof, shutters mounted above the door for swinging movement, means for limiting outward movement of the shutters, a main trough positioned beneath said door, a trough discharging into said main trough, supplemental troughs communicating with the second mentioned trough, the base being provided with openings communicating with said second mentioned trough and the supplemental troughs, and means for normally holding said door raised.

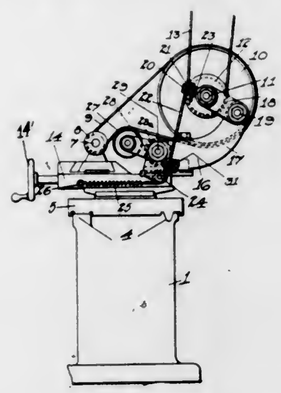
1,508,962. REFRIGERATOR. PERCY H. DONHAM, Sullivan, Ind. Filed Oct. 11, 1923. Serial No. 667,970. 1 Claim. (Cl. 62—46.)

A refrigerator comprising a casing, a pair of curtain walls spaced inwardly from two opposed side walls thereof and extending from front to back of said casing, said curtain walls also extending from the top of the casing to points spaced from its bottom, an ice chamber bottom in the upper portion of the casing extending from front to back thereof and terminating in spaced relation with said curtain walls, ice chamber end walls rising from said ice chamber bottom and extending from front to back of the casing, said end walls being inwardly spaced from said curtain walls and downwardly spaced from the casing top, and cold air outlet passages extending through the lower portions of said end walls, across the space between the latter and said curtain walls, and through the latter.



1,508,963. BELT BUCKLE. HERMAN DORF, Newark, N. J. Filed Dec. 1, 1923. Serial No. 678,005. 4 Claims. (Cl. 24—163.)

1. A belt buckle comprising a front wall, a rear wall spaced from said front wall to provide a passage way for the free end of a belt, a compartment formed in said rear wall, and a door hingedly connected to said rear wall for permitting access to said compartment.

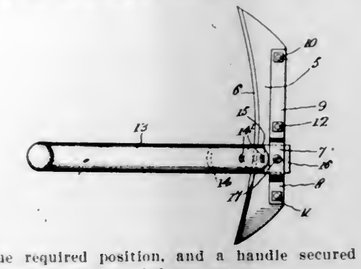


1,508,964. FEED BAG. GEORGE DOUTNEY, Brooklyn, N. Y. Filed Apr. 24, 1923. Serial No. 634,344. 2 Claims. (Cl. 119—65.)

1. A feed bag, comprising means forming an open topper container for receiving the mouth and nose of an animal when feeding, means forming a magazine of canvas on each side of the container, each of said magazines being formed with a canvas flap at the lower part thereof adjacent the container, fastening means for normally

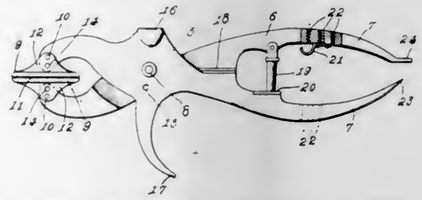
holding said flaps closed, and a supporting member secured to said magazines positioned to fit over the top of the animal's head which is using the bag.

1,508,965. GRINDING MACHINE. ALDEN M. DRAKE, Worcester, Mass., assignor to The Heald Machine Company, Worcester, Mass., a Corporation of Massachusetts. Filed Dec. 21, 1922. Serial No. 608,182. 1 Claim. (Cl. 51—32.)



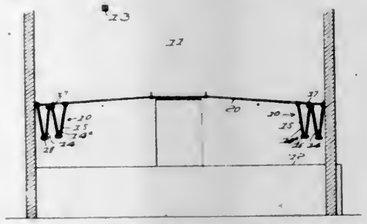
In a grinding machine, a base, a table longitudinally movable thereon, a grinding wheel spindle carried by said table and adjustable crosswise thereof, and means for diving said spindle from an overhead line shaft, said driving means comprising a belt driven countershaft which is belted itself to said spindle, in combination with a spring drawing downwardly on said countershaft, and a belt tightener acting on said spindle belt, the latter providing a wrap around the spindle pulley in all positions of crosswise adjustment of said spindle.

1,508,966. ADJUSTABLE BRUSH AND WEED CUTTER. WILLIAM DRYER, Topeka, Kans. Filed Oct. 11, 1923. Serial No. 667,971. 2 Claims. (Cl. 30—9.)



1. A brush and weed cutter comprising a narrow elongated thin blade having regularly spaced openings in its length, a reinforcement placed against a side of the blade and having openings in register with the openings thereof and having a portion adajcent an end bent to provide a clip of approximately U-form, the reinforcement being reversible to bring the clip at one or the other end of the

blade, fastenings passing through the registering openings of the blade and reinforcement to secure the latter

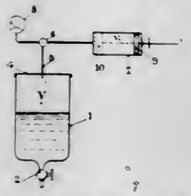


in the required position, and a handle secured to the clip portion of the reinforcement.

1,508,967. TOOL. ROGELIO G. FERNANDEZ, New York, N. Y. Filed Aug. 31, 1923. Serial No. 660,403. 2 Claims. (Cl. 7—3.)

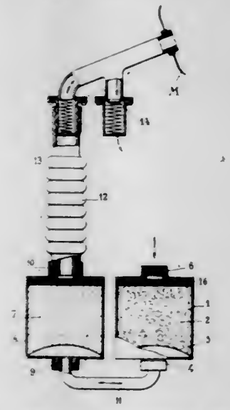
1. A tool comprising a pair of members pivotally connected together intermediate their ends, handles formed on one end of said members and movably mounted jaws mounted on the other end, and means comprising openings in the last-mentioned end of each member for registration with openings in its respective jaw, and a pin insertible through the registered openings for rendering said movable jaws stationary.

1,508,968. SAFETY SCREEN FOR TOBACCO-CURING FLUES. ALEXANDER S. GREEN, Oxford, N. C. Filed Aug. 11, 1921. Serial No. 491,498. 8 Claims. (Cl. 34—19.)



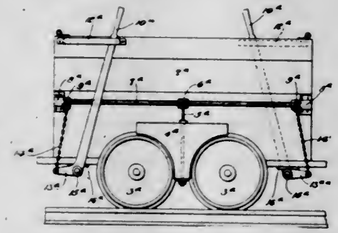
8. A safety screen for tobacco curing flues adapted for arrangement between the tobacco racks and the furnace at the lower end of the flue, constisting of independent sets of screen sections aranged in pairs with the members of each pair connected for folding movement into substantially parallel relation and guide rods disposed in transverse relation to the lines of folding of said pairs, and the marginal edges of adjoining pairs being hingedly connected and having a sliding mounting upon said guide bars, hangers being provided for detachable engagement with intermediate portions of the scheen for preventing the sagging thereof.

1,508,969. METHOD AND APPARATUS FOR INDICATING THE LEVEL OF LIQUID IN A TANK. LOUIS GUICHARD, Paris, France, assignor to Edouard Seignol, Paris, France. Filed May 31, 1922. Serial No. 564,978. 2 Claims. (Cl. 73—54.)



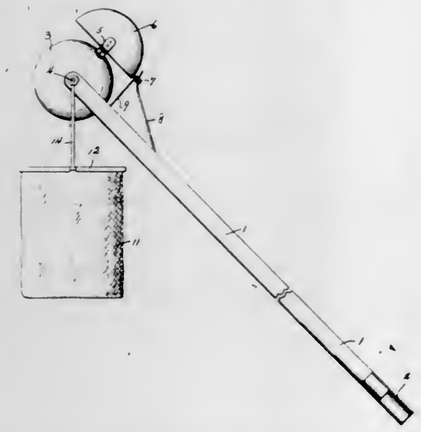
1. A process for measuring the volume of liquid contained in a tank, such as the tank of an automobile ve-

nicle, comprising temporarily isolating a body of air so enclosed above the level of the liquid, that its volume will vary inversely as such level varies, and in adding to the



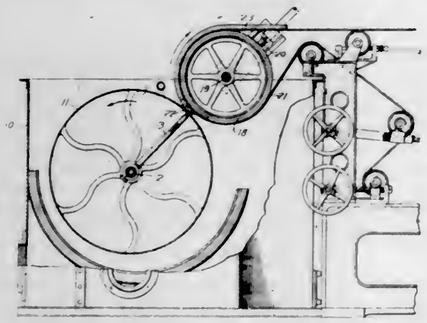
said body of air, a constant quantity of air so as to increase the pressure of the enclosed air, and measuring the resulting increase in pressure on a gauge graduated in units of volume.

1,508,970. RESPIRATORY DEVICE. HENRI GUILLEMARD, Lyon, France. Filed May 6, 1920. Serial No. 379,397. 2 Claims. (Cl. 128—141.)



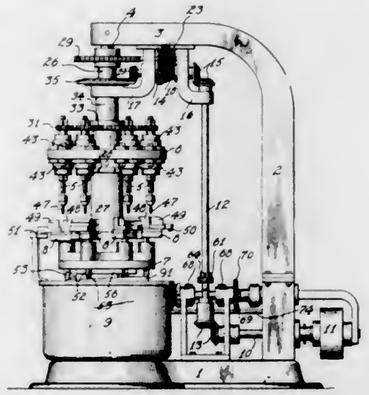
1. A respiratory device comprising a container holding an oxidizing material capable of the oxidation of carbon monoxide, a second container holding an absorbent for carbon dioxide, a connection from the first container to the second, and a valved connection adapted to connect the second container to a respiratory mask.

1,508,971. MINE CAR. JOHN A. HEBB, Hopwood, and WILLIAM J. MCDADE, Uniontown, Pa. Original application filed Nov. 6, 1919, Serial No. 336,025. Divided and this application filed Oct. 6, 1920. Serial No. 415,066. 4 Claims. (Cl. 188—57.)



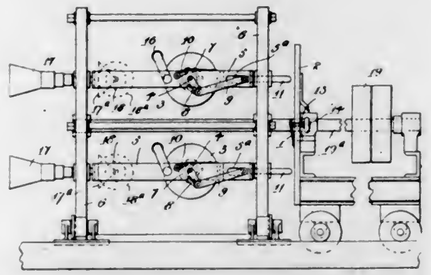
1. The combination with a mine car having wheels thereon, of a braking mechanism therefor, said mechanism comprising a vertically movable shoe adapted to be moved into and out of wheel engaging position, a shaft extending along the side of the car substantially its entire length, means connecting the shoe and shaft, an operating lever disposed near each end of the car, and flexible means connecting the shaft with the two operating levers, said flexible means and operating levers being so arranged that movement of one of the operating levers to locking position will not move the other operating lever.

1,508,972. FRUIT-PICKING DEVICE. ALBERT HERMUNDSON, Nelson, Wis. Filed Aug. 23, 1923. Serial No. 658,990. 4 Claims. (Cl. 56—334.)



1. A device of the class described comprising a handle member, a cup-like jaw, means for connecting the central portion of said jaw to one side of the handle member, a second cup-like jaw, means for pivotally connecting marginal portions of both of said jaws, the axis of said pivotal connection being disposed substantially in parallelism with the longitudinal axis of the handle member, means for normally maintaining the second jaw open with respect to the first named jaw, and manual means for moving said second jaw toward the first jaw.

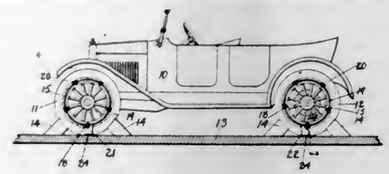
1,508,973. PROCESS AND APPARATUS FOR MAKING WALL BOARD AND THE LIKE. PAUL B. HUDSON, Watertown, N. Y. Filed Dec. 5, 1921. Serial No. 520,032. 6 Claims. (Cl. 92—42.)



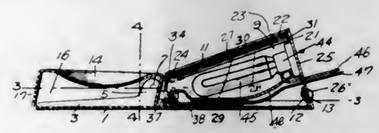
1. The process of producing a wall board, or the like, consisting in blowing fibers from the periphery of a screen rotating in a tank of pulp into the space intervening between said screen and a member spaced therefrom and traveling at a lower speed to fill said space.

1,508,974. AUTOMATIC MULTIPLE-SPINDLE-MACHINE TOOL. CALVIN JACKSON, Jacksonwalt, Pa., assignor, by mesne assignments, to Reading Automatic Machine Company, a Corporation of Pennsylvania. Filed July 30, 1921. Serial No. 488,738. 16 Claims. (Cl. 29—38.)

1. A multiple-spindle machine of the character described having a plurality of work holders and a spindle head, means for holding said head stationary or revolving it, and a work holder table adapted for intermittent or synchronous revolution with respect to said spindle head, in combination with means for rotating said spindles and simultaneously causing said work holders and spindles to approach and separate at predetermined points around the machine.



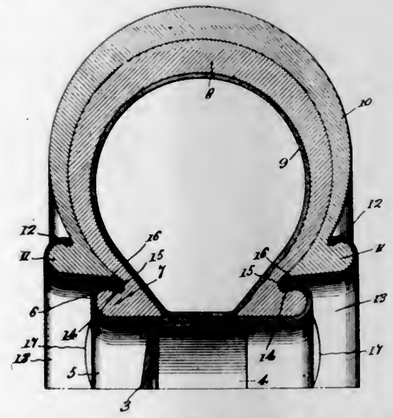
1,508,975. ROPE-UNTWISTING APPARATUS. PETER BURD JAGGER, London, England. Filed Nov. 23, 1921. Serial No. 517,387. 14 Claims. (Cl. 117—1.)



14. Mechanism of the kind set forth comprising spools mounted so as to revolve on a common axis, a ratchet wheel on each of said spools, a one-way acting ratchet pawl co-operating therewith, a lever and link feed device slidably carried by the spool carrier and operating said ratchet pawl and a cam on the framework of the machine for contacting with said lever and link feed device.

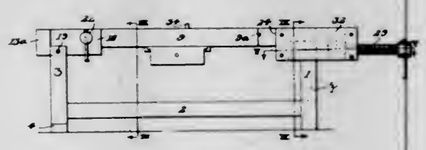
1,508,976. WHEEL-SECURING BRACKET. FRANCIS JERDONE, Jr., Toledo, Ohio, assignor to The Willys-Overland Company, Toledo, Ohio, a Corporation of Ohio. Filed June 23, 1920. Serial No. 391,134. 4 Claims. (Cl. 188—32.)

1. Means for securing a vehicle in fixed position upon a floor or frame comprising a tie-plate having a hooked portion adapted to extend between the sections of a demountable wheel rim behind one of the wedges projecting between said sections to interlock therewith, said plate having a base portion adapted to be secured to said floor or frame.



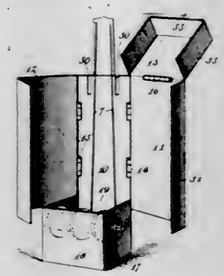
1,508,977. ADVERTISING DEVICE. ALLAN ROLAND PYE JOHNSON and CYRIL HERBERT JOHNSON, Toronto, Ontario, Canada, assignors of one-third to John Armstrong Hume, Toronto, Canada. Filed Jan. 19, 1924. Serial No. 687,392. 2 Claims. (Cl. 40—130.)

1. An advertising device comprising a base plate, side walls extending upward from the rear portion of the base plate, an advertisement slide, a slide holder carrying the advertisement slide and slidably engageable with the upper edges of the aforesaid side walls, securing means capable of being sealed for securing the advertisement slide holder in its inward position, an incandescent bulb located beneath the slide and carried by the slide holder, a pivoted change receiver also mounted upon the base plate, a circuit for the bulb, stationary contacts forming the terminals of such circuit and a bridging closure carried by the change receiver adapted to close said contacts when the change receiver is depressed.



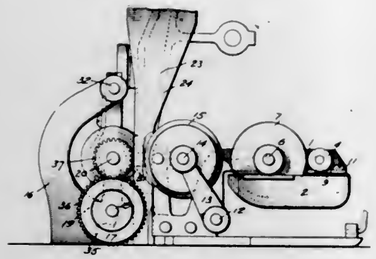
1,508,978. ATTACHMENT FOR TIRES. HARRY E. JONES, El Paso, Tex., assignor of one-third to Daniel E. Fowler and one-third to Frank R. McKay, both of El Paso, Tex. Filed Aug. 31, 1923. Serial No. 660,350. 1 Claim. (Cl. 152—17.)

In combination with a rim having clincher flanges and a vehicle tire mounted thereon having compressible beads engaging within the clincher flanges of the rim, of a supplemental casing secured over the tire and having beads extending outwardly of the beads of the tire,



and auxiliary rim sections upon both sides of the wheel, said sections composed of base portions lying substantially horizontally beneath the outer supplemental beads and resting directly upon extensive surfaces of the rim flanges; the outer edges of the sections having clincher flanges thereon adapted to engage over the supplemental beads to prevent separation inwardly of the base portions from the supplemental beads, the inner edge portions of the sections being scalloped having between the scallops downwardly and outwardly turned hooks, the outwardly-turned portions of the hooks extending substantially horizontally and parallel with the base portions, said base portions and hooks being separated by substantially the thickness of the rim flanges to avoid rocking in or out of the section on the rim flanges, the hooks being relatively large to compress the tire bead in the rim flanges to avoid inward movement of the hooks.

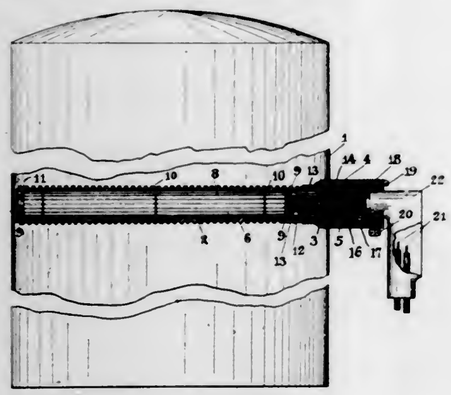
1,508,979. CARPENTER'S TABLE. PETER KELLER, Montreal, Quebec, Canada. Filed May 11, 1923. Serial No. 638,302. 1 Claim. (Cl. 144—286.)



In a carpenter's bench, a bench top having one corner cut away to provide a rectangular rabbet, a cross member extending under the end of the table top and projecting across the cutaway corner, the projecting portion of said cross member being reduced in height to provide a rabbeted outer upper corner, a clamping frame top member resting on said reduced end and slidable thereacross, a depending clamping shoulder at the inner end of the top bar and having a laterally extending arm projecting beneath the table top, a depending shoulder on the outer end of the top bar provided with a lateral clamping extension, extending along the end of the table top, a brace rod connecting said extensions and extending longitudinally beneath the table top, a securing member extending transversely beneath the table top and having a notch in its upper surface to receive the brace bar slidably, means to secure the securing member removably to the table top, and means to adjust the clamping member.

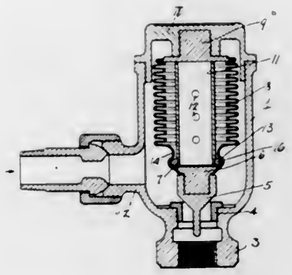
1,508,980. RECEPTACLE FOR FLAGS. AMBROSE VINCENT KELLY, Brooklyn, N. Y. Filed July 15, 1922. Serial No. 575,214. 4 Claims. (Cl. 220—1.)

1. A device of the character described comprising a receptacle, a rear wall projecting above said receptacle, side walls hinged to the rear wall and adapted to embrace said receptacle, and a top wall hingedly secured to one of the side walls and adapted to close said receptacle.



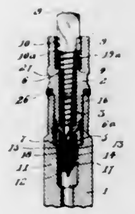
1,508,981. PASTING DEVICE FOR PACKAGING MACHINES. EUGENE G. KERLIN, Salem, Va., assignor to Comas Cigarette Machine Company, Salem, Va., a Corporation of Virginia. Filed Aug. 25, 1922. Serial No. 584,290. 7 Claims. (Cl. 91—50.)

1. A pasting device comprising a glue-pot, delivery rollers, guide rollers, transfer rollers aligned therebetween, and means for alternately shifting said transfer rollers between the delivery and guide-rollers.



7. A pasting device comprising a glue-pot, delivery rollers rotatably mounted above said glue-pot, guide rollers aligned with said delivery rollers, transfer rollers mounted upon rocker arms aligned between said delivery rollers and guide rollers, means for shifting said rocker-arms whereby the transfer rollers alternately engage said delivery rollers and guide-rollers, a paper feed adapted to deliver a plurality of strips between said guide rollers and transfer rollers, stop fingers arranged in the path of travel of said plurality of strips, feed-rollers arranged between said stop fingers comprising a stationary and movable roller, and means for simultaneously shifting said stop fingers out of the path of travel of the plurality of strips of paper, and shifting the feed rollers into engagement with said plurality of strips of paper, whereby the paper is fed downwardly between the guide and transfer rollers.

1,508,982. ELECTRIC WATER HEATER. JAMES ALEXANDER MACDONALD, Brantford, Ontario, Canada. Filed Sept. 28, 1922. Serial No. 591,082. 26 Claims. (Cl. 219—38.)

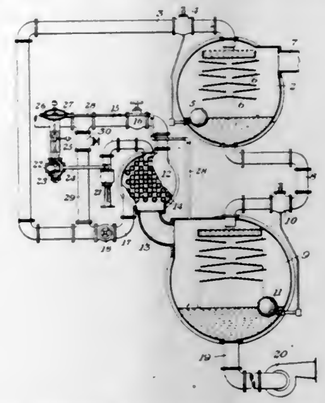


1. In an electric heater, the combination of a substantially solid cylindrical core of refractory non-conducting material having a plurality of narrow slits formed longitudinally thereof; and a resistance element of lesser depth than and mounted in said slits, said resistance being held in the bottom of the slits by dielectric cement.

1,508,983. VALVE FOR STEAM SYSTEMS. MAX P. MILLER, Cleveland Heights, and HAL T. PATTON, Cleveland, Ohio, assignors to The Bishop & Babcock Company, Cleveland, Ohio, a Corporation of Ohio. Filed Jan. 29, 1920. Serial No. 354,843. 3 Claims. (Cl. 236—58.)

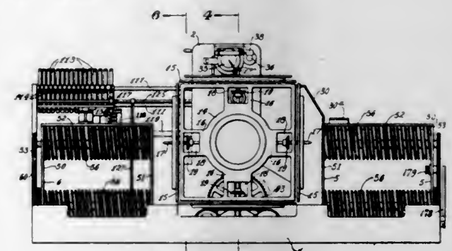
1. In a device of the character described, the combination of an open casing having a passage therethrough; a cover therefor; a plug mounted on the inner side of said cover; an open ended, expansible bellows member mounted on and closed by said plug, said member extending into said casing, said bellows having a narrowed closed inner end, a reinforcing collar mounted within such closed end, a valve, and a frusto-conical disk shaped connection attached to said valve and engaging over the narrowed end of said bellows opposite such reinforcing collar therein.

1,508,984. PNEUMATIC-TIRE VALVE. FREDERICK MYERS, New York, N. Y. Filed Nov. 11, 1922. Serial No. 600,279. 14 Claims. (Cl. 152—12.)



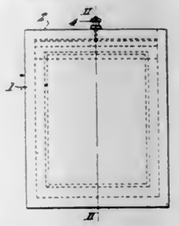
1. In a pneumatic tire valve, a tensioned one-piece valve stem, and a spring supported valve slidably carried by the stem.

14. In a pneumatic tire valve, a tensioned valve stem, a valve carried thereby, and stationary means cooperating with said valve stem adapted, when the valve stem is rotated in reverse directions, for holding the valve either locked on its seat or spaced therefrom, said means being constructed to cause longitudinal movement of the valve stem when the valve stem is rotated for locking the valve on its seat.



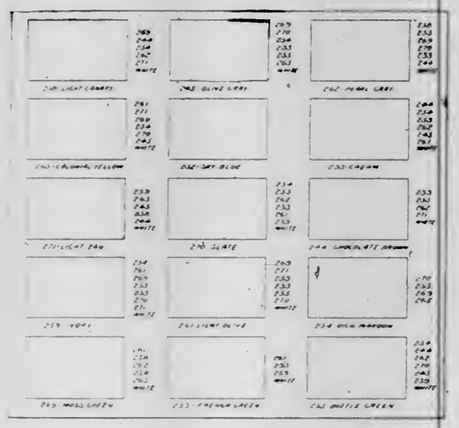
1,508,985. METHOD AND APPARATUS FOR TREATING LIQUID. JOHN R. MCDERMET, Jeannette, Pa., assignor to Elliott Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Dec. 15, 1923. Serial No. 680,923. 25 Claims. (Cl. 183—2.5.)

1. In an apparatus for treating liquid, a chamber adapted to have a predetermined pressure maintained therein, a condenser communicating with said chamber, a steam ejector for withdrawing non-condensable gases



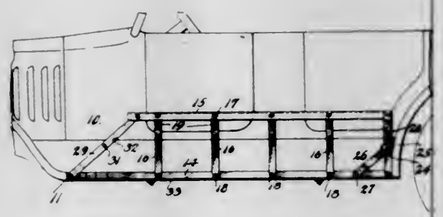
from the condenser, and means for varying the total amount of steam to said ejector in accordance with variations in the pressure in said chamber.

1,508,986. PHONOGRAPH. MALCOLM L. ORD, Colorado Springs, Colo. Filed July 27, 1922. Serial No. 577,944. 23 Claims. (Cl. 274—10.)



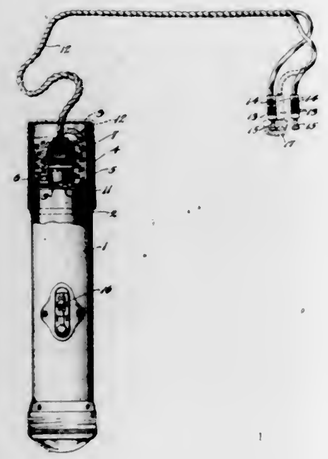
5. In a phonograph, a record carrier, comprising, a rotatable turret, turn-tables mounted for rotation on said turret, means for delivering records to and removing them from said turn-tables, means for positioning one of said turn-tables for playing, and means for driving said positioned turn-table.

1,508,987. BATTERY OF DRY CELLS AND PROCESS OF ASSEMBLING THE SAME. CARL SEAVERNS RIDER, Lansing, Mich., and ALTON KARL HUNTLEY, Madison, Wis., assignors to National Carbon Company, Inc., a Corporation of New York. Filed Mar. 11, 1922. Serial No. 543,095. 8 Claims. (Cl. 204—38.)



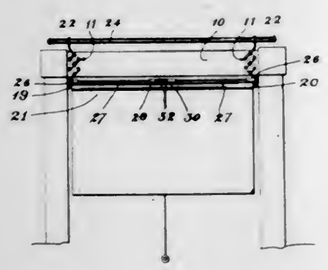
4. A dry cell battery comprising a casing, a plurality of flat cells in juxtaposition and having depolarizers spaced from the casing and an insulating material in which the depolarizers are embedded.

1,508,988. COLOR CHART. NORTON A. ROSS, Cleveland, Ohio, assignor to The Patterson-Sargent Company, Cleveland, Ohio, a Corporation of Ohio. Filed Sept. 16, 1919. Serial No. 324,198. Renewed Aug. 18, 1924. 4 Claims. (Cl. 283—1.)



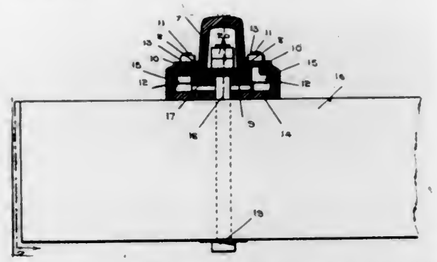
1. The combination of color charts comprising a chart bearing a series of colored panels representing by their colors a series of primary color paints certain of which are combinable with each other to produce secondary paints having distinctive colors, said chart having identifying marks associated with said colored panels, and another chart bearing a series of colored panels representing by their colors the aforesaid secondary paints, the last named chart having associated with each of its colored panels a corresponding legend indicating by the use of said identifying marks the primary paints that are combinable to produce the secondary paint in question.

1,508,989. LUGGAGE CARRIER. GILBERT A. ROTH, Hastings, Nebr. Filed Dec. 29, 1922. Serial No. 609,664. 23 Claims. (Cl. 224—29.)



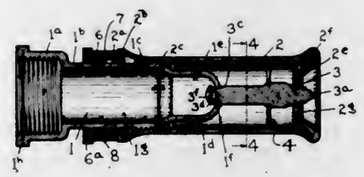
11. In a luggage carrier, a base member, a relatively movable top member, and folding connecting elements, said members being constructed and arranged to form a housing to enclose said elements when in folded position.

1,508,990. FLASH-LIGHT ATTACHMENT. FREDERICK J. SCHMIDT, Steelton, Pa. Filed Sept. 25, 1922. Serial No. 590,460. 1 Claim. (Cl. 175—183.)



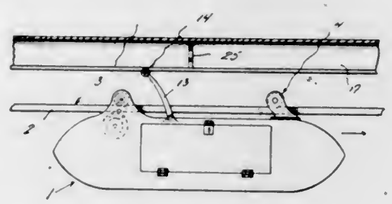
A shell having an enclosing support formed with a fixed central socket and an opening at its base and an extension cord unit adapted to be stored in the space surrounding said socket and having a plug one terminal of which contacts with the socket and the other terminal passing through said opening for contact with a flashlight battery.

1,508,991. COMBINATION SHADE AND CURTAIN HOLDER. JOHN H. SENDLAK, Saskaton, Saskatchewan, Canada. Filed Mar. 19, 1923. Serial No. 625,968. 1 Claim. (Cl. 156—23.)



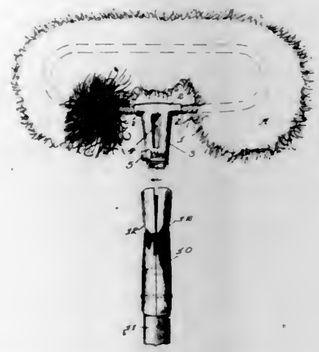
A combination shade bracket and curtain rod support comprising a pair of sleeves, rods slidable in said sleeves, friction pads fixed on the outer ends of said rods, a sleeve receptive of the inner adjacent ends of said rods, a coiled compression spring filling said central sleeve abutting the ends of the rods to press the pads outward, grips on said rods extending outward through slots in the central sleeve for retracting said pads, plates fixed on the outer ends of the first named sleeves, the lower portions of said plates being adapted to receive the pintles of a shade roller, lazy tong elements extending from the upper portions of said plates, and means to support a curtain pole at the outer ends of said lazy tong elements.

1,508,992. RAILROAD RAIL. ELMER C. SHAVER, New York, N. Y. Filed Sept. 27, 1923. Serial No. 665,118. 14 Claims. (Cl. 238—122.)



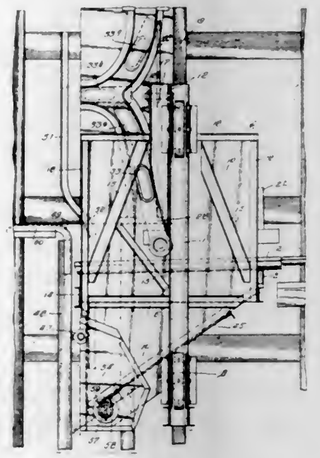
1. A rail comprising a base section, an intermediate section mounted yieldingly above the base section, and a tread section secured detachably on the intermediate section.

1,508,993. NOZZLE. HOWARD B. SHERMAN and FREDERICK HANLAN, Battle Creek, Mich., assignors to H. B. Sherman Manufacturing Co., Battle Creek, Mich., a Corporation of Michigan. Filed Jan. 21, 1922. Serial No. 530,836. 4 Claims. (Cl. 299—131.)



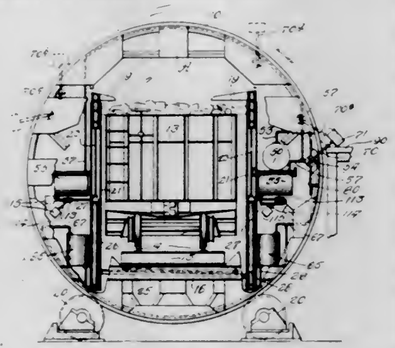
3. In a nozzle; a base; a spindle; a sleeve having an outlet orifice; a valve member having a conical head adapted to close the said orifice, and an integral inwardly extending stem, the inner end of the stem being loosely connected to the inner end of the spindle within the sleeve, so that the valve may have lateral play on the spindle in the sleeve; and a guide spider attached to the valve stem and slidably supporting the valve in the sleeve while permitting slight lateral movement thereof.

1,508,994. PARCEL-DELIVERY SYSTEM. WILLIAM F. SHYLER, Meadville, Pa. Filed May 24, 1924. Serial No. 715,736. 3 Claims. (Cl. 104—93.)



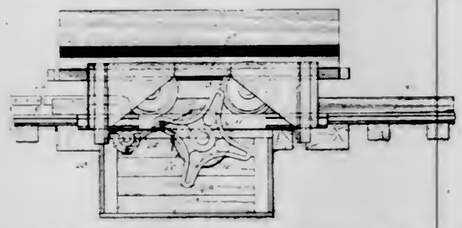
2. In a device of the class described, a support, brackets carried by and extending laterally outwardly from said support, said brackets being provided with vertically disposed portions spaced outwardly from said support, the upper end of said vertical portion of the bracket being equipped with transversely spaced lugs, said lugs being spaced inwardly from the edges of said vertical portions to provide rail seats, and a track supported from the vertical portions of said brackets, the rails of said track engaging said seats and said lugs.

1,508,995. MOP HEAD AND DETACHABLE CONNECTION THEREFOR. DAVID L. SILVER, Clayton, N. J., assignor to Silver-Chamberlin Co., Clayton, N. J., a Corporation of New Jersey. Filed Aug. 24, 1922. Serial No. 584,034. 1 Claim. (Cl. 15—145.)



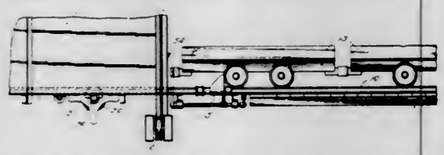
The combination with a mop head provided with a body of twisted wires constituting a mop fabric support having oppositely facing end portions disposed in substantial axial alignment, of a stem provided at one end with flanges carrying extensions which project laterally on each side of said stem and along said end portions, said flanges and extensions being so die-pressed around the end portions of the body of twisted wires that the material of the flanges is permanently forced into the convolutions of the spirals of wire constituting said body, and means carried by the other end of the stem adapted for detachable connection to a mop handle.

1,508,996. HOISTING AND DUMPING APPARATUS. GEORGE N. SIMPSON, Pittsburgh, Pa., and ARTHUR M. SIMPSON, Chicago, Ill. Filed Aug. 5, 1921. Serial No. 489,940. 17 Claims. (Cl. 214—122.)



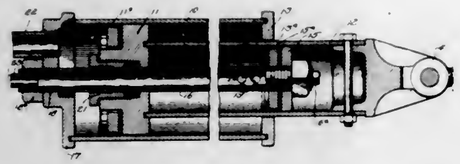
1. In a car hoisting and dumping apparatus, a cage adapted to receive a loaded car, a rotatable car supporting cradle within such cage, an arm attached to the cradle, a shoe on the end of the arm, means for hoisting the cage, and means acting through the movement of the cage to turn the arm to rotate the cradle and overturn the car, said means including a Y-shaped guide adapted to engage the shoe on the end of the arm.

1,508,997. AUTOMATIC CAR-HOLDING MECHANISM. GEORGE N. SIMPSON, Pittsburgh, Pa., and ARTHUR M. SIMPSON, Chicago, Ill. Filed Aug. 5, 1921. Serial No. 489,941. 4 Claims. (Cl. 214—52.)



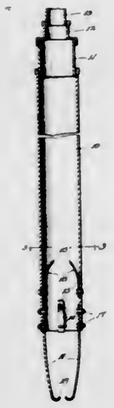
1. In combination with a rotatable cage adapted to hold a car to be dumped, means on the cage for holding the car on the rails during rotation of the cage, independent power means on the cage for operating the car holding means, said independent power means including a cylinder with a movable piston therein and fluid under pressure, and means automatically operated by rotation of the cage for causing the independent power means to operate the car holding means.

1,508,998. CAR CONTROL. GEORGE N. SIMPSON and ARTHUR M. SIMPSON, Chicago, Ill. Filed July 14, 1923. Serial No. 651,511. 3 Claims. (Cl. 188—63.)



1. A device of the character described, comprising a rotatable member arranged in proximity to a car track and having arms adapted for successive engagement by parts on cars passing on said track, means for substantially preventing raising of a car part, upon engagement with one of the arms of said rotatable member, and means for controlling the rotation of said rotatable member.

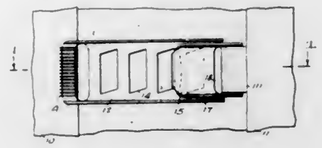
1,508,999. CAR CONTROL. GEORGE N. SIMPSON and ARTHUR M. SIMPSON, Chicago, Ill. Filed July 14, 1923. Serial No. 651,512. 12 Claims. (Cl. 214—35.)



1. In a device of the character described, a car containing structure, an approach track leading to the car containing structure, a movable stop on the approach track, and means on the car containing structure for setting the stop, said means adapted to be operated by successive engagement of a predetermined number of parts on passing cars.

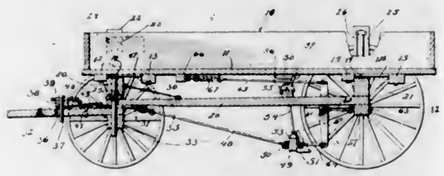
1,509,000. POWER MECHANISM. GEORGE N. SIMPSON, Chicago, Ill. Filed Mar. 17, 1924. Serial No. 699,853. 4 Claims. (Cl. 138—9.)

1. A device of the character described; a cylinder; a piston therein; a hollow push rod attached to the piston and extending through the front head of the cylinder; a smaller piston in the hollow push rod; a connection between the smaller piston and the rear head of the cylinder, said connection extending through the larger piston; a port entering the large cylinder behind the large piston; and a passage extending from the atmosphere to the inside of the push rod behind the smaller piston.



1,509,001. PUMP ROD AND VALVE GRAB. GEORGE SMITH, Mullen, Nebr. Filed Aug. 7, 1923. Serial No. 656,266. 1 Claim. (Cl. 294—114.)

In a pump rod and valve grab, the combination of a sleeve, a pair of coacting diametrically disposed flat spring jaws rigidly fixed at their lower ends against the inner face of the sleeve at its lower end to extend upwardly within the sleeve and curved toward each other at their free ends, a second pair of coacting diametrically disposed flat spring jaws rigidly fixed at their lower ends against the inner face of the sleeve substantially at the plane of the upper ends of the former pair of jaws to extend upwardly within the sleeve, the latter pair of jaws being disposed in a plane at a right angle to the plane of the former pair of jaws and being curved toward each other at their free ends, a pair of coacting diametrically disposed flat spring jaws depending from the lower end of the sleeve, and fastening devices extending through the sleeve and said latter pair of jaws detachably connecting such jaws with the sleeve.

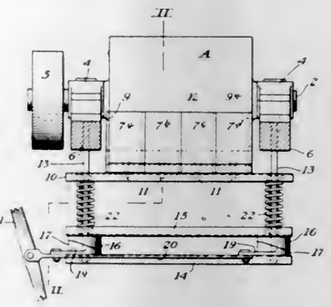


1,509,002. DOUBLE-LOCKING HOOK AND EYE. WELLING C. SOULE, Savannah, N. Y. Filed Feb. 27, 1923. Serial No. 621,598. 2 Claims. (Cl. 24—26.)

1. A fastening device, comprising two members, longitudinal flanges on both members and one member constructed to fit within the other and held by the flanges against accidental lateral displacement or angular movement, a hook on one of said members, and the other

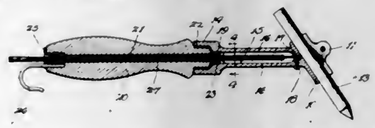
of said members having an eye therein so shaped as to permit entrance and exit of the hook only when one of the members is positioned at an angle to the other.

1,509,003. AUTOMATIC WAGON BRAKE. DANIEL SOWARDS, Kettle Falls, Wash. Filed Mar. 23, 1923. Serial No. 627,125. 2 Claims. (Cl. 188—178.)



2. An automatic brake for wagons comprising a wagon frame having front and rear bolsters, roller bearings on said bolsters, a box supported by said roller bearings, two-armed levers mounted vertically to oscillate on the front side of the rear axle of the wagon, links between the rear axle and said levers forming fulcrums therefor, one arm of each lever having yieldable connection with said box, a brake beam carrying brake blocks and mounted to oscillate on said frame and having a link connection with the other arms on said two-armed levers, a tree carrying a pintle, said pintle being mounted to slide in longitudinal direction on said frame, and links positively connecting said pintle with said brake beams; whereby upon the pull on the tree being discontinued when the wagon is going downgrade, said box actuated by gravity, will slide forward and communicate its movement through said yieldable connection to said levers thus applying the brake blocks against the rear wheels.

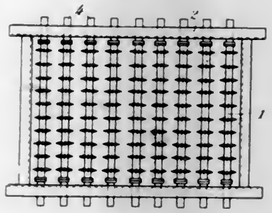
1,509,004. PUNCTURE-SEALING COMPOUND. OSRO S. STEVENS, Waxahachie, Tex., assignor of one-half to P. Blanchard & Sons, Palestine, Tex. Filed Oct. 9, 1922. Serial No. 593,419. 2 Claims. (Cl. 134—17.5.)



2. The herein described tube sealing compound, comprising the following ingredients in substantially the proportions named, eight ounces of powdered cork, five ounces of powdered mica, two ounces of soap tree bark, two ounces of a mixture of Epsom salts and salt, and one gallon of distilled water.

1,509,005. CRUSHING ROLLS. FRANCIS J. STRAUB, New Kensington, Pa. Filed Feb. 7, 1922. Serial No. 534,705. 2 Claims. (Cl. 83—12.)

1. In a crusher of the class described, the combination with a pair of spaced crushing rolls and a frame therefor, of an intervening wedge shaped resisting member composed of a series of interlocking sections having concave tapering faces conforming to the curvature of the rolls, a longitudinal supporting bar therefor, bolts connecting each section with the bar, stems suspended from the frame forming guides for the supporting bar, a lower supporting frame suspended below the bar, intervening cushioning springs engaging the ends of the bar and resiliently supporting the several sections, and means for varying the tension of the springs.



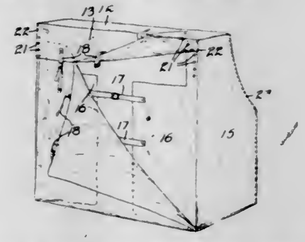
1,509,006. ELECTRODE HOLDER. EARL B. THOMAS, Atlantic City, N. J. Filed Feb. 28, 1923. Serial No. 621,870. 3 Claims. (Cl. 219—8.)

1. An electrode holder including a skeleton shank terminating at one end in a split sleeve to removably receive an electrode and at its opposite end in a socket to removably receive a handle, and a handle engaged in said socket.

1,509,007. DISCHARGING DEVICE FOR ELECTRIC FURNACES. CARL THEODOR THORSSELL and ERIK CHRISTIAN BECK-FRIIS, Gottenborg, Sweden. Filed June 20, 1921. Serial No. 479,042. 4 Claims. (Cl. 204—64.)

1. In electrically heated furnaces for heating electrically conductive material a grate-shape device carrying said material and consisting of a plurality of parts which are electrically insulated from each other.

1,509,008. FOUNTAIN PEN. JAMES M. WALLACE, Spartanburg, S. C. Filed Dec. 19, 1922. Serial No. 607,899. 2 Claims. (Cl. 120—47.)

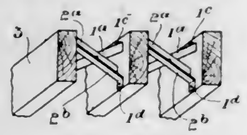


1. In a fountain pen, a barrel equipped with the usual writing point, the barrel having interior threads at one end, a nipple formed exteriorly and interiorly with threads, the said nipple being threaded at one end into the threaded end of the barrel, a piston comprising a head, and a stem for the piston comprising connected telescopic sections, one of said sections being exteriorly threaded and screwed into the head, the said section

having a part of its exteriorly threaded portion extending beyond the end of the head into which the said section is threaded, whereby, when the piston head is re-

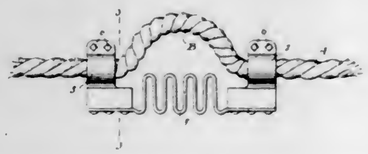
tracted, the projecting end of the said stem section may be rotated through the connection provided between the telescopic stem sections and threaded into the said nipple.

1,509,009. DUSTPROOF PIANO COVER. LAURENCE R. WEINBERG, Cleveland, Ohio. Filed May 23, 1922. Serial No. 563,026. 3 Claims. (Cl. 45—68.)



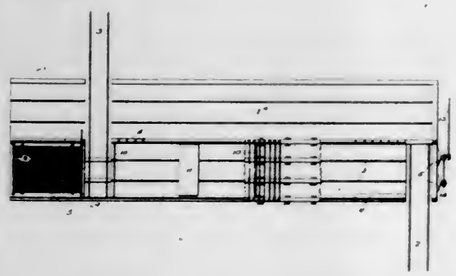
3. A one-piece dust proof piano cover comprising a body section, top and bottom sections adjacent the body section and extending in opposite directions therefrom, said top section having an extension adapted to overlap the opposite side of a piano from the body section, said bottom section having an extension adapted to also overlap the opposite side of a piano, a pair of similarly shaped end sections adjacent opposite edges of the body section, each of said end sections having extensions forming flaps, the arrangement being such that when applied to a piano the extensions on the top and bottom sections overlap the flaps on the end sections to inclose all the edges of the piano, substantially as set forth.

1,509,010. SIGNALING DEVICE. JOHN M. WENZEL, Chicago, Ill. Filed June 3, 1922. Serial No. 565,622. 6 Claims. (Cl. 177—311.)



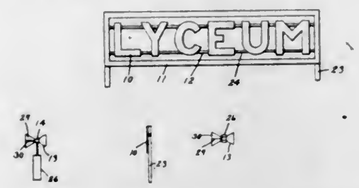
5. The combination with an electrically operated door-operating device, and an energizing circuit therefor; of a branch circuit connected to said energizing circuit, a signal device interposed in the branch circuit, door-controlled circuit-closers interposed in both circuits and operating to close the branch circuit when the door opens, and simultaneously therewith to cut out the door-releasing device, a switch contact to which the branch circuit and one side of the energizing circuit are connected, and a movable switch member adapted to engage said contact, to which switch member the other side of the energizing circuit is connected.

1,509,011. STRUT FOR FLOOR JOISTS. JAMES MCDOWELL WHITESIDE, Bangor, Ireland. Filed Jan. 14, 1924. Serial No. 685,997. 2 Claims. (Cl. 20—9.)



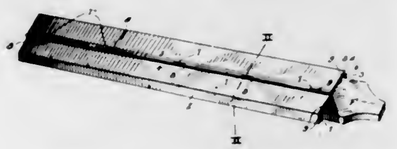
1. A collapsible crossed strut or trussing for floor joists and the like having in combination two metal angle bars pivoted together, and having a sid of each angle bar at each end thereof bent parallel with the adjacent joist and orificed to receive an attaching member such as a nail.

1,509,012. MOORING LINE. ROBERT R. WHITING, Darien, Conn. Filed Apr. 12, 1924. Serial No. 706,149. 2 Claims. (Cl. 114—215.)



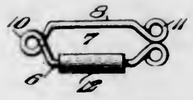
1. A strain-relieving device in lines, comprising in combination with a mooring line, a plurality of clamps adapted to be secured to the mooring line, a bight formed in the mooring line between said clamps, and means connecting said clamps, said means consisting of a resilient element.

1,509,013. VENEER KILN. PATRICK M. WILLIAMS, North Wilkesboro, N. C., assignor to L. Moore Dry Kiln Co., Jacksonville, Fla., a Corporation of Florida. Filed May 22, 1920. Serial No. 383,530. 1 Claim. (Cl. 34—46.)



A kiln having a heater at one end, suction means at the other, the heated end having an inlet opening of limited size, and a roof sloping away from said opening, whereby incoming air is forced to pass directly through and over said heater, and is permitted to expand as it progresses from said opening into the kiln, and means for varying the amount of air sucked in through said inlet.

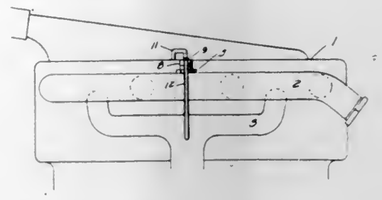
1,509,014. ILLUMINATED SIGN. CHARLES M. YOUNG, New Britain, Conn. Filed May 9, 1923. Serial No. 637,787. 3 Claims. (Cl. 40—130.)



2. In an illuminating sign structure, a sign having display characters with the exposed face portion of reflective character and with a variegated and uneven surface, a lighting structure for illuminating said sign having a lamp socket structure, a rod supporting said socket structure, a spring serving as means for supporting said rod, and means for loosely guiding said rod.

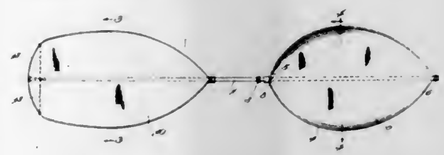
1,509,015. FILE SHEATH. TADEUSZ ZDRODOWSKI, Pittston, Pa. Original application filed Nov. 23, 1922, Serial No. 602,908. Divided and this application filed Oct. 30, 1923. Serial No. 671,808. 1 Claim. (Cl. 206—16.)

In a file sheath, an elongated sheath casing having one end open and the other end closed, said sheath casing consisting of a bottom wall, integral end walls, and an integral upper wall section, a hinged upper wall section carried by one of the end walls of the casing, a fabric lining for the casing secured at one longitudinal edge to the free edge of the integral upper wall section by means of spurs carried by said wall section, and resilient devices for retaining the hinged section in closed position.



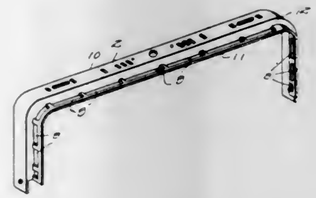
1,509,016. SUPPORTER FOR AN INNER GARMENT OF FEMALE WEAR. GEORGE B. MERSHON, Jr., Philadelphia, Pa. Filed July 18, 1923. Serial No. 652,273. 4 Claims. (Cl. 241—12.)

1. A lingerie clasp comprising a member of wire bent in the middle to form an eye adapted to be sewn to an outer garment, the branches of said member being extended in parallelism and in spaced relation for a portion of their extent with their ends converged to abutting, tensioned relation, the converging ends each being bent outwardly and inwardly to form eyes of which one is adapted to be sewn to an outer garment, said abutting ends being separable for lingerie strap insertion.



1,509,017. FUEL ECONOMIZER FOR EXPLOSIVE ENGINES. LLOYD W. MILLER and IRVIN C. DEVALL, Bessemer, Pa. Filed June 22, 1922. Serial No. 570,149. 4 Claims. (Cl. 123—25.)

1. An engine humidifying device of the character specified comprising a shell having an air inlet and provided in its lower portion with a valve member, and a head closing the upper end of the shell and formed with inflow and outflow passages, and having a tubular stem extending

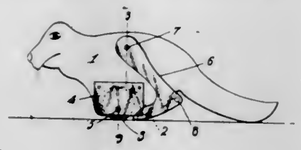


into the shell and normally closed by the said valve member, the latter being automatically unseated by unequal expansion of the parts when the device is in operation.

1,509,018. GLIDER. FREDERICK C. MORTON, Minneapolis, Minn. Filed July 6, 1923. Serial No. 649,950. 2 Claims. (Cl. 244—12.)

1. A glider comprising a body stick, means on the body stick for projecting it into the air, forward and rear planes carried by the body stick, said rear plane being convexly curved and presenting its convex surface upwardly, the forward plane being concavely curved and presenting a concave surface upwardly, and a rudder carried by the body stick.

1,509,019. FRAME FOR HAND BAGS. SEWERYN MOSCICKI, New York, N. Y. Filed Dec. 5, 1922. Serial No. 605,044. 2 Claims. (Cl. 190—49.)

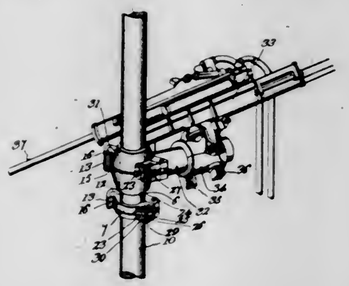


1. A frame for bags of the class described consisting of sections, one of the sections being movable relatively to the other, each section having a laterally offset perforated flange for attachment of the bag body thereto, said flanges being substantially parallel to the outer surfaces of the sections and inwardly offset with respect to said outer surfaces.

1,509,020. TOY. FRANCIS M. MULLIGAN, Butte, Mont. Filed Feb. 11, 1922. Serial No. 535,824. 1 Claim. (Cl. 46—45.)

A toy comprising a body having a tail extending at one end which is adapted to engage the surface upon which the toy is placed, said body having a recess formed in its lower edge, an eccentrically arranged roller ar-

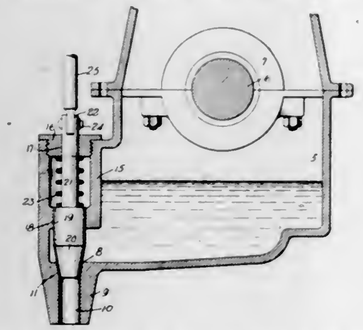
ranged in the recess for engaging the said surface, a leg pivotally secured to each side of the body above the roller and arranged to move downwardly and forwardly



under the action of gravity as the body is raised by the roller and to be moved backwardly through engagement to the supporting surface when the body is lowered.

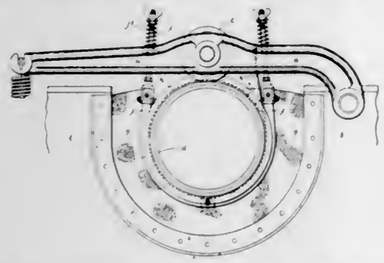
1,509,021. COUPLING FOR DRAIN PIPES AND THE LIKE. JOHN F. NEHLIG, Ashland, and HARRY K. NEHLIG, Laurel Springs, N. J. Filed Apr. 9, 1924. Serial No. 705,196. 8 Claims. (Cl. 285—185.)

1. A coupling of the character stated comprising a ring-like member the central opening of which has a continuous fluted or corrugated wall and the under-face of which member is inwardly tapered.



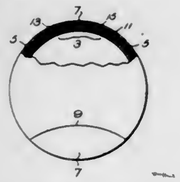
1,509,022. CLAMP. ERNEST E. NOBLE, Lead, S. Dak. Filed July 16, 1923. Serial No. 651,956. 2 Claims. (Cl. 255—51.)

1. A clamp comprising a substantially semicircular member having a head at one end with a recess therein open at one end only, and having a slot in its side wall, a second substantially semi-circular member having a trunnion fitted axially in said recess and provided with a narrow neck adapted to turn in said slot, and removable fastening means at the other ends of said members.



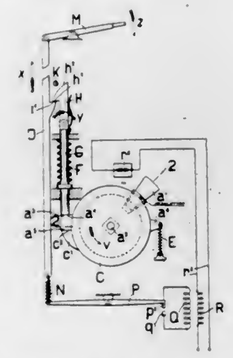
1,509,023. CRANK-CASE CONSTRUCTION. VICTOR W. PAGE, New York, N. Y. Filed Apr. 15, 1921. Serial No. 461,713. 1 Claim. (Cl. 137—21.)

In a crank case having a discharge opening, a chamber formed on one of the side walls of the crank case and positioned interiorly thereof, a tapered plug having a reduced extension, said tapered plug being slidably mounted in the bottom wall of said interior chamber, a coil spring surrounding the reduced extension of the tapered plug and serving to maintain the tapered plug in position in the discharge opening of the crank case, means exterior of the crank case for operating said



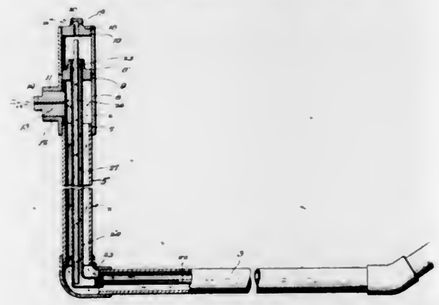
tapered plug to remove the same from the drain opening of the crank case, and means for maintaining said tapered plug out of engagement with said drain opening against the action of said coil spring.

1,509,024. MACHINE FOR STRAINING PAPER PULP AND THE LIKE. JOHN PARAMOR, Watford, England, assignor of one-half to The Watford Engineering Works, Limited, Watford, England. Filed Feb. 15, 1923. Serial No. 619,280. 4 Claims. (Cl. 92—36.)



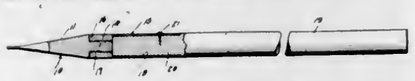
2. In a paper-pulp straining machine of the rotating and vibrating drum type, the combination, with the respective drum-trunks, of a pivoted saddle-arm, a looped strap of flexible material suspended from the said saddle-arm and embracing the lower portion of the drum-trunks, and an apron composed of elastic material; the inner edge of the elastic apron being attached to the looped portion of the strap, whilst the outer edge thereof is secured water-tight to the pulp-vat.

1,509,025. BALL. JOHN W. PATTERSON, New Haven, Conn., assignor to The Seamless Rubber Company, Inc., New Haven, Conn., a Corporation of Massachusetts. Filed Mar. 22, 1920. Serial No. 367,729. 5 Claims. (Cl. 46—4.)



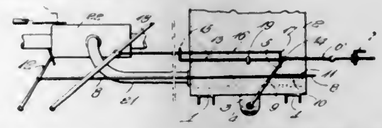
1. A hollow ball having a wall comprising two layers of tough rubber composition and an intermediate layer of soft substantially sulphur-free gum rubber.

1,509,026. ELECTRIC TIME SWITCH. JAKOB PFRETZSCHNER, Essen, Germany, assignor to Fried. Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Filed Mar. 24, 1922. Serial No. 546,379. 10 Claims. (Cl. 200—33.)



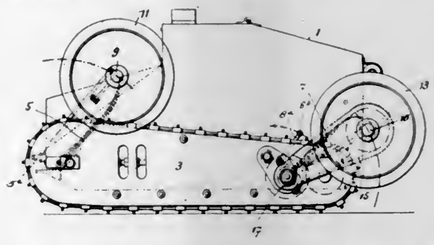
6. In subcombination a switching and unswitching means comprising two abutting parts with a lost motion spring connection between them, said parts having the mechanical characteristic of a differential kinetic response to a given impulsive action, and means for returning said parts to normal abutting relationship.

1,509,027. APPARATUS FOR DESTROYING TREE STUMPS. EDWARD S. PHILLIPS, Seattle, Wash. Original application filed Nov. 21, 1918, Serial No. 263,566. Divided and this application filed Oct. 12, 1922. Serial No. 594,085. 5 Claims. (Cl. 158—28.)



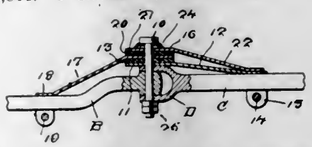
2. A burner including an outer air conducting tube having a discharge orifice opening through one side near the end thereof, a tip supported from the end of said tube and spaced from the orifice and out of communication therewith and positioned to discharge in the same direction as the said orifice, and a liquid fuel conducting tube extending within the first-mentioned tube but out of communication therewith and having its discharge end at the said tip.

1,509,028. COMBINATION CLEANER AND TAMPER. JAMES PHILLIPS, Hazleton, Pa. Filed July 28, 1923. Serial No. 654,474. 2 Claims. (Cl. 86—21.)



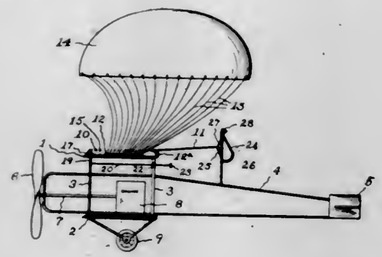
1. A mining tool having a cleaner at one end provided with an elongated cleaning blade, a screw threaded shank extending from said blade, a socket member having an inwardly enlarged end in screw threaded engagement with said shank, said socket member having a hollow, an elongated rod of wood extending into and secured in the hollow.

1,509,029. ROADWAY SANDER. OMI GRANT PHILLIPS, Portland, Oreg. Filed Dec. 1, 1923. Serial No. 678,055. 3 Claims. (Cl. 291—19.)



1. A roadway sander comprising sanding means adapted to be carried by a brake equipped vehicle, elastic operating means for said sanding means adapted for connection with the brake mechanism of the vehicle to operate the sanding means when the brakes are applied, and means engaged with the sanding means for holding the latter against operation when the brake mechanism is actuated.

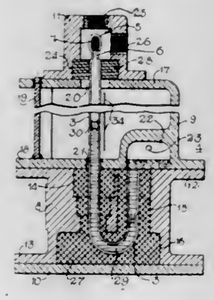
1,509,030. ENDLESS-TRACK VEHICLE. IRÉNÉ ROY, Paris, France. Filed June 28, 1920. Serial No. 392,308. 1 Claim. (Cl. 180—9.1.)



In a motor-vehicle, the combination of a frame, two endless tracks, raisable wheels mounted on this frame and adapted to be geared into different positions with reference to this frame so as to cause the vehicle to rest sometimes upon the endless tracks and sometimes upon the wheels, a motor, a cross-shaft divided into two parts, a differential gear interposed between said motor and shaft, brakes with independent drive means respectively arranged on these parts of shaft, two fixed cross-shafts, sleeves free to revolve and to slide on these latter shafts and driven by said parts of shaft, two chain pinions revolving loosely on every one of these sleeves, driving the one, the wheel, the other the respective endless track, and means for connecting at will the one or the other of these pinions with the corresponding sleeve.

1,509,031. JOINT-TIGHTENING DEVICE. CARL R. SANDSTROM, Austin, Tex. Filed Sept. 4, 1923. Serial No. 660,844. 4 Claims. (Cl. 287—100.)

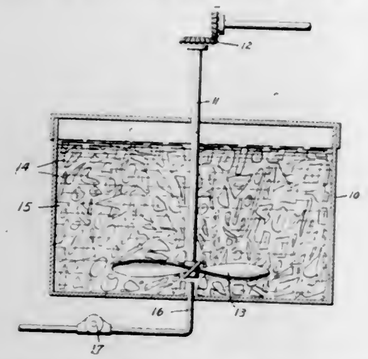
1. Means for tightening the pivotal connection of two elements comprising metallic disks formed with extensions terminating in clips engaged upon said members, a fiber disk disposed between said metallic disks, and a bolt passing through all of the disks and carrying a clamping nut, and a spring washer engaged upon the uppermost metallic disk and engaged beneath the head of the bolt.



1,509,032. PARACHUTE ATTACHMENT FOR AIRSHIPS. IGNAZIO J. SCALISI, Cleveland, Ohio. Filed Feb. 18, 1924. Serial No. 693,430. 5 Claims. (Cl. 244—21.)

1. The combination with an airship including a supporting plane having a parachute receiving compartment arranged entirely between the normal surfaces thereof, a cover for the compartment which constitutes one of the surfaces of the plane when in a closed position, a parachute anchor arranged within the compartment and firmly secured to the frame of the airship, a collapsible parachute normally housed within the compartment and attached to the said anchor, and means for opening the cover to release the parachute in an emergency.

3. The combination with an airship provided with a parachute receiving compartment, of a cover for the compartment, a parachute adapted to be collapsed within the compartment, means for opening the cover, and a member projecting from the airship and provided with means for engaging the cover to hold it in an open position.

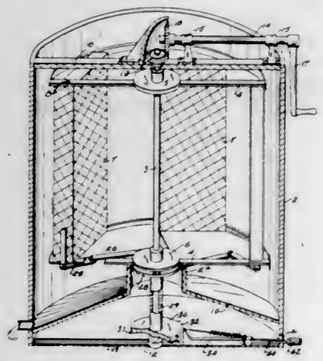


1,509,033. CONDENSER-EFFICIENCY GAUGE. ARTHUR EDWIN LEIGH SCANES, Ashton-on-Mersey, England. Filed Nov. 4, 1922. Serial No. 599,041. 11 Claims. (Cl. 73—51.)

1. A gauge of the character stated comprising a tube adapted to contain liquid and having one end sealed and the other end open, means whereby the open end of said tube is liquid sealed, liquid absorbing substance in the sealed end of the tube and means through which fluid can be circulated in thermal association with the portion of the tube containing the liquid absorbing substance.

1,509,034. MANUFACTURE OF CELLULOSE. FRED CURTIS THORNLEY and FRANK FORD TAPPING, Knightsbridge, London, and OTTO REYNARD, Inkerman Terrace, London, England; said Tapping and said Reynard assignors to said Thornley. Filed Dec. 10, 1923. Serial No. 679,755. 4 Claims. (Cl. 92—11.)

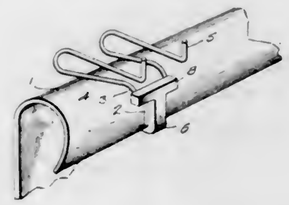
1. A process for the manufacture of cellulose from finely divided vegetable substances such as woody matter, which comprises introducing sulfur dioxide into a liquid medium in which the vegetable substances are suspended and subjecting the entering gas and liquid



medium to intense mechanical agitation whereby an intimate mixture of the gas and liquid medium is produced.

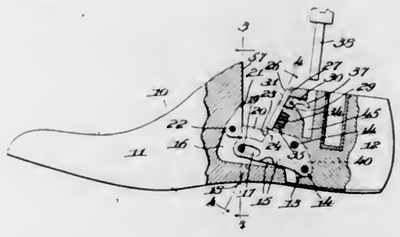
1,509,035. PROCESS FOR THE UTILIZATION OF SEAWEED. FRED CURTIS THORNLEY and FRANK FORD TAPPING, Knightsbridge, London, and OTTO REYNARD, Inkerman Terrace, London, England; said Tapping and said Reynard assignors to said Thornley. Filed Dec. 10, 1923. Serial No. 679,756. 5 Claims. (Cl. 92—20.)

1. A cold process of preparing an agglutinating pulp from fresh seaweed containing the constituents in substantially the original proportions, which consists in converting the alginic acid present in the seaweed to alginate by macerating and grinding the seaweed to a condition of colloidal fineness, and treating the same in such condition with a small proportion of alkali material, so that the said conversion occurs without application of heat.



1,509,036. HONEY EXTRACTOR. GEORGE L. EMERSON, Los Angeles, Calif., assignor to Victor V. Kunkel, Los Angeles, Calif. Filed Jan. 20, 1920. Serial No. 352,779. 5 Claims. (Cl. 210—65.)

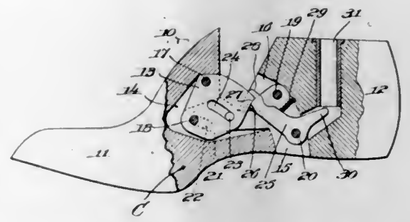
2. In a centrifugal honey extractor a vessel having a bottom provided with a bearing for an upright shaft, an upright shaft journaled for rotation in said bearing, a reel carried from said shaft and provided with reversible honey comb receiving baskets, an inclined false bottom for said vessel, the center of which false bottom is provided with an opening to receive the lower portion of the upright shaft and an annular wall on said false bottom around said opening, the upper portion of which



annular wall terminates in a horizontal plane above the plane occupied by the lower portions of the reel whereby the latter will sweep through the upper strata of liquid honey before the same overflows the upper edge of said annular wall.

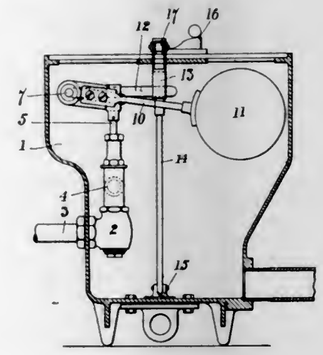
1,509,037. SOAP RACK. GRANVEL FRANKLIN, Flint, Mich. Filed Mar. 2, 1923. Serial No. 622,355. 3 Claims. (Cl. 45—28.)

1. A soap bracket of the class described formed from a single strand of wire bent so as to form a pair of connected spaced parallel L-shaped members terminating in curved extensions and U-shaped members formed on the curved extensions so that their legs extend substantially parallel with the lower legs of the L-shaped members.



1,509,038. LAST. ALEXANDER GODFREY, Haverhill, Mass.; Annie E. Godfrey and Arthur C. Murphy, both of Haverhill, Mass., executors of said Alexander Godfrey, deceased. Filed July 20, 1921. Serial No. 486,214. 10 Claims. (Cl. 12—136.)

1. In a last of the class described, the combination of a two-part last adapted to be hinged, the pivotal center of which is approximately in a plane with the bottom of the heel part, of a hinge comprising a member fast with the forepart and a member fast with the heel part; guiding means in one of said members adapted to be entered by the other member; means coacting with said heel part member adapted to further aid in the guidance of said member; and means coacting with one of said members to lock the said last in extended position.

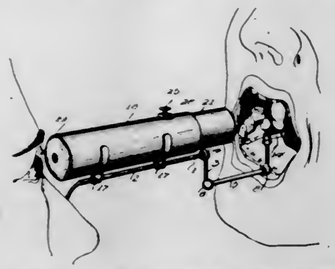


1,509,039. LAST. ALEXANDER GODFREY, Haverhill, Mass.; Annie E. Godfrey and Arthur C. Murphy, both of Haverhill, Mass., executors of said Alexander Godfrey, deceased. Filed Dec. 29, 1922. Serial No. 609,755. 8 Claims. (Cl. 12—136.)

1. In a last of the class described, the combination of a two-part last adapted to be hinged, the pivotal center of which is located below a plane intersecting the toe and heel tips; of a hinge comprising a member fast with the forepart in a slot provided therefor, and a member fast in a slot of the heel part; means to fasten each of said members in its respective slot, said first member having a slot therein adapted to be entered by a stud projecting from said second member; said second member having a slot parallel to the slot of said first member and adapted to be entered by one of the fastening devices of said first member, said slots and said stud and fastening device being the means to retain said fore and heel parts in operative relation; a latch pivotally mounted on one of the fastening de-

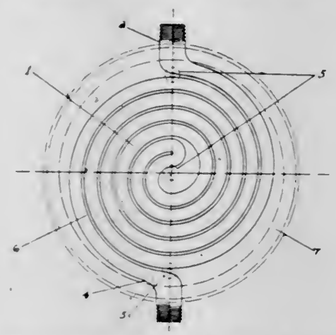
vices for said second member adapted to coact with said first member to lock the last in extended position; means to normally retain said latch in locking position; and means to disengage said latch from said first member when said last is to be collapsed.

1,509,040. APPARATUS FOR PREVENTING WASTE OF WATER IN BATHS AND THE LIKE. FRANCIS H. HORTON, London, England, assignor of one-half to G. N. Haden & Sons Limited, Trowbridge Wilts, England. Filed Nov. 6, 1923. Serial No. 673,155. 6 Claims. (Cl. 4—194.)



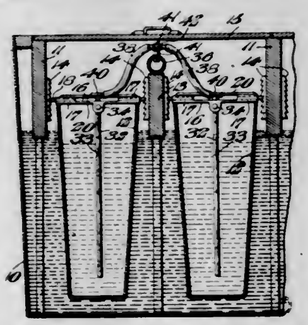
1. Apparatus for preventing waste of water and for use with baths said apparatus comprising a vessel, a connection for water between the vessel and the bath to maintain a uniform level of liquid in said vessel and bath, a water supply valve in the vessel, a float adapted to close the valve when a predetermined level has been reached by the water and a holding means, adapted to engage the float and to releasably sustain it and thus keep the valve closed when the vessel and the bath are emptied.

1,509,041. DENTAL APPLIANCE. HARRY T. HYAMS, De Kalb, Tex. Filed Dec. 5, 1922. Serial No. 605,082. 5 Claims. (Cl. 128—11.)



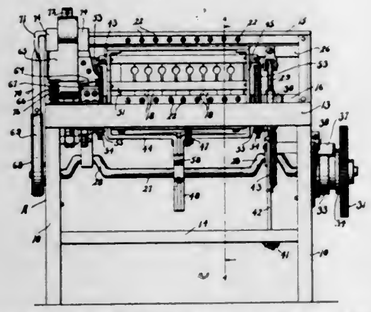
4. In an instrument of the character described, a tubular eye-piece comprising two telescopic sections, having end walls at their remote ends, said end walls having aligned openings therethrough, means for releasably securing the sections together in adjusted relation, a handle having a rigid portion supporting the eye-piece and extending at one end beyond the forward end of the latter, said

handle also including a flexible portion connected at one end to said one end of the rigid portion, a light emitting means carried by the handle at the other end of the



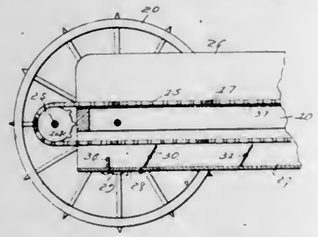
flexible portion and in advance of the forward end of the eye-piece, and a reflector carried by the handle in adjacent relation to the light emitting means.

1,509,042. ELECTRIC WATER HEATER. WILLIAM M. R. KAY, Windsor, Ontario, Canada. Filed Nov. 6, 1922. Serial No. 599,440. 1 Claim. (Cl. 219—39.)



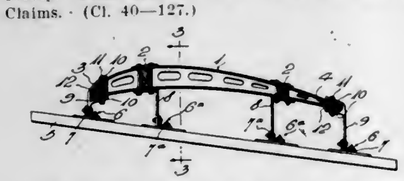
In an electric water heater, a casing or housing, and a lining of non-heat conducting material for said housing, and two coils of flattened rectangular metal conduit, and means for heating said coils comprising two flattened heat resistance elements placed between and adjacent to but insulated from the broad sides of the two said coils, all substantially as set forth.

1,509,043. BRINE-TANK CONSTRUCTION. LOUIS KOBASH, Maple Shade, N. J. Filed Jan. 26, 1924. Serial No. 688,646. 6 Claims. (Cl. 62—159.)



3. In combination a brine containing tank, a frame arranged in said tank to provide a freezing-can receiving compartment, a rack-bar fitted to opposed faces of said frame, a freezing can, a member arranged upon said can and provided with suitable bolts for engaging with said rack-bars to maintain said can properly immersed, a perforated tube for supplying air to said can pivotally carried by said member, and means for supplying air to said tube.

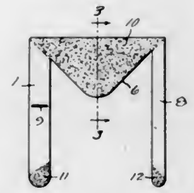
1,509,044. WIRE-STRIPPING MACHINE. PETER W. KUCHMUK, Chicago, Ill. Filed Dec. 7, 1923. Serial No. 679,202. 10 Claims. (Cl. 81—9.5.)



1. A wire stripping machine of the character described comprising a supporting structure, wire stripping means designed to receive and clamp the wires, means for automatically drawing the wires away from said means whereupon said wires are stripped, said last mentioned means including a yoke mounted for pivotal movement and movable toward and away from the stripping means, and a clamp carried by said yoke for clamping all of the wires to be stripped.

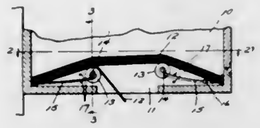
1,509,045. BUNDLE CARRIER. GEORGE W. KUEBER, Killam, Alberta, Canada. Filed Jan. 3, 1920. Serial No. 349,333. 2 Claims. (Cl. 56—207.)

1. A bundle carrier having a frame, an endless conveyor mounted upon the frame, a grain box arranged beneath the conveyor and provided at one end with a closure, and movable baffles arranged at intervals through the length of said grain box for normally preventing the shifting of grain received thereby.



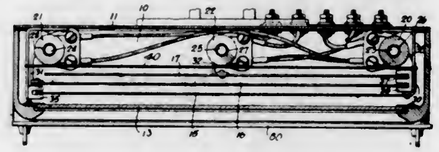
1,509,046. ADVERTISING SIGN. PETER LA GRASSA, New York, N. Y., assignor to Night Aero Advertising Corporation, New York, N. Y., a Corporation of New Jersey. Filed Mar. 11, 1924. Serial No. 698,516. 4 Claims. (Cl. 40—127.)

1. The combination with an aircraft having a supporting plane, of a sign under said plane, and supporting means for said sign including plane-carried hangers



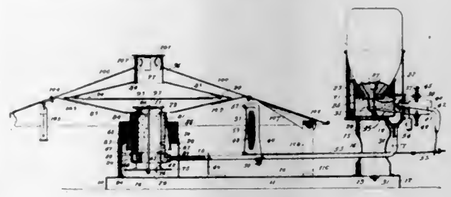
spaced inwardly from the front and rear edges of the plane, and other hangers having vertically spaced arms embracing said front and rear edges of the plane and secured thereto.

1,509,047. RUG FASTENER. RUDOLPH J. LINDHORST, Cleveland, Ohio. Filed Apr. 19, 1923. Serial No. 633,151. 3 Claims. (Cl. 154—49.)



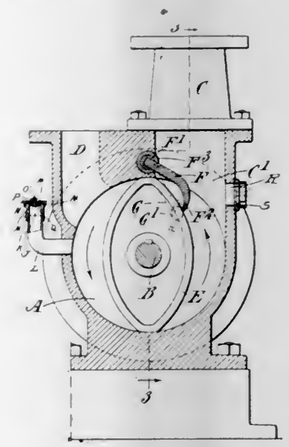
2. A rug fastener comprising a piece of material having adhesive on both sides thereof, whereby it may be stuck to the under side of a rug and also stuck to a floor, the piece of material having projecting arms adapted to be folded over the corners of a rug and having means to retain the same in folded position.

1,509,048. DISPENSING CABINET. MOSES M. MARCUSE, New York, N. Y. Filed May 9, 1922. Serial No. 559,576. 6 Claims. (Cl. 211—29.)



1. A dispensing cabinet having a bottom provided with a delivery slot and independent supporting means resiliently mounted in said cabinet on opposite sides of said slots, one of said supporting means being lowered relatively to the other, away from the pile, upon the withdrawal of a sheet to relieve the pressure of the pile on the sheet being withdrawn.

1,509,049. REAR-END SIGNAL FOR VEHICLES. CHARLES F. MARSTON, Brooklyn, N. Y., assignor to Auto-Automatic Signal Co., Inc., a Corporation of New York. Filed June 1, 1920. Serial No. 385,517. 3 Claims. (Cl. 177—327.)



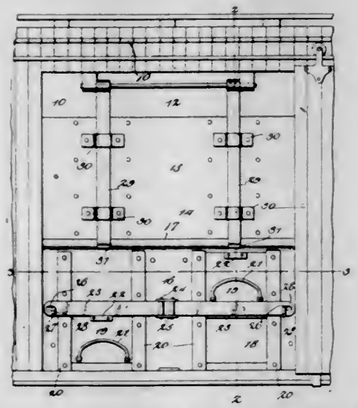
1. A rear end signal for vehicles, comprising a casing having a display window, a plurality of movable indicating members normally one in the rear of another and in non-display position relative to said window, a guide for one of said members arranged at one side of said casing, an actuating element connected with said indicating member at the opposite side of said casing from said guide to move said member into display position in said window, guides for the other indicating members arranged at the side of the casing adjacent said actuating element, and other actuating elements connected with the last named indicating members at points remote from the guides therefor for moving said indicating members into display positions in said window.

1,509,050. OIL-BURNING COLONY BROODER. PERRY S. MARTIN, Harrisonburg, Va., assignor to Newtown Giant Incubator Corporation, Harrisonburg, Va., a Corporation of Virginia. Filed Nov. 9, 1920. Serial No. 422,914. 7 Claims. (Cl. 119—32.)

1. In a brooder, a hover, a burner for heating said hover, a heat radiating member between said hover and burner receiving the products of combustion from said burner and discharging through said hover, a shield surrounding said burner, and a baffle beneath said burner for directing air against said shield and to the outside of said radiating member.

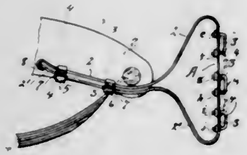
1,509,051. ROTARY PUMP. JAMES GRAHAM MCBRYDE, Romford, England, assignor to Pulco Supplies Limited, London, England, a Company of Great Britain. Filed July 20, 1921. Serial No. 486,039. 2 Claims. (Cl. 103—124.)

1. In apparatus for delivering pulverized or viscous substances, the combination of a substantially cylindrical chamber having an inlet port therein, a discharge conduit leading tangentially into the chamber, an elliptical rotor mounted within the chamber so that its ends make sliding contact with the circumferential wall of the chamber, an adjustable air inlet valve communicating with the chamber between the inlet and discharge ports, a curved pivoted scraper having a knife edge, and means for holding the knife edge of the scraper in constant engagement with the periphery of the rotor, the inner walls of the chamber and discharge conduit being free from any recesses or projections and the scraper and discharge con-



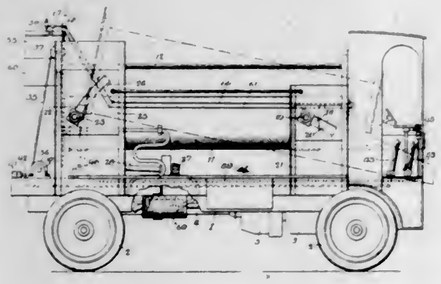
duit being so formed that the latter is never wholly closed while the scraper constitutes a flap adapted to assist in discharging the material under treatment as set forth.

1,509,052. WINDOW. HENRY N. MCGAUGHEY, Nettleton, Miss. Filed July 17, 1923. Serial No. 652,135. 1 Claim. (Cl. 20—40.)



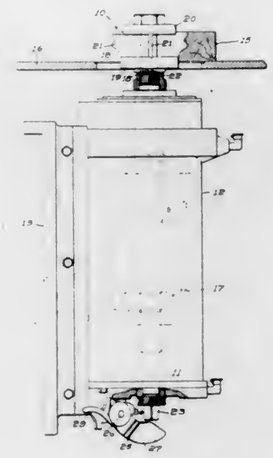
In a window, a frame forming a window opening and including a lower section having a channel therein, a stationary panel at the upper end of said frame forming a partial closure for said opening, a section forming a part of the window slidably engageable with said panel and also engageable in said channel, said window section having an opening and an overhanging hood for said opening, a screw member supported in said frame on the inner side of said stationary panel and connected to said window section to vertically adjust the same, a second window section supported at the lower end of said frame and movable vertically thereon and with respect to the first-named window section to regulate the size of the opening in said first-named window section, and a second screw member carried by the lower section of said frame and connected to said second-named window section to adjust the same.

1,509,053. CAR-DOOR CONSTRUCTION. JAMES W. MCNEICE, Ridgefield Park, N. J. Filed Apr. 15, 1921. Serial No. 461,475. 1 Claim. (Cl. 20—34.)



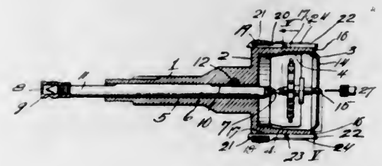
A car door of the character described comprising a pair of horizontally hingedly connected sections normally arranged one above the other, the lower section being provided with spaced openings, strips secured to the side edges of the openings and providing guideways, sliding doors arranged in the guideways, means for retaining the doors in opened or closed position and said means being in the nature of latch elements including a bracket secured to the lower section between the openings, latch members hingedly connected to said bracket and provided with slots in their free ends and a latch element rotatably mounted upon each outer side of each opening to receive the slotted end of the latch members respectively.

1,509,054. VEHICLE BUMPER. EDWARD FARRADEE, Grand Rapids, Mich. Filed Dec. 24, 1923. Serial No. 682,512. 7 Claims. (Cl. 293—55.)



1. In an automobile bumper support, two spring metal bars arranged near their longitudinal center to form straight upright bearing plates, then bent inwardly, then backwardly forming supporting bars spaced apart and lying parallel to the ends thereof, cross bars secured to and connecting the upright supports, said cross bars vertically adjustable upon the supports and the supports arranged for the reception and support of one, or of several of said cross bars, and brackets arranged to engage the flanges on the automobile frame beams and firmly clamp the parallel arms of the support to the frame.

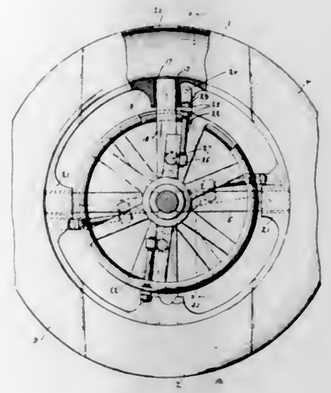
1,509,055. COMBINATION TRUCK AND CONCRETE MIXER. CHARLES PAYNE, Waukegan, Ill. Filed Feb. 19, 1923. Serial No. 619,799. 16 Claims. (Cl. 83—73.)



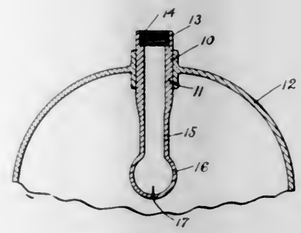
1. Apparatus of the class described comprising a motor vehicle having a cylindrical mixing drum longitudinally arranged thereon in substantially horizontal position and open at its top throughout its length, said drum having a discharge opening at one end thereof, a screw conveyor inside said drum, means connected to the engine of said vehicle for rotating said conveyor in either direction to mix the contents of said drum whereby a thorough mix may be obtained regardless of the point at which the material is charged into said drum, said drum being pivotally mounted near one end thereof and means for raising the other end to discharge the contents through said opening.

1,509,056. SPINDLE-HOLDING MEANS. WILLARD N. SAWYER, Winchendon, Mass., assignor to Baxter D. Whitney & Son, Inc., Winchendon, Mass., a Corporation of Massachusetts. Filed Jan. 15, 1924. Serial No. 686,338. 8 Claims. (Cl. 29—74.)

1. In combination with a machine having a vertical spindle for operating a tool, means for holding the spindle from rotating while a tool is being secured to or removed from the spindle, comprising a lever pivotally mounted near the lower end of the spindle and constructed to form a wrench adapted to be swung into holding engagement with the lower end of the spindle as the lever is rocked.



1,509,057. CHUCK FOR JEWELERS' LATHES. JAMES E. STEWART, Maryville, Mo., assignor of one-third to L. H. Ludwig, Kansas City, Mo., and one-third to Herbert L. Raines, Maryville, Mo. Filed May 15, 1922. Serial No. 561,194. 4 Claims. (Cl. 279—1.)



1. A chuck having a stem provided at one end with a hollow head open at its front end, a plate for fitting on the front end of the head over the open end thereof and provided with a bearing orifice for axial alinement with the axis of the stem, a pump center fitting axially in the stem and axially pointed at one end for engaging with the orifice of the plate to center the same, and means for clamping the plate in place.

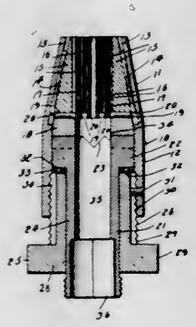
1,509,058. COLLAPSIBLE CORE. HAROLD A. DENMIRE, Akron, Ohio, assignor to The General Tire and Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Mar. 16, 1923. Serial No. 625,487. 8 Claims. (Cl. 154—9.)

1. In a collapsible core, a plurality of core sections, all of said sections being movable toward and from the center of the core, and radially extending arms for guiding the sections in their radial movement, said arms being located in the common plane at the center line of the core, certain of the sections being movable laterally of the core.

1,509,059. VALVE. FRANK W. DODGE, New Haven, Conn. Filed May 29, 1922. Serial No. 564,325. 5 Claims. (Cl. 46—4.)

1. An air valve of rubber comprising a stem portion for association with an air container, a globular head portion provided with a slot and a restricted neck leading from the stem to the globular head, the walls of the said globular head portion and restricted neck being resilient and thinner than the wall of the stem and adapted to be influenced under varying air pressures to cause the opening and closing of the said slot in the globular head portion.

1,509,060. RUBBER GLOVE. FRANK W. DODGE, New Haven, Conn., assignor to The Seamless Rubber Company, Inc., New Haven, Conn., a Corporation of Massachusetts. Filed Nov. 18, 1922. Serial No. 601,901. 4 Claims. (Cl. 2—168.)

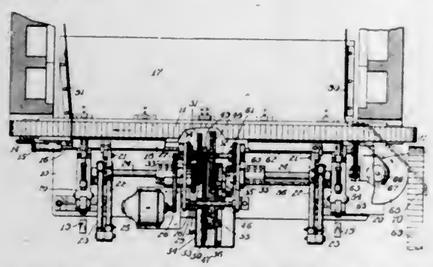


1. A rubber glove provided with rubber, longitudinal reinforcing strips on the front wrist portion, rubber

longitudinal strips on the back and back wrist portion, and transverse rubber reinforcing strips encircling the

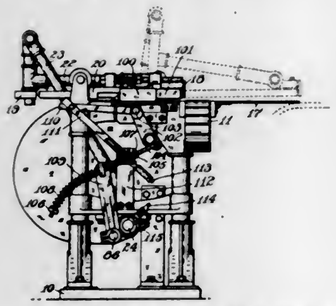
glove at the wrist and open end and adapted to cross and co-operate with the said longitudinal rubber strips on the front and back.

1,509,061. AUTOMATIC GRIPPING AND RELEASING CHUCK. LAURIE O. HARDWICKE, Atlanta, Ga., assignor of one-third to P. C. Miller and one-third to A. T. Miller, both of Richmond County, Ga. Filed Jan. 13, 1923. Serial No. 612,521. 4 Claims. (Cl. 279—60.)



2. A chuck having a shell provided with a tapered end portion, said end portion having grooves therein, jaws having ribs extending into said grooves, the base walls of which grooves constitute cams, a follower within the shell, said follower having ribs, said jaws having slots receiving the last mentioned ribs whereby the jaws may move inwardly towards the axis of the shell and on the follower, an operating head having a disk disposed within the shell, cooperating cam means between the follower and head, a nut screw threaded into the shell and constituting a thrust bearing for said disk, a shank extending outwardly from the disk and journaled in the nut, and means for attachment of said shank to means for imparting turning movement thereto.

1,509,062. FERTILIZING COMPOSITION. ROY H. HOOVER, Freeport, Ill., assignor to R. H. Hoover Laboratories, Inc., Freeport, Ill., a Corporation of Illinois. Filed Dec. 29, 1919. Serial No. 348,041. 4 Claims. (Cl. 71—6.)

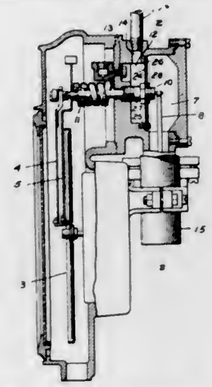


1. A composition consisting of pine oil, oil of wintergreen, oil of star anise and tankage, the oils being combined with the tankage in proportion of one pound of oil to one-hundred pounds of tankage.

1,509,063. LEER FEEDER. WILLIAM H. JOHNSON, Terre Haute, Ind., assignor to Automatic Machinery Company, Terre Haute, Ind., a Corporation of Indiana. Filed Jan. 25, 1923. Serial No. 615,423. 13 Claims. (Cl. 198—31.)

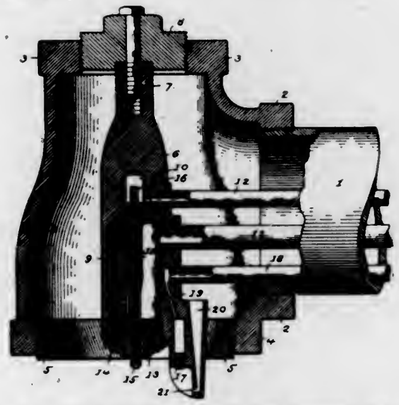
1. In a leer feeder, a carrier for bringing ware to the mouth of the leer, a push bar arranged along side the carrier, a pair of parallel rock shafts, an arm mounted on one of said shafts and arranged to actuate said bar to cause the same to intermittently sweep across the carrier and return, an operating cam, a second arm mounted upon said rock shaft and actuated by said operating cam, an arm mounted on said second rock shaft and actuated by said cam, a second arm mounted on said second rock shaft and means synchronized with the push bar for intermittently interrupting the flow of articles on the carrier to position in front of said push bar operated by the second arm mounted on said second shaft.

1,509,064. LEER FEEDER. WILLIAM H. JOHNSON, Terre Haute, Ind., assignor to Automatic Machinery Company, Terre Haute, Ind., a Corporation of Indiana. Filed Jan. 25, 1923. Serial No. 615,425. 5 Claims. (Cl. 198—31.)



5. In a leer feeder, a carrier for bringing ware to the mouth of a leer, a push bar arranged alongside the carrier, a rock-shaft, connections between the rock-shaft and push bar by which the push bar may be swept laterally across the carrier, a cam acting on said rock-shaft, a stop finger movable into and out of the line of flow of ware to a position in front of the push bar, a second rock-shaft, connections between said second rock-shaft and the cam, an arm carried by the second rock-shaft, a pitman associated with said arm, a pair of oppositely acting springs arranged between said pitman and arm, connections between the pitman and stop finger, a catch carried by the stop finger and serving to retain the stop finger in flow-blocking position against the action of one of said springs, tripping means controlled by the first rock-shaft, and means acted upon by said tripping means for releasing said catch.

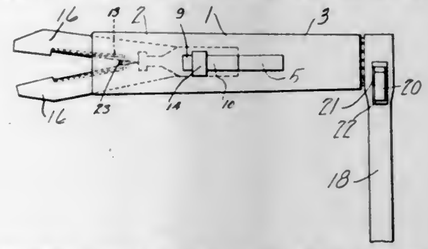
1,509,065. INDICATING METER. THOMAS H. KERR, Columbus, Ohio. Filed Jan. 14, 1922. Serial No. 529,239. 3 Claims. (Cl. 73—167.)



1. In combination in a differential meter having a float chamber and a calibrating chamber, each provided

with a gas inlet port, a gas pervious diaphragm, dividing the float chamber in two compartments, into one of which the gas inlet port of said chamber opens and the other of which forms the liquid reservoir thereof, a Bourdon tube communicating with said chamber on the

gas inlet port side of said diaphragm, a float operating in said liquid reservoir and means actuated by said float, extending through said diaphragm, and a gas pervious diaphragm located in said calibrating chamber, and separating the liquid reservoir portion thereof from the fluid inlet port thereof.

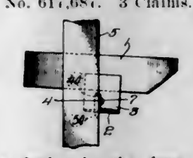


1,509,066. LIQUID-FUEL BURNER. HARRY W. MILLER, Chicago, Ill., assignor to Aladdin Oil Burner Corporation, Chicago, Ill., a Corporation of Illinois. Filed Oct. 8, 1923. Serial No. 667,192. 3 Claims. (Cl. 158—76.)

1. In a burner head for liquid fuel burners, the combination of an enclosing shell having inlet and outlet necks, a jet head arranged centrally in said shell and formed with a lower bore and an upper counterbore, a compressed air supply connected to said lower bore, a liquid fuel supply connected to said counterbore, a jet tube connected to the lower end of said counterbore and having a nipple extending up above the fuel inlet thereof, and an annular bushing fitting the lower end of said lower bore with its orifice encircling the lower portion of the jet tube and forming an annular air passage around the same, the annular bushing having a conical lower end formed with a series of concentric ridges.

1,509,067. SOCKET RATCHET WRENCH. WILLIAM E. DRUMMOND, Chiefland, Fla., assignor of one-half to Morris W. Cooper, Chiefland, Fla. Filed Apr. 23, 1923. Serial No. 633,893. 1 Claim. (Cl. 81—112.)

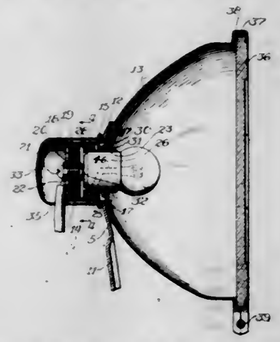
A wrench of the kind described, comprising a shank having at one end a longitudinal rectangular jaw-cavity, and an elongated thumb-stud slot at one side communicating with the jaw-cavity, the opposite end of the shank being reduced to a circular ratchet; a pair of tapered jaws to fit into the jaw-cavity, the jaws being recessed on their inner contiguous faces to form nut-engaging recesses, and jaw bar head engaging notches; a V-shaped spring to fit into the said spring recesses of the jaws; a jaw bar having a draw head adapted to be engaged by the said notches of the jaws and having a



transverse thumb-stud hole in its shank portion; a thumb-stud having a stem adapted to pass through the thumb-stud slot of the shank and fit into the thumb-stud hole of the jaw bar; a pin passed through the shank between the wings of the V-shaped spring; a handle having a ratchet hole adapted to engage the ratchet end of the said shank, and having a lateral pawl slot communicating with the ratchet hole; and a pawl pivotally mounted within said pawl slot and adapted to engage the circular ratchet of the shank.

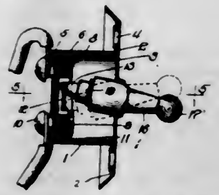
1,509,068. ADJUSTABLE SUPPORT FOR ELECTRIC APPLIANCES. JAMES C. HERRON, Chicago, Ill., assignor to Reflector & Illuminating Co., Chicago, Ill., a Corporation of Illinois. Filed Mar. 26, 1923. Serial No. 627,938. 7 Claims. (Cl. 240—52.)

1. A support for an electric appliance, comprising a stationary member having a hollow and substantially hemispherical tip provided with a slot extending in a medial plane thereof, a movable member comprising a ball disposed within the said tip and a stem projecting through the slot, a thrust member disposed within the stationary member and engaging the ball on the opposite side from the slot; and clamping means operable from outside the stationary member for forcing the tip portions at opposite sides of the slot towards each other and towards the thrust member, so as to cause these tip portions to cooperate in clamping the said ball against the thrust member.



1,509,069. SUPPORTING RACK FOR COLLARS. ALVIN O. JOHNSON, Chicago, Ill., assignor to The Meyercord Company, a Corporation of Illinois. Filed Feb. 8, 1923. Serial No. 617,687. 3 Claims. (Cl. 211—24.)

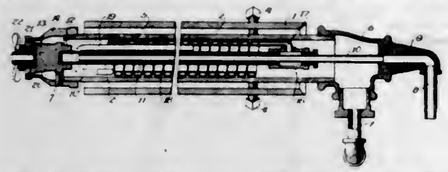
1. A supporting device in the form of a C-shaped member, and a bar lying below the plane of and extend-



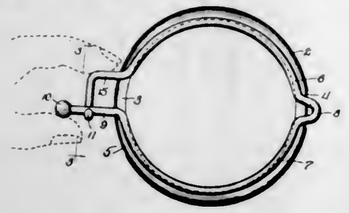
ing across the middle of said member, said bar having at its ends upwardly-projecting arms secured at their upper ends to said member.

1,509,070. VEHICLE LAMP. THOMAS J. KERWIN, Chicago, Ill., assignor to Edmunds & Jones Corporation, a Corporation of New York. Filed Sept. 16, 1922. Serial No. 588,578. 6 Claims. (Cl. 240—41.)

1. A lamp socket and reflector combination comprising a reflector having in its back a circular perforation and a plurality of slits surrounding and spaced from the said perforation, an outer socket shell provided at its forward end with fingers extending forwardly through the said slits and clinched against the forward face of the reflector, an inner shell equipped with notches for interlocking with the base of the lamp, the said inner shell extending slidably through the said circular perforation in the reflector and having a lateral projection spaced rearwardly from the reflector, coacting means on the two socket shells for preventing relative rotation thereof, and a compression spring disposed between the two socket shells and abutting at its ends respectively against the said lateral projection and against the portion of the reflector between the said circular perforation and the said slits.



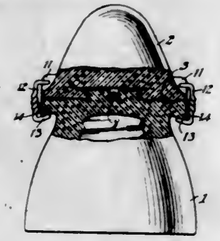
1,509,071. LEVER SWITCH. EDWARD S. PRESTON, Chicago, Ill., assignor to Edmunds & Jones Corporation, a Corporation of New York. Filed June 21, 1922. Serial No. 569,962. 9 Claims. (Cl. 200—164.)



1. A switch lever having a bore extending into the same from one end of the lever, a cup of insulating material disposed in the said bore and having its mouth directed toward the said end, a cylinder within the cup, a shouldered plunger movable in the cylinder and having a tip projecting beyond all the aforesaid parts, the cylinder having its outer end contracted to engage with the plunged shoulder, and a compression spring within the cylinder disposed for urging the plunger to increase the said projecting of its tip.

1,509,072. OIL BURNER. JOHN R. WATTS, Chicago, Ill. Filed Jan. 15, 1923. Serial No. 612,660. 11 Claims. (Cl. 158—75.)

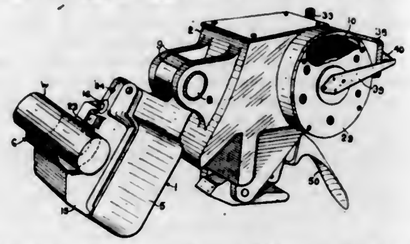
1. An oil burner, a steam casing, an oil duct, a return oil pipe spaced from and surrounding the oil duct, a nozzle connected to the steam casing, and a coiled pipe connected to the inner end of the return pipe and surrounding the return pipe and having its opposite end extending inwardly and disposed between the coils of the coiled pipe and the return pipe so as to cause the oil to traverse the steam casing three times and to then effect discharge of the oil at a point intermediate the length of the coils of the coiled pipe.



1,509,073. SHADE HOLDER. HERMAN V. WILLMAN, Maywood, Ill. Filed Oct. 12, 1922. Serial No. 594,001. 7 Claims. (Cl. 240—134.)

1. In a shade holder, a supporting member having a main slot and a lateral slot leading at one end into the main slot, and a retaining member including two substantially semi-circular resilient wire arms having terminals each extending through the main slot of the supporting member, one of said terminals having a hook-like part engageable with the other terminal, the mouth of which faces toward said end of the lateral slot, the said other terminal being movable into said slot to allow same to be disengaged from the hook-like part.

1,509,074. INSULATOR. JAMES LESLIE WILSON, Davenport, Iowa. Filed Apr. 6, 1921. Serial No. 458,941. 1 Claim. (Cl. 173—314.)



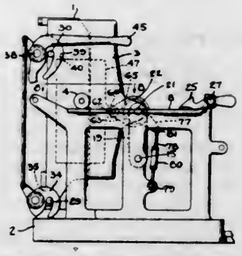
An insulator, comprising a body having at the upper end an annular shoulder and provided on its upper face with spaced ribs of a height a little greater than the diameter of the wire to be held therebetween, said ribs extending entirely across the body and having curved inner edges and straight outer edges, a cover having in its lower face a recess of a depth equal to the height of the ribs, said recess extending entirely across the face of the cover and having straight walls lying close to the straight outer edges of the ribs, and latch members pivoted to opposite sides of the cover and engaging the shoulder of the body to lock the cover on the body with their faces directly in contact with each other.

1,509,075. STEADY REST. CHARLES H. NORTON, Worcester, Mass., assignor to Norton Company, Worcester, Mass., a Corporation of Massachusetts. Filed Jan. 5, 1921. Serial No. 435,097. 19 Claims. (Cl. 51—238.)

1. A steady rest for grinding machines comprising a stand, a member movably mounted on said stand which

is arranged to serve as the sole steadying support for the work during grinding, and means to move said member and apply pressure on the front side only of the work and thereby tend to hold the work away from the wheel and prevent vibrations.

1,509,076. TREATMENT OF SOY BEANS. LÁSZLÓ BERCZELLER, Budapest, Hungary. Filed Apr. 10, 1924. Serial No. 705,701. 10 Claims. (Cl. 99—11.)

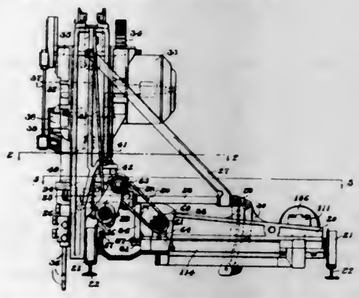


1. A process for purifying soy beans, which comprises subjecting the beans to the action of steam for such a short period of time, that they absorb but a very small amount of water and that the albuminous substances in the said beans remain substantially uninjured.

1,509,077. TORCH. EMANUEL FOLGMAN, Brooklyn, N. Y. Filed Nov. 14, 1923. Serial No. 674,739. 4 Claims. (Cl. 158—35.)

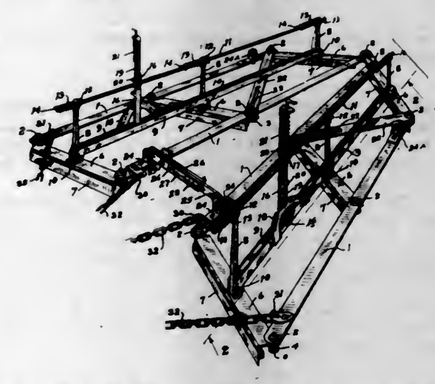
1. In a self-blowing torch, a retort chamber, a body portion forming a fuel reservoir, and a tube extending from the retort chamber to the reservoir and provided intermediate of its ends with a gas discharging opening, said tube constituting means for discharging gas formed in the retort chamber and discharging gas formed in the reservoir.

1,509,078. STEREOTYPE-PLATE-CASTING MACHINE. ALBERT A. HENZI, Chicago, Ill., assignor to Goss Printing Press Company, a Corporation of Illinois. Filed Sept. 4, 1920. Serial No. 408,203. 38 Claims. (Cl. 22—2.)



1. A stereotype plate casting machine including in combination a core, a drag carrying the plate from plate casting position to plate discharging position, a matrix in the drag, and means including an eccentric mechanism for moving the matrix and plate apart during said traveling of the drag.

1,509,079. BRICK-MACHINE MOLD. JAMES P. MARTIN, Lancaster, Pa., assignor to Lancaster Iron Works, Inc., Lancaster, Pa., a Corporation of Pennsylvania. Filed Feb. 28, 1924. Serial No. 695,682. 2 Claims. (Cl. 25—119.)



1. A brick machine mold having side and end pieces and having at its ends projecting bumping members and provided at the ends with solid metal plates co-extensive as unitary structures not only with the top surfaces of the members but also with the top edge of the adjacent end piece.

1,509,080. STONEWORKING MACHINE. HENRY H. MERCER, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Mar. 4, 1918, Serial No. 220,265. Renewed Feb. 23, 1924. 65 Claims. (Cl. 262—18.)

1. In a machine of the character described, in combination, a truck, a standard adjustably mounted thereon for adjustment in a plane transverse to said truck, cutting appliances on said standard, feeding means on said standard for moving said cutting appliances toward and from the work, a motor on said truck, and driving connections between said motor and said feeding means including shafting adjustable with respect to said standard so as to be substantially perpendicular to the latter in any position thereof in said plane.

1,509,081. ROAD DRAG. ROY COON, Windsor, Colo. Filed Feb. 18, 1924. Serial No. 693,500. 3 Claims. (Cl. 37—151.)

1. A road drag section comprising a pair of parallel bars, said bars having pivots connected thereto at spaced intervals, each of said pivots having transverse openings forming bearings, angular scraper members pivotally

mounted in said bearings, and means for adjusting the angular relationship of the bars and scrapers in the plane of the section, means for adjusting the scrapers angularly in said bearings, said last-named means having resilient means for yieldingly holding the scrapers in adjusted position.

1,509,082. IMPERISHABLE BUTTER. CHARLES E. NORTH, Montclair, N. J., assignor to The Milk Oil Corporation, Wilmington, Del., a Corporation of Delaware. Filed Nov. 2, 1922. Serial No. 598,511. 2 Claims. (Cl. 99—13.)

1. The process herein described of making imperishable butter which consists in emulsifying pure milk oil, water and a nondecomposable thickener in the relative proportions in which the corresponding ingredients are present in natural creams and churning this product to produce the butter.

1,509,083. IMPERISHABLE MILK. CHARLES E. NORTH, Montclair, N. J., assignor to The Milk Oil Corporation, Wilmington, Del., a Corporation of Delaware. Filed Nov. 2, 1922. Serial No. 598,512. 2 Claims. (Cl. 99—11.)

1. The process herein described of producing imitation and imperishable milk or cream which consists in emulsifying milk oil, water and such a thickener as a vegetable gum which is capable of producing a permanent emulsion, the milk oil and water being in such proportionate amounts as are present in the natural products imitated.

1,509,084. PROCESS OF CHURNING CREAM. CHARLES E. NORTH, Montclair, N. J., assignor to The Milk Oil Corporation, Wilmington, Del., a Corporation of Delaware. Filed Dec. 21, 1922. Serial No. 608,336. 4 Claims. (Cl. 99—13.)

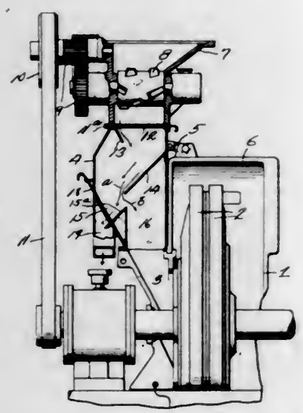
3. The process of churning hereinbefore set forth, which consists in passing whole milk through a cream separator, diluting the resulting cream with a volume of water substantially equal to the skim milk separated, passing this mixture through a cream separator to wash the cream, and then churning the washed cream.

1,509,085. PROCESS FOR WHIPPING RECONSTRUCTED CREAM. CHARLES E. NORTH, Montclair, N. J., assignor to The Milk Oil Corporation, Wilmington, Del., a Corporation of Delaware. Filed Jan. 19, 1923. Serial No. 613,766. 2 Claims. (Cl. 99—11.)

2. The process of producing whipped reconstructed cream which consists in producing reconstructed milk, separating out the cream in a form in which it is free from all undissolved or suspended milk solids not fat and whipping the same.

1,509,086. PROCESS OF MAKING BUTTER FROM MILK OIL. CHARLES E. NORTH, Montclair, N. J., assignor to The Milk Oil Corporation, Wilmington, Del., a Corporation of Delaware. Filed Mar. 28, 1924. Serial No. 702,568. 7 Claims. (Cl. 99—13.)

2. The process of making butter without churning, which consists in mixing together milk oil, dried milk solids not fat, and water at a temperature above the melting point of the fat and in proportions to form an emulsified paste of high fat concentration, cooling such paste to a temperature at which the fat has a tendency to agglomerate, and then pressing or squeezing the same to produce such agglomeration and the discharge of the excess of butter milk.



1,509,087. PROCESS OF MAKING BUTTER FROM MILK OIL. CHARLES E. NORTH, Montclair, N. J., assignor to The Milk Oil Corporation, Wilmington, Del., a Corporation of Delaware. Filed Mar. 28, 1924. Serial No. 702,569. 6 Claims. (Cl. 99—13.)

1. The process of making butter from milk oil, which consists in emulsifying milk fat or oil and milk fluid at a temperature above the melting point of the fat to produce a reconstructed cream or milk oil emulsion having a high fat concentration, cooling the emulsion to a temperature at which the fat has a tendency to agglomerate, and then pressing or squeezing the same to effect such agglomeration and the discharge of the excess buttermilk.

1,509,088. MAKING BUTTER FROM MILK OIL. CHARLES E. NORTH, Montclair, N. J., assignor to The Milk Oil Corporation, Wilmington, Del., a Corporation of Delaware. Filed Apr. 11, 1924. Serial No. 705,931. 3 Claims. (Cl. 99—13.)

3. The method of making butter from milk oil which consists in mixing milk oil and milk fluid in proportions to produce a high fat concentration and at a temperature above the melting point of the milk oil, cooling the mixture to increase its viscosity to a point where the internal friction causes emulsification of the milk oil as a result of stirring and then to a temperature at which it will be converted into butter by the simple application of pressure.

1,509,089. ATTRITION-MILL SEPARATOR. JOHN J. CZAREY, HENRY H. WHITLEY, and MICHAEL KREUSER, West Allis, Wis. Filed Nov. 9, 1923. Serial No. 673,727. 1 Claim. (Cl. 83—11.)

The combination with an attrition mill, a hopper carried by said mill, of a separator interposed between the hopper and mill, a door interposed between the separator and hopper, a deflecting plate adjacent the inner end of the said door, an oppositely extending deflecting plate within the hopper below the first mentioned deflecting plate, a foreign material compartment communicating with said hopper and having an inclined base, between the upper end of which and the lower end of said second deflecting plate, is a passage way for material to be reduced, a door forming the outer wall of the foreign matter compartment and discharge spouts for said foreign compartment and for the separated material respectively.

Patents Nos. 1,509,090 to 1,509,819.

THE OFFICIAL GAZETTE OF THE United States Patent Office.

Vol. 326—No. 4. TUESDAY, SEPTEMBER 23, 1924. Price—$5 per year.

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $5.00 per annum; single numbers, 10 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

(ORDER No. 2,877.)

U. S. PATENT OFFICE, *Washington, Aug. 1, 1924.*

Acting under the provisions of section 487 of the Revised Statutes of the United States, as amended February 18, 1922, Mr. Harry L. Smith, of 925 Jefferson Building, 1015 Chestnut Street, Philadelphia, Pa., whose registration number is 3,587, has this day been disbarred from practice before the United States Patent Office.

THOMAS E. ROBERTSON,
Commissioner.

Interference Notices.

U. S. PATENT OFFICE, *Washington, Aug. 27, 1924.*

Zucker & Levett & Loeb Company, its assigns or legal representatives, take notice:

An interference having been declared by this Office between A. P. Munning & Co., 52 Vesey Street, New York, N. Y., for registration of a trade-mark and trade-mark registered June 23, 1908, No. 69,580, to Zucker & Levett & Loeb Company, New York, N. Y., and a notice of such declaration sent by registered mail to said Zucker & Levett & Loeb Company at the said address having been returned by the post-office authorities as undeliverable, notice is hereby given that unless said Zucker & Levett & Loeb Company, its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

KARL FENNING, *Acting Commissioner.*

U. S. PATENT OFFICE, *Washington, Sept. 3, 1924.*

Rubber Company of America, its assigns or legal representatives, take notice:

An interference having been declared by this Office between the Continental Tire Corporation, 1508 South Michigan Avenue, Chicago, Ill., for registration of a trade-mark and trade-mark registered June 14, 1910, No. 78,446, to Rubber Company of America, 249–251 Ocean Avenue, Jersey City, N. J., and a notice of such declaration sent by registered mail to said Rubber Company of America at the said address having been returned by the post-office authorities as undeliverable, notice is hereby given that unless said Rubber Company of America, its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

KARL FENNING, *Acting Commissioner.*

U. S. PATENT OFFICE, *Washington, Sept. 11, 1924.*

Herman Zohrlaut Leather Co., its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of C. Trautman & Company, 614 Main Street, Cincinnati, Ohio, for registration of a trade-mark and trade-mark registered November 9, 1897, No. 30,801, to Herman Zohrlaut Leather Co., 783 to 825 North Water Street, Milwaukee, Wis., and 115–117 Summer Street, Boston, Mass., and the Office having failed to secure service on said Herman Zohrlaut Leather Co., notice is hereby given that unless said Herman Zohrlaut Leather Co., its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

KARL FENNING, *Acting Commissioner.*

Notice of Cancellation.

U. S. PATENT OFFICE, *Washington, Sept. 3, 1924.*

Boston Pneumatic Action Company, its assigns or legal representatives, take notice:

A cancellation proceeding having been instituted by this Office upon the application of the M. S. Wright Company, of Worcester, Mass., to effect the cancellation of the trade-mark registration of the Boston Pneumatic Action Company, of 1075 Washington Street, Boston, Mass., No. 83,132, dated August 22, 1911, and the notice of such proceeding sent by registered mail to the said Boston Pneumatic Action Company at the said address having been returned by the post-office authorities as undeliverable, notice is hereby given that unless said Boston Pneumatic Action Company, its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the cancellation will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

KARL FENNING, *Acting Commissioner.*

ADJUDICATED PATENTS.

(C. C. A. N. Y.) Bird patent, No. 1,036,427, for roofing material, *Held* valid and infringed. *Bird* v. *Sears, Roebuck & Co.*, 299 Fed. Rep. 574.

Condition of Applications Under Examination at Close of Business September 12, 1924.

DECISIONS IN PATENT AND TRADE-MARK CASES.

Commissioner's Decision.

EX PARTE HAMMOND, JR.

Decided February 8, 1923.

CLAIMS—OVERLAPPING ELEMENTS.

Where several sets of mechanisms cooperate to produce the desired result, a claim which recites these separate sets of mechanisms and their respective functions is not, ordinarily, objectionable as including an element twice because some one element, such as a power shaft, a drive gear, or a source of electric or other energy, is common to and cooperates with all such sets of mechanisms.

(Note.—This application has resulted in Patent No. 1,491,773, April 22, 1924.)

APPEAL from the Examiners in Chief.

SELECTIVE-WAVE TRANSMISSION SYSTEM.

Messrs. Messimer & Austin and *Mr. A. I. Gardner* for the applicant.

KINNAN, *First Assistant Commissioner:*

The applicant has appealed from the decision of the Examiners in Chief affirming that of the Primary Examiner denying patentability to claims 2, 3, 15, 16, 18, and 19. Claims 2, 15, and 16 will serve sufficiently for illustrative purposes:

2. In a system of wave transmission, the combination of means for producing waves of a predetermined frequency, of means operative to form said waves into a series of groups of a predetermined group frequency above the limits of audibility and make and break means to form said series of groups into sets having a set frequency within the limits of audibility.

15. In a transmission system, the combination with means for producing impulses of a predetermined frequency, of means operative to impress upon said impulses a series of periodic variations having a frequency different from said first mentioned frequency, and means automatically operative to interrupt said impulses periodically at a frequency different from said first mentioned frequencies.

16. In a transmission system, the combination with means for producing periodic impulses of a predetermined frequency, of means acting inductively upon said impulses to impress thereon periodic variations having a frequency different from said first mentioned frequency, and means automatically operative to modify said impulses periodically at a frequency different from said first mentioned frequencies.

The references are: Fessenden, 727,330, May 5, 1903; Ehret, 785,804, March 28, 1905; Eastham, 1,056,893, March 25, 1913; British patent, 19,922 of 1909; German patent, 221,791.

The alleged invention, as recited in the appealed claims, comprises a transmitting system for selective electromagnetic wave signaling in which high-frequency waves are produced, and these have superimposed upon them a series of wave groups of a lower frequency. These wave groups are then broken up into sets or groups at, of course, a still lower frequency. The arrangement shown in Figure 3 has been held by the Examiner to support the claims appealed, and this holding is not disputed by the appellant.

There is no serious dispute as to the operation of devices constituting the system disclosed in this Fig. 3. Applying the appealed claims to this figure, appellant notes that the source of alternating current at H^1 and the circuit through the interrupter, the sending key, and the primary coil L^2 constitute the means for producing the high-frequency waves, while the alternating-current generator G by varying the field winding of the generator H^1 superimposes on these waves a group frequency which is broken up into group sets by the interrupter I^2.

In thus applying the claims the appellant contends the three sets of "means" recited in the claims for accomplishing these three functions are separate and distinct means, not overlapping in any way, and not requiring the reading of any part of one set of means as a portion of another set of means. In attempting to read the appealed claims upon the references, however, appellant contends that it is necessary to read some of the elements of one set as constituting part of the other set of "means"—that is, that some of the elements must be read twice in order to hold the claims met. Where several sets of mechanisms cooperate to produce the desired result, a claim which recites the separate sets of mechanisms and their respective functions is not, ordinarily, objectionable as including an element twice because some one element, such as a power shaft, a drive gear, or a source of electric or other energy, is common to and cooperates with all such sets of mechanism. Applying this interpretation in connection with claims 2, 3, and 15 to Fessenden's transmitter of his Fig. 1, the battery may be regarded as a common source of energy, an element common to the various sets of mechanisms or "means" recited in these claims. The circuits 3, 4, 6, 5, and possibly the antenna circuit, must be deemed the "means" for producing waves of a predetermined frequency, while the coils 7 and 8 function to choke back surges from this high-frequency oscillatory circuit, although, it is true, they are not necessarily a part of the means which transforms the energy of the battery into the waves. With this view it becomes plain the second means, "the means to form" (claim 2), or "to impress" (claims 3 and 15), the groups can be correctly read as the coil 8, while the motor and the tuning-fork arrangement function as the means for forming the groups into sets by short-circuiting the coil and varying the energy supplied from the battery. It would seem plain, therefore, that claims 2, 3, and 15 are too broadly stated in view of this reference.

In the Eastham patent there is disclosed the generator G, which supplies energy to the entire transmitting system. Also there is found, plainly enough, the means—the conductor, spark gap, and the primary of the antennæ coupling—"for producing the impulses of a predetermined frequency."

Likewise there is the means—the mechanism for rotating one member of the spark-gap coupling—to impress upon the impulses "a series of periodic variations;" but the generator G is common to both these sets of means to the extent that it furnishes the necessary energy for them to produce the specified functions, and to read such alternator as constituting other means—the "means to interrupt the impulses"—seems to be giving the reference or the claim a strained and unfair interpretation. It is not thought this patent anticipates claims 15, 16, and 18. Claims 16 and 18 are therefore deemed patentable over the art of record.

Claim 19 is held fully met in Fessenden, whose key 15 constitutes the signal-producing means of the claim. This claim is also unpatentable over Fessenden in view of the usual practice of employing a "signaling key" in the relation shown in the Ehret patent.

The two foreign patents do not seem to me to be as pertinent as the references above discussed.

The decision of the Examiners in Chief is affirmed as to claims 2, 3, 15, and 19 and reversed as to claims 16 and 18.

Commissioner's Decision.

EX PARTE HAMMOND.

Decided March 2, 1922.

1. DIVISIONAL APPLICATION—NOT PATENTABLY DIFFERENT FROM PARENT APPLICATION—REVERSAL OF PARTS—DOUBLE PATENTING.

Where the sole structural difference between the form specifically claimed in the parent application and the form presented in the divisional application resides in making a dial rotate upon a particular shaft in the one and in making the dial fixed and a pointer rotate upon the same shaft in the other, and the art shows in similar devices that it is equally well known that the pointer may rotate with the shaft and indicate the reading on a fixed dial or that the latter may rotate and indicate in an opening in a fixed part, *Held* that there is only one inventive feature present in the two applications.

2. DOUBLE PATENTING.

If two patents are to be granted to the same inventor there must be two inventions, although one may be wholly dependent on the other.

APPEAL from Examiners in Chief.

PRESSURE GAUGE.

Messrs. Fraser, Turk & Myers for the applicant.

KINNAN, *First Assistant Commissioner:*

The applicant has appealed from the decision of the Examiners in Chief affirming that of the Primary Examiner rejecting the claims, which are four in number. In view of the ground upon which the rejection is based it is not necessary to copy the claims.

It appears this applicant has a parent application, of which the present case is a division, which discloses two specific forms of the pressure gauge, one of which is identical with that disclosed in the appealed case. The parent case includes a number of claims generic to these two specifically different embodiments or forms, which claims appear allowable to this applicant in view of the termination of the interferences in which such claims were involved.

[1, 2] The sole structural difference between the two specific forms resides in making the dial rotate upon the shaft 10 in the form specifically claimed in the parent application, and in the form presented in the appealed case making the dial fixed and the pointer rotate upon this same shaft 10. The art shows in gauges similar to that disclosed in the case at bar that it is equally well known that the pointer may rotate with the shaft and indicate the reading on a fixed dial or that the latter may rotate and indicate the pressures in an opening in a fixed part. The two specific forms disclosed in the parent and the present application, therefore, differ only in an old and obviously-reversible detail. The inventive concept is independent of this structural difference. It must be held, in consequence, that there is only one inventive feature present in the parent and the appealed case. It is elemental that if two patents are to be granted there must be two inventions, although one may be wholly dependent upon the other. Mere obvious changes dependent upon the presence of one and the same inventive embodiment can not form the basis for the grant of independent patents. The law presumes the existence of equivalents, and the present art shows that these two different forms of indicating means are recognized equivalents.

The statement of counsel that appellant desires a claim specific to the form disclosed in the case at bar for the purpose of bringing an action for infringement is not overlooked. The contention, also, that appellant should not be compelled to prove equivalency in the action he proposes to bring is noted. It would seem, however, that by having both these forms in his parent application, covered by generic claims, would, when the patent is issued, be a sufficient basis for the purposes of his suit to the same extent as if he were granted a patent upon the divisional case. It would seem that the presence of both forms in the parent patent, should the parent application mature into a patent, would be sufficient proof of equivalency for the purposes of the action had in view by appellant.

The decision of the Examiners in Chief is affirmed.

Commissioner's Decision.

EX PARTE FOREMAN.

Decided August 2, 1922.

METHOD—CLAIMS FOR—STRUCTURAL LIMITATIONS.

Patentable novelty of method claims can not be based on positive recitations of structural limitations included therein.

(Note.—This application has resulted in Patent No. 1,487,649, March 18, 1924.)

APPEAL from Examiners in Chief.

SAWMILL APPARATUS AND METHOD.

Messrs. Bradford & Doolittle for the applicant.

FENNING, *Assistant Commissioner:*

This is an appeal from the decision of the Examiners in Chief affirming the decision of the Primary Examiner in finally rejecting claims 1 to 18, inclusive, of which the following will serve as examples:

1. The method of sawing boards from logs which comprises carrying the log on a conveyor to move it continuously in a rectangular path and successively sawing the boards from the underside thereof during its travel, and removing the sawed boards singly by retarding them and allowing the remaining log portion to separate therefrom by gravity, substantially as set forth.

5. In an apparatus for sawing boards from logs the combination of a supporting structure, means for moving the log longitudinally on said structure, a horizontal saw for cutting a board from the underside of the log during said movement, inclined conveyors adapted to receive the log and sawed board while together and carry the same transversely, inclined ways adapted to receive the log and board, and stops on said ways adapted to retard the board and separate the same, substantially as set forth.

8. In an apparatus for sawing logs the combination of a supporting structure, a carrier for moving the log longitudinally, a saw for cutting a board from the underside of the log during said movement, a horizontally movable carrier adapted to receive said log and board and move the same transversely, an inclined conveyor adapted to receive the log and board from said carrier, means for receiving the log and board from said conveyor and separate the log from the sawed board, a carrier for receiving the log portion and moving the same longitudinally, and a carrier for receiving the log from said last named carrier and transferring same to the first named carrier, substantially as set forth.

11. In a saw mill, a main vertical saw, a horizontal re-saw, means for conveying the log from the main saw to the re-saw and then successively through said re-saw, and means for retarding the board and separating it from the log following each resawing operation, substantially as set forth.

18. A saw mill comprising initial sawing apparatus for dividing the logs, a re-sawing apparatus for cutting the log-parts formed by the initial saw into boards, conveying means for carrying the log-parts from the initial sawing apparatus to the re-sawing apparatus, said conveying means embodying means for controlling and regulating the feed of said log-parts to said resawing apparatus, substantially as set forth.

The references are: Walton, No. 811,009, Jan. 30, 1906; Cleveland, No. 922,854, May 25, 1909; Kennedy, No. 927,248, July 6, 1909; Williams, No. 996,286, June 27, 1911; Mershon, No. 1,112,822, Oct. 6, 1914.

Claims 1 and 2 were found objectionable on the ground that they are in form method claims which contain recitations of structural limitations. This objection is believed to be well founded, and applies with equal force to claims 14 and 15, which include a "rigid supporting table." Patentable novelty of method claims can not be based on positive recitations of structural limitations included therein.

The series of steps comprising the method covered by claims 1 to 4 and 14 to 17, inclusive, of sawing and resawing logs make out nothing patentable over the prior art as evidenced by the patents cited by the Examiner. Walton discloses a method and means of continuously sawing logs into boards which comprises carrying the log in a rectangular path and successively sawing the boards from the under side of the said log during its travel, and merely to provide his device with a conveyer of the kind shown by Williams for the purpose of conveying the logs from the rollers *l* to *n* would not involve invention. This is especially true, since Walton states (p. 2, lines 1 to 5) that a mechanical means may be provided between such rollers for the purpose indicated, and he himself shows one form of such means *p* at the opposite end of his machine.

Claim 4 specifies that the log is initially reciprocated, and claims 14 to 17 specify that the log is first "slabbed," or divided, which is understood to mean that the log is run through the vertical saw before being resawed. As stated by the Examiners in Chief, no special relationship exists between such steps as defined in these claims.

Claims 5, 6, and 10 to 13 are also deemed unpatentable over Walton and Williams for the reasons mentioned. The "inclined conveyors" included in claims 5 and 6 are considered as being purely colorable over and readable on the conveyers *f'* and G^2 shown by Williams, while the broad combination covered by claim 11, for example, is recognized by the applicant himself on page 1 of the specification as being old. In view of Cleveland, for example, nothing of a patentable nature would be involved by merely providing a conveyer between a vertical saw and resawing apparatus.

Although there is a generic sameness between the resawing devices disclosed by this applicant and Walton, it is not seen that the specific structure covered by claims 7, 8, and 9 as now presented is anticipated by this reference, even when supplemented by Williams's disclosure. The applicant has devised a comparatively simple and automatically-operating machine for transporting the logs between the parallel conveyers of his resawing apparatus. Such machine comprises, among other things, the horizontally-movable carriers, inclined conveyers, and inclined ways, the inclined carriers being necessary in the structure shown to elevate the logs in order that the ways may function in the manner intended.

Williams, on the other hand, does not use inclined conveyers. This patentee provides a somewhat elaborate mechanism for intermittently elevating his horizontally-movable carriers when it is desired to lift a log from the rollers corresponding to applicant's longitudinal conveyer.

The combination covered by claim 18 seems to be met by Cleveland.

The word "carriers" occurring in line 7 of claim 7, should be *conveyors*.

The decision of the Examiners in Chief is affirmed as to claims 1 to 6 and 10 to 18, inclusive, and reversed as to claims 7, 8, and 9.

Court of Appeals of the District of Columbia.

HOWARD COMPANY *v.* BALDWIN COMPANY. HOWARD COMPANY *v.* VALLEY GEM PIANO COMPANY.

Nos. 1,201 and 1,202. Decided March 3, 1919.

1. TRADE-MARKS—NAME OF PERSON OR CORPORATION.

The name of a person or corporation is not susceptible of exclusive appropriation as a trade-mark.

2. SAME—CANCELLATION—PRIOR USE OF MARK WHICH IS INCAPABLE OF EXCLUSIVE APPROPRIATION.

Priority of use of a trade-mark is immaterial in a cancellation proceeding where the mark was incapable of exclusive appropriation when adopted.

3. SAME—NAME OF PERSON OR CORPORATION—PROPERTY.
A man's name is his own property, and he has the same right to its use and enjoyment as he has to that of any other species of property, and the same rule applies to corporations.

4. SAME—SAME—REGISTRATION OF—DAMAGE.
The registration of the name of a party as a trade-mark is an invasion of a property right inhering in the name itself and damage will be presumed.

5. SAME—CANCELLATION—ACT OF 1905—SECTION 13, CONSTRUCTION OF.
Section 13 of the Trade-Mark Act of February 20, 1905, does not alter in any way the right of a registrant to his trade-mark, but merely provides a new remedy in case a trade-mark is registered by a party who never had or who has abandoned any right thereto.

HEARING on an appeal from a decision of the Commissioner of Patents dismissing a petition for cancellation of a registered trade-mark. Reversed.

The facts are stated in the opinion.

Mr. Samuel S. Watson for the R. S. Howard Company.

Mr. J. E. Cross for the Baldwin Company and Valley Gem Piano Company.

VAN ORSDEL, *J.:*

These are cancellation proceedings brought by R. S. Howard Company, a corporation, against the Baldwin Company, a corporation. One is to cancel the certificate of registration of a trade-mark consisting of the word "Howard" registered by the Baldwin Company on October 17, 1905, and the other is to cancel the certificate of registration for a trade-mark consisting of the word "Howard" in connection with the initials "V G P Co" arranged in monogram, registered by the Valley Gem Piano Company on March 8, 1898, and now owned by the Baldwin Company. Both marks were registered as trade-marks for pianos.

These cases were consolidated and heard together in the Patent Office, and will be so considered here. From the decision of the Commissioner denying the petition, the Howard Company appeals.

It appears that appellant corporation was organized in 1902, and that for a number of years prior to that R. S. Howard, the organizer of the corporation, had been an agent for the sale of pianos for the Baldwin Company. During that period, Howard sold pianos extensively throughout the country bearing the trade-mark "Howard." It appears, however, that pianos similarly marked were extensively sold by the Baldwin Company through other agencies than R. S. Howard. After its organization, the Howard Company sold pianos marked on the fall board "R. S. Howard Company," and advertised itself extensively as manufacturers of "Howard" pianos.

This resulted in a suit by the Baldwin Company against the Howard Company for unfair competition in the United States District Court for the Southern District of New York (233 Fed. 439), resulting in a decree restraining the Howard Company from making or selling pianos bearing the word "Howard" alone, but permitting it to use the marks "R. S. Howard Company" and "Robert S. Howard Company." The decree was affirmed by the United States circuit court of appeals (151 C. C. A. 230; 238 Fed. 154).

While an attempt was made to involve the present proceeding in that case, the court refused to interfere with its course in the Patent Office. The district judge, in his opinion, said:

> I am inclined to think if this court has the power, it is inadvisable to seek to prevent the continuance of the cancellation proceedings in the Office. It is plain to me that the object of these proceedings is primarily to get rid of something which constitutes an obstacle to the extension into certain foreign countries (*e. g.*, Cuba and Uruguay) of the business of the R. S. Howard Company. I doubt whether under our law the name "Howard," being a not infrequent surname or place name, can be appropriated as a strict trademark. I have no doubt that the original registration in 1898 was made with the full knowledge and consent of Mr. Robert S. Howard. He admits the knowledge; the consent is implied from the course of business. But if he could not make a strict trade-mark out of his own name, I am unable to see how anybody else could do it even with his consent.

The circuit court of appeals, referring to the validity of the trade-mark registration, said:

> The appellee's brief contains the following: • • • "The matter was not pressed by either side, and therefore there is no finding about it in the decree. It was evidently the opinion of the court below that all questions concerning the validity of the registrations should be left to the cancellation proceedings instituted by the R. S. Howard Company in the Patent Office and now about to come to final hearing there." We are inclined to think that the court was not called upon to hear what were practically moot questions not essential to a decision, and which, even if decided according to the appellant's contention, would not affect the controlling question in the least.

The court decisions can be dismissed from further consideration, since they were confined solely to the question of unfair competition, a matter of no concern in this proceeding, either by way of estoppel or otherwise. We are here dealing with the validity of the registration of the marks in question, in a proceeding in which the Commissioner of Patents is vested by statute with exclusive jurisdiction. Section 13 of the Trade-Mark Act of February 20, 1905, provides—

> that whenever any person shall deem himself injured by the registration of a trade-mark in the Patent Office he may at any time apply to the Commissioner of Patents to cancel the registration thereof. The Commissioner shall refer such application to the Examiner in Charge of Interferences, who is empowered to hear and determine this question and who shall give notice thereof to the registrant. If it appear after a hearing before the Examiner that the registrant was not entitled to the use of the mark at the date of his application for registration thereof, or that the mark is not used by the registrant, or has been abandoned, and the Examiner shall so decide, the Commissioner shall cancel the registration. Appeal may be taken to the Commissioner in person from the decision of the Examiner of Interferences. [33 Stat. at L. 728, chap. 592, Comp. Stat. 1916, sec. 9498, 9 Fed. Stat. Anno. 2d Ed. p. 779.]

Section 5 of the same act, as amended by the act of March 2, 1907, among other things, forbids the registration of a—

> mark which consists merely in the name of an individual, firm, corporation, or association, not written, printed, impressed, or woven in some particular or distinctive manner or in association with a portrait of the individual. [34 Stat. at L. 1251, chap. 2573, Comp. Stat. 1916, sec. 9490, 9 Fed. Stat. Anno. 2d Ed. p. 753.]

[1] Unquestionably, the Baldwin Company was the first to make a trade-mark use of the word "Howard," but in our view of the case that is of no importance. The sole question here is, was the Baldwin Company entitled to the exclusive use of this mark on the date of its application for registration? If not, has the Howard Company been injured by the registration of the mark? The right to register the name of a person or corporation, except under conditions not present in either of these cases, is expressly forbidden. *Wm. A. Rogers v. International Silver Co.*, 34 App. D. C. 410; 153 O. G. 1085. The mark in the Baldwin case and the dominating feature of the mark in the Valley Gem case is not only a common surname, but the name of appellant corporation, either of which is sufficient to prohibit the right of registration or to form the basis of an action for cancellation. As was said by Mr. Chief Justice Fuller in *Howe Scale Co. v. Wyckoff, Seamans & Benedict*, 198 U. S. 118, 134, 49 L. Ed. 972, 984, 25 Sup. Ct. Rep. 609; 116 O. G. 299.

> But it is well settled that a personal name cannot be exclusively appropriated by anyone as against others having a right to use it; and as the name "Remington" is an ordinary family surname, it was manifestly incapable of exclusive appropriation as a valid trademark, and its registration as such could not in itself give it validity. *Brown Chemical Co. v. Meyer*, 139 U. S. 540; 35 L. Ed. 247; 11 Sup. Ct. Rep. 625; 55 O. G. 287; *Singer Mfg. Co. v. June Mfg. Co.*, 163 U. S. 169; 41 L. Ed. 118; 16 Sup. Ct. Rep. 1022; *Elgin Nat. Watch Co. v. Illinois Watch Case Co.*, 179 U. S. 665; 45 L. Ed. 365; 21 Sup. Ct. Rep. 270; 94 O. G. 755.

[2, 3] It will be observed that the statutory prohibition relates back to the date of adoption. If it was then "incapable of exclusive appropriation," its validity may be assailed by anyone possessing the right. The question of priority of use is immaterial if no right to the use ever existed. As this court said in *Asbestone Co. v. Philip-Carey Mfg. Co.*, 41 App. D. C. 507, 509; 200 O. G. 857:

> The statute takes from the realm of possible registration the name of an individual, firm, corporation, or association, except under conditions not existing in this case. This limitation is founded upon sound principles of public policy. "A man's name is his own property, and he has the same right to its use and enjoyment as he has to that of any other species of property." *Brown Chemical Co. v. Meyer*, 139 U. S. 540; 35 L. Ed. 247; 11 Sup. Ct. Rep. 625. The same rule applies to a corporation. "That the name of a corporation is an essential part of its being, and that the courts, independent of statutory provision, will protect the corporation in the use of its name, seems to be well settled by the authorities, and the controlling principles in such a case are those applicable to trademarks." *Investor Pub. Co. v. Dobinson*, 72 Fed. 603. The converse is equally true. Had appellee been using the mark when appellant incorporated, it could not, by mere adoption of the name, have created an exclusive right to its use. *Goodyear's India Rubber Glove Mfg. Co. v. Goodyear Rubber Co.*, 128 U. S. 598; 32 L. Ed. 535; 9 Sup. Ct. Rep. 166; 46 O. G. 122.

[4] It follows that, at the date of the adoption of the mark by both the Valley Gem and Baldwin Companies, the word "Howard" was a surname in common use, and not available to either, for registration as a trade-mark. But the statute goes further, and requires that the registrant must be entitled to the use of the mark at the date of his application for registration thereof. When the Baldwin Company applied for the registration of the word "Howard," the Howard Company was in existence and a direct competitor of applicant in the piano business. Hence, the registration of its competitor's name was sought and secured in direct violation of the express terms of the statute.

But it is said that the Howard Company has not shown that it has been injured by the registration of its name. The element of damage enters into the right to challenge the registration of a technical trade-mark either in an opposition or a cancellation proceeding. In either case, the complaining party must show that he would be damaged unless the relief sought is granted. But, where the party is seeking to prevent the adoption of his name as a trade-mark or the cancellation of its registration, his action is grounded upon the invasion of a property right inhering in the name itself, and damage will be presumed. As we said in the *Asbestone Case*, supra:

> It is not the business which the statute in this particular aims to protect. It is the corporate name, and it is sufficient that possible damage may be inferred from invading the property right which the corporation possesses in its name.

[5] Section 13 of the act of 1905 provides a remedy which applies to registrations existing at the date of its passage, as well as to registrations made subsequent to its enactment. In *Black Betsy Coal & Min. Co. v. W. J. Hamilton Coal Co.*, 197 O. G. 998, Commissioner Ewing said:

> I see no reason why sec. 13 of the Trademark Act of 1905 should not be held to apply to trade-marks registered under the earlier act. Section 13 does not alter in any way the right of a registrant to his trade-mark, but merely provides a new remedy in case a trade-mark is registered by a party who never had or who has abandoned any right thereto. The language in sec. 13 is broad enough to cover registrations under the earlier act, and there is no reason for limiting its plain meaning.

The same interpretation was placed upon the statute by this court in *Stamatopoulos v. Stephano Bros.*, 41 App. D. C. 590; 200 O. G. 1394, where we said:

> The registration of trade-marks is regulated entirely by statute. There is no such property right acquired by registration as either forbids regulation or abolition by a subsequent act of Congress. Section 13 relates entirely to procedure in the Patent Office. The act of 1881 did not provide for challenging a registration by a proceeding for cancellation. The act of 1905 for the first time furnished this speedy and sensible remedy. Being merely remedial, and a matter of procedure, it was within the power of Congress to make it apply to all marks registered in the Patent Office. Intention to make it apply only to future marks is not indicated in the later act. Neither do we find anything to that effect in the saving clause in sec. 30 of the act. Provision as to cancellation did not exist in the prior acts, hence the saving clause in the later act could have no reference to that subject.

The decision of the Commissioner of Patents is reversed, and the clerk is directed to certify these proceedings as by law required. Reversed.

A petition for rehearing was denied March 29, 1919, and the opinion and judgment withheld pending decision of the Supreme Court of the United States on petition for a writ of certiorari.

189,797. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) THE D. E. CLEARY CO., Newark, N. J. Filed Oct. 18, 1923. Serial No. 187,151.

PAVONIA

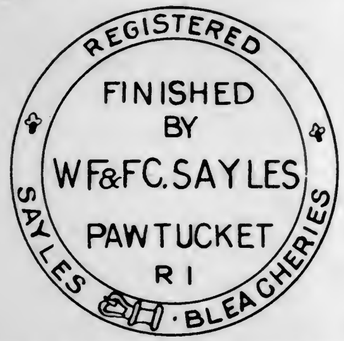
Particular description of goods.—Canned Fruits and Vegetables.
Claims use since about Sept. 25, 1898.

189,798. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) LOUIS ROSENBLUM, Brooklyn, N. Y. Filed Nov. 16, 1923. Serial No. 188,438.

Particular description of goods.—Fresh Potatoes, Turnips, Cabbage, and Apples.
Claims use since Aug. 1, 1923.

189,799. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) SAYLES FINISHING PLANTS, INC., Saylesville, R. I. Filed Dec. 4, 1923. Serial No. 189,201.

Particular description of goods.—Cotton Piece Goods.
Claims use for about five years.



189,800. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) SAYLES FINISHING PLANTS, INC., Saylesville, R. I. Filed Dec. 11, 1923. Serial No. 189,523.

SAYLES BLEACHERY

Particular description of goods.—Cotton Piece Goods.
Claims use for over five years.

189,801. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) SAYLES FINISHING PLANTS, INC., Saylesville, R. I. Filed Dec. 11, 1923. Serial No. 189,525.

Particular description of goods.—Cotton Piece Goods.
Claims use for over five years.

189,802. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) SAYLES FINISHING PLANTS, INC., Saylesville, R. I. Filed Dec. 11, 1923. Serial No. 189,527.

SAYLES BLEACHERY

Particular description of goods.—Cotton Piece Goods.
Claims use for over five years.

189,803. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) GARBIS ZAKARIAN, New York, N. Y. Filed Dec. 17, 1923. Serial No. 189,829.

Garbis
Strength Mixture

Particular description of goods.—A Medicinal Preparation for the Treatment of Nervous Debility and Run-Down Condition, and for Use to Increase Red Blood Corpuscles, and to Freshen and Enliven the Complexion.
Claims use since May 1, 1922.

189,804. (CLASS 1. RAW OR PARTLY-PREPARED MATERIALS.) CASSADAY GREY GRANITE COMPANY, Llano, Tex. Filed May 2, 1924. Serial No. 196,427.

CASSADAY GREY GRANITE

Particular description of goods.—Gray Granite Stone in the Form of Rough Quarry Blocks.
Claims use since June 1, 1920.

189,805. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) GOLDEN NUGGET SWEETS, San Francisco, Calif. Filed May 8, 1924. Serial No. 196,738.

Nutty-Fruit

Particular description of goods.—Candy.
Claims use since August, 1923.

189,806. (CLASS 16. PAINTS AND PAINTERS' MATERIALS.) THE BON-LAC CORPORATION, Baltimore, Md. Filed May 19, 1924. Serial No. 197,250.

THE
BON-LAC
SHELLACS
CORPORATION

Particular description of goods.—Prepared Shellacs, Shellac Varnishes, and Spirit Varnishes.
Claims use since Dec. 1, 1922.

189,807. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) HENRY SCHOELLKOPF SONS, Chicago, Ill. Filed May 19, 1924. Serial No. 197,300.

DUTCH BRAND

Particular description of goods.—Malt Extract for Food Purposes.
Claims use since January, 1919.

189,808. (CLASS 7. CORDAGE.) MORICE TWINE MILLS CORPORATION, Wilmington, Del., and New York, N. Y. Filed July 16, 1924. Serial No. 200,113.

ROANOKE

Particular description of goods.—Twine.
Claims use since Jan. 1, 1923.

189,809. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) BERNARDO ANGEL, New York, N. Y. Filed Aug. 4, 1924. Serial No. 200,922.

BERNARDO ANGEL'S

Particular description of goods.—Coffee.
Claims use since January, 1908.

189,810. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) BERNARDO ANGEL, New York, N. Y. Filed Aug. 4, 1924. Serial No. 200,925.

ANGEL, LOPEZ & CO.

Particular description of goods.—Coffee.
Claims use since December, 1908.

189,811. (CLASS 45. BEVERAGES, NONALCOHOLIC.) CANADA DRY GINGER ALE, INCORPORATED, New York, N. Y. Filed Aug. 5, 1924. Serial No. 200,980.

"CANADA DRY"

Particular description of goods.—Ginger Ale.
Claims use for not less than one year.

189,812. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) LAWRENCEBURG ROLLER MILLS CO., Lawrenceburg, Ind. Filed Aug. 5, 1924. Serial No. 201,001.

Particular description of goods.—Wheat Flour.
Claims use since July 25, 1920.

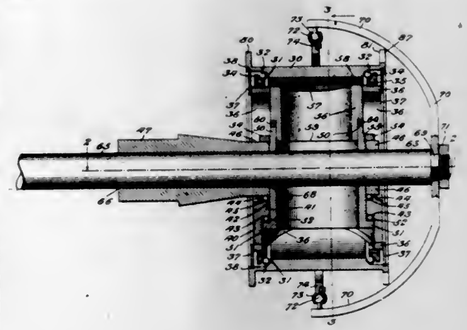
INTERNATIONAL TRADE-MARK REGISTRATIONS

The following International Registration has been received from the Bureau at Habana and has been placed upon the Register in accordance with the provisions of section 1 (a) of the act of March 19, 1920.

189,813. International Registration No. 1,000 of June 4, 1924. Registered in Cuba on March 27, 1915, No. 30,740. Proprietor: ARTURO C. BOSQUE. Address: Tejadillo 38, Habana, Cuba.

Merchandise to which the mark is affixed.—A Granulated and Sparkling Preparation of Pepsin and Rhubarb.

REISSUES



SEPTEMBER 23, 1924.

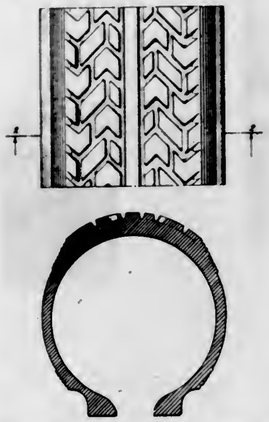
15,918. PEANUT BUTTER AND PROCESS OF MANUFACTURING SAME. JOSEPH LEWIS ROSENFIELD, Alameda, Calif. Filed June 23, 1923. Serial No. 647,879. Original No. 1,445,174, dated Feb. 13, 1923, Serial No. 458,643, filed Apr. 5, 1921. 10 Claims. (Cl. 99—11.)

1. The herein described process of manufacturing nut butter which comprises removing from the nut meat the major portion of the oil, forming the residue into a mass or cake and mixing the said cake or mass with a hydrogenated edible oil while still hot.

15,919. POWER TRANSMISSION FOR WHEELS. HARLEIGH R. HOLMES, Denver, Colo., assignor to Plains Motors Corporation, Denver, Colo. Filed Mar. 20, 1923. Serial No. 626,399. Original No. 1,377,131, dated May 3, 1921, Serial No. 325,476, filed Sept. 22, 1919. 30 Claims. (Cl. 180—48.)

1. A power transmission for vehicles including a shaft, a cylinder mounted thereon, a shell, means for connecting the shell with the cylinder, and a hub mounted upon the shell.

DESIGNS



SEPTEMBER 23, 1924.

65,629. AMULET OR SIMILAR ARTICLE. JERROLD GAY BELCHER, Columbus, Ohio. Filed May 17, 1924. Serial No. 9,637. Term of patent 3½ years.

The ornamental design for an amulet or similar article as shown.

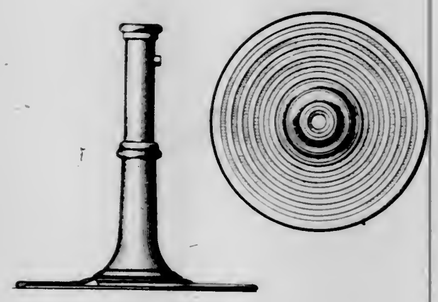
65,630. AUTOMOBILE TIRE. FREDERICK L. BRAENDER, Montclair, N. J. Filed Aug. 4, 1924. Serial No. 10,365. Term of patent 14 years.

The ornamental design for an automobile tire, as shown.

65,631. RING. ALBERT BROD, New York, N. Y. Filed July 26, 1924. Serial No. 10,265. Term of patent 3½ years.

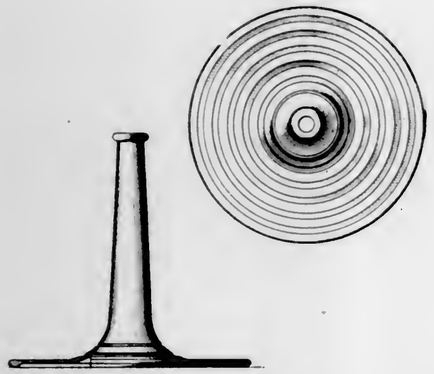
The ornamental design for a ring, as shown.

65,632. RING. ALBERT BROD, New York, N. Y. Filed July 26, 1924. Serial No. 10,266. Term of patent 3½ years.



The ornamental design for a ring, as shown.

65,633. STATUETTE. JOSEPH CASTELLANA, New York, N. Y. Filed June 14, 1924. Serial No. 9,875. Term of patent 14 years.

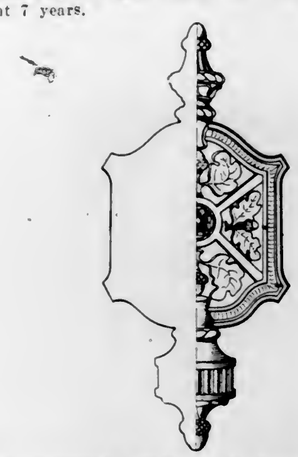


The ornamental design for a statuette as shown.

65,634. PEDESTAL. HANS CLEMENT, New York, N. Y., assignor to General Optical Company, a Corporation of New York. Filed Sept. 27, 1923. Serial No. 7,342. Term of patent 14 years.

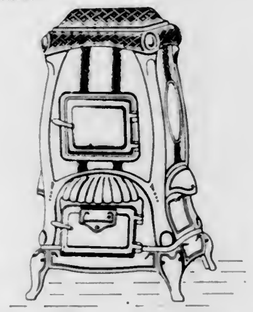
The ornamental design for a pedestal, as shown.

65,635. PEDESTAL. HANS CLEMENT, New York, N. Y., assignor to General Optical Company, a Corporation of New York. Filed Sept. 27, 1923. Serial No. 7,343. Term of patent 14 years.



The ornamental design for a pedestal, as shown.

65,636. FOUNTAIN PEN. SAMUEL V. CORONA, Janesville, Wis. Filed Dec. 16, 1922. Serial No. 4,623. Term of patent 3½ years.

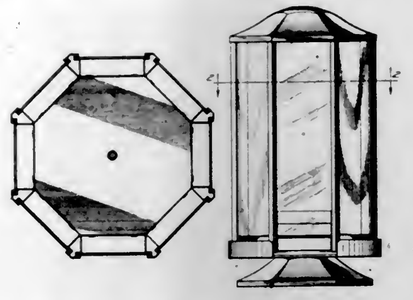


The ornamental design for a fountain pen as shown and described.

65,637. BACKPLATE FOR LIGHTING FIXTURES. LE ROY A. CRUMLEY, New York, N. Y., assignor to The Rogers Silver Plate Co., a Corporation of Connecticut. Filed July 28, 1924. Serial No. 10,273. Term of patent 7 years.

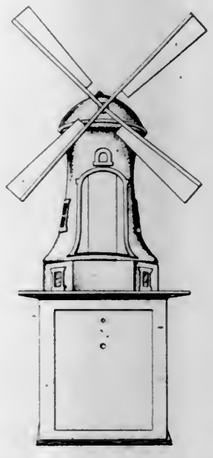
The ornamental design for a backplate for lighting fixtures substantially as shown and described.

65,638. COAL HEATER. LESLIE DANA, St. Louis, Mo. Filed July 24, 1924. Serial No. 10,248. Term of patent 14 years.



The ornamental design for a coal heater, as shown.

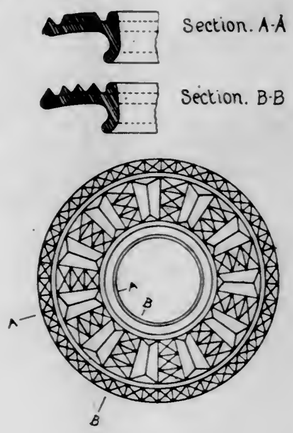
65,639. CRETONNE. ALFRED C. DODMAN, Jr., Summit, N. J., and CORA S. REIBER, New York, N. Y.; said Reiber assignor to said Dodman. Filed Mar. 26, 1924. Serial No. 9,069. Term of patent 14 years.



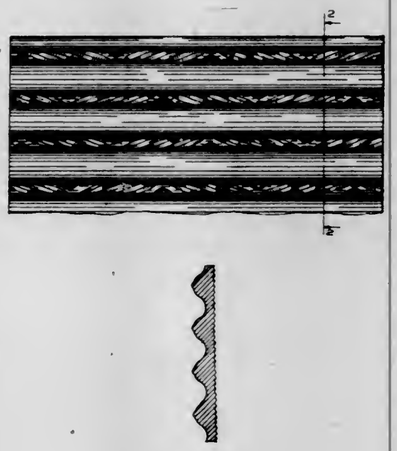
The ornamental design for cretonne, as shown.

65,640. ROTARY DISPLAY CASE. LEE F. DUFF and GEORGE LANGHANS, Los Angeles, Calif. Filed July 18, 1923. Serial No. 6,794. Term of patent 14 years.

The ornamental design for a rotary display case, as shown.

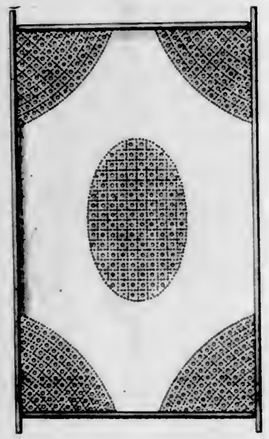


65,641. CASING FOR A FRUIT CRUSHING, DISPLAYING, AND DISPENSING DEVICE. JAMES FAZIO, Venice, Calif. Filed Dec. 12, 1923. Serial No. 8,003. Term of patent 7 years.



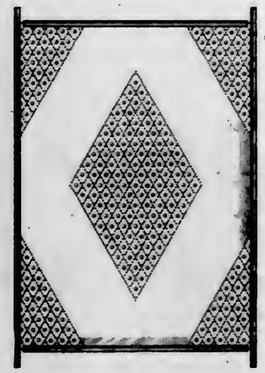
The ornamental design for a casing for a fruit crushing, displaying, and dispensing device, as shown.

65,642. GLASS REFLECTOR FOR ELECTRIC-LIGHT FIXTURES. SAMUEL ARDELL FORCEY, Du Bois, Pa. Filed May 20, 1924. Serial No. 9,666. Term of patent 3½ years.



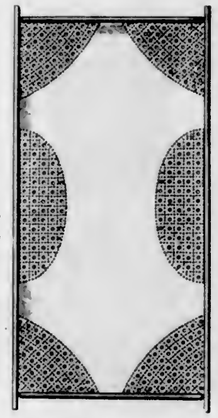
The ornamental design for a glass reflector for electric light fixtures, substantially as shown.

65,643. SHEET GLASS. HENRY J. GILBERT, Saginaw, Mich. Filed Feb. 12, 1923. Serial No. 5,153. Term of patent 14 years.



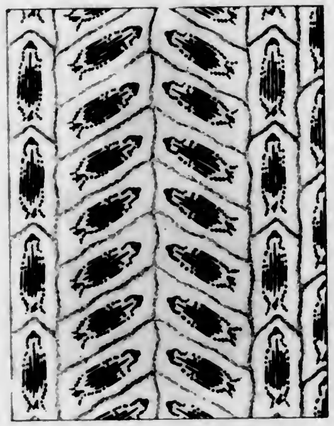
The ornamental design for sheet glass.

65,644. PANEL FOR BEDSTEAD ENDS. ANTONIO GOVERNALE, Brooklyn, N. Y. Filed May 14, 1923. Serial No. 6,159. Term of patent 3½ years.



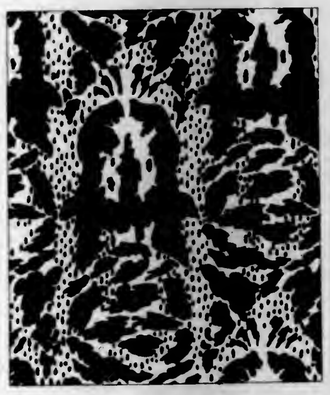
The ornamental design for a panel for bedstead ends as shown.

65,645. PANEL FOR BEDSTEAD ENDS. ANTONIO GOVERNALE, Brooklyn, N. Y. Filed May 14, 1923. Serial No. 6,162. Term of patent 3½ years.



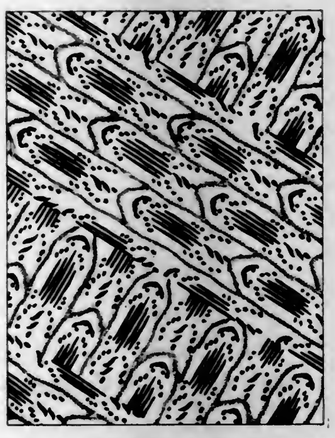
The ornamental design for a panel for bedstead ends as shown.

65,646. PANEL FOR BEDSTEAD ENDS. ANTONIO GOVERNALE, Brooklyn, N. Y. Filed June 1, 1923. Serial No. 6,372. Term of patent 3½ years.



The ornamental design for a panel for bedstead ends as shown.

65,647. PILE FABRIC. JAMES GOWANS, Leonia, N. J., assignor to Sidney Blumenthal & Co., Inc., New York, N. Y., a Corporation of New York. Filed July 24, 1924. Serial No. 10,251. Term of patent 7 years.



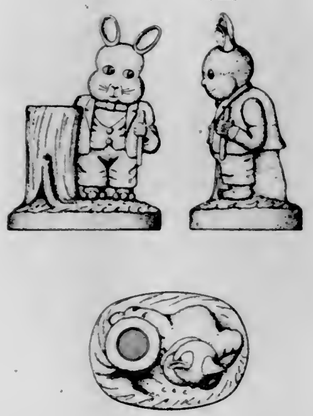
The ornamental design for a pile fabric, as shown.

65,648. PILE FABRIC. JAMES GOWANS, Leonia, N. J., assignor to Sidney Blumenthal & Co., Inc., New York, N. Y., a Corporation of New York. Filed July 29, 1924. Serial No. 10,314. Term of patent 7 years.

The ornamental design for a pile fabric, as shown.

65,649. PILE FABRIC. JAMES GOWANS, Leonia, N. J., assignor to Sidney Blumenthal & Co., Inc., New York, N. Y., a Corporation of New York. Filed Aug. 4, 1924. Serial No. 10,368. Term of patent 7 years.

The ornamental design for a pile fabric, as shown.



65,650. GEM SETTING. EDWARD J. GROSS, South Orange, N. J., assignor to Meyer & Gross, a Corporation of New Jersey. Filed May 9, 1924. Serial No. 9,536. Term of patent 7 years.

The ornamental design for a gem setting, as shown.

65,651. LAMP. ARCHIBALD B. HEATH, Lynbrook, N. Y. Filed July 1, 1924. Serial No. 10,024. Term of patent 14 years.

The ornamental design for a lamp, as shown.

65,652. LAMP. ARCHIBALD B. HEATH, Lynbrook, N. Y. Filed July 22, 1924. Serial No. 10,212. Term of patent 3½ years.

The ornamental design for a lamp, as shown.

65,653. LAMP. ARCHIBALD B. HEATH, Lynbrook, N. Y. Filed July 22, 1924. Serial No. 10,213. Term of patent 3½ years.

The ornamental design for a lamp as shown.

65,654. ANIMAL DOLL. THEODORE F. KÖTTER, Hollis, N. Y., assignor to Ted Morton Co. Inc., New York, N. Y., a Corporation of New York. Filed Feb. 28, 1923. Serial No. 5,309. Term of patent 3½ years.

The ornamental design for an animal doll as shown and described.

65,655. ANIMAL DOLL. THEODORE F. KOTTER, Hollis, N. Y., assignor to Ted Morton Co. Inc., New York, N. Y., a Corporation of New York. Filed Feb. 28, 1923. Serial No. 5,310. Term of patent 3½ years.

The ornamental design for an animal doll as shown described above.

65,656. ANIMAL DOLL. THEODORE F. KOTTER, Hollis, N. Y., assignor to Ted Morton Co. Inc., New York, N. Y., a Corporation of New York. Filed Feb. 28, 1923. Serial No. 5,311. Term of patent 3½ years.

The ornamental design for an animal doll as shown described above.

65,657. DOLL. THEODORE F. KOTTER, Hollis, N. Y. Filed Mar. 30, 1923. Serial No. 5,646. Term of patent 3½ years.

The ornamental design for a doll and shown and described.

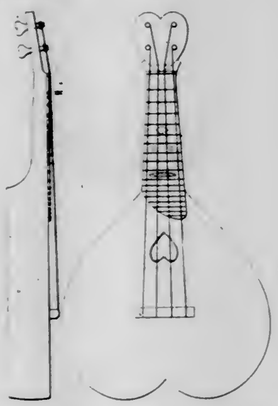
65,658. RABBIT DOLL. THEODORE F. KOTTER, Hollis, N. Y. Filed Mar. 30, 1923. Serial No. 5,648. Term of patent 3½ years.

The ornamental design for a rabbit doll as shown and described.

65,659. LAMP. CLARENCE LAZETTE, Lake Worth, Fla. Filed May 27, 1924. Serial No. 9,719. Term of patent 14 years.

The ornamental design for a lamp, substantially as shown.

65,660. LIGHTING-FIXTURE BAND. EMORY S. LEWIS, Brooklyn, N. Y. Filed July 28, 1924. Serial No. 10,275. Term of patent 7 years.



The ornamental design for a lighting fixture band substantially as shown.

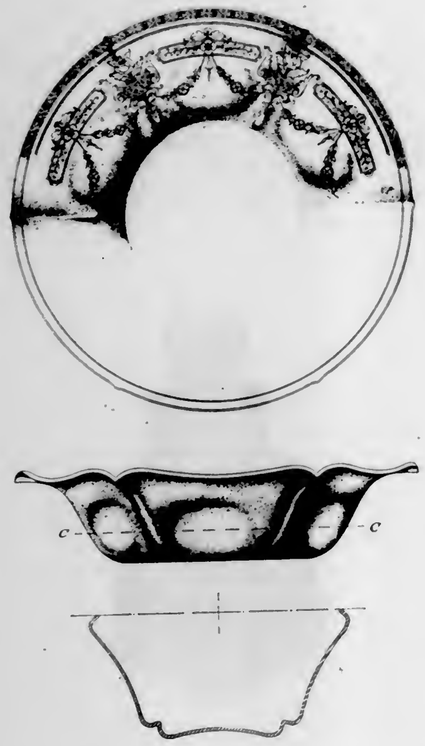
65,661. BANK NOTE. ALFRED S. MAJOR, New York, N. Y., assignor to American Bank Note Company, New York, N. Y., a Corporation of New York. Filed July 10, 1924. Serial No. 10,103. Term of patent 14 years.

The ornamental design for a bank note, as shown.

65,662. UKULELE. EDWIN FRANK MATTAUSCH, Rosalia, Wash. Filed Apr. 2, 1923. Serial No. 5,660. Term of patent 3½ years.

An ornamental design for a ukulele, substantially as shown.

65,663. BIAS TRIMMING. JOSEPH PRICE MORRIS, Bridgeport, Conn., assignor to Bartons Bias Narrow Fabrics Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Apr. 10, 1924. Serial No. 9,218. Term of patent 3½ years.

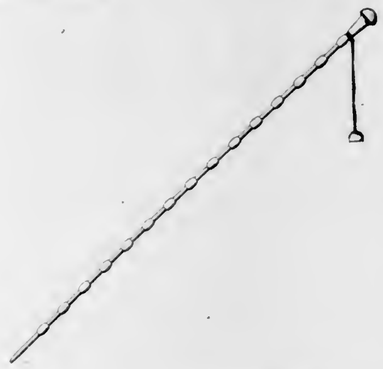


The ornamental design for bias trimming substantially as shown.

65,664. REAR-LAMP LENS. CHARLES H. MUCKENHIRN, Detroit, Mich. Filed July 9, 1923. Serial No. 6,733. Term of patent 7 years.

The ornamental design for the rear lamp lens as shown.

65,665. BOWL OR ANALOGOUS ARTICLE. HAROLD E. NOCK, Newburyport, Mass., assignor to Towle Manufacturing Company, Newburyport, Mass., a Corporation of Massachusetts. Filed Feb. 13, 1923. Serial No. 5,162. Term of patent 7 years.



The ornamental design for a bowl or analogous article, substantially as shown and described.

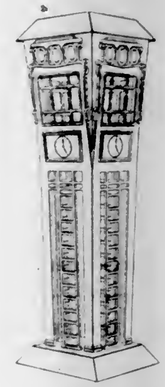
65,666. PLATE OR ANALOGOUS ARTICLE. GEORGE FRANCIS PARKER, Newburyport, Mass., assignor to Towle Manufacturing Company, Newburyport, Mass., a Corporation of Massachusetts. Filed July 22, 1924. Serial No. 10,223. Term of patent 7 years.

The ornamental design for a plate or analogous article, substantially as shown and described.

65,667. CANE. CHARLES HAMILTON PAJEAU, Evanston, Ill. Filed May 24, 1924. Serial No. 9,704. Term of patent 3½ years.

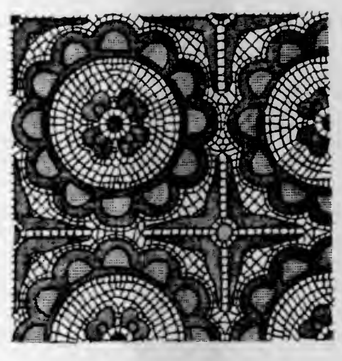
The ornamental design for a cane, as shown.

65,668. PERFUME CONTAINER. LOUIS PARISET, New York, N. Y. Filed Apr. 17, 1924. Serial No. 9,305. Term of patent 3½ years.



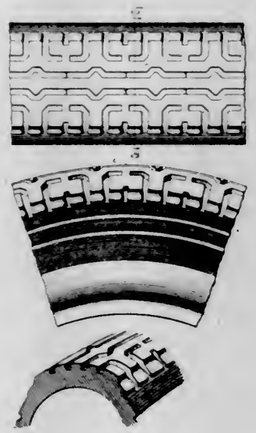
The design for a perfume container as shown.

65,669. PERFUME CONTAINER. LOUIS PARISET, New York, N. Y. Filed Apr. 17, 1924. Serial No. 9,306. Term of patent 3½ years.



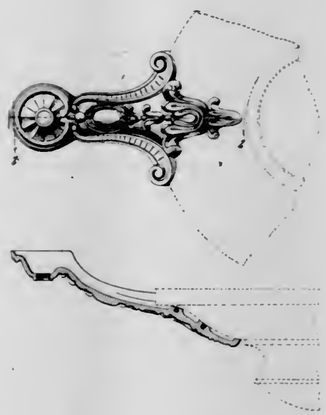
The design for a perfume container as shown.

65,670. TOY TRAFFIC TOWER. MAX PRESSNER, New York, N. Y. Filed May 13, 1924. Serial No. 9,575. Term of patent 3½ years.



The ornamental design for a toy traffic tower, as shown.

65,671. LACE. GEORGE RADFORD, Oakland Beach, R. I., assignor to Richmond Lace Works, New York, N. Y., a Corporation of Maine. Filed June 3, 1924. Serial No. 9,782. Term of patent 14 years.

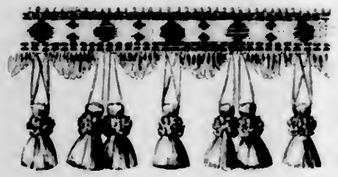


The ornamental design for lace as shown.

65,672. AUTOMOBILE TIRE. WALTER J. RENNICK, Millersburg, Ohio, assignor to The McKone Tire and Rubber Company, Millersburg, Ohio, a Corporation of Ohio. Filed June 12, 1924. Serial No. 9,866. Term of patent 7 years.

The ornamental design for an automobile tire as shown.

65,673. CHANDELIER BRACKET. CHARLES RICHTER, New York, N. Y. Filed Feb. 28, 1923. Serial No. 5,304. Term of patent 3½ years.



The ornamental design for a chandelier bracket, as shown.

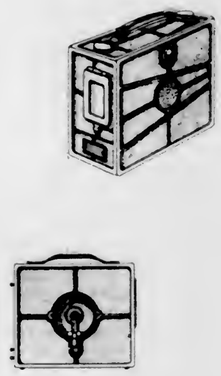
65,674. LOUD SPEAKER. LEOPOLD ROSENSTOCK, New York, N. Y. Filed May 14, 1924. Serial No. 9,583. Term of patent 3½ years.

The ornamental design for a loud speaker as shown.

65,675. TASSEL FRINGE. GEORGE C. RUNGE, Chicago, Ill., assignor to E. L. Mansure Company, Chicago, Ill., a Corporation of Illinois. Filed July 21, 1924. Serial No. 10,206. Term of patent 7 years.

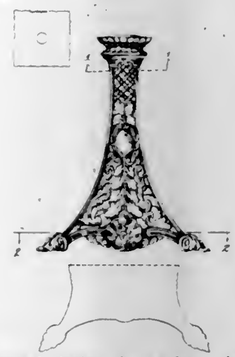
The ornamental design for tassel fringe as shown.

65,676. LAMP PEDESTAL. MORRIS STEINBERG, Detroit, Mich. Filed Aug. 2, 1924. Serial No. 10,345. Term of patent 3½ years.



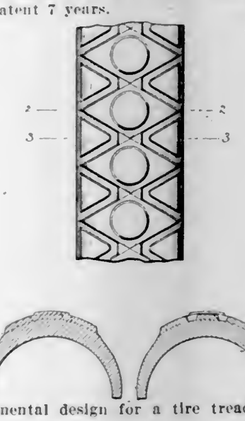
The ornamental design for a lamp pedestal, as shown.

65,677. CHARM. WILLIAM STERN, Seattle, Wash. Filed Apr. 12, 1923. Serial No. 5,789. Term of patent 7 years.



The ornamental design for a charm, as shown.

65,678. CAMERA CASING. JULIEN TESSIER, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed May 4, 1923. Serial No. 6,053. Term of patent 14 years.



The ornamental design for a camera casing, as shown and described.

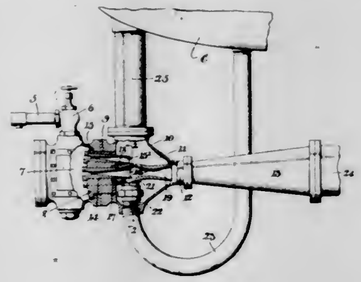
65,679. LAMP BASE OR SIMILAR ARTICLE. GUSTAVE E. VILLARET, New York, N. Y., assignor to William R. Noe & Sons, New York, N. Y., a Corporation of New York. Filed Nov. 14, 1923. Serial No. 7,765. Term of patent 7 years.

The ornamental design for a lamp base or similar article, as shown.

65,680. TIRE TREAD. PARK E. WELTON, Cuyahoga Falls, Ohio, assignor to The Tire Products Manufacturing Company, Salisbury, N. C., a Corporation of North Carolina. Filed Jan. 27, 1923. Serial No. 5,018. Term of patent 7 years.

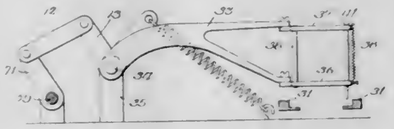
The ornamental design for a tire tread substantially as shown.

65,681. POWDER BOX. JACQUES WORTH, Paris, France. Filed June 17, 1924. Serial No. 9,886. Term of patent 14 years.



The ornamental design for a powder box, as shown.

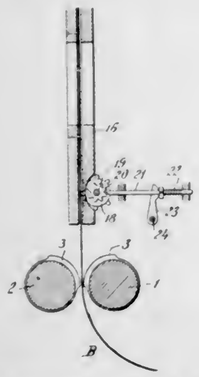
PATENTS



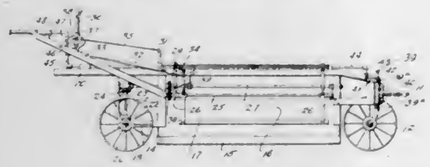
GRANTED SEPTEMBER 23, 1924.

1,509,090. PRESSURE PUMP. LEONARD E. ALLYN, West Mystic, Conn. Filed Feb. 9, 1923. Serial No. 618,034. 1 Claim. (Cl. 162—1.)

In a device of this character, the combination with a valve controlled motive pressure fluid supply, a valve chamber, an ejector chamber having an outlet and two inlets, a suction pipe connected to one inlet, a condensate pipe projecting into the ejector housing, a nozzle block at the junction between the nozzle chamber and the ejector chamber and provided with a concentric nozzle opening and a plurality of circumferential nozzle openings, the latter openings being in direct communication with the chamber of the ejector housing, a condensate nozzle provided with a main chamber in communication with the condensate pipe, and a propelling and suction nozzle in communication with the center nozzle of the block.



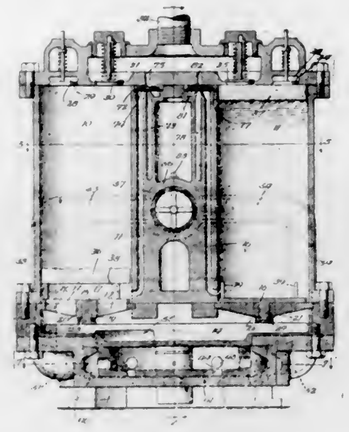
1,509,091. SELECTOR MECHANISM FOR ADDRESSING MACHINES. RAY C. ANDERSON and PAUL A. GOLLNICK, Chicago, Ill., assignors to Spiegel May Stern Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 17, 1924. Serial No. 686,767. 4 Claims. (Cl. 101—48.)



1. In an addressing machine, selector mechanism comprising a pivotally mounted selector arm, a plate rigidly secured to the arm, a second plate spaced from the first mentioned plate and rigidly secured to the arm, a pin slidably journaled in the plates, and a spring for holding the pin in an extended position with respect to the plates.

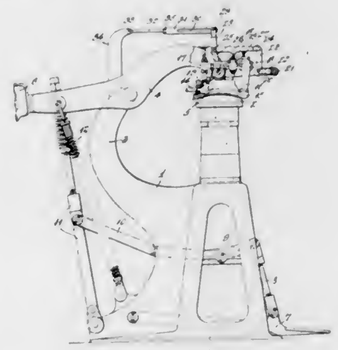
1,509,092. INTERMITTENT-DRIVING MEANS IN CINEMATOGRAPHIC APPARATUS. CARLOS ANSELMI and MARCELINO VITERBO, Buenos Aires, Argentina. Filed May 7, 1921. Serial No. 467,538. 5 Claims. (Cl. 88—18.5.)

1. A moving picture projection apparatus comprising a film feed mechanism and a projector aperture, means for moving the picture bearing film intermittently past the projector aperture, said intermittent driving means comprising a pair of rollers arranged with their axes in substantial parallelism, means for driving the rollers in opposite directions and synchronously with the film feed mechanism, a protruding portion provided on each cylinder of periphery substantially equal to the length of a picture on the film, said protruding portions engaging the film between them during each revolution of the rollers and thereby advancing the film a distance equal to the length of a single picture, means for effecting a relative angular displacement of said feed rollers thereby varying the time of contact between said protruding portions and correspondingly varying the amount or distance the film moves at each revolution of the rollers and a resilient mounting for the axle of one of said rollers whereby a yielding pressure is secured between the rollers during the period of advancing of the film.



1,509,093. INSECT-DESTROYING MACHINE. ALLEN EARL BABCOCK, Exeland, Wis. Filed June 13, 1922. Serial No. 567,987. 4 Claims. (Cl. 43—142.)

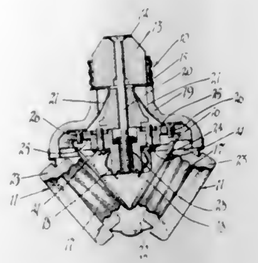
4. A machine for the purpose indicated including a wheel supported central longitudinal draft beam, a pivot rod extending longitudinally of and supported beneath the said beam, arms connected to said rod, a reel carried by the arms, a counter shaft supported beneath the beam in aligned position to the rod, means for operating said counter shaft, and means for operating the said reel.



1,509,094. HYDRAULIC AIR COMPRESSOR. MARTEN BALCKER, Chicago, Ill. Filed June 15, 1923. Serial No. 645,486. 36 Claims. (Cl. 230—16.)

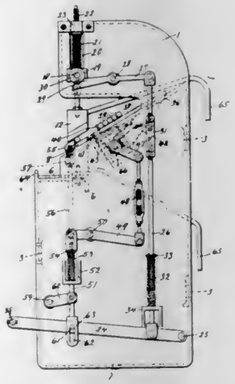
1. A compressor embodying a plurality of compressing chambers each having a fluid inlet and an outlet for compressed fluid, means for delivering a liquid into the chambers for compressing the fluid, the said means including

an impeller for creating a pressure upon the liquid, and means operating automatically to cause the liquid to compress the fluid in the said chambers alternately.



1,509,095. STEAMING DEVICE FOR GARMENT PRESSES. DANA H. BENJAMIN, Cleveland Heights, Ohio, assignor, by mesne assignments, to Metropolitan Trust Company, trustee, New York, N. Y., a Corporation of New York. Filed Apr. 11, 1918. Serial No. 228,009. Renewed Feb. 13, 1922. Serial No. 536,373. 11 Claims. (Cl. 68—9.)

1. A garment press, comprising relatively movable pressing members, means arranged when operated to supply steam to a garment between said members, and means arranged to prevent operation of said steaming means when said members are in pressing relation.

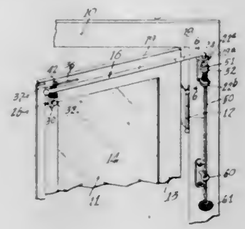


1,509,096. PLUG CLUSTER. REUBEN B. BENJAMIN, Chicago, Ill., assignor to Benjamin Electric Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed July 30, 1920. Serial No. 400,062. 5 Claims. (Cl. 173—336.)

1. A pull switch plug cluster comprising a plug portion, a receptacle sub-assembly, an insulating petticoat and a metal bowl shaped housing member, said receptacle sub-assembly comprising an insulating base, with receptacle contacts and pull switch mechanism mounted

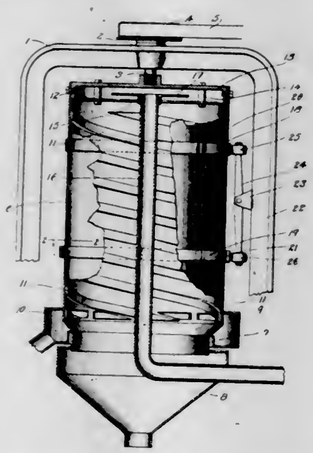
thereon, said petticoat and bowl shaped housing member being combined to form an enclosing housing for said sub-assembly.

1,509,097. ELECTRIC HEATER. WALLACE J. BISSET, Bloomsburg, and MORRIS S. EVANS, Berwick, Pa., assignors to American Car and Foundry Company, New York, N. Y., a Corporation of New Jersey. Filed June 19, 1922. Serial No. 569,237. 11 Claims. (Cl. 219—13.)



1. In an electric heater, normally fixed electrodes adapted to complete a circuit upon engagement by the stock, movable electrodes cooperating with said fixed electrodes and adapted to complete a second circuit upon engagement with the work and means adapted to operate said movable electrodes to make and break said second circuit.

1,509,098. CURTAIN HANGER FOR CASEMENT WINDOWS. MONROE N. CALLENDER, Los Angeles, Calif. Filed Nov. 22, 1921. Serial No. 516,948. Renewed Aug. 5, 1924. 14 Claims. (Cl. 156—22.)

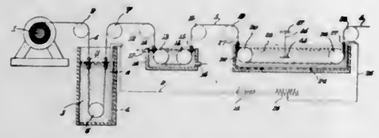


8. A curtain hanger adapted to be used in combination with a casing and a window pivotally mounted in the casing including a bracket mounted on the window, a member adjustably carried by said bracket, a spring clip carried by said member, a bracket mounted on the casing, said last mentioned bracket having a vertical opening, a curtain carrying rod, an arm connected to one end of the rod so that it is spaced from and extends parallel to the rod, the arm being slidably frictionally gripped by the clip, a projection at the other end of the rod extending downwardly through the opening in the last mentioned bracket, a plate mounted on the projection so that it faces downwardly, a vertically disposed operating rod

carried by said last mentioned bracket below the projection and so that it is movable longitudinally only, a plate mounted on the upper end of the operating rod, and a

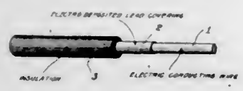
spring arranged to normally hold the operating rod up so that the plate carried by it bears against the plate carried by the projection.

1,509,099. VIBRATING CONCENTRATOR. WILLIAM C. COLEMAN, Wichita, Kans. Filed Oct. 10, 1923. Serial No. 667,652. 3 Claims. (Cl. 233—5.)



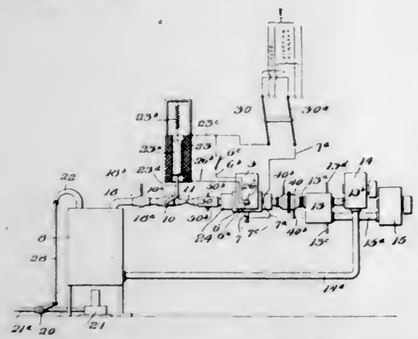
3. A concentrator comprising a vertical rotor, rings about the rotor, tappets on the ring, a vertical lever pivoted intermediate its ends and hammers on the respective ends of the levers engageable by the tappets whereby the ends of the lever will strike against the rotor when actuated by the tappets.

1,509,100. PHONOGRAPH TONE ARM. ROLAND B. DALEY, Chicago, Ill. Filed June 5, 1922. Serial No. 565,949. 8 Claims. (Cl. 274—24.)



1. In a phonograph, a reproducer having a sound exit stem extending at an acute angle to the plane of the diaphragm of the reproducer, a tone arm elbow, and an extension to the elbow, one end of which communicates with and is rotatable with respect to said elbow, the other end of which communicates with and is rotatable with respect to the exit stem of the reproducer.

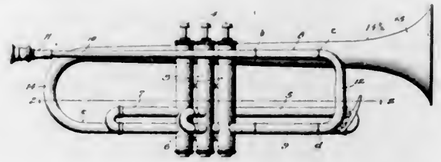
1,509,101. PROCESS AND APPARATUS FOR COATING WIRE. ALAN STANDISH DANA, Seymour, Conn., assignor to The Kerite Insulated Wire and Cable Company, a Corporation of Connecticut. Filed Jan. 26, 1920. Serial No. 354,088. 16 Claims. (Cl. 204—11.)



1. The process of coating wire which consists in drawing the wire continuously through a caustic alkali cleaning bath and thereafter without stopping, through an electrolytic bath depositing a lead coating on the wire.

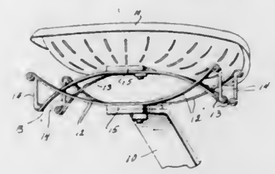
1,509,102. ELECTRICAL CONDUCTOR. ALAN STANDISH DANA, Seymour, Conn., assignor to The Kerite Insulated Wire and Cable Company, a Corporation of Connecticut. Filed Jan. 26, 1920. Serial No. 354,089. 12 Claims. (Cl. 173—264.)

1. An electric conductor comprising a copper wire, having a thin covering of lead electro-deposited thereon, the lead being coherent and adherent to the copper, and an insulating covering surrounding the lead covered wire.



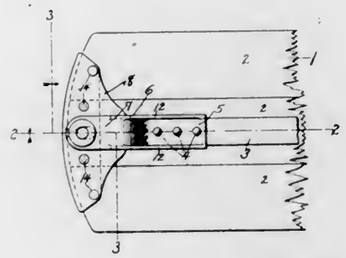
1,509,103. VAPOR DYNAMO-ELECTRIC MACHINE. WILLIAM ST. GEORGE ELLIOTT, Jr., New York, N. Y. Filed Dec. 14, 1920. Serial No. 430,667. 12 Claims. (Cl. 171—212.)

1. The herein described method of producing electricity from heat, which consists in generating a vapor in a closed circuit by the external application of heat to a portion of the circuit; passing the vapor so generated through a magnetic field, where a difference of potential in the vapor is obtained and utilized to form a useful current; and then cooling the vapor into a liquid form and returning it to the heated portion of circuit to be used over again.



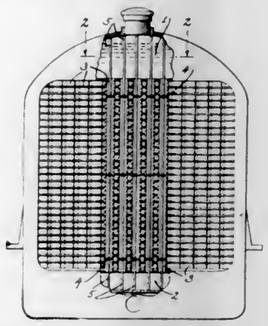
1,509,104. SOLO TRUMPET. ROSS HICKERNELL, Warren, Ohio. Filed May 24, 1922. Serial No. 563,361. 3 Claims. (Cl. 84—387.)

1. A solo trumpet, comprising a small mouth-pipe progressively increasing in diameter at the ratio of three to four in a length of nine inches, intermediate mechanism for controlling the length of the vibrating air column, having valve-controlled crook-tubes of uniform diameter, a U-tube of progressively increasing diameter interposed between the mouth-pipe and said intermediate mechanism, and a bell-tube connected to said intermediate



mechanism and terminating in a large bell, said bell-tube having a curved end portion and a straight portion terminating in the bell, the straight portion being graduated at the ratio of one to two in a length of twelve inches.

1,509,105. SEAT MOUNTING. GEORGE J. KRUM, Old Chatham, N. Y. Filed Nov. 7, 1923. Serial No. 673,397. 3 Claims. (Cl. 155—51.)

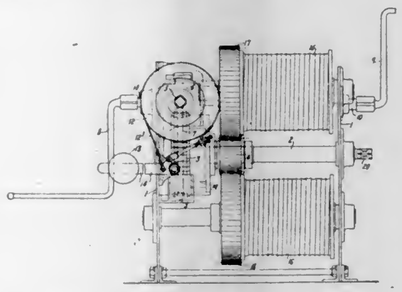


1. In a seat mounting for the seats of agricultural machines and in combination with the usual seat and standard therefor, a mounting comprising two pairs of semi-elliptical springs, the springs of one pair being reversed as regards the springs of the other pair, a connection between the springs of one pair affording a means of attachment for the seat, a connection between the springs of the other pair affording a means of attachment to the seat standard, and shackles connecting the corresponding ends of the springs of the pairs permitting transverse oscillation of the upper pair of springs with relation to the lower pair of springs but preventing longitudinal movement thereof.

1,509,106. DRAWBAR AND BUMPER. RICHARD A. LOCKARD, Berwick, Pa., assignor to American Car and Foundry Company, New York, N. Y., a Corporation of New Jersey. Filed May 3, 1922. Serial No. 558,064. 5 Claims. (Cl. 23—220.)

1. The combination of a car floor comprising boards extending longitudinally from end to end of the car, channel-shaped buffer means having a tapered upper flange embracing the ends of a plurality of said boards, draft means spaced from said buffer means and formed integral with said buffer means and a drawbar connected to said means.

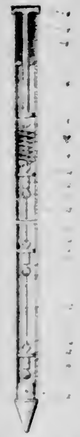
1,509,107. NONBURST RADIATOR. JOHN C. MAXWELL, Moody, Ind. Filed Feb. 10, 1923. Serial No. 618,250. 2 Claims. (Cl. 257—125.)



1. A radiator of the class described comprising top and bottom chambers, vertical radiator tubes therebetween, wooden cores in said tubes and spaced from the inner walls thereof, said cores extending from the extreme bottom of said chamber to the extreme top of said top chamber.

1,509,108. CARLINE CONSTRUCTION. ROY C. MUNRO, Chicago, Ill., assignor to Chicago Cleveland Car Roofing Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 24, 1920. Serial No. 376,183. 2 Claims. (Cl. 108—5.6.)

1. A carline construction for freight car roofs and the like, embodying side plates respectively extending along opposite sides of the car, brackets hung from and secured to said side plates, said brackets being constituted of sheet metal and respectively bent to provide depending vertical flanges resting against the inner faces of the side plates, said vertical flanges being extended inwardly to form shelves, a carline having its horizontal portion secured at its ends to said shelves, and angle plates separate from said bracket members connecting and securing the vertical portions at the ends of the carline to the vertical flanges of said brackets, substantially as specified.



1,509,109. WINCH. COLIN DONALD MCLACHLAN, Glasgow, Scotland. Filed Feb. 29, 1924. Serial No. 695,923. 1 Claim. (Cl. 254—184.)

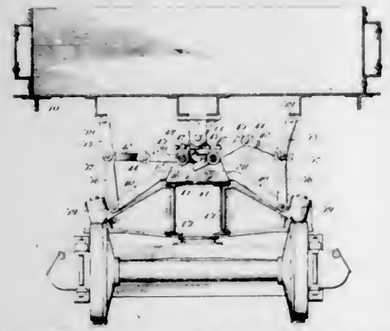
In a winch, in combination, a worm-wheel shaft, a worm-wheel loose on said shaft and a spur-wheel fixed on said shaft, a worm-shaft, a worm on said worm-shaft engaging said worm-wheel, a combined flywheel and

brake drum on said worm-shaft, a manually controllable brake engageable with said drum, winch drums, spur wheels on said winch drums meshing with said first-mentioned spur-wheel, and a pawl-and-ratchet mechanism between said worm-wheel shaft and said worm-wheel permitting rotation of said worm-wheel shaft in one circular direction without rotation of said worm-wheel, the transmission comprising said worm and worm-wheel being non-reactive, for the purpose specified.

1,509,110. SIGNAL. THOMAS IRVING POTTER, East Orange, N. J., assignor to Federated Engineers Development Corporation, Jersey City, N. J., a Corporation of Delaware. Filed May 26, 1922. Serial No. 563,916. 7 Claims. (Cl. 116—114.)

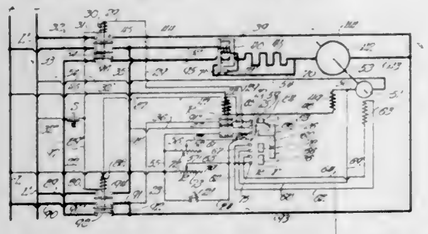
2. A device of the character described comprising an elongated signal casing of heat conducting material adapted to be inserted in a coal pile, a signal rod having limited longitudinal movement in the outer end of the casing, means carried by the rod for closing the outer end of the casing, a spring urging said rod outwardly, a chain anchored in the casing and retaining said rod in retracted position against the action of the spring, said chain including a plurality of fusible links, and means associated with the links for limiting the circulation of air in the casing, said means comprising packing rings carried by said links and tightly fitting the interior of the casing.

1,509,111. SEAM. ROGER N. SALEEBY, Brooklyn, N. Y. Filed June 21, 1922. Serial No. 569,917. 1 Claim. (Cl. 112—269.)



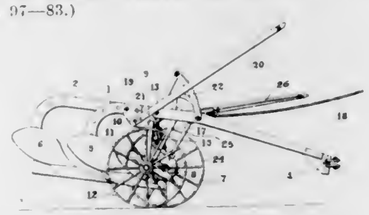
The method of attaching a raw edging or strip of lace to the raw edge of a piece of fabric which consists in superposing said elements with the raw edge of the fabric projecting beyond said edge of lace a distance substantially greater than the thickness of the lace, and forming a seam by interlinking a pair of threads at a point beyond the edge of said fabric and alternately stitching through said superposed fabrics with one of the interlinked threads sufficiently taut to draw the projecting edge of the fabric inward to overlap and enclose the joined edge of the lace.

1,509,112. PROCESS FOR THE MANUFACTURE OF INKING SURFACES. ETIENNE SABBOT, FERNAND BOULLE, SEGOND MORDACI, and EMILIEN COMMENGE, Marseille, France. Filed Sept. 14, 1922. Serial No. 588,174. 1 Claim. (Cl. 41—25.)



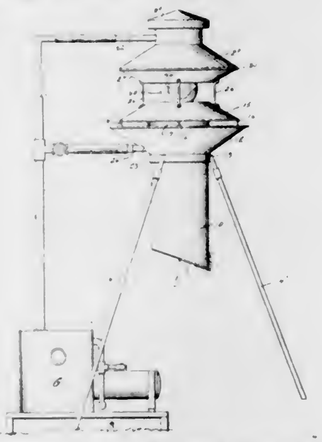
The process of manufacturing a rubber inking surface which consists in pressing a sheet of lead against a stereotype or its equivalent containing the matter to be printed to form a mold, covering the mold with a thin uniform layer of natron silicate placing thereon a sheet of unvulcanized rubber with a paper band on the back of the same pressing the rubber into the mold and vulcanizing the same.

1,509,113. DUMP CAR. JOSEPH H. SLAKER, Aurora, Ill., assignor to Western Wheeled Scraper Company, Aurora, Ill., a Corporation of Illinois. Filed Sept. 8, 1923. Serial No. 661,608. 5 Claims. (Cl. 105—271.)



3. A dump car comprising in combination a car bed, a support therefor with which said bed is pivotally connected to adapt it for tilting in opposite directions alternatively, two parallel rock-shafts beneath said bed, two laterally-movable struts arranged respectively beneath and adjacent to opposite sides of the bed, a bar pivotally connected with each strut and pivoted on one of said rock-shafts, each bar comprising two members pivoted together and the inner member of each having an end portion projecting toward the other one of said rock-shafts, an arm non-rotatably mounted on each rock-shaft and lying over and adapted to be brought in contact with the said projecting end portion of the inner member of the bar mounted on the other rock-shaft, and means for rocking either of said rock-shafts.

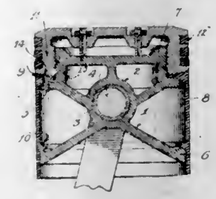
1,509,114. CONTROL SYSTEM FOR ELECTRIC MOTORS. LEIGH J. STEPHENSON, Chicago, Ill., assignor to B. V. Becker, Leigh J. Stephenson, George B. Burrage, William T. Fenton, and Lynn A. Williams, trustees, all of Chicago, Ill. Filed July 20, 1921. Serial No. 486,244. 6 Claims. (Cl. 172—240.)



1. The combination with a machine, of a motor connected to drive said machine, a shunt field winding for said motor, a regulating dynamo connected in series with said shunt field winding to form a field winding circuit, means for impressing an electromotive force upon said field winding circuit, a field winding for said regulating dynamo, and controlling means operated by an element of said machine for reversing the direction of current through the field winding of said regulating dynamo, and for subsequently reversing the direction of current through the armature of said motor.

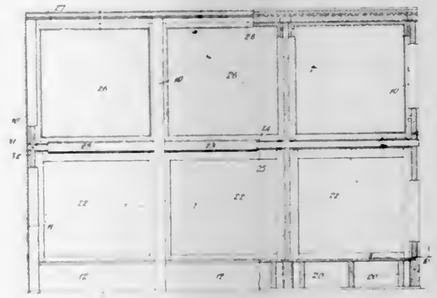
1,509,115. WHEEL PLOW. CARL G. STRANDLUND, Moline, Ill., assignor to Deere & Company, Moline, Ill., a Corporation of Illinois. Filed Aug. 8, 1918. Serial No. 248,993. Renewed Apr. 14, 1923. 17 Claims. (Cl. 97—83.)

1. In a wheeled plow, the combination of a frame carrying one or more plow bodies, a support therefor comprising a transverse axle having a land wheel and a furrow wheel mounted thereon and adapted to be rocked to move the wheels simultaneously forwardly or rearwardly to lower or raise the plow, means operable at will to raise the plow by traction power of one of said wheels, and means to adjust the frame to parallelism with the ground at any point in the operation of raising or lowering and irrespective of the plow raising or lowering movement of the wheels.



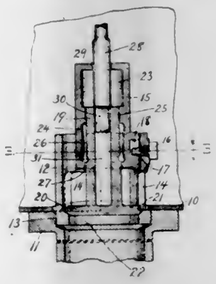
1,509,116. INSECT DESTROYER. JAMES R. THOMAS and JAMES L. FLOYD, Kenton, Tenn. Filed Sept. 19, 1923. Serial No. 663,628. 4 Claims. (Cl. 43—113.)

1. A device for destroying insects including a drum, means for supporting the drum in an elevated position, a frusto-conical flange upon the upper end of the drum, opposed spaced frusto-conical reflector flanges supported from the flange of the drum and of less size than the flange of the drum, a ring burner arranged within the lower reflector flange, an illuminating element arranged intermediate the reflector flanges, and means for directing flame from the burner upwardly about the illuminating element.



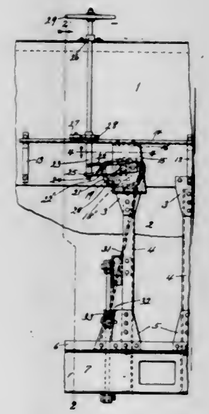
1,509,117. PISTON FOR COMBUSTION ENGINES. WILLIAM H. THOMSON, Peoria, Ill. Filed Oct. 3, 1921. Serial No. 504,949. 14 Claims. (Cl. 74—108.)

1. In a piston, a body-portion having two annular beveled faces spaced from one another longitudinally thereof, an expansible skirt portion having interior faces adapted to engage the beveled faces, and a portion adapted to engage the skirt the same being adjustable relative



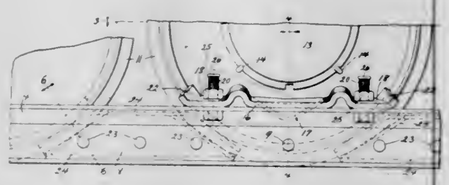
to said skirt and the body, adapted to force the skirt upon the beveled faces of the body for expanding said skirt.

1,509,118. PARTITION. HERMAN TORJESEN, Brooklyn, N. Y. Filed May 27, 1921. Serial No. 473,013. Renewed Feb. 23, 1924. 4 Claims. (Cl. 20—4.)



1. In a partition stiles and panels, a tubular rail provided with upper and lower grooves to receive lower and upper edges of said panels respectively and a locking strip adapted to be passed through the said tubular rail and a lever bit, one end being adapted to be embedded in said locking strip, and the other end adapted to be secured to a stile.

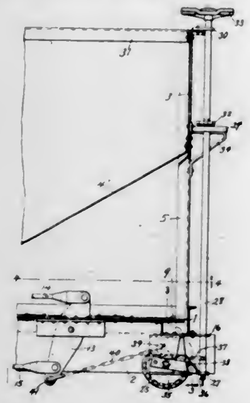
1,509,119. TANK-DISCHARGE-VALVE MECHANISM. VICTOR R. WILLOUGHBY, Ridgewood, N. J., assignor to American Car and Foundry Company, St. Louis, Mo., a Corporation of New Jersey. Filed Jan. 26, 1921. Serial No. 439,917. 8 Claims. (Cl. 137—21.)



8. In combination, a discharge outlet, a tubular valve housing having a valve seat mounted in said outlet, a valve adapted to engage said seat and a tubular valve locking means having a connection with said housing permitting a predetermined rotation of said valve on said seat.

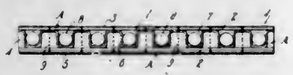
1,509,120. CAM SHEAVE AND SUPPORT FOR BRAKES. VICTOR WILLOUGHBY, Ridgewood, N. J., assignor to American Car and Foundry Company, New York, N. Y., a Corporation of New Jersey. Filed Jan. 17, 1924. Serial No. 686,782. 10 Claims. (Cl. 74—110.)

1. In a car, a brake step, a power multiplying device operatively connected to the brake lever, means connecting said power multiplying device and said brake step, a brake mast and a brake mast step carried by said connecting means.



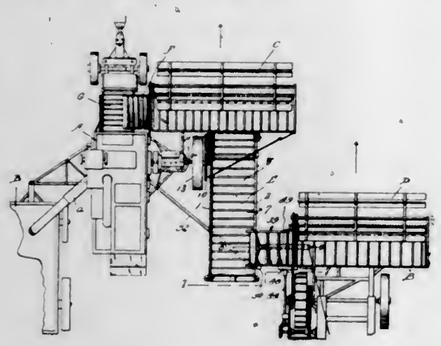
1,509,121. MULTIPLE-UNIT TANK CAR. VICTOR WILLOUGHBY, Ridgewood, N. J., assignor to American Car and Foundry Company, New York, N. Y., a Corporation of New Jersey. Filed Feb. 1, 1924. Serial No. 689,807. 12 Claims. (Cl. 105—360.)

1. A multiple unit tank car comprising a floor, spaced longitudinal members secured to said floor, tank units carried by said floor between said longitudinal members and securing members carried by said longitudinal members and adapted to exert a wedging action on the ends of said tank units.



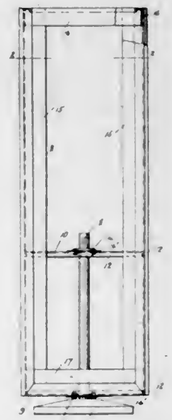
1,509,122. CAM BRAKE SHEAVE AND SUPPORT. VICTOR WILLOUGHBY, Ridgewood, N. J., assignor to American Car and Foundry Company, New York, N. Y., a Corporation of New Jersey. Filed Feb. 1, 1924. Serial No. 689,898. 6 Claims. (Cl. 254—149.)

1. In a car having center and end sills, a car brake comprising a cam brake sheave operatively connected to the brake lever, an inverted U-shaped member supporting said cam brake sheave and having a projection connected



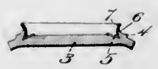
to said center sill and supporting means for said U-shaped member supported from said center and end sills.

1,509,123. SAFETY PACKAGE. JOHN L. BINDER, Barnesboro, Pa. Filed July 10, 1923. Serial No. 650,639. 1 Claim. (Cl. 206—3.)



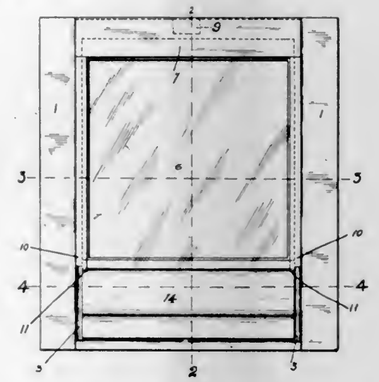
A package of the character described, comprising suitable side walls composed of flat stiff sheets of material, of a continuous corrugated strip disposed between said side walls and bent to engage each wall and provide a series of cushioned pockets between said walls, and a plurality of spaced rows of perforations extending through said side walls and said continuous corrugated strip to permit individual pockets to be removed from said package successively.

1,509,124. TRAILER FEEDER ATTACHMENT FOR COMBINED HARVESTER THRASHERS. FRANK BLOOR, Buckin, Kans. Filed Nov. 25, 1922. Serial No. 603,176. 2 Claims. (Cl. 56—6.)



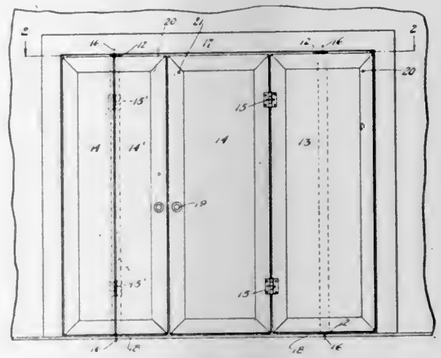
1. In combination, a combined harvester and thrasher, a header positioned at the rear under one side of the harvester and movable therewith for harvesting co-operation, and a feeder attachment on the harvester for feeding the material from the header thereto, said attachment having a frame pivotally connected to the harvester frame, said harvester having an apron on the rear side thereof formed with an opening, a conveyer mounted for movement in the frame to convey material from the header to the harvester and discharge the same thereto through said opening, supporting means for the rear end of the frame of said feeder, and a compresser mounted on said frame and movable relative to the conveyer therein, said compresser projecting through the opening in the apron of said harvester for assisting the feeding of the material from the conveyer in the frame through said opening onto the harvester.

1,509,125. DISPLAY RACK. EDWARD A. BURBANK, Boston, Mass. Filed Apr. 15, 1922. Serial No. 552,826. 1 Claim. (Cl. 40—68.)



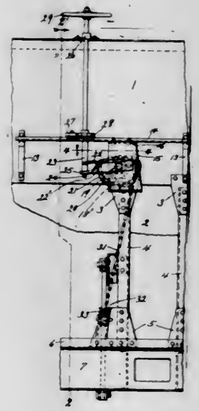
In a display rack, a skeleton frame formed of a series of similar vertical panels secured edge to edge and arranged around a common axis, each panel comprising side bars, a top bar and a bottom bar secured together in rectangular form and having an open space between them, all of said bars being hook-shaped in cross-section and the hook of the top bar being arranged to project inwardly and in the reverse direction from the hooks of the side and bottom bars which form a channel for a card, a horizontal plate secured at the bottom ends of the panels, a horizontal plate secured to the panels intermediate of their ends, each horizontal plate being provided with a bearing at the axis of the frame, and a supporting base and axial spindle upon which the said bearings are journaled.

1,509,126. TURN SHOE. JAMES CAVANAGH, Boston, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Aug. 8, 1919. Serial No. 316,226. 2 Claims. (Cl. 36—22.)



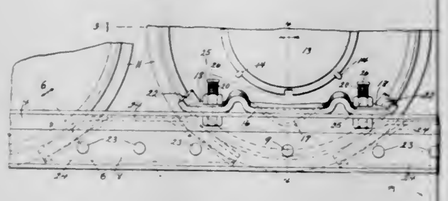
1. A turn shoe comprising, in combination, an upper and a single sole which has been sewed thereto with the sole and upper wrong side out and then turned right side out, the grain face of the sole being outward in the finished shoe and the flesh face being prepared with a continuous sewing-rib to receive the seam securing the upper and sole together and being provided with a continuous reinforce cemented within the inner angle between the sewing-rib and the flesh face of the sole to receive the stitches of the seam and prevent them from pulling through the sewing-rib when the shoe is turned, the foot-engaging part of the flesh surface of the sole being free from the reinforce to preserve its flexibility and prevent impairment of the appearance of the inside of the shoe.

1,509,127. CABINET. ERIC MICHAEL DE SHERBININ, Toronto, Ontario, Canada, assignor, by mesne assignments, to Paragon Dishwasher Syndicate Incorporated, a Corporation of New York. Filed June 25, 1923. Serial No. 647,707. 6 Claims. (Cl. 20—35.)



1. In a cabinet, a sliding sash door comprising two spaced vertical members each having a double rabbet adjacent to and parallel with its inner edge, two spaced horizontal members located one at the top and the other near the bottom of, and integral with, the vertical members and in the same plane as the vertical surfaces of the inner rabbets, a rabbet at the bottom of the lower one of the horizontal members extending to, and in the same plane as the bottom of the vertical members, a panel contacting the surfaces of the inner rabbets and the surfaces of the horizontal members adjacent to their inner edges, panel holding members secured in the outer rabbets overlying the side edges of the panel and having panel supports at their lower ends engaging the bottom edge of the panel, and a cross piece, contacting the inner surfaces of the outer rabbets, extending between the vertical members and covering the top edge of the panel.

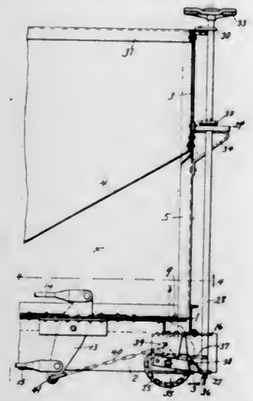
1,509,128. DOOR FOR IN-A-CLOSET BEDS. ROSS J. ELLSWORTH, Chicago, Ill. Filed Sept. 30, 1922. Serial No. 591,629. 9 Claims. (Cl. 20—1.11.)



1. A plurality of sets of similar doors mounted in the opening between a chamber and an annexed closet, an article mounted on each set of doors, hinge means to fold each set together to the width of a single door, pivot means to rotate each set on an intermediate axis within said opening and swing the article through an intermediate part of said opening, and a narrow door provided in one of said doors.

1,509,120. CAM SHEAVE AND SUPPORT FOR BRAKES. VICTOR WILLOUGHBY, Ridgewood, N. J., assignor to American Car and Foundry Company, New York, N. Y., a Corporation of New Jersey. Filed Jan. 17, 1924. Serial No. 686,782. 10 Claims. (Cl. 74—110.)

1. In a car, a brake step, a power multiplying device operatively connected to the brake lever, means connecting said power multiplying device and said brake step, a brake mast and a brake mast step carried by said connecting means.

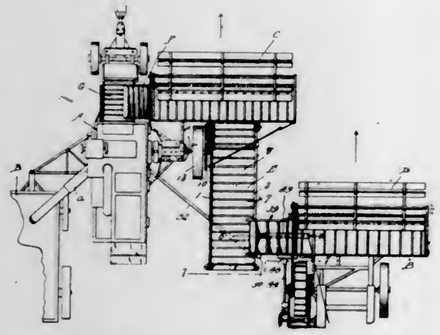


1,509,121. MULTIPLE-UNIT TANK CAR. VICTOR WILLOUGHBY, Ridgewood, N. J., assignor to American Car and Foundry Company, New York, N. Y., a Corporation of New Jersey. Filed Feb. 1, 1924. Serial No. 689,897. 12 Claims. (Cl. 105—360.)

1. A multiple unit tank car comprising a floor, spaced longitudinal members secured to said floor, tank units carried by said floor between said longitudinal members and securing members carried by said longitudinal members and adapted to exert a wedging action on the ends of said tank units.

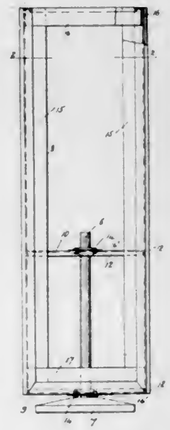
1,509,122. CAM-BRAKE SHEAVE AND SUPPORT. VICTOR WILLOUGHBY, Ridgewood, N. J., assignor to American Car and Foundry Company, New York, N. Y., a Corporation of New Jersey. Filed Feb. 1, 1924. Serial No. 689,898. 6 Claims. (Cl. 254—149.)

1. In a car having center and end sills, a car brake comprising a cam brake sheave operatively connected to the brake lever, an inverted U-shaped member supporting said cam brake sheave and having a projection connected



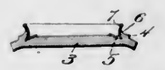
to said center sill and supporting means for said U-shaped member supported from said center and end sills.

1,509,123. SAFETY PACKAGE. JOHN L. BINDER, Barnesboro, Pa. Filed July 10, 1923. Serial No. 650,639. 1 Claim. (Cl. 206—3.)



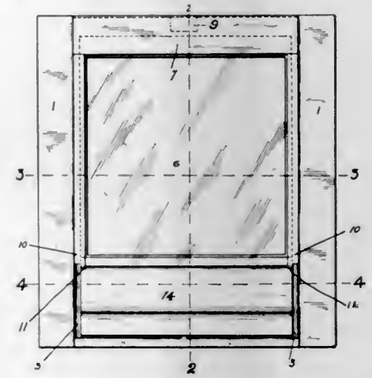
A package of the character described, comprising suitable side walls composed of flat stiff sheets of material, of a continuous corrugated strip disposed between said side walls and bent to engage each wall and provide a series of cushioned pockets between said walls, and a plurality of spaced rows of perforations extending through said side walls and said continuous corrugated strip to permit individual pockets to be removed from said package successively.

1,509,124. TRAILER FEEDER ATTACHMENT FOR COMBINED HARVESTER THRASHERS. FRANK BLOOR, Bucklin, Kans. Filed Nov. 25, 1922. Serial No. 603,176. 2 Claims. (Cl. 56—6.)



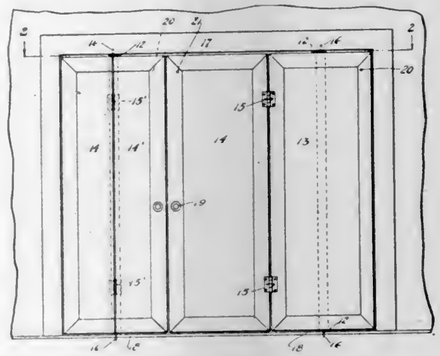
1. In combination, a combined harvester and thrasher, a header positioned at the rear under one side of the harvester and movable therewith for harvesting co-operation, and a feeder attachment on the harvester for feeding the material from the header thereto, said attachment having a frame pivotally connected to the harvester frame, said harvester having an apron on the rear side thereof formed with an opening, a conveyer mounted for movement in the frame to convey material from the header to the harvester and discharge the same thereto through said opening, supporting means for the rear end of the frame of said feeder, and a compresser mounted on said frame and movable relative to the conveyer therein, said compresser projecting through the opening in the apron of said harvester for assisting the feeding of the material from the conveyer in the frame through said opening onto the harvester.

1,509,125. DISPLAY RACK. EDWARD A. BURBANK, Boston, Mass. Filed Apr. 15, 1922. Serial No. 552,836. 1 Claim. (Cl. 40—68.)



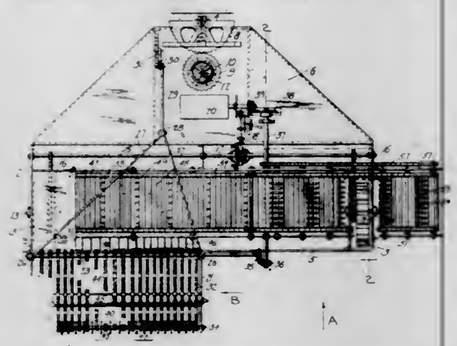
In a display rack, a skeleton frame formed of a series of similar vertical panels secured edge to edge and arranged around a common axis, each panel comprising side bars, a top bar and a bottom bar secured together in rectangular form and having an open space between them, all of said bars being hook-shaped in cross-section and the hook of the top bar being arranged to project inwardly and in the reverse direction from the hooks of the side and bottom bars which form a channel for a card, a horizontal plate secured at the bottom ends of the panels, a horizontal plate secured to the panels intermediate of their ends, each horizontal plate being provided with a bearing at the axis of the frame, and a supporting base and axial spindle upon which the said bearings are journaled.

1,509,126. TURN SHOE. JAMES CAVANAGH, Boston, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Aug. 8, 1919. Serial No. 316,226. 2 Claims. (Cl. 36—22.)



1. A turn shoe comprising, in combination, an upper and a single sole which has been sewed thereto with the sole and upper wrong side out and then turned right side out, the grain face of the sole being outward in the finished shoe and the flesh face being prepared with a continuous sewing-rib to receive the seam securing the upper and sole together and being provided with a continuous reinforce cemented within the inner angle between the sewing-rib and the flesh face of the sole to receive the stitches of the seam and prevent them from pulling through the sewing-rib when the shoe is turned, the foot-engaging part of the flesh surface of the sole being free from the reinforce to preserve its flexibility and prevent impairment of the appearance of the inside of the shoe.

1,509,127. CABINET. ERIC MICHAEL DE SHERBININ, Toronto, Ontario, Canada, assignor, by mesne assignments, to Paragon Dishwasher Syndicate Incorporated, a Corporation of New York. Filed June 25, 1923. Serial No. 647,707. 6 Claims. (Cl. 20—35.)

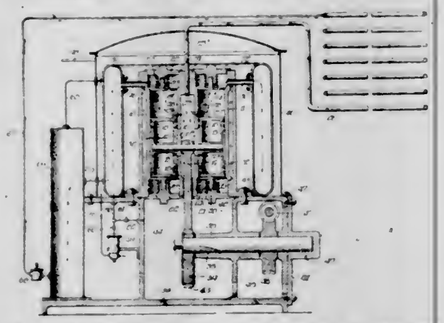


1. In a cabinet, a sliding sash door comprising two spaced vertical members each having a double rabbet adjacent to and parallel with its inner edge, two spaced horizontal members located one at the top and the other near the bottom of, and integral with, the vertical members and in the same plane as the vertical surfaces of the inner rabbets, a rabbet at the bottom of the lower one of the horizontal members extending to, and in the same plane as the bottom of the vertical members, a panel contacting the surfaces of the inner rabbets and the surfaces of the horizontal members adjacent to their inner edges, panel holding members secured in the outer rabbets overlying the side edges of the panel and having panel supports at their lower ends engaging the bottom edge of the panel, and a cross piece, contacting the inner surfaces of the outer rabbets, extending between the vertical members and covering the top edge of the panel.

1,509,128. DOOR FOR IN-A-CLOSET BEDS. ROSS J. ELLSWORTH, Chicago, Ill. Filed Sept. 30, 1922. Serial No. 591,629. 9 Claims. (Cl. 20—1.11.)

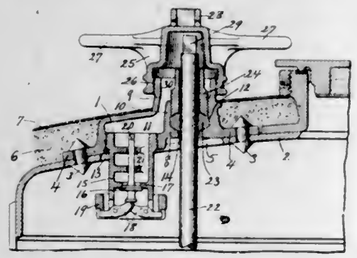
1. A plurality of sets of similar doors mounted in the opening between a chamber and an annexed closet, an article mounted on each set of doors, hinge means to fold each set together to the width of a single door, pivot means to rotate each set on an intermediate axis within said opening and swing the article through an intermediate part of said opening, and a narrow door provided in one of said doors.

1,509,129. BEET-LOADING MACHINE. ELLIE C. EVANS and PATRICK C. ROBERTS, Wiley, Colo. Filed Aug. 6, 1921. Serial No. 490,350. 2 Claims. (Cl. 198—9.)



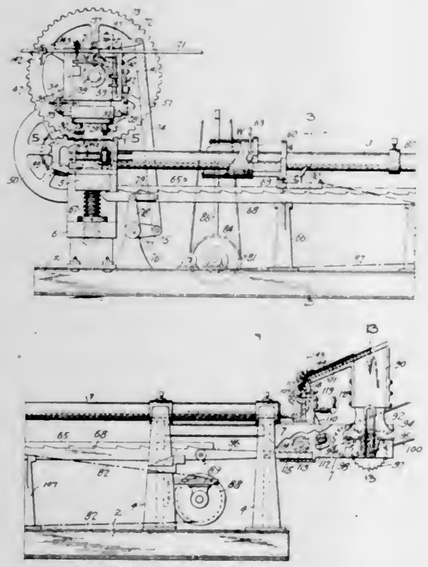
1. In a beet-loading machine, the combination of a wheel-supported frame, an elevator for moving beets to an elevated point of discharge, a slanting conveyor for feeding beets to the elevator, consisting of upper and lower shafts, series of spaced sprocket wheels on the shafts and chains separately engaging with said sprocket wheels, and a pick-up element consisting of teeth projecting radially from the lower shaft of the conveyor between its sprocket wheels.

1,509,130. PRICE TAG. HERMAN P. FEST, San Diego, Calif. Filed Oct. 27, 1922. Serial No. 597,356. 1 Claim. (Cl. 40—125.)



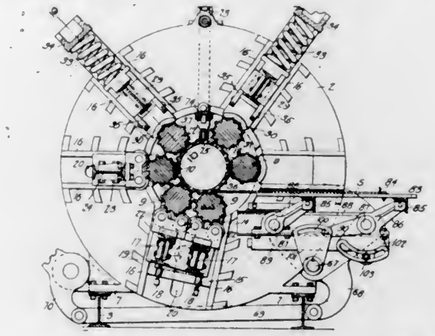
A price tag formed from a single piece of metal and including a horizontal base portion, and an obliquely disposed wall projecting upwardly and rearwardly from the forward longitudinal edge of the base portion, a rib extending across said wall to divide the latter into an upper space adapted to contain a name, and a lower space adapted to contain indicia relating to the price of the merchandise, said wall beneath said rib being provided with a slot arranged parallel with said rib, and separate figures adapted to be supported in said slot.

1,509,131. REFRIGERATING APPARATUS. PHILIP FISCHBACHER, Quincy, Ill. Filed Feb. 2, 1920. Serial No. 355,734. 5 Claims. (Cl. 230—6.)



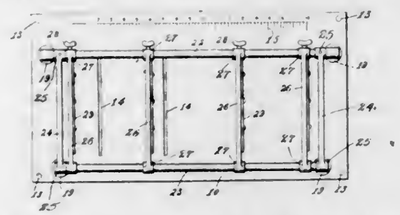
1. In a compressor, the combination of adjacently arranged cylinders having a space therebetween, double acting pistons mounted for reciprocating movement in said cylinders, a pin connecting said pistons, means for communicating refrigerant to said space, a driving member connected to said pin and movably mounted in said space, and a lubricating medium for said driving member forming a seal to prevent ingress of air from the outside of said compressor to said space.

1,509,132. COMBINED CAP AND ROD WRENCH. CLYDE H. FOLMSBEE, Bayonne, N. J., assignor to American Car and Foundry Company, New York, N. Y., a Corporation of New Jersey. Filed June 15, 1922. Serial No. 568,664. 6 Claims. (Cl. 220—39.)



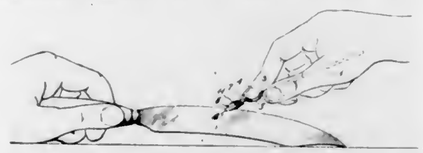
1. As a new article of manufacture, an integral cast cap having a closure portion, a socket portion adapted to serve as a wrench and means to operate said cap when used as a wrench.

1,509,133. RIVETING MACHINE. JONATHAN R. FREEZE, Middletown, Ohio, assignor to Rudd Harvesty, trustee, Denver, Colo. Filed Feb. 1, 1922. Serial No. 533,356. 36 Claims. (Cl. 78—51.)



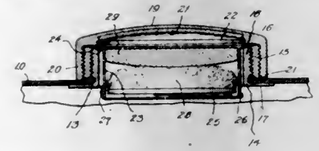
1. In a riveting machine, a work-support, a riveting and punching element, an element adapted to feed rivets to holes of work on the support, an element for supplying rivets to the feed element, both the feed element and the supply element being controlled by movement of the first mentioned element, and a spacing element adapted to advance the work alternately with the operation of the other elements.

1,509,134. PIPE-FORMING MACHINE. JONATHAN R. FREEZE, Middletown, Ohio, assignor to Rudd Harvesty, trustee, Denver, Colo. Filed Feb. 1, 1922. Serial No. 533,357. 27 Claims. (Cl. 153—61.)



1. In a pipe forming machine, a mandrel, head supports at opposite ends thereof, rotary heads on the supports, rollers arranged about the mandrel and mounted on said heads to be separated from the mandrel by a rotary movement of the same, mechanism for automatic rotary reciprocation of the heads, and means for adjusting the automatic mechanism on the heads to vary the normal position of the rollers relative to the axis of the mandrel.

1,509,135. BINDER CUTTER. JULIO FUENTE, West Tampa, Fla. Filed Apr. 14, 1922. Serial No. 552,770. 2 Claims. (Cl. 131—49.)

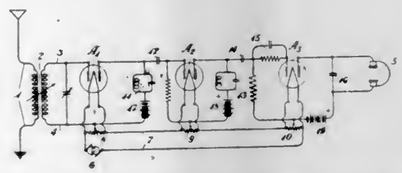


2. A binder cutter comprising a base having spaced parallel slots, a cutting frame pivoted upon the base and movable toward and away from the latter, said frame including spaced parallel shafts, stationary arms connecting said shafts, other arms connecting said shafts and slidable on the latter, whereby the latter mentioned arms can be spaced different distances apart, means for holding said movable arms fixed relatively to the shafts, a cutting blade carried by each of said movable arms, and means for limiting the downward movement of said frame.

1,509,136. KNIFE SHARPENER. MILTON G. GOFF, Detroit, Mich. Filed Aug. 4, 1922, Serial No. 579,724. Renewed June 30, 1924. 1 Claim. (Cl. 76—78.)

In a knife sharpener, the combination with a body composed of a single piece of metal having a handle portion, an intermediate continuous corrugated portion forming a transverse channel in said body, a pair of integral disk-supporting extensions beyond said corrugations, a flat cutting disk supported by each of said extensions with the peripheral edges of said cutting disks in contact, said extensions being separated so as to provide a slot extending inwardly beyond the meeting edges of said cutting disks.

1,509,137. WATERPROOF CONTAINER. BENJAMIN GOTTLIEB, New York, N. Y. Filed Mar. 26, 1923. Serial No. 627,594. 3 Claims. (Cl. 150—8.)

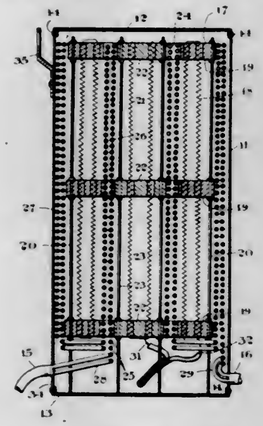


1. A container of the character set forth comprising a body having an opening bounded by flexible resilient material and closure means for said opening, said closure means including a neck member having an internal flange lying against said flexible resilient material, binder means on the outside of the material coacting with the flange for locking the neck member in place, and a cap removably fitted upon said binder means, both the binder means and the cap making independent watertight joints with the flexible material first mentioned.

1,509,138. ALKALINE ELECTRIC BATTERY. LEOPOLD GRAFENBERG, Cologne-Lindenthal, Germany, assignor to John Ferreol Monnot, Mill Hill, Middlesex, England. Filed May 21, 1923. Serial No. 640,553. 8 Claims. (Cl. 204—29.)

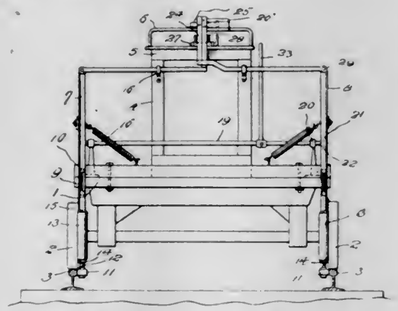
1. A process for the manufacture of negative electrodes for alkaline electric batteries, which consists in electrolytically precipitating an active cadmium-containing mass from a solution containing at least one complex metal ammonia salt and utilizing said active mass so obtained as a filling material for said negative electrodes.

1,509,139. RADIO RECEIVING APPARATUS. DAVID GRIMES, Tompkinsville, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Apr. 21, 1922. Serial No. 555,905. 1 Claim. (Cl. 250—20.)



In a radio receiving system including a vacuum tube amplifier and a vacuum tube detector, means for heating the filaments of said tubes with alternating current of relatively low frequency, a coupling between said tubes including a condenser offering small impedance to radio frequencies and large impedance to other frequencies, and a shunt associated with said coupling, said shunt being anti-resonant to radio frequencies and resonant for lower frequencies.

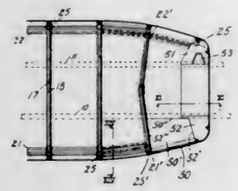
1,509,140. ELECTRIC WATER HEATER. ERNEST GROULX, Montreal, Quebec, Canada, assignor to Arthur Hoolahan, Montreal, Canada. Filed May 26, 1923. Serial No. 641,678. 3 Claims. (Cl. 219—38.)



1. An electric water heater comprising a cylinder with removable top and bottom covers and having an inlet pipe and an outlet pipe, a plurality of heating units

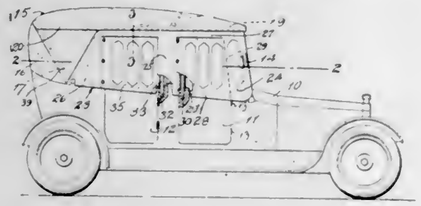
placed within and spaced from one another and from the inner wall of the cylinder, a plurality of pipes coiled between the heating units and between the outer heating unit and the inner wall of the cylinder, said coils being

connected together and so arranged as to provide a continuous passageway between the inlet and outlet pipes, and means to connect the heating units to a source of electrical supply.



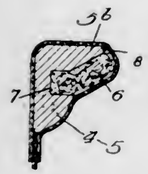
1,509,141. TRACK GAUGE. HARRY L. GROVEDAHL, Waukon, Iowa. Filed Jan. 7, 1924. Serial No. 684,840. 1 Claim. (Cl. 33—144.)

In combination with a vehicle adapted to travel upon a track gauge comprising frame sections movably connected with the vehicle and having rollers adapted to engage the track rails, spring means connected with the sections and the vehicle, and adapted to resiliently retain the rollers in contact with the track rails, means for raising and lowering the section simultaneously, means for locking the sections in fixed position with respect to each other and with respect to the vehicle, one of the sections having a pointer and the other section having a graduated indicator over which the said pointer is adapted to move when the sections of the frame move laterally with respect to each other.



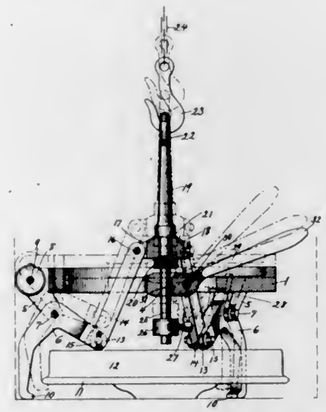
1,509,142. MOTOR BUS CONSTRUCTION. JOHN C. HAGGART, Jr., Alma, Mich., assignor to Republic Motor Truck Co. Inc., Alma, Mich., a Corporation of New York. Filed May 23, 1922. Serial No. 562,941. 5 Claims. (Cl. 296—28.)

1. In a motor bus construction having front and rear wheels and longitudinal framed beams, a vehicle body frame carried thereby, including cross members, upright members, and roof members located rearwardly of the front wheels and over and rearwardly of the rear wheels of said vehicle, the frame being directly supported on said beams and recessed over said wheels to permit said frame to be located below the top of said wheels, said



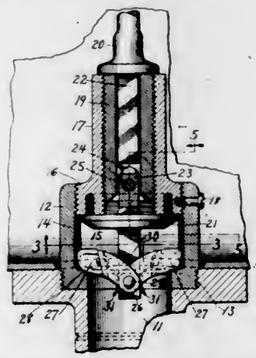
recessed portions of said frame being formed by arching the transverse cross members upwardly at either side thereof, and providing a plurality of short, vertical elements of said frame over said wheels.

1,509,143. VEHICLE TOP. GEY R. HALLOCK and RALPH VILLANE, Duluth, Minn. Filed Mar. 18, 1921. Serial No. 453,351. 2 Claims. (Cl. 296—139.)



1. In a vehicle top of the class described, comprising a plurality of curtain panels, including a rear door panel, an intermediate section for connecting said panels, a flap secured to the rear edge of said section and the forward edge of said rear door panel, a forked rod adapted to receive between its prongs said flap, a retaining bead on said rear door panel for securing said flap, and means for securing the overlapping edges of said panels and section.

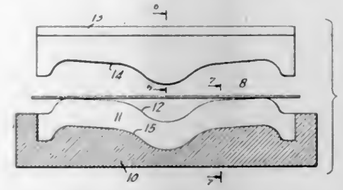
1,509,144. HOOD FOR BILLIARD-TABLE POCKETS. FRANK J. HARMET, Chicago, Ill. Filed Oct. 24, 1921. Serial No. 509,915. 2 Claims. (Cl. 46—11.)



1. A device for the purpose mentioned, comprising a rigid body member extending in a curve around the top of the pocket recess and of general right-angle-triangular form in vertical section radial to said curve, whereby there is formed an under-sloping face overhanging the pocket around the curve thereof, said body member being as to the portion constituting said sloping overhanging face, substantially non-resilient and having in said face a racess forming a seat for a cushion; a relatively soft and non-resilient cushion lodged in said recess and protruding therefrom and a leather jacket enclosing the body member and the protruding cushion.

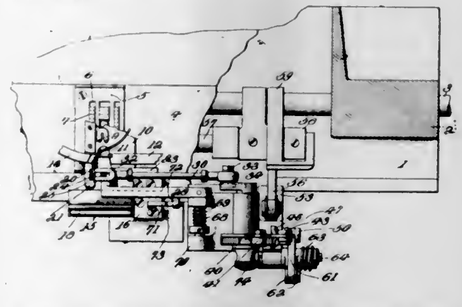
1,509,145. WHEEL TONGS. HENRY C. HAUMUELLER, St. Louis, Mo., assignor to American Car and Foundry Company, New York, N. Y., a Corporation of New York. Filed Aug. 16, 1923. Serial No. 657,710. 10 Claims. (Cl. 294—115.)

1. Wheel tongs comprising a ring member, bell crank levers pivotally mounted on said ring member, a rod for supporting said member and levers and links connecting an end of each lever to said rod.



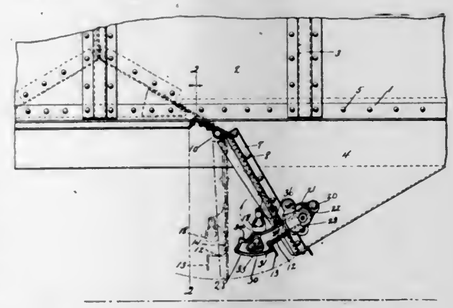
1,509,146. TANK-DISCHARGE-VALVE MECHANISM. OSCAR HOCHBERG, New York, N. Y., assignor to American Car and Foundry Company, St. Louis, Mo., a Corporation of New Jersey. Filed Jan. 5, 1921. Serial No. 435,158. 4 Claims. (Cl. 251—36.)

2. In a tank discharge outlet valve mechanism including a valve seat, a reciprocatory valve member having a depending stud shaft, and a pair of valve seat wipers carried by said shaft and adapted to be retracted upon downward movement of said valve.



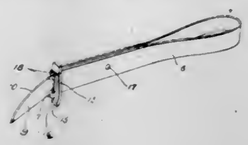
1,509,147. STAMPING APPARATUS AND PROCESS. HENRY S. HOLMES, New York, N. Y., assignor to Thomas E. Murray, Brooklyn, N. Y. Filed Mar. 21, 1921. Serial No. 453,916. 1 Claim. (Cl. 113—49.)

An apparatus for producing from a sheet-metal blank a segment of a rear axle housing, comprising a die having sides 11 shaped on their upper edges 12 to the desired longitudinal contour of the segment and having a bottom 15 parallel to and shaped similarly to said edges, and a one-piece punch having a working face 14 similarly shaped arranged to co-operate with the sides of the die to bend the work to the contour of the upper edges of such sides, said punch having its working face of less width than the recess of the die so as to force the work, after it



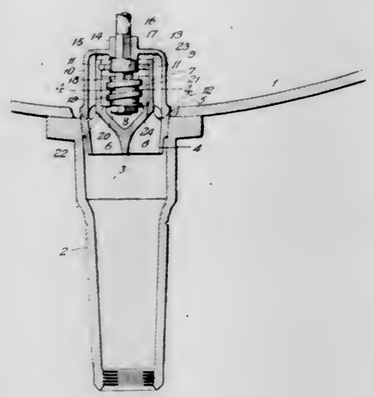
has been bent to the contour of the sides, down against the bottom of the die and to bend up the side portions of the work to a width determined by the contour of the edges of the sheet-metal blank from which the segment is formed.

1,509,148. MACHINE FOR FORMING AND STITCHING TAPERED COLLARETS. ROBERT R. HUGHES, Jr., Utica, N. Y., assignor to Union Special Machine Company, Chicago, Ill., a Corporation of Illinois. Filed June 17, 1919. Serial No. 304,786. 19 Claims. (Cl. 112—122.)



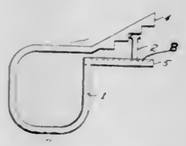
1. The combination of trimming means, stitching means, means located wholly above and pressing against the upper face of the strip for directing the same to the trimming and stitching means, means for shifting the directing means for tapering the strip, and manual means for setting said shifting means into operation.

1,509,149. DOOR-LOCKING DEVICE. ROBERT W. JOY, Brooklyn, N. Y., assignor to American Car and Foundry Company, New York, N. Y., a Corporation of New Jersey. Filed Sept. 17, 1923. Serial No. 663,022. 9 Claims. (Cl. 105—308.)



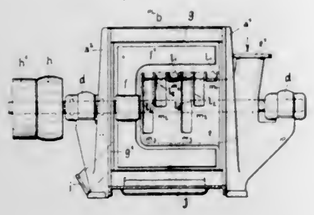
1. The combination of a door, a latch for said door, and a locking pawl for said latch adapted to engage said latch to hold said door in partly closed position.

1,509,150. CAN OPENER. CHARLES E. KENT, Los Angeles, Calif. Filed Apr. 23, 1923. Serial No. 634,115. 2 Claims. (Cl. 30—3.)



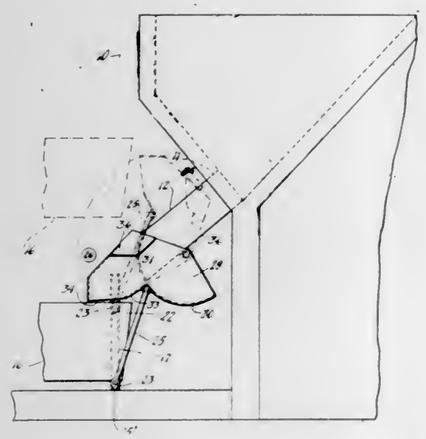
1. A can opener comprising; a looped handle having shouldered extremities; a blade having a downwardly curved cutting edge and an angularly disposed shank; and a pierced fulcrum plate adapted to engage said extremities with said shank therebetween.

1,509,151. TANK-CAR-DISCHARGE VALVE. JOHN W. KING, Sayville, N. Y., assignor to American Car and Foundry Company, New York, N. Y., a Corporation of New Jersey. Filed Aug. 5, 1920. Serial No. 401,291. 16 Claims. (Cl. 137—21.)



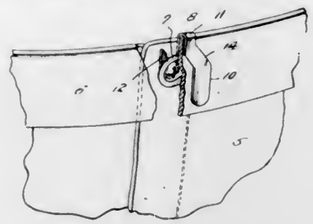
16. In a tank car discharge valve, a valve member, a valve seat member, a valve operating member, a threaded sleeve adapted to rotate with said valve member movable on said valve operating member, and a second sleeve operated by said threaded sleeve, said second sleeve being shifted with respect to said valve member by said first sleeve.

1,509,152. ELECTRODE FOR RIVET HEATERS. FRED T. KITT, Seattle, Wash., assignor, by mesne assignments, to American Car and Foundry Company, New York, N. Y., a Corporation of New Jersey. Filed Mar. 6, 1920. Serial No. 363,670. 8 Claims. (Cl. 219—13.)



1. In an electric heater, the combination of means whereby current may be passed through an element for the purpose of heating the same, and means for cooling a point of contact with a bath of molten metal.

1,509,153. CENTRIFUGAL SEPARATOR FOR PULPY MATTER SUCH AS GROUND WOOD OR STRAW, CELLULOSE, AND THE LIKE. KARL KLIMPKE, Braunschweig, Germany. Filed Aug. 2, 1923. Serial No. 655,382. 5 Claims. (Cl. 92—34.)

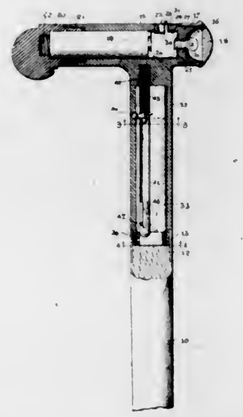


1. In an apparatus of the class described, the combination, with a sieve, and a rotary member mounted on a substantially horizontal axis and adapted to throw the matter to be separated against the sieve, of distributing means for supplying the matter to be separated to the rotary member and having an open overflow for the discharge of the matter to the rotary member, said overflow being divided into sections adapted to divide the matter being discharged into separate streams.

1,509,154. AUTOMATIC SKIP-BUCKET LOADING DEVICE. WILLIAM H. LANG, Chicago, Ill., assignor of one-half to George W. Phillips, Chicago, Ill. Filed Mar. 12, 1923. Serial No. 624,442. 3 Claims. (Cl. 214—125.)

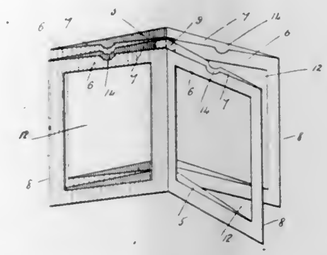
1. An automatic loading device for a skip bucket traveling between vertical guide rails, said device comprising a fixed chute, a chute pivoted to said fixed chute and having an extension with a curved wall to close the passage provided by said chutes, a yoke swingably mounted on said pivoted chute, for operating said chute, and a transverse rod in said yoke and having its ends traveling in said guide rails, said rod being engaged by the bottom of said bucket traveling in said guide rails for swinging said pivoted chute with its closing means to provide a continuous passage through said chutes.

1,509,155. GARMENT SUPPORTER. FLOYD L. LAU, Delhi, Iowa. Filed Aug. 2, 1923. Serial No. 655,170. 1 Claim. (Cl. 241—11.)



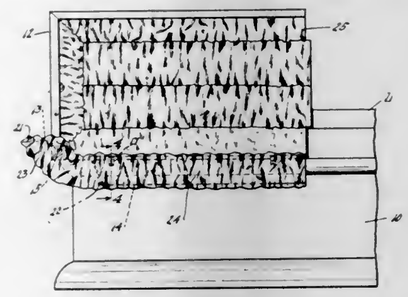
A garment support consisting of a metallic strip provided at a point between its ends with an arcuate bend and having spaced, parallel, plane end portions one of which is longer than the other, the shorter end portion having a hook disposed beyond one side edge of the bend and the longer end portion having an offset extremity disposed beyond the opposite end edge of the bend.

1,509,156. PROCESS OF RECOVERING METALS FROM CYANIDE SOLUTIONS. ARTHUR H. LAWRY, Goldfield, Nev. Filed Aug. 22, 1922. Serial No. 583,654. 3 Claims. (Cl. 75—185.)



1. A process for precipitating precious metals from solutions containing no substantial quantity of free cyanide, consisting in introducing to the weak solution an activated carbon, in allowing the carbon to remain in contact with the solution, to precipitate the precious metals, and in filtering the solution to recover the precipitate therefrom.

1,509,157. COMBINATION CANE. PRUDENCIO LEAÑO, Manila, Philippine Islands. Filed Oct. 11, 1921. Serial No. 507,077. 4 Claims. (Cl. 135—47.)

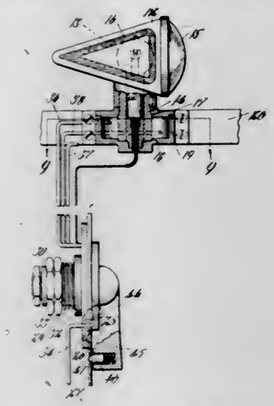


1. In combination, a cane comprising an upper section and a lower section detachably connected to each other, said upper section having a hollow lower end portion, a casing secured within the upper end section, a knife blade slidable within said casing, a spring pressed pin positioned within the upper end section exterior to said casing, connecting means between said pin and knife blade, whereby the knife blade will be projected from said casing, means to limit the outward movement of said knife blade, and means to hold the spring depressed and thereby retaining the knife blade within the casing.

1,509,158. MUSIC HOLDER. JAMES LOVE, Jr., Wilkes-Barre, Pa. Filed Nov. 24, 1923. Serial No. 676,780. 2 Claims. (Cl. 129—20.)

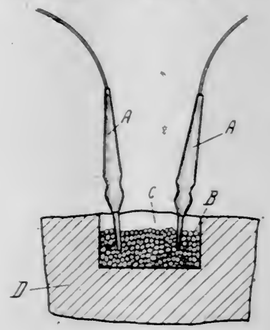
1. A music holder, comprising a frame formed of two similar panels each of which has a front part and a back part secured together at their outer edges and each provided with a similar sight opening, the two front parts being pivoted together at their adjacent edges, and the two back parts being similarly pivoted together and independently of the front parts, said frame being adapted to hold an unfolded double sheet of music which is slid into engagement with both panels.

1,509,159. BURIAL CASKET. FREDERICK LUNDBERG, Chicago, Ill. Filed Jan. 14, 1924. Serial No. 686,058. 5 Claims. (Cl. 27—19.)



1. In combination with a casket having cover means connected to its body, rigid wing means with drapery mountable on said casket body to produce a couch effect, and tongues on said wing means adapted to engage slots in said casket body for permitting ready attachment or removal of said wing means from said body and for supporting said wing means concealed under the cover.

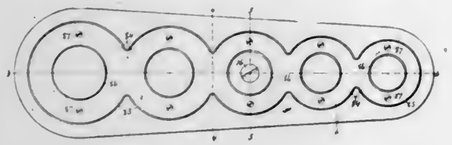
1,509,160. SIGNALING DEVICE. ALOYSIUS L. MAHONY, Boston, and PETER J. LINSTROM, Medford, Mass. Filed Aug. 15, 1923. Serial No. 657,496. 5 Claims. (Cl. 116—39.)



1. A signaling device comprising a dirigible direction-indicating lamp casing, a shaft supporting the same and arranged substantially at right angles with the major axis of the lamp casing, a pneumatic motor including a piston chamber provided with bearings for said shaft and with means for attachment to a vehicle body, in position to maintain said shaft substantially vertical, a manually operable controlling valve, a plurality of air conduits connecting different portions of the piston chamber with different portions of the controlling valve, air-exhausting means carried by the vehicle, and a suc-

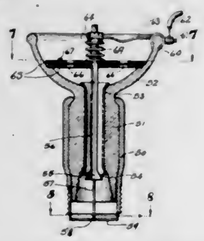
tion conduit connecting said valve with said air-exhausting means and in constant open communication with the valve and with the air-exhausting means, said valve

being provided with means for selectively connecting either of the air conduits with the suction conduit and with the atmosphere.



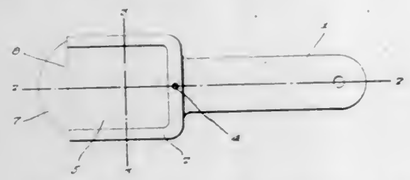
1,509,161. METHOD OF FILLING HOLLOW BODIES, ESPECIALLY THE CAVITIES OF HUMAN TEETH, WITH METALLIC FILLING SUBSTANCES. JACOB MAURER, Konstanz, Germany, assignor to Reiniger, Gebbert & Schall Aktiengesellschaft, Erlangen, Bavaria, Germany. Filed July 18, 1922. Serial No. 575,818. 2 Claims. (Cl. 32—32.)

1. The method of filling, with the aid of electricity, small cavities of hollow bodies, especially of human teeth, with a metal intended to remain constantly in the respective cavity, said method consisting in introducing into the respective cavity an appropriate amount of a suitable metal which is so disintegrated that sparks can arise between the particles thereof when an electric current is caused to pass therethrough, and causing an electric current to pass intermittently through said metallic filling so as to cause the particles forming it to sinter and get welded to one another by said sparks, substantially as described.



1,509,162. GARMENT-PRESSING MACHINE. RICHARD H. MELZER, Syracuse, N. Y., assignor to Triplex Garment Presser., Inc., Syracuse, N. Y., a Corporation of New York. Original application filed Sept. 29, 1920, Serial No. 413,559. Patent No. 1,400,088, dated Dec. 13, 1921. Divided and this application filed Sept. 2, 1921. Serial No. 497,871. 4 Claims. (Cl. 68—9.)

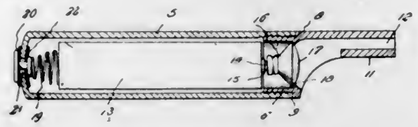
1. In a garment pressing machine, a buck having a steam-heated chamber extending continuously along its sides and ends, a relatively narrow steam exit passage in the upper face of the buck extending continously in a tortuous path along the entire length of and in a



plane above the steam-heated chamber, means for introducing live steam into the first named chamber, and valve-controlled means for conducting steam from the first named chamber to the exit passage.

1,509,163. SPARK PLUG. EINAR MINGE, Chicago, Ill. Filed Jan. 20, 1921. Serial No. 438,565. 8 Claims. (Cl. 123—169.)

1. In a device of the class described, a spark plug provided with an insulating member bearing a cup at it upper end, means movably mounted in said insulating member, said means having an electric terminal connected to its top, means for supporting said terminal on the wall of said cup, an electric terminal at the bottom of said movable means, and means extending inward from the bottom of said plug forming a spark gap with said bottom terminal.

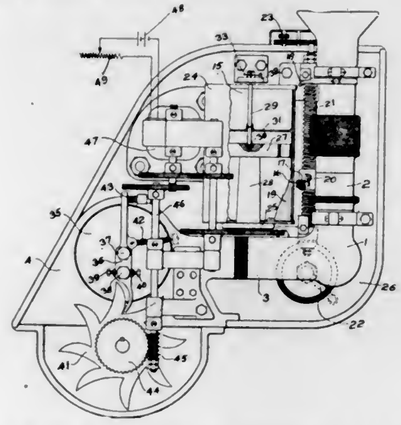


1,509,164. FINGERPRINT-SHEET HOLDER. LEO LAWRENCE MIVELAZ, Memphis, Tenn. Filed July 26, 1922. Serial No. 577,655. 1 Claim. (Cl. 41—4.)

A holder for finger print sheets comprising a handle part having a receptacle formed at one end thereof, one end and the front of the receptacle being open, a plate removably arranged in the receptacle, a pin on the plate for holding the sheets thereon and a set screw at the rear of the handle part for engaging the plate to force the same with the sheets thereon against the front of the receptacle.

1,509,165. ILLUMINATED TOOL HOLDER. ALBERT A. MONTERO, Springfield, Mo., assignor to Gaston M. Serrano, St. Louis, Mo. Filed Oct. 9, 1923. Serial No. 667,519. 2 Claims. (Cl. 240—8.4.)

1. An illuminated tool holder comprising a cylindrical hollow handle, open and internally screw threaded at its outer end, a tool holding device having a substantially semi-circular socketed extension disposed in alignment with said handle, said device being provided on its inner end with a reduced screw threaded nipple tapped into the threaded end of the handle, that portion joining the nipple with the extension being provided with

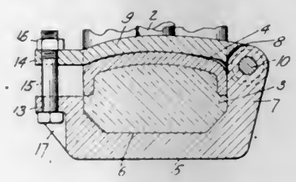


an internal shoulder adapted to be engaged by a flash light bulb and having an opening therein of the size to permit simultaneous projection of light rays through and beneath said extension.

1,509,166. KEROSENE OIL LIVESTOCK DIP. JOHN HARRY MOORMAN and WALTER EMERSON HOWE, Denver, Colo. Filed Aug. 6, 1923. Serial No. 656,129. 9 Claims. (Cl. 167—10.)

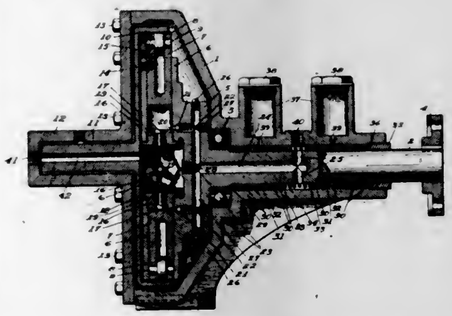
3. An insecticide comprising a mixture of oleic acid, alcohol ammonia and kerosene.

9. The method of compounding an insecticide emulsion consisting in first mixing together substantially thirteen parts of oleic acid and substantially nine parts of alcohol, adding to said mixture substantially three parts of aqua ammonia and mixing the same thoroughly and thereafter adding to the mixture, kerosene in substantially the proportion of four parts of kerosene to the aforesaid mixture.



1,509,167. AIRPLANE SPEEDOMETER. ROBERT V. MORSE, Ithaca, N. Y. Filed Apr. 16, 1921. Serial No. 462,004. 9 Claims. (Cl. 88—1.)

3. In optical apparatus, the combination of a speedometer drum having a large number of different scales, a telescope, optical means whereby the scale reading of the speedometer drum is magnified and transmitted into the field of vision of the telescope, and mean for adjusting the optical means so that any particular scale may be selected and read.

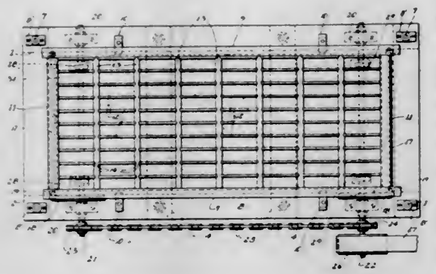


1,509,168. TRACTION LUG FOR MOTOR VEHICLES. JOHN I. MULLEN, Naturita, Colo. Filed Apr. 29, 1922. Serial No. 557,450. 1 Claim. (Cl. 152—2.)

A mud lug for motor vehicle wheels comprising a relatively massive solid shoe member formed to provide a tread portion of a substantial tractive area and oppositely disposed side wall portions, the inner surfaces of said tread and side wall portions being continuous one with the other to snugly seat transversely over a portion of the tire, one of the side wall portions being extended to project inwardly of the rim at its inner side and having its free end centrally bifurcated to provide spaced pivot ears having aligned apertures therein, a retaining member having a pivot ear formed centrally of its inner end for engagement between the said spaced ears, the pivot ear of said retaining member being apertured for alignment with the apertures of said spaced

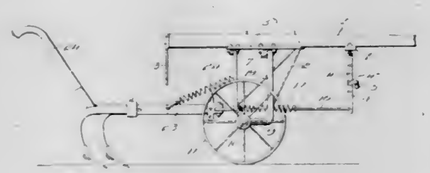
ears, a pivot pin passing through the aligned apertures of all of said ears for hinging said retaining member in position, the other of said side wall portions being substantially shorter than said first mentioned side wall portion and having its free end terminating in close proximity to the adjacent edge of the rim and in spaced relation to the overlying end of said retaining member, and headed fastenings carried by the shorter side wall portion and adapted to engage the overlying end of said retaining member whereby the latter is clamped firmly against the inner side of the rim.

1,509,169. PUMP. GEORGE MCFARLAND, Fort Madison, Iowa. Filed Feb. 19, 1920. Serial No. 359,791. 1 Claim. (Cl. 103—161.)



In a pump the combination of a housing, a shaft journalled therein and passing through a sealing packing, a cylinder structure carried by the shaft and provided with radially arranged cylinders, a reciprocating piston in each cylinder, a rotating stroke member cooperating with the pistons and journalled in the housing eccentrically to the shaft, an inlet passage through the rotating stroke member and communicating with the inlet to each cylinder, and an outlet passage from each cylinder through the shaft and the sealing packing to a point outside the housing.

1,509,170. APPARATUS FOR COMPACTING CONCRETE OR THE LIKE. FRANK NOSSEK, Chicago, Ill. Filed Nov. 26, 1921. Serial No. 517,879. 4 Claims. (Cl. 25—41.)

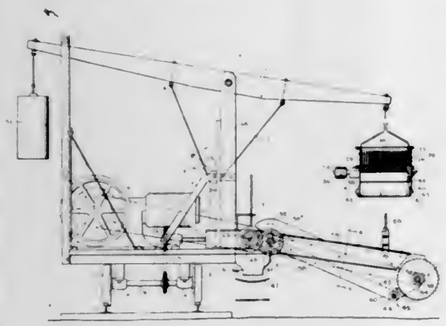


1. An apparatus for compacting concrete comprising a platform; a receptacle mounted on said platform; angle bars disposed end to end in said receptacle and providing bottom and side means forming longitudinal

chambers therein; cross pieces having slots in their opposite side faces and disposed between said angle bars for receiving the ends thereof to retain them in

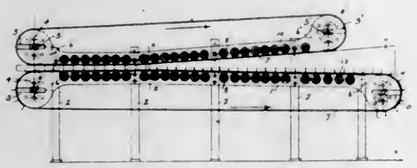
position, binding members extending through and connecting said side bars; and means on said members for locking said receptacle in assembled relation substantially as described.

1,509,171. WALKING CULTIVATOR. JOHN H. OGDEN, Gravelly, Ark. Filed Feb. 18, 1924. Serial No. 693,622. 2 Claims. (Cl. 27—135.)



1. A walking cultivator comprising a draft tongue, a draft bar pivotally mounted thereon, a plate disposed upon the tongue at a point behind the draft bar, a sectional arch bar structure adjustably connected with the plate, the sections of the arch bar structure being adjustable with relation to each other, means for fixing the sections of the arch bar structure to the plate, the sections of the arch bar structure being provided at their outer ends with rearwardly disposed portions having outwardly disposed spindles, ground engaging wheels journalled upon the spindles, braces connecting the outer portions of the sections of the arch bar structure with the plate, a sectional bar structure adjustably mounted upon the plate and located behind the first mentioned arch bar structure, means resiliently connecting the outer portion of the sections of the second mentioned arch bar structure with the outer ends of the pivoted draft bar, blocks adjustably mounted upon the sections of the second mentioned arch bar structure, cultivator beams pivotally connected with the blocks, means for bracing the beams with relation to the blocks, and means resiliently connecting the intermediate portions of the beams with the adjacent sections of the second mentioned arch bar structure.

1,509,172. PROCESS OF RECOVERING WOOL OR OTHER ANIMAL FIBERS FROM FABRICS. SIDNEY A. OGDEN, Eagle Rock, Calif. Filed Apr. 24, 1923. Serial No. 634,398. 5 Claims. (Cl. 8—12.)



1. A process of treating material composed of wool and cellulose or silk in mechanical mixture whereby the wool can be reclaimed, and the additive substances or materials removed in such manner that valuable by-products may be recovered in the processing, without injury to the wool, which comprises causing protective substances to be formed on the woolen fibers before treating the whole for recovery of the by products, and additive substances.

1,509,173. CLAY-DIGGING MACHINE. JAMES T. POKORNY, Cedar Bayou, Tex., assignor of one-third to A. T. Eddingston, Port Arthur, Jefferson County, Tex. Filed Apr. 22, 1920. Serial No. 375,837. 2 Claims. (Cl. 262—19.)

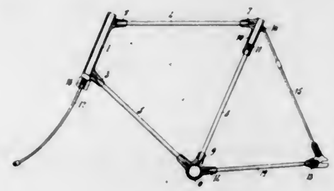
1. A device of the character described including a frame work, a boom pivoted thereto at one end, a gang of pulverizing saws rotatably mounted at the free end of said boom, a digging saw spaced from said pulverizing saws, an operative mechanism carried by the frame work through which said saws may be driven, means for elevating and lowering the same, depending side plates carried by the boom, an endless belt moving between the side plates, said belt and plates forming a conveyor disposed to receive from said saws.

1,509,174. BRICK-MOLDING MACHINE. JAMES T. POKORNY, Cedar Bayou, Tex., assignor of one-half to A. T. Eddingston, Port Arthur, Tex. Filed Feb. 4, 1921. Serial No. 442,573. 4 Claims. (Cl. 25—99.)

1. In a molding machine, an endless belt, rollers over which the same operates, a series of molds carried by said belt, said rollers having peripheral ribs and grooves, the ribs of each roller fitting into the grooves of adjacent rollers.

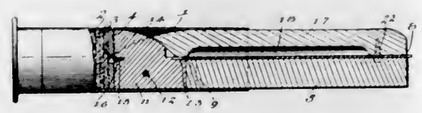
2. In a molding machine, an endless belt, rollers over which the same operates and a series of molds carried by said belt, and formed of slightly flexible material.

1,509,175. YEAST FOOD AND PROCESS OF MAKING SAME. GILBERT R. POTTS, Convent, N. J. Filed Dec. 26, 1923. Serial No. 682,828. 4 Claims. (Cl. 99—10.)



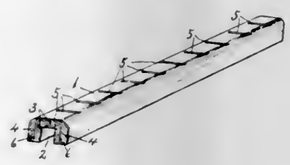
2. A yeast food for bread making and other uses consisting of a syrup composed of malt syrup, extract of hops, and maltose syrup.

1,509,176. LEAF SPRING. CLAUDE J. QUICK, Pulaski, N. Y. Filed Oct. 18, 1921. Serial No. 508,575. 1 Claim. (Cl. 267—49.)



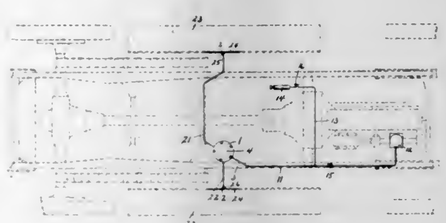
A bow spring comprising a plurality of spring leaves arranged in spaced relation one above the other, rollers in longitudinally spaced relation between said leaves for holding them in spaced relation and permitting their relative endwise movement, said rollers having both ends provided with annular flanges projecting into recesses in adjacent portions of the springs, the springs having portions thereof extended entirely across the recesses and peripheries of the adjacent flanges of the rollers to protect them against contact with external objects and also to avoid excessive weakening of the leaves.

1,509,177. CYCLE FRAME OF STEEL BARS. JOHANNES RASMUSSEN, Copenhagen, Denmark. Filed Apr. 9, 1923. Serial No. 630,920. 1 Claim. (Cl. 208—106.)



A bicycle frame including a front bracket having rearwardly extending threaded sockets, upper and lower bars having their front ends in threaded engagement with said sockets, a crank bearing having a socket in threaded engagement with the lower bar, an intermediate bar having its lower end screwed into the crank bearing, a saddle bracket connected to the upper end of the intermediate bar and the rear end of the upper bar, said bracket having a threaded socket engaging one of the last mentioned bars and a screw for connecting the saddle bracket with the other one of the last mentioned bars, rear bars in threaded connection with said crank bearing, rear fork brackets in threaded engagement with the rear ends of the rear bars and oblique bars connecting said rear brackets to the saddle bracket, all of the threaded connections having their threads extending in the same direction in order to prevent the bars from accidentally unscrewing, and each of the upper, lower, intermediate and rear bars having frustro-conical end portions.

1,509,178. PROJECTILE. HILERY M. RATCLIFF, Blytheville, Ark. Filed Mar. 13, 1923. Serial No. 624,862. 10 Claims. (Cl. 102—26.)

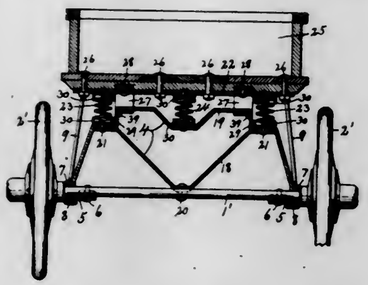


8. A projectile comprising an elongated metal body member having its opposite ends pointed, a flat plate rigidly secured to the body member, having lateral extensions projecting outwardly from the longitudinal edges of the body member and provided with a slot at its rear end, the body member being provided with a slot at its rear end, a rudder inserted within the slot of the body member rigidly secured thereto and having an upstanding wing projecting through the slot of the flat plate, said rudder being provided with a notch at its rear end engaging the metal at the end of the slot in the flat plate, and a casing provided with a slot at its rear end of less weight than the body member with said slot receiving the wing of the rudder.

1,509,179. NOISELESS WINDOW GUIDE. GEORGE ALLEN REYNOLDS, Jr., Binghamton, N. Y. Filed Aug. 7, 1922, Serial No. 580,365. Renewed Aug. 8, 1924. 2 Claims. (Cl. 296—44.5.)

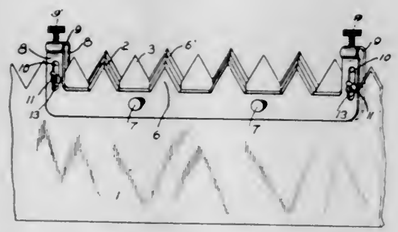
1. A noiseless guide-strip for glass windows, comprising a strip of pliable fabric material, bent into U-shaped cross-sectional form, and staples driven from the back side of the pliable material into the opposite flanges thereof at intervals throughout the length of the strip to enable said strip to be flexed longitudinally while retaining its U-shaped cross-sectional form.

1,509,180. LUBRICATING SYSTEM. GEORGE W. SEVERSON, Auburn, N. Y., assignor to Bowen Products Corporation, Auburn, N. Y., a Corporation of New York. Filed May 19, 1920. Serial No. 382,584. 7 Claims. (Cl. 184—7.)



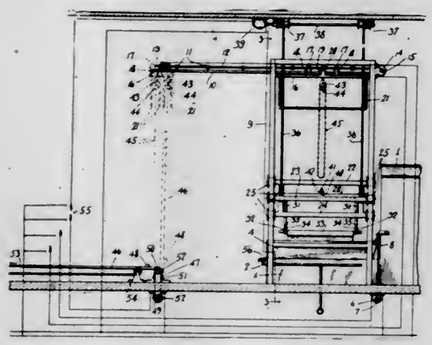
3. In a lubricating system, the combination with a vehicle of a tank supported thereon, a conduit communicating with the tank, and terminating in a coupling member positioned adjacent the periphery of the vehicle, a valve within said coupling member closing by pressure of lubricant in said conduit, and a flexible hose having a coupling adapted to engage either of the first-named couplings, and means in connection with a coupling on the hose for opening the respective valve when said coupling is operatively engaged with either of the first-named couplings.

1,509,181. CART. HOWARD W. SHERWOOD, Syracuse, N. Y., assignor to Edna I. Sherwood, Auburn, N. Y. Filed Nov. 2, 1923. Serial No. 672,281. 7 Claims. (Cl. 280—87.5.)



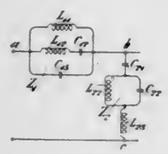
1. In a cart having an axle and supporting wheels journaled thereon, washer-plates secured to the axle ad-

jacent the inner ends of the wheel hubs and provided with bolster-receiving pockets, and a body supporting



bolster overlying the axle and having its opposite ends seated in the adjacent pockets and embracing the adjacent portions of the axle.

1,509,182. SAW GAUGE. DANIEL C. SPENCER, St. Maries, Idaho. Filed Apr. 7, 1923. Serial No. 630,587. 1 Claim. (Cl. 33—202.)

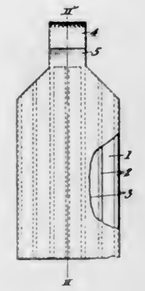


A reversible saw gauge comprising a pair of spaced plates having vertical slots therein, means for attaching said gauge to a saw, said plates having at their ends integral connecting-bends, vertically arranged set screws in these ends, and transversely arranged bolts adjustable in the slots of the plates for co-action with the set screws in determining the required gauge for the saw teeth.

1,509,183. GLASS-DRAWING APPARATUS. DAVID L. SWINDELL, Okmulgee, Okla. Filed Nov. 20, 1920. Serial No. 425,489. 5 Claims. (Cl. 49—17.)

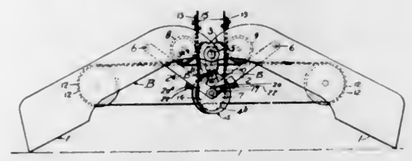
1. An apparatus of the class described comprising a straight bait bar, a vertically movable carriage, a supporting frame for the bait bar removably supported in the carriage, a horizontally movable carriage, means thereon for automatically engaging the supporting frame when the vertically movable carriage brings said frame adjacent the horizontally movable carriage and means for moving said carriages.

1,509,184. MULTIPLE-BAND WAVE FILTER. OTTO J. ZOBEL, Maplewood, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Apr. 30, 1920. Serial No. 377,963. 13 Claims. (Cl. 178—44.)



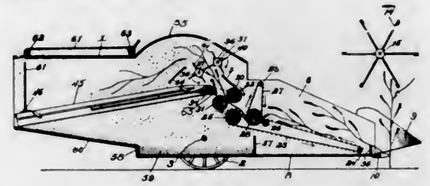
1. A wave filter comprising a plurality of periodic sections, each section including series impedance elements in parallel and shunt impedance elements in series so proportioned that the filter will have more than two bands of free transmission, the impedance of the filter being such that the product of the series impedance and the shunt impedance of any section will be constant.

1,509,185. FUSE. JOHN P. ARNDT, South Milwaukee, Wis., assignor to Line Material Company, South Milwaukee, Wis., a Corporation of Wisconsin. Filed Mar. 21, 1919. Serial No. 284,059. 27 Claims. (Cl. 200—120.)



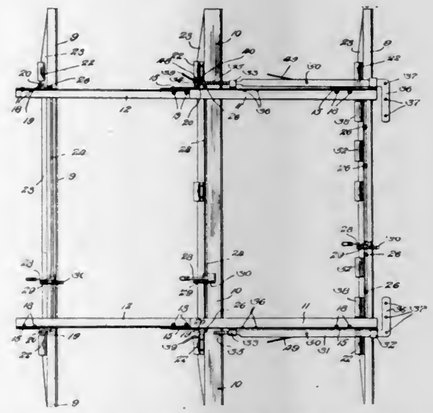
6. A fuse comprising a pair of telescopically arranged tubes having their opposite ends closed and provided with aligned openings through their side walls, a pair of spaced terminals for the outside tube, and a fuse-link extending within said tubes and through the aligned openings, to complete a circuit between said terminals.

1,509,186. STORAGE CELL, ELECTRODE THEREFOR, AND PROCESS OF MAKING THE SAME. RAYMOND C. BENNER, Bayside, and HARRY F. FRENCH, Flushing, N. Y., assignors to The Prest-O-Lite Company, Inc., a Corporation of New York. Filed Aug. 16, 1922. Serial No. 582,248. 5 Claims. (Cl. 204—239).



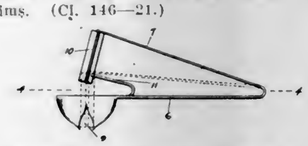
1. Process of preparing a support for the active material of storage cells, comprising subjecting a non-metallic body to a spray of metal in condition to adhere to the body, and removing the body when a metallic coating of the desired character has been formed.

1,509,187. GRAB BUCKET. WILLIAM C. BOLGIANO, Cleveland, Ohio, assignor to The Brown Hoisting Machinery Company, Cleveland, Ohio. Filed Mar. 19, 1924. Serial No. 700,341. 2 Claims. (Cl. 37—184.)



1. In a clean-up bucket for overhead trolleys wherein the spade-arm members are revolvably connected to a common cross-pin above, and the bucket opening and closing links are pivotally connected at their upper ends to the inner ends of the scoop-members and, at their lower ends, are revolvably mounted upon a common cross-pin below, the combination of a top-block mounted on the cross-pin above, a bottom-block fixedly mounted on the cross pin below, and means for counteracting any axial movement of the cross-pin below during the vertical movements of said pin and connected links during the opening and closing operations of said bucket, substantially as shown and described.

1,509,188. THRASHER. OSCAR H. BREMSER, Columbia, Ill. Filed Sept. 26, 1919. Serial No. 326,457. 3 Claims. (Cl. 130—27.)

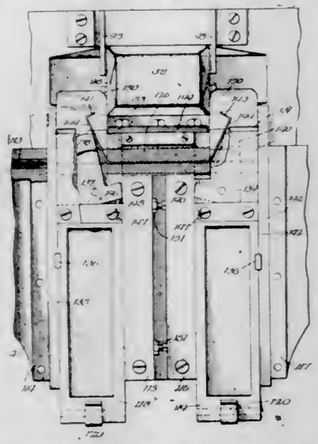


1. A clover thrasher comprising a body, a main conveyor therein, means to direct stalks on to the conveyor, beating means including flexible cooperating arms at opposite sides of the path of the stalks arranged beyond the conveyor, and a cooperating conveyor arranged at an angle to the main conveyor and also arranged in advance of the beating means to compress the stalks while assisting the feed of and directing the same.

1,509,189. DRAG. PETER J. CARLSON, Sioux City, Iowa. Filed Sept. 18, 1923. Serial No. 663,367. 12 Claims. (Cl. 37—143.)

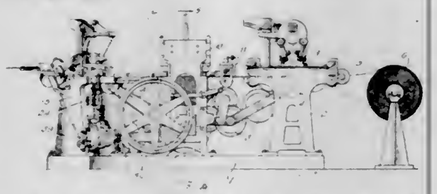
1. A convertible road and gutter drag including a pair of scrapers, and draft elements so interconnecting the same that when traction is applied to both of said elements, the scrapers will be drawn one behind the other, and when traction is applied to one of said elements, the scrapers will be shifted to a V-shape, the draft elements being spaced farther apart at their free ends than at their ends connected to the scrapers.

1,509,190. CHERRY PITTER. PAUL D. COOK, Sioux City, Iowa. Filed Mar. 12, 1923. Serial No. 624,451. 2 Claims. (Cl. 146—21.)



1. A cherry pitter comprising a strip of flat spring metal bent in the form of a V so as to provide an upper and lower arm, a cherry cup formed on the lower arm, a plunger fixed to and depending from the upper arm, said plunger having on its side adjacent the arms, a longitudinal rib, a stripping finger formed of a slip of metal cut from the lower arm and bent back over the cherry cup, said finger having its end bifurcated to receive the rib of the plunger, and adapted to act as a guide for the plunger and to strip from the plunger, cherries impaneled thereby.

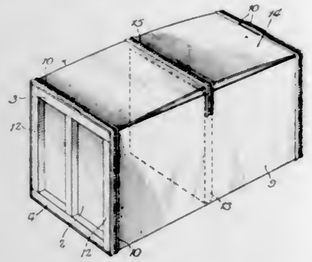
1,509,191. MACHINE FOR MAKING ICE-CREAM PAILS OR OTHER RECEPTACLES. EDWARD CRAIG, St. Joseph, Mich. Filed Apr. 23, 1920. Serial No. 376,161. 34 Claims. (Cl. 93—36.)



1. In a machine for folding blanks and inserting wire bails therein to form receptacles having handles, the combination of means to support the blank in a horizontally disposed plane, with the inside surface of the blank facing downward, instrumentalities above and below said plane for automatically folding the blank, thereby to form the receptacle upside down by upward movement thereof, mechanism disposed in position for automatically applying the wire bail horizontally to form a

handle which serves also to retain the blank in the folded condition thereof, so that the handle formed by the bail is applied in a horizontally disposed plane above the said

plane of the blank, and means to prevent each finished receptacle from falling back when said instrumentalities and mechanism are retracted for the insertion of the next blank.

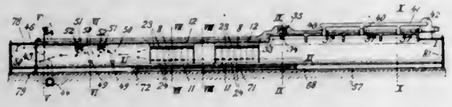


1,509,192. MACHINERY AND METHOD FOR MAKING RECEPTACLES. EDWARD CRAIG, St. Joseph, Mich. Filed July 15, 1921. Serial No. 485,128. 35 Claims. (Cl. 93—36.)

1. In a machine for making and folding blanks of sheet material to produce ice cream pails or other similar receptacles, the combination of automatic instrumentalities for making and feeding rectangular blanks with their front and rear edges disposed transversely of and at right angles to the long sheet or strip of paper from which they are successively formed, so that the other edges of the blanks are formed by the side edges of said long sheet or strip of paper, with the bottom section of each blank disposed obliquely to the line of travel, and automatic receptacle forming means whereby each blank is necessarily converted into a receptacle before another blank is detached from said strip, in which each blank finally and automatically occupies a folding position in line with said long strip, when viewed from above, with the edges of the blank extending obliquely to said means, so that two diametrically opposite corners of the blank to be folded extend longitudinally of said receptacle forming means, while the other two corners extend laterally and transversely of said means, and whereby the bottom section of each blank stands squarely in said forming means.

1,509,193. METAL-BOUND SHIPPING BOX. EDWARD CRAIG, St. Joseph, Mich., assignor to Saranac Automatic Machine Corporation, Benton Harbor, Mich., a Corporation of Delaware. Filed Oct. 5, 1922. Serial No. 592,535. 5 Claims. (Cl. 217—12.)

1. In a metal-bound box structure for oranges or the like, a plurality of sheets and cleats and metal binding members forming a blank, end walls for the box, partition means to divide the box transversely at the middle to form two compartments, when the blank is folded to form the bottom and sides of the box, a separate flexible cover for the top, and cover attaching means including a transverse metal attaching member for the middle of

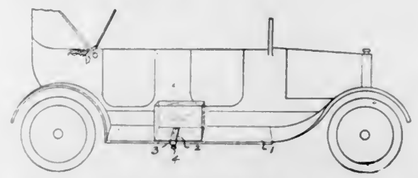


the cover, in the plane of said partition means, with the opposite ends of this attaching member projecting a distance beyond the edge of the cover and serving to fasten down the cover with more or less upward bulge at the middle thereof, and whereby the means to form the blank exclude said cover and said attaching member thereof.

1,509,194. EDIBLE CONTAINER. IVAN CHANDLER DRESSER, Yonkers, N. Y. Filed Sept. 6, 1922. Serial No. 586,529. 1 Claim. (Cl. 99—16.)

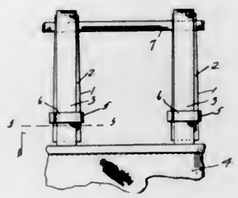
A drinking cup, open at its top and capable of standing upon its own bottom, comprising a baked farinaceous container having a bottom and side walls, a liquid impervious edible lining coating the inner faces of said container and means whereby a breakage of the upper portion of the cup will be limited in its downward fracture of the wall thereof to a predetermined distance from the bottom of the cup.

1,509,195. TUNNEL KILN. CONRAD DRESSLER, Cleveland, Ohio, assignor to American Dressler Tunnel Kilns, Inc., New York, N. Y., a Corporation of New York. Filed Oct. 28, 1919. Serial No. 333,900. Renewed Mar. 14, 1924. 13 Claims. (Cl. 25—142.)



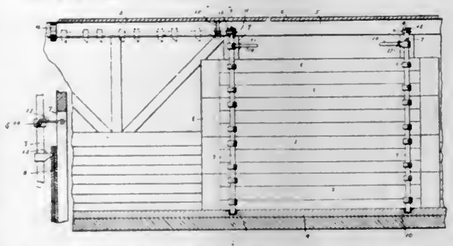
1. A tunnel kiln comprising a main chamber through which the goods to be treated are moved, means situated approximately at the center of said chamber for developing a high temperature therein, and gas propelling mechanism located within the kiln and associated with the forward heating zone of said main chamber and adapted by its propulsion to equalize the heat distribution in said zone.

1,509,196. DISTILLATION APPARATUS. CONRAD DRESSLER, Cleveland, Ohio, assignor to American Dressler Tunnel Kilns, Inc., New York, N. Y., a Corporation of New York. Filed Nov. 14, 1919. Serial No. 338,008. Renewed Mar. 8, 1924. 6 Claims. (Cl. 202—9.)



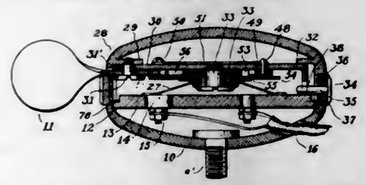
1. In distillation apparatus comprising an elongated kiln or retort formed with a pathway therethrough for the material to be distilled, means for moving said material along said pathway, and means for heating the kiln to a temperature varying progressively at points along the length of the kiln, said heating means comprising combustion chambers and provisions for setting up a directed convection current circulation of the kiln atmosphere in planes transverse to the length of the kiln, the improvement which consists in a gas receiving space above said pathway of substantial volume and divided into a longitudinally extending series of compartments open at their lower ends and having individual gas outlets.

1,509,197. ICE HOLDER. EARL H. DUKE, Houston, Tex., assignor of one-half to Rudolph P. Suhn, Harris County, Tex. Filed Dec. 16, 1921. Serial No. 522,839. 1 Claim. (Cl. 224—29.)



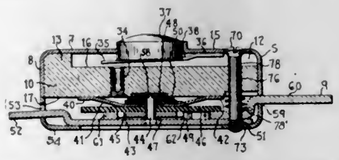
An ice holder including a single strap whose outer end is overturned and formed into a U-shaped clamp which receives the outer edge of a vehicle running board, a clamp screw threaded through the overturned end of said clamp and engaging with said running board, and holding the strap closely against the upper side of said running board, end teeth extending upwardly from said strap and inclined in opposite directions, and intermediate side teeth upstanding from said strap and inclined in opposite directions, said teeth being triangular and thrown up from the material of the strap and being in staggered relation.

1,509,198. RIBBON DRIER FOR LINGERIE. MILDRED G. ELLINWOOD, Kansas City, Mo. Filed Dec. 28, 1923. Serial No. 683,241. 1 Claim. (Cl. 223—19.)



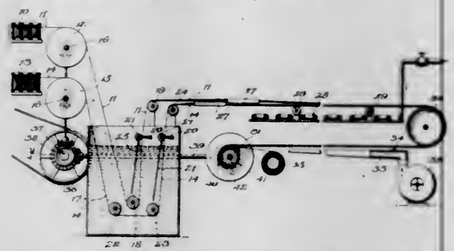
A ribbon drier for lingerie, consisting of a strip of flexible resilient material having its sides formed tapering from the ends of the strip to the middle thereof, and a plurality of binding members slidably mounted on said strip and adapted to move longitudinally thereof in outward direction with increasing friction and to move inwardly with decreasing friction, said binding members comprising severed bands adapted for receving said strip and a ribbon thereon and having yielding portions adapted for pressing normally on the ribbon to hold the latter in place on the strip.

1,509,199. GRAIN DOOR FOR BOX CARS. JOHN C. FOLGER, Alton, Iowa. Filed Aug. 25, 1923. Serial No. 659,358. 1 Claim. (Cl. 20—30.)



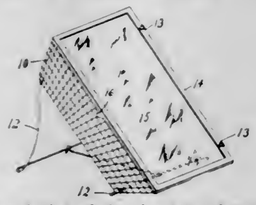
A device for retaining in position a closure extending across the doorway of a car comprising a socket bearing in the floor of the car adjacent the edge of the doorway, a bearing above the doorway adapted to swing on a pivot, a shaft normally journaled in said socket and said bearing, cams on the shaft adapted to engage the closure when rotated into position, a handle secured to the shaft for rotating the same, a hook adapted to engage the handle to retain the cams in engagement with the closure, resilient detent arms fixed to the car structure in position to receive the end of the shaft when the same is removed at its lower end from the socket and swung upwardly around the pivot of the bearing, and a resilient bifurcated spring retainer for engaging the handle when the shaft is in its upper position.

1,509,200. ELECTRIC SWITCH APPARATUS. ARTHUR C. GAYNOR, Stratford, Conn. Filed Dec. 22, 1919. Serial No. 346,522. 52 Claims. (Cl. 200—11.)



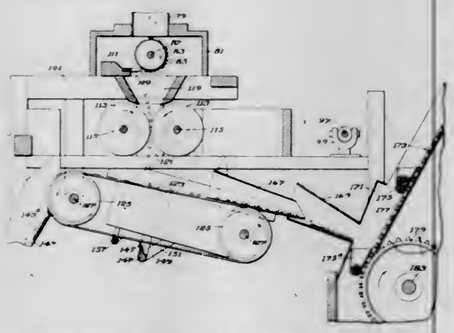
1. In an automotive vehicle, a lighting switch having two sets of terminals having one terminal in common, a single finger actuated operating means for effecting all switch adjustments required when said switch is set for use with either set of terminals, and a setting device for setting said switch to control either of said sets, said setting device operating independently of the position of said single finger actuated means.

1,509,201. ELECTRIC SWITCH APPARATUS AND SYSTEM. ARTHUR C. GAYNOR, Stratford, Conn. Filed Feb. 12, 1921. Serial No. 444,382. 21 Claims. (Cl. 200—11.)



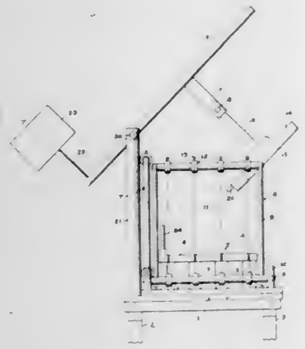
2. The combination in an electric switch, of a box, a movable switching member in said box having operating means accessible from the exterior thereof, and a pivoted member for setting the position of said switch, said member having operating means rigid therewith and projecting from said box.

1,509,202. METHOD AND APPARATUS FOR PRODUCING STRANDS FOR TIRE FABRIC. HANS E. GRAAG, New York, N. Y., assignor, by mesne assignments, to Multiple Cord Corporation, New York, N. Y., a Corporation of Delaware. Filed Jan. 30, 1919. Serial No. 273,969. 13 Claims. (Cl. 154—1.)



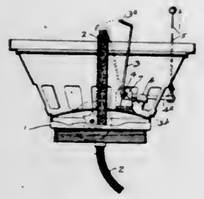
13. Apparatus for making strands consisting of threads arranged in superposed layers including, in combination, a tank adapted to contain a solution of rubber, means to guide threads through the rubber solution in said tank, and means to arrange said threads while the rubber is tacky in narrow superposed layers to form strands.

1,509,203. STAND. VINCENT GRENFELL, Albuquerque, N. Mex., assignor to I. D. Lambert, Denver, Colo., and G. W. Johnson, Albuquerque, N. Mex. Filed May 26, 1922. Serial No. 563,906. 2 Claims. (Cl. 211—24.)



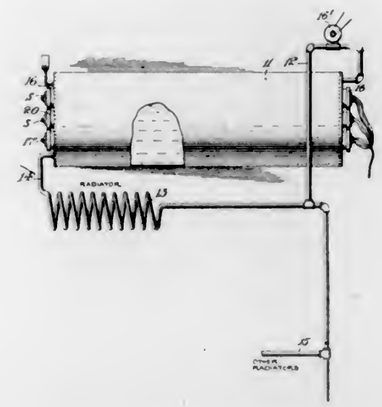
1. A display device of the character described comprising an outer tray like open topped receptacle of foraminous material provided with longitudinally extending stiffening rods, an inner receptacle of foraminous material fitting loosely within said outer receptacle and having a fabric covering adapted to be saturated with liquid and a glazed frame hinged upon the outer receptacle for closing the same.

1,509,204. APPARATUS FOR TREATING CRANBERRIES. HENRY H. HARRISON, deceased, late of Boston, Mass., by Virginia B. Harrison executrix, Boston, Mass. Filed Dec. 1, 1922. Serial No. 604,236. 13 Claims. (Cl. 146—56.)



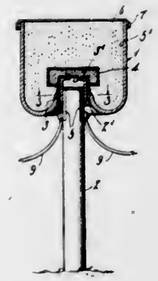
1. Apparatus for treating cranberries, comprising, in combination, means for cleaning the berries, means for puncturing the berries, means for pressing the berries to crush the soft but not the sound ones, an inclined conveyer for receiving the berries and feeding the soft ones upward while allowing the sound ones to roll down on the conveyer, means to receive the soft berries from the conveyer, a mill for perforating the sound berries, and means for conducting the latter from said conveyer to said mill.

1,509,205. TILE-MAKING MACHINE. WILLIAM A. HISLOP, Richmond, Calif., assignor to California Art Tile Co., Richmond, Calif., a Copartnership consisting of Albert C. Myers, Charles E. Cummings, Lewis J. Hislop, James W. Hislop, and William A. Hislop. Filed Oct. 18, 1923. Serial No. 669,274. 6 Claims. (Cl. 25—105.)



1. A tile making machine comprising a support, a bed on the support having intersecting slots therein, on which bed a slab of plastic material is adapted to rest, a cutter member mounted on the support on one side of the bed, a similar cutter member extending along an adjacent side of the bed, each of said cutting members comprising a frame and a plurality of cutting wires carried by said frame and adapted to cut through the slab and extend into the slots in said bed on movement of said cutting members downwardly over said bed.

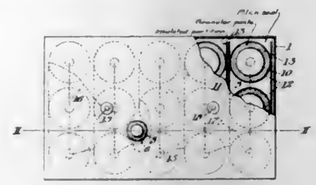
1,509,206. SHUTTER ATTACHMENT FOR WICK-FED BURNERS. DAVID M. HOLBROOK, Portland, Oreg. Filed Dec. 13, 1923. Serial No. 680,484. 1 Claim. (Cl. 67—78.)



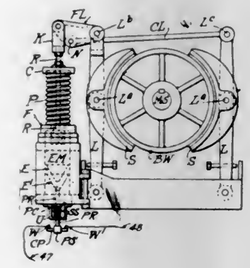
In a shutter attachment for wick fed burner, a bent arm, a shutter wick cover blade at upper end of said bent arm, a counterweight arm at the lower end of said bent arm, a counterweight attached to said counterweight arm, a bent up bar with a bearing at each end thereof, a spindle extending through said bearings and attached to said bent arm substantially as described.

1,509,207. HEATING SYSTEM. WALTER E. HUDSON, Amagansett, N. Y. Filed June 7, 1921. Serial No. 475,676. Renewed Jan. 23, 1924. 13 Claims. (Cl. 219—38.)

1. In a heating system, a boiler, a tube passing therethrough, a heating element in said tube, and ventilating insulated means for supporting the element within the tube.



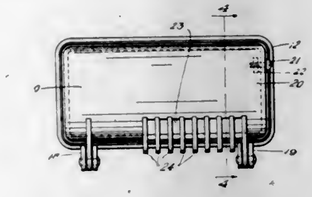
1,509,208. PROCESS AND SYSTEM OF APPLYING INSECTICIDES. JOHN C. HULL, Gasport, N. Y. Filed June 6, 1922. Serial No. 566,436. 2 Claims. (Cl. 102—20.)



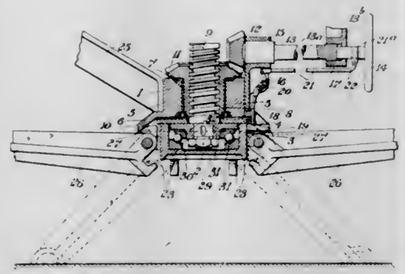
1. An insecticide container, comprising a casing having a socket therein, said casing being adapted to receive a charge of insecticide material and an explosive substance, and contacts adjacent the walls of said socket having terminals adapted to enter the container to ignite the explosive substance when an electrical current is conveyed to said contacts.

1,509,209. DEFERRED-ACTION DRY BATTERY. ALTON KARL HUNTLEY, Madison, Wis., assignor to National Carbon Company, Inc., a Corporation of New York. Filed May 4, 1921. Serial No. 466,861. 9 Claims. (Cl. 204—38.)

6. In a battery of deferred action dry cells of the liquid activated type, a casing in which the battery cells are intermediately disposed, a liquid storage chamber on one side of said battery cells and out of contact therewith, an absorption chamber on the other side of the battery cells and opening into the cells, and means for transferring liquid from the storage to the absorption chamber.

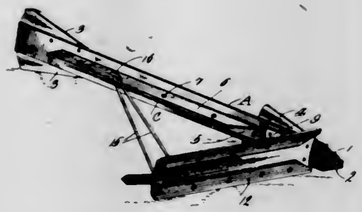


1,509,210. MEANS FOR CONTROLLING SOLENOID BRAKES. BRENT C. JACOB, Cleveland, Ohio, assignor to The Brown Hoisting Machinery Company, Cleveland, Ohio, a Corporation. Filed Nov. 25, 1922. Serial No. 603,294. 2 Claims. (Cl. 188—172.)



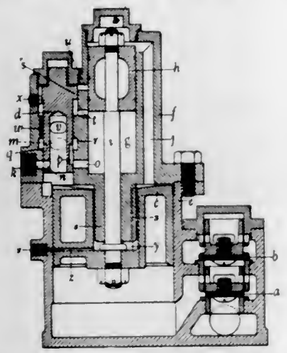
1. In combination, with mechanism for setting the brakes of power shafts when actuated by the expansive force of a compression spring, a solenoid having its core operatively related to said mechanism in opposition to said spring, and a system of co-related electrical circuits comprising a main circuit for energizing said solenoid having resistance therein, a subsidiary circuit for reducing said resistance, provided with a contactor-switch, a subsidiary circuit for closing said contactor-switch, and a normally-open shunting circuit for cutting out remaining resistance, together with means for closing said shunting circuit, substantially as shown and described.

1,509,211. ELECTRIC LAMP. JOSEPH B. KAUSAL, Chicago, Ill. Filed June 28, 1922. Serial No. 571,459. 5 Claims. (Cl. 240—11.)



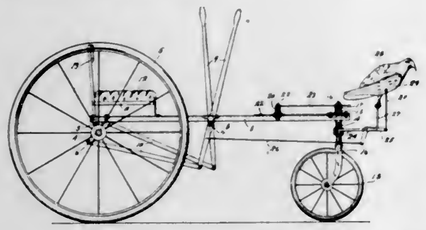
1. A lamp comprising a casing containing a source of light and having an opening therein; and a plurality of members arranged across said opening, said members projecting beyond said opening at one side thereof and gradually tapering inwardly to the opposite side of said opening, said members in cross section being bevelled in opposite directions.

1,509,212. TURNTABLE LIFTING JACK GENERALLY FOR MOTOR ROAD VEHICLES AND THE LIKE. HENRY STUART KEIGHTLEY and GEORGE ARTHUR GODFREY, Newcastle-on-Tyne, England. Filed May 7, 1923 Serial No. 637,215. 7 Claims. (Cl. 254—87.)



1. A lifting jack comprising a body portion composed of a pair of sections, means connecting said sections effective to separate them, means connecting one of said sections with a device to be lifted and suspending said body portion from such device, legs carried by the other section engageable with a support whereby separation of said sections results in lifting of the device with which the first section is connected, and means whereby said legs are automatically elevated above said support when said sections are moved towards one another.

1,509,213. DRAG IMPLEMENT. ROBERT A. MOORE, Balmorhea, Tex. Filed Jan. 26, 1924. Serial No. 688,843. 1 Claim. (Cl. 37—173.)

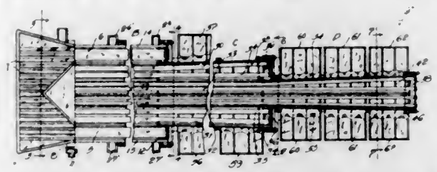


In an implement of the class described, an elongated body having its forward end tapered and provided with an aperture for receiving a clevis or the like, a plurality of fins arranged on the body so as to extend beyond its longitudinal edges, said fins being arranged in pairs, one pair being disposed adjacent the tapered end thereof and the other adjacent the other end thereof, a plate of angular construction in cross section having one portion fixed to the body and the other portion extending angularly therefrom and provided with a plurality of apertures, a wing, means for hinging the wing immediately behind the tapered end of the body, a pair of blades disposed on the wing one extending beyond each longitudinal edge thereof, said wing and said blades being curved transversely, a rod pivotally engaged with the wing adjacent its free end, means engaged with the rod for piercing the apertures of the plate whereby said wing may be held in various angular positions in relation to the body, and a handle projecting beyond the free end of the wing whereby said wing may be lifted upwardly for the purpose of inverting the implement all in the manner and for the purpose specified.

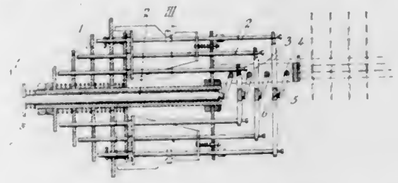
1,509,214. LIQUID PUMP AND ELEVATOR. JOHN EDWARD LEWIS OGDEN, Liscard, England. Filed May 28, 1923. Serial No. 642,082. 3 Claims. (Cl. 103—48.)

1. In liquid pumps and elevators, the combination with a pump piston, means for admitting liquid to be pumped to one side of the piston, means for admitting operative pressure fluid to the opposite side of the piston, means for permitting the exhaust of the pressure fluid, a second piston connected with the pump piston having its opposite sides open to the exhaust means and the pressure fluid whereby to cause the suction stroke of the pump piston and to assist the delivery stroke of the latter.

1,509,215. TRICYCLE. HARRY SLATER, Hawthorne, Calif. Filed Apr. 19, 1923. Serial No. 633,122. 2 Claims. (Cl. 208—38.)



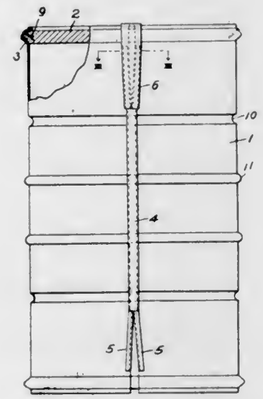
1. A vehicle comprising a frame, a pair of wheels supporting the same at the rear thereof, a crank shaft mounted in said frame and forming an axle on which said wheels are mounted, a seat secured to said frame adjacent the rear thereof, a shaft extending transversely of said frame forward of said seat, hand levers mounted on said shaft having handle portions extending above the frame and portions extending below the frame, connections from the lower end of said levers to said crank shaft for turning the same and said wheels, a bracket at the front of said frame, a figure having pivoted wings supported on said bracket, a bell crank lever fulcrumed on said bracket, links connected at one end to one arm of said lever and at their other ends to said wings, and a link connected at one end to the other arm of said lever and at its other end to one of said handles whereby said wings will be flapped when said vehicle is propelled.



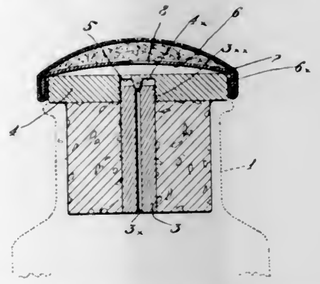
1,509,216. FRUIT-GRADING MACHINE. ANDREW C. TULIUS and FLOYD VALLEAU, Elk, Wash., assignors of one-third to William Kroll, Spokane, Wash. Filed Apr. 8, 1924. Serial No. 704,946. 3 Claims. (Cl. 130—32.)

1. In a fruit grading machine, the combination with a pair of endless belts and operating means therefor,

of a pair of guide boards for said belts each having a longitudinal rib for inwardly tilting the upper flights of said belts to form a trough, means for relatively adjusting said guide boards, and means for engaging the inner edges of said belts to spread them to permit various sizes of fruit to fall therebetween.

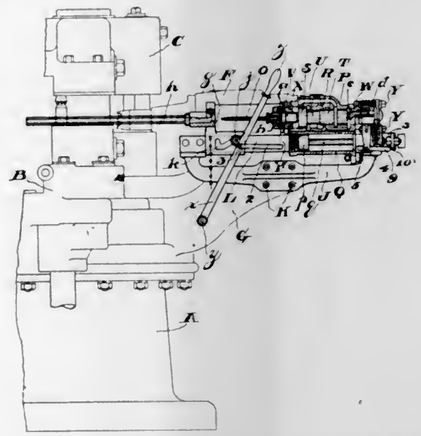


1,509,217. SELF-INDICATING TARGET. ANTON VANGEN, Vestmarken, Norway. Filed Mar. 26, 1924. Serial No. 702,065. 3 Claims. (Cl. 124—15.)



1. In a selfindicating target a number of annular target sections having independent universal motion about their center, means for transmitting the motion of each annular target section to one of a set of spiders mounted behind the target sections, indicators for each target section, pivoted to swing in planes perpendicular to the target axis behind the target sections, transverse shafts pivoted behind each spider, said shafts having one substantially vertical arm in engagement with the center of the spider and one substantially horizontal arm engaging said pivoted indicator, for transmitting motion from the center of each spider to the corresponding indicator.

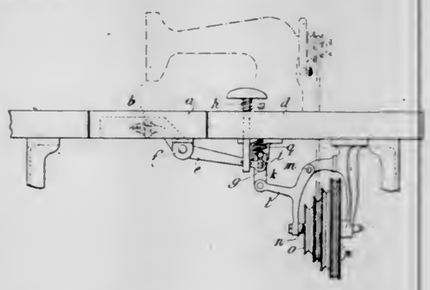
1,509,218. CONTAINER. JAMES V. WALSH, Knoxville, Pa. Filed Feb. 27, 1923. Serial No. 621,519. 2 Claims. (Cl. 220—80.)



1. A container formed of an integral web of flexible material grooved along one edge and shaped to cylindrical form, the groove along the edge of the web forming an internal circumferential groove at one end of the cylinder, the meeting edges of the web being united medially but at the grooved end of the cylinder left free, from a point inward from the groove to the edge, thus constituting a terminal split in the side of the cylinder, the edges of the split inward from the groove being recurved, such split end of the cylinder being adapted to receive within its groove a circular head, and a removable keeper adapted to interlock with the recurved edges of the web on opposite sides of the split defined above and by interlocking to hold the web of flexible material tensionally in engagement upon the periphery of a head introduced into the groove.

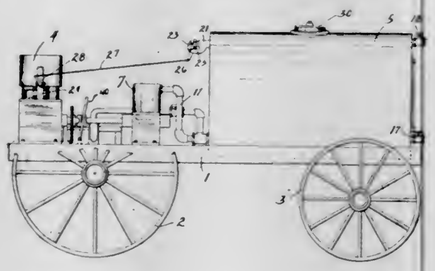
1,509,219. DISPENSING BOTTLE. ABRAHAM ALEXANDER, New York, N. Y. Filed June 19, 1922. Serial No. 569,393. 1 Claim. (Cl. 15—133.)

A dispensing bottle closure comprising a stopper adapted to fit within the neck of the bottle, a stem held vertically in said stopper and formed with a passageway for liquid, the stem being threaded at its upper end, a disk threaded on the stem above the stopper, the disk being provided with a projection for closing the passageway in the stem, and a body of absorbent material carried by the disk.



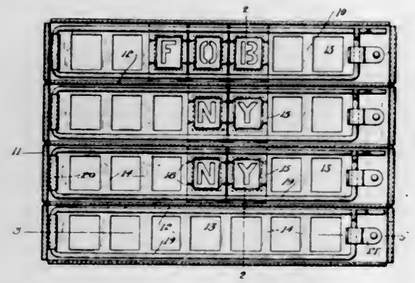
1,509,220. SHANK AND BIT PUNCH. LEWIS C. BAYLES, Easton, Pa., and ARTHUR E. PETERS, Littleton, Colo., assignors to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Jan. 17, 1923. Serial No. 613,125. 13 Claims. (Cl. 76—5.)

1. In a fluid actuated machine for punching hollow articles, the combination with a cylinder and reciprocating piston bodily movable to and from the article to be punched, of an anvil block at each end of the cylinder, one anvil block being adapted to carry a pin, means for causing the piston to impart blows of impact to one or the other of the said anvil blocks according to the direction in



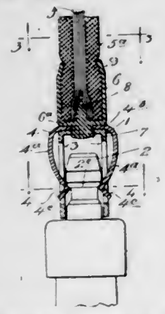
which the pin is to be driven, fluid actuated means for feeding the machine forwardly and for retracting the machine, manually actuated means for controlling the distribution of motive fluid to both the punching machine and the feeding mechanism, and means for automatically returning the said controlling means to neutral position when released from manual control.

1,509,221. CLUTCH-OPERATING MECHANISM. WILLIAM DAVID JAMES BANENDALE, London, England. Filed Dec. 9, 1919. Serial No. 343,498. 4 Claims. (Cl. 192—83.)



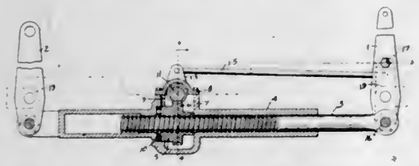
1. A clutch operating mechanism, comprising a work table, a frame supported from said table, a movable clutch member cooperating with a stationary clutch member, a lever pivoted to said frame and operative upon the movable member of said clutch, an oscillating bar pivoted intermediate its ends and connected at one end to said lever, slidable means on said table operated by pressure of a part of the body above the legs for operating said bar to move the movable clutch member into operative engagement with the stationary clutch member, and means whereby said lever, said bar and said slidable means will be automatically restored to normal, and said movable clutch member will be permitted to move out of engagement with said stationary clutch member, when said pressure is removed.

1,509,222. SPRAYING APPARATUS. GEORGE G. BAYNE, Bushnell, Ill. Filed Feb. 24, 1920. Serial No. 360,555. 1 Claim. (Cl. 299—43.)



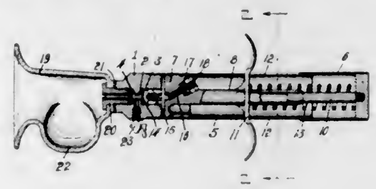
A spraying apparatus including a tank, separate pumps for introducing both air and liquid into the tank, a motor for driving said pumps, a spraying nozzle, connections to the nozzle from the top and bottom of the tank, means for maintaining substantially constant air pressure in the tank, said means including a pressure actuated valve having a connection to the speed governor of the motor whereby as the pressure within the tank increases, the speed of the motor is decreased and vice versa, and clutch and gear connections from the motor to the liquid pump whereby the same may be operated simultaneously, with the air pump at will.

1,509,223. STENCIL. PETER BEGHETTI, San Francisco, Calif. Filed Dec. 27, 1922. Serial No. 609,190. 2 Claims. (Cl. 101—128.)



1. A stencil comprising a frame formed with a plurality of rows of apertures, a plurality of individual stencil plates adapted to register with said apertures, each plate having an upstanding flange at its end and a U-shaped member pivoted at one end to the frame in line with each row of apertures and adapted to fit within the upstanding flange of the said stencil plates and means for latching the said U-shaped member in position on the frame.

1,509,224. ELECTRIC TERMINAL. GEORGE H. E. BERTHOLD, East Orange, N. J., assignor to Rajah Auto Supply Co., Bloomfield, N. J., a Corporation of New York. Filed Apr. 3, 1923. Serial No. 629,563. 4 Claims. (Cl. 173—269.)

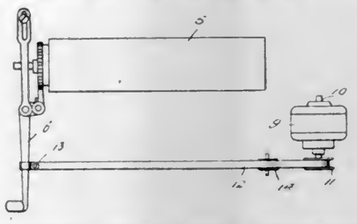


1. An electric terminal comprising a ferrule provided with slots, and having an open end, a clip secured to the opposite end of the ferrule and having spring-like arms located outside of the ferrule and extending into said slots, and means to secure the terminal to an electric conductor with the ferrule disposed axially thereof.

1,509,225. SLACK ADJUSTER FOR VEHICLE BRAKES. AMEL B. BROLUSKA, Detroit, Mich. Filed June 12, 1922. Serial No. 567,502. 3 Claims. (Cl. 188—202.)

2. In a slack take-up mechanism for vehicle brakes, a thrust member comprising inner and outer telescoping members, the inner member having a screw-threaded portion and the outer member having a housing through which said screw-threaded portion extends, a nut axially confined within said housing and engaging said screw-threaded portion, a shaft journaled in said housing transversely to the axis of said nut, a drive connection from said shaft to said nut, a chambered rock arm pivoted upon said shaft, a pawl and ratchet drive connection to said shaft from said rock arm, within the chamber of said arm, a brake lever connected to one end of said thrust member, and a lost-motion drive connection from said lever to said shaft, effective only upon taking up of the lost motion through an abnormal angular movement of the lever.

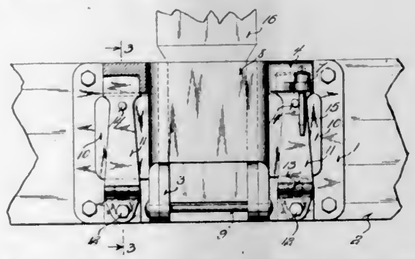
1,509,226. BREAST PUMP. EARL D. BROWN, Toledo, Ohio. Filed Apr. 27, 1922. Serial No. 556,836. 2 Claims. (Cl. 128—281.)



1. In a breast pump, a body having an axial passage with its inner end enlarged to form a valve chamber, and its outer end interiorly threaded, a slotted cylinder secured at its inner end to the inner end of the body, a cap secured to and closing the outer end of the cylinder, a reciprocal piston in the cylinder having a stem provided with an axial socket, a guide stem secured to the closed end of the cap and slidably received in the socket of the piston stem, operating means for the piston connected to the stem thereof, and extending through said cylinder slots, a coil spring encircling the piston and guide stems and abutting the closed end of the cap at one end and the operating means for the piston at its opposite end, a valve in said valve chamber of the body, a valve controlled passage in the piston, a breast cup, and a screw having an axial passage extending through the closed end of the breast cup and threaded into engagement with the said interior threads at the outer end of the body and having a head engaged against said closed end of the breast cup.

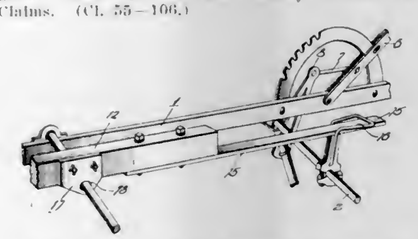
1,509,227. PROCESS OF MAKING A LEAD-ALKALI-METAL ALLOY. WILLIAM S. CALCOTT, Penns Grove, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Oct. 23, 1922. Serial No. 596,517. 7 Claims. (Cl. 75—1.)

1. The process of making an alloy of lead and an alkali-metal, which comprises heating the two metals together to form a molten mass, and excluding oxygen therefrom by maintaining over the upper surface of the molten alloy a liquid layer of a substance which will not contaminate said alloy, and which has a boiling point above, and a melting point substantially below, the temperature of said molten alloy.



1,509,228. AUTOMATIC CARRIAGE-REVERSING MECHANISM FOR TYPEWRITERS. JOSE M. CARINO, Washington, D. C. Filed Mar. 7, 1923. Serial No. 623,353. 1 Claim. (Cl. 197—66.)

In a typewriting machine, a normally closed switch mounted upon the frame of the machine, a normally open switch mounted upon the frame of the machine, said switches being located in the path of movement of the carriage of the machine and at the end of the path of movement, an electric motor, means operatively connecting the electric motor with the carriage reversing bar and the line spacing bar of the machine, an electric circuit connected with the normally closed switch and with the motor, and connected with one of the terminals of the normally open switch, a condenser connected with the electric circuit at the opposite side of the normally closed switch, an open conductor connected with the opposite side of the normally open switch, means adapted to be manually operated for closing said conductor, a magnet connected with the first mentioned circuit and



the open conductor, resistance means interposed between the magnet and the electric circuit, and an armature controlled by the magnet and movable to connect the electric circuit with the said open circuit.

1,509,229. STAKE HOLDER. AUGUSTINE J. CECIL, Oconto, Wis. Filed Mar. 26, 1924. Serial No. 701,971. 3 Claims. (Cl. 105—383.)

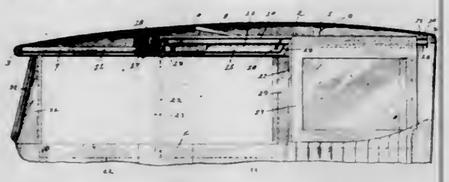
2. A stake holder comprising a body member having outwardly projecting spaced flanges, slotted lugs extending outwardly from the upper portion of said body member, a movable U-shaped member enclosing said flanges and pivoted adjacent its lower end to said flanges, said movable member having outwardly projecting ears, and a pair of latches pivoted adjacent their lower ends to said body member and adapted to have their upper ends positioned within said slotted lugs, said latches being jointed adjacent their pivoted ends.

1,509,230. IMPLEMENT POLE CONNECTION. HENRY P. CORBIN, Moline, Ill., assignor to Moline Plow Company, Incorporated, Moline, Ill., a Corporation of Virginia. Filed Sept. 22, 1922. Serial No. 589,756. 9 Claims. (Cl. 55—106.)

1. In an implement, a pole mounted to swing in both horizontal and vertical planes, an oscillatable shaft, and means carried by the shaft cooperating with the end of the pole and serving to prevent the pole from swinging in a horizontal plane when the shaft is in one position, but permitting a limited swinging movement when the shaft is in another position.

2. In an implement, a pole mounted to swing in both horizontal and vertical planes, an oscillatable shaft, and means carried by the shaft cooperating with the end of

the pole serving to prevent the pole from swinging in a horizontal plane when the shaft is in one position and, when the shaft is in another position, permitting a limited movement in a horizontal plane, but preventing the pole from swinging downward.

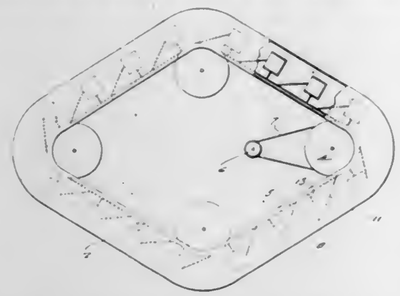


3. In an implement, a pole mounted to swing in both vertical and horizontal planes, an oscillatable shaft, and a loop member carried by the shaft serving to prevent the pole from swinging in a horizontal plane when the shaft is in one position and serving, when the shaft is in another position, to hold the end of the pole against vertical movement in one direction, but permitting a limited amount of horizontal movement.

4. In an implement, a guiding pole mounted to move in both horizontal and vertical planes, a swinging crank axle for raising and lowering the implement, and means carried by the crank axle cooperating with the end of the pole for automatically locking the pole to the machine when the machine is raised and for automatically releasing it to permit the pole to move laterally relative to the machine when the machine is lowered.

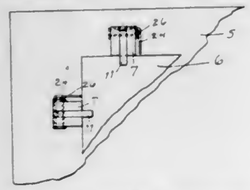
6. A beet puller having a laterally movable pole, pivotal connections for raising and lowering the puller, and means carried by the pivotal connections cooperating with the pole for automatically locking the pole to the machine when it is raised and for automatically freeing the pole to permit it to move relative to the machine when the machine is lowered.

9. A beet puller having steering wheels, a crank axle, means for swinging the crank axle to raise and lower the puller, the steering wheels being mounted so as to be out of contact with the ground when the machine is raised, a guiding pole mounted to move laterally relative to the puller, and means carried by the crank axle cooperating with the end of the pole for automatically locking the tongue rigidly to the puller when the latter is raised and for automatically freeing the pole to render it inoperative as a guiding means when the puller is lowered.



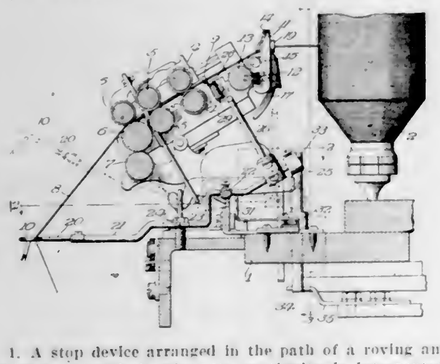
1,509,231. SLIDING CURTAINS FOR AUTOMOBILES. JAMES E. DONNELL and FRANK L. GLOVER, San Francisco, Calif. Filed Apr. 17, 1923. Serial No. 632,668. 4 Claims. (Cl. 296—47.)

3. In a device of the character described, a supporting member comprising a central body portion provided with a forward extension and a rearward extension; an upper and a lower groove formed upon the rearward extension and the central portion; a groove formed in the forward extension and the central portion, said groove being spaced below the grooves of the central portion and the rearward extension; and a plurality of angularly disposed grooves formed in the body portion, and arranged in pairs, one pair of said grooves communicating with the upper groove, and another pair of said grooves communicating between the lower groove and the groove in the forward extension; said grooves combining to form tracks for a pair of side curtains independently mounted thereon.



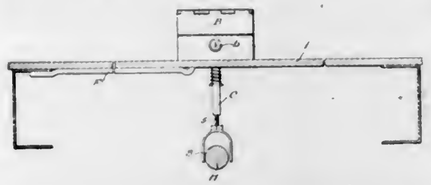
1,509,232. AMUSEMENT STRUCTURE. WILLIAM HUSTON FORSYTHE, Fort Collins, Colo. Filed June 16, 1924. Serial No. 720,377. 3 Claims. (Cl. 104—53.)

2. An amusement structure comprising a floor, a superstructure in the form of a tunnel erected thereon, the said tunnel being composed of sections which are disposed in the form of a diamond, pulleys journaled for rotation at the corner portions of the tunnel and having peripheral portions which pass through the inner walls of the sections of the tunnel, a cable trained around the pulleys and arranged to move in an orbit through the



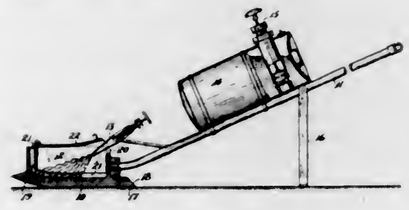
tunnel, means for rotating one of the pulleys and wheel mounted carriages connected at intervals in the cable and arranged to move through the tunnel and upon the floor.

1,509,233. PLATEN-PRESS GAUGE. LEWIS T. GARDNER, Oakland, Calif. Filed Aug. 31, 1923. Serial No. 660,401. 3 Claims. (Cl. 101—415.)



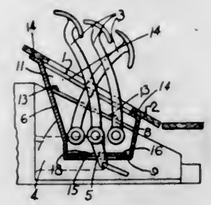
1. In a gauge of the character described, a block, a dove-tail slot formed on the upper surface of said block, a clamping member pivoted to said block, a cam supported in said clamping plate, and means for moving said cam for the purpose of causing said clamping plate to move toward said block throughout a greater portion of its length.

1,509,234. SPINNING AND TWISTING FRAME AND THE LIKE. JOHN P. GAREY, Elmira Heights, N. Y. Filed July 12, 1922. Serial No. 574,509. 14 Claims. (Cl. 117—33.)



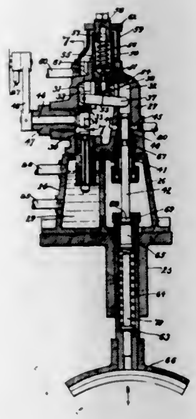
1. A stop device arranged in the path of a roving and adapted to catch it when its continuity is interrupted, said device comprising a block, a member pivoted on the block on an axis at right angles to the roving and having a gripping portion for such roving, and a trigger cooperating with such member to first partially rotate and then cause it to drop by gravity and thereby grip the roving.

1,509,235. THEFT DETECTOR FOR AUTOMOBILES. JOSEPH G. GIULIANI, Washington, D. C. Filed May 2, 1923. Serial No. 636,253. 15 Claims. (Cl. 177—314.)



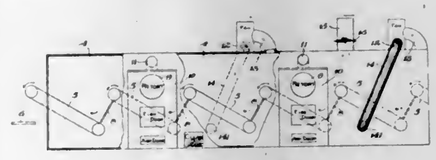
1. An automobile theft alarm comprising alarm means mounted on the body of the vehicle, actuating means extending between said alarm means and a portion of the vehicle substantially at the longitudinal center thereof and with respect to which the body is moved, when additional weight is applied thereto, for setting said alarm means into operation on such movement.

1,509,236. PAVING IRON. FRED E. GREENE, Berkeley, Calif. Filed Nov. 15, 1921. Serial No. 515,198. 2 Claims. (Cl. 158—27.)



1. A paving iron comprising a base having a smoothing surface, a heating compartment overlying the same, a burner extending into the compartment, a handle for said base, a fuel tank for the burner mounted on said handle, said heating compartment having an opening surrounding the burner for the admission of air and being formed with ventilating flues extending upwardly from the bottom at both sides and one end thereof, and a hinged cover for said compartment.

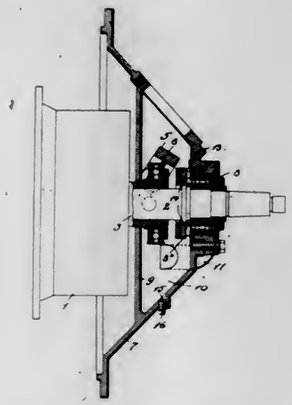
1,509,237. DRAFT-PREVENTING DEVICE FOR AUTOMOBILES. WILLIAM B. HARRIS, Denver, Colo. Filed Feb. 12, 1924. Serial No. 692,311. 3 Claims. (Cl. 180—77.)



3. A draft excluding casing having a bottom, forward and rear walls and inner and outer walls, the bottom being provided with an opening for receiving a pedal arm and the inner wall having its lower portion cut out to receive a portion of a motor and provide an upper wall portion having at its lower edge a flange for receiving fasteners to secure the inner wall to the upper face of a motor, and a bottom plate fitting into said casing and resting upon the bottom thereof and having an opening for registering with the opening in the bottom of the casing, said plate having a slit leading from its inner edge to the opening formed in the plate whereby the pedal arm may be passed through the slit and into the opening.

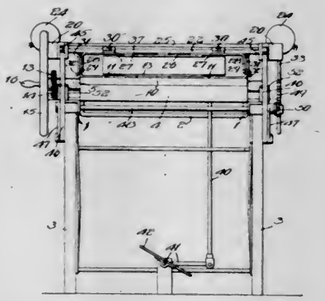
1,509,238. FUEL PUMP FOR INTERNAL-COMBUSTION ENGINES. LOUIS ILLMER, Cortland, N. Y. Filed Apr. 19, 1918. Serial No. 229,556. 36 Claims. (Cl. 123—140.)

1. A pump comprising a plunger, a suction valve and a positively opened discharge valve, a relatively rigid actuating gear for reciprocating said plunger, an intermediary resilient drive adapted to yield against said plunger during a portion of the discharge stroke movement of the actuating gear, means for opening said discharge valve to allow said drive to recover and impel the plunger onward, and means adapted to utilize only the initial portion of the impulsion stroke for the effective pump delivery through said discharge valve.



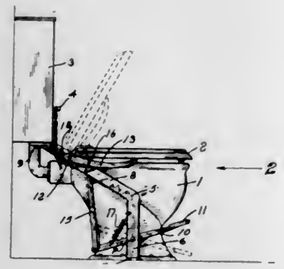
1,509,239. CARBONIZING APPARATUS. MATHEW F. KEVLIN, Philadelphia, Pa., and JULIAN S. JACOBS, Springfield, Vt., assignors to John T. Slack Corporation, Springfield, Vt., a Corporation of Vermont. Filed Mar. 6, 1924. Serial No. 697,251. 4 Claims. (Cl. 8—12.)

4. Wool carbonizing apparatus comprising the combination with a continuous dryer, a closed chamber, and a retort by which a carbonizing reagent is gasified and the gas supplied to the said chamber, of a series of endless traveling aprons within the said chamber, to the first of which the dried stock is supplied by the said dryer, said aprons successively supporting the stock, feeding it along within the chamber until the stock is delivered by a final apron, and respectively dropping the stock in a loose state from a relatively elevated delivery portion of one thereof to a relatively lower receiving portion of the next succeeding apron, and a fan and flue



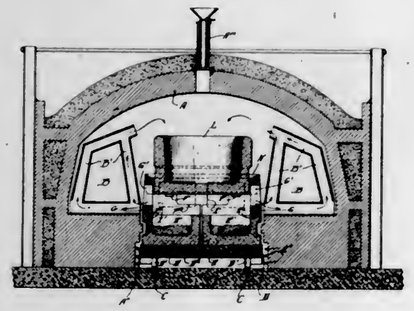
arrangement by means of which the gas-charged atmosphere is withdrawn from the upper portion of the interior space of the chamber and discharged into the lower portion of such space below the conveyor aprons.

1,509,240. AUTOMOBILE LUBRICATION. VALENTINE C. KLOEPPER, St. Louis, Mo., assignor of one-half to A. J. Kessinger, Detroit, Mich. Filed Apr. 29, 1921. Serial No. 465,567. 5 Claims. (Cl. 192—113.)



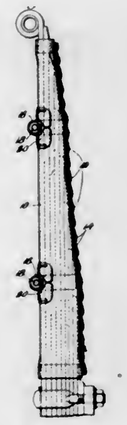
1. The combination, in an automobile, with the clutch mechanism proper and its connected actuating sleeve-and-lever, and the housing enclosing the sleeve-and-lever connection, of a partition-wall attached to the housing-wall and forming with the housing wall a lubricant-containing well for the splash lubrication of such sleeve-and-lever connection.

1,509,241. INNER-SPRING MATTRESS AND CUSHION MAKING. JULIUS KRAMER, Chicago, Ill., assignor to Pullman Davenport & Upholstered Furniture Company, Chicago, Ill., a Corporation of Illinois. Refiled for abandoned application Serial No. 427,151, filed Nov. 29, 1920. This application filed Nov. 17, 1922. Serial No. 602,919. 3 Claims. (Cl. 226—46.)



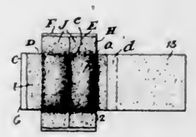
1. In a cushion making machine, a base comprising a fixed central plate and movable side plates extending under the opposite edges of the central plate, and with the outer edges of the side plates turned upwardly, in combination with a cover comprising a fixed central plate and slidable side plates engaging over the opposite edges of the central plate and having their outer edges turned downwardly, engaging blades at the outer edges of the cover side plates whereby the upturned edges of the lower side plates are engaged on both sides thereof, and means including a hand wheel at one side of the machine for moving the side plates of the base laterally carrying with them the side plates of the cover in both directions of adjustment.

1,509,242. COVER LIFTER. SHICHIGORO KUNO, Denver, Colo. Filed Oct. 12, 1923. Serial No. 668,094. 3 Claims. (Cl. 4—251.)



1. In an attachment for water closet seats having covers, the combination with a bracket having one end adapted to be connected to a floor and the other adapted to be secured to a stationary member, a lever pivoted intermediate its ends to said bracket near the lower end thereof, a second lever pivotally connected to said bracket near the upper end thereof, said lever having one end turned at an angle thereto and adapted to engage the lower side of the cover, a link connecting the lower lever with the upper lever in such a manner that when the lower lever moves in a clockwise direction, the upper lever will move in a counter-clockwise direction, and a chain connected to the rear end of the upper lever said chain being adapted to be connected to a flush leevr.

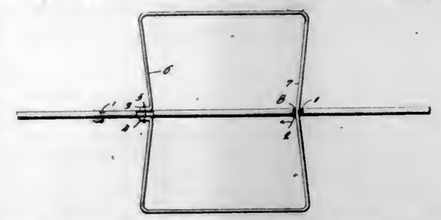
1,509,243. MELTING-FURNACE CAR. WALTER S. KUPFER, Cleveland, Ohio, assignor to American Dressler Tunnel Kilns, Inc., Cleveland, Ohio, a Corporation of New York. Filed Dec. 11, 1920. Serial No. 429,873. Renewed Mar. 17, 1924. 4 Claims. (Cl. 25—142.)



1. A car of the character specified comprising a refractory superstructure shaped to provide a seat for a melting pot and a chamber beneath said seat adapted to receive and retain pot spillage and having portions projecting above said seat and adapted to hold pot fragments on the car in case of breakage of a pot mounted on said seat.

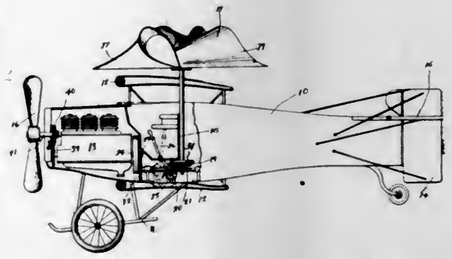
1,509,244. SPRING COVER. CARLISLE A. LINCOLN and EDWIN F. ROSSMAN, Buffalo, N. Y., assignors to The Houdaille Company, Buffalo, N. Y., a Corporation of Delaware. Filed Nov. 27, 1923. Serial No. 677,236. 6 Claims. (Cl. 267—37.)

3. A spring cover comprising a resilient plate provided with a tubular portion and relatively flat flanges extending therefrom, the plate being constructed and arranged to be distorted when applied to the cross bolt of a spring clip and to grip the underside of the cross bolt firmly when in place.



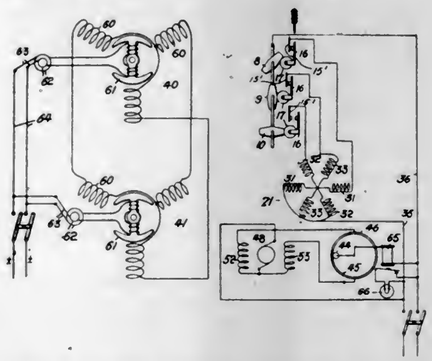
1,509,245. RING BOX. ANDREW BROWN MACLAREN, Toronto, Ontario, Canada, assignor to E. & A. Gunther Co. Ltd., Toronto, Ontario, Canada. Filed Dec. 18, 1920. Serial No. 431,792. 3 Claims. (Cl. 211—28.)

1. As a new article of manufacture, a ring-holder comprising a flat ring-card coated with suitable adhesive material on one side, and provided with a central opening therethrough, and further provided with scored lines located to form side- and end-flaps which are adapted to be broken down; a padding gummed to said card down each side of said opening in such manner as not to overlap said side- and end-flaps, and a covering for said padding adapted to be gummed to said side- and end-flaps and over said padding, and to extend through said opening in the form of a loop.



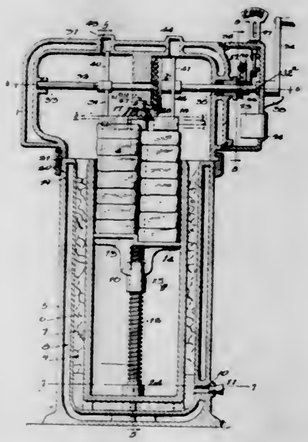
1,509,246. SELF-LOCKING WIRE-REEL GUARD. OWEN C. MAHON, Chattanooga, Tenn. Filed May 18, 1921, Serial No. 470,653. Renewed Feb. 26, 1924. 1 Claim. (Cl. 242—77.)

A self-locking reel guard comprising a shaft having an inwardly depressed portion forming a seat, a spring guard pivoted to said shaft and having its free end engageable in the seat, a guard retaining element projecting outwardly from the shaft adjacent the seat and



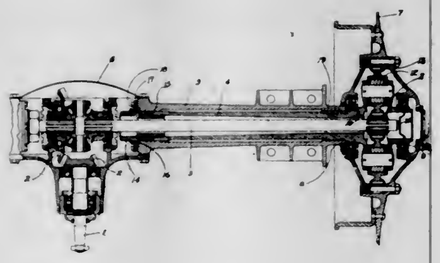
having an overhanging guard-engaging portion provided with an inclined surface for guiding the frame into locking engagement with the seat and retaining member.

1,509,247. AIRCRAFT. JOSEPH MANSELLI, Mount Vernon, N. Y. Filed July 7, 1923. Serial No. 650,089. 2 Claims. (Cl. 244—15.)



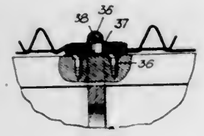
1. In an air craft, a helicoplane, and means for warping portions of said helicoplane, said means including a tubular shaft, a shaft slidable in said tubular shaft, a portion of said helicoplane attached to said tubular shaft, and a portion attached to the sliding shaft, and operating means for moving the sliding shaft in one direction, and automatic means for moving said shaft in an opposite direction upon the release of said operating means.

1,509,248. SELF-SETTING TRANSMISSION SYSTEM. ELEMER MEITNER, Brooklyn, N. Y., assignor to The Sperry Gyroscope Company, Brooklyn, N. Y., a Corporation of New York. Filed Apr. 10, 1918. Serial No. 227,680. 13 Claims. (Cl. 172—293.)



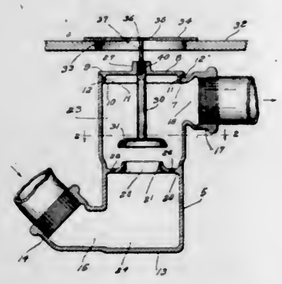
2. In a remotely controlled instrument, a plurality of electrically responsive repeating devices and means including a motor jointly controlled by said repeating devices for exerting a torque on one of said repeating devices.

1,509,249. VENDING MACHINE. LEWIS CARLISLE MILES and JOHN CARLISLE MILES, Boise, Idaho. Filed July 8, 1922. Serial No. 573,626. 34 Claims. (Cl. 211—8.)



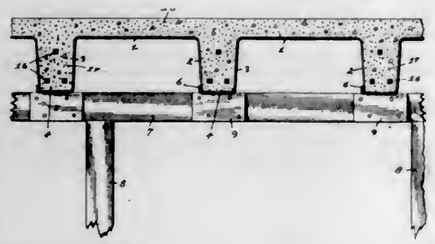
1. A vending machine comprising means to contain the vendable articles, means to cover the container during transit to the vendor, and vending mechanism adapted to be installed on top of the container which then acts as a base in place of said cover so that said articles may be vended therefrom.

1,509,250. AXLE CONSTRUCTION. LEO B. MILLER and ARTHUR J. SHRUM, Chicago, Ill. Filed July 20, 1921. Serial No. 486,090. 8 Claims. (Cl. 74—56.)



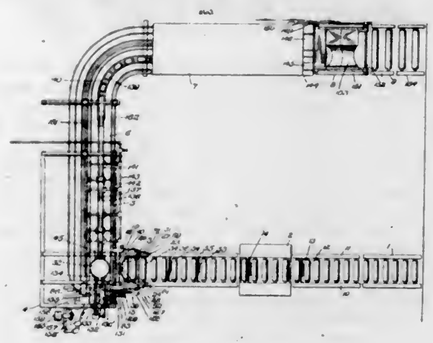
5. In combination, a housing having a cylindrical seat at each end, a recess in one of said seats, a hollow nut having a flange received within said recess, a collar secured to said housing for locking said flange in place, a tubular member having a bearing surface at each end which surfaces fit within said first-mentioned cylindrical seats, a keyway in one of the cylindrical surfaces of said housing, a corresponding keyway in said tubular member, a key fitting said keyways to prevent rotation of said members, said nut having a screw-threaded extension engaging within said tubular member to move the latter longitudinally, and a drive shaft passing through said hollow nut and tubular member.

1,509,251. WING-RADIATOR FASTENING. HARVEY C. MUMMERT, Hollis, N. Y., assignor, by mesne assignments, to Curtiss Aeroplane and Motor Company, Inc., Garden City, N. Y., a Corporation of New York. Filed Oct. 12, 1923. Serial No. 668,235. 5 Claims. (Cl. 244—31.)



1. A fastening for skin or surface type radiators comprising means carried by and projecting out from that part or portion of the vehicle over and upon which the radiator is placed, together with other and further means and also the radiator for fastening the radiator to said vehicle part.

1,509,252. WASTE TRAP. ALBERT S. NEWTON, Providence, R. I. Filed July 15, 1924. Serial No. 726,214. 3 Claims. (Cl. 182—12.)

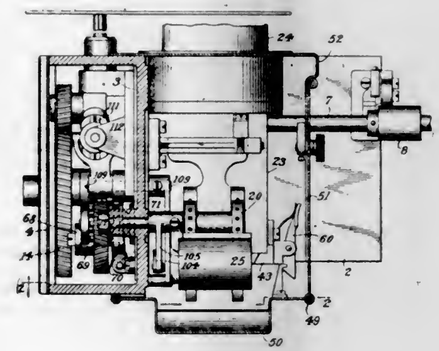


1. In a waste trap, a casing, an inlet in the lower portion of the casing, an outlet in the upper portion of the casing, an annular trough in an intermediate portion of the casing provided with perforations, a vertical depending post attached to the top of the casing, and a downwardly directed baffle plate upon the post extending over the trough.

1,509,253. CONCRETE-FLOOR FORM. RAYMOND C. PHELPS, Los Angeles, Calif. Filed Jan. 2, 1924. Serial No. 683,927. 11 Claims. (Cl. 25—131.5.)

1. A concrete floor form comprising the combination with a supporting structure consisting of a plurality of spaced transverse supporting beams, of a plurality of form pans having interlapping longitudinal edges forming depressions defining floor joist; supporting elements detachably connected to the supporting structure to engage and support the ends of the pans clear of the edges of the supporting beams whereby the pans may be removed without disturbing the supporting structure; and auxiliary pans supported above the beams and spanning the space between the adjacent ends of the form pans.

1,509,254. CAN-HANDLING APPARATUS. FRANK PILLEY, Kansas City, Mo. Filed July 15, 1921. Serial No. 484,842. 5 Claims. (Cl. 214—1.)



1. In an apparatus for handling milk cans, a receiving conveyor, a mixing vat, in line with the receiving conveyor, a can emptying mechanism between the conveyor and the mixing vat onto which the can is delivered by the conveyor, the can emptying mechanism having means for lifting the can to a point above the mixing vat, a conveyor to receive the can in inverted position above the mixing vat, means for transferring the can from the lifting mechanism to the second mentioned conveyor, a can washing apparatus through which the can is automatically passed and a can-up-ending mechanism at the end of the washing apparatus onto which the can is automatically delivered after it passes from the washing apparatus and a delivering mechanism receiving the can from the up-ending mechanism.

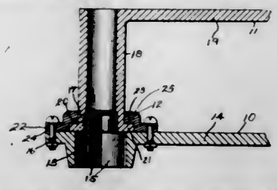
1,509,255. LEAD PENCIL. ABRAHAM POLLAK, New York, N. Y., assignor to Samuel Kanner, New York, N. Y. Filed July 15, 1922. Serial No. 575,279. 8 Claims. (Cl. 120—18.)

1. A lead pencil comprising an exterior tubular polygonal casing having at its forward end a tip-member, a rear interior rotary tube having at its rear end means for imparting rotary motion thereto and at its front end a nut, and lead-holding and propelling means within said casing comprising a spirally threaded screw engaging said nut and extending within said tube and having on its forward end a polygonal head engaging the inner walls of said casing, and a lead clutch member connected with said polygonal head and having a polygonal head engaging the inner walls of said casing.

1,509,256. MOVING-PICTURE MACHINE. NICHOLAS POWER, Brooklyn, N. Y., assignor to Nicholas Power Company, New York, N. Y., a Corporation of Delaware. Filed June 6, 1916, Serial No. 102,068. Renewed Jan. 26, 1922. Serial No. 532,036. 9 Claims. (Cl. 88—17.)

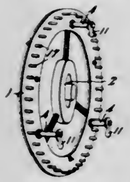
1. In a moving picture machine the combination of a frame or casing having two fixed walls, the other two walls being hinged together and supported on a single hinge whereby the casing may be opened from one side only or from two sides, and film feed mechanism within said casing.

1,509,257. AIR GUN OR RIFLE. MYRON R. RANDALL, Waupaca, Wis., assignor of one-half to Francis D. Randall, Waupaca, Wis. Filed Feb. 26, 1923. Serial No. 621,401. 54 Claims. (Cl. 124—10.)



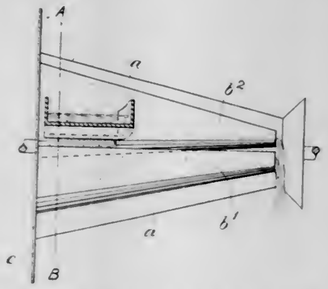
1. In a gun or rifle, a barrel, a receiver connected with the barrel, an air chamber slidable within the receiver, a plunger within the air chamber, a compressible coil spring within the air chamber at the rear of the plunger, an abutment carried by and movable with the air chamber and engaging with the spring within the air chamber, a plunger rod connected with the plunger and extending rearwardly therefrom exteriorly of the air chamber and provided with a holding element, a sear pivotally connected with the rear portion of the receiver and having a holding element to engage with the first named holding element, the holding element of the sear being arranged in advance of the pivot point of the sear whereby the forward movement of the plunger tends to shift the sear to the releasing position, and a trigger engaging the sear at a point remote from the holding element for controlling the movement thereof toward the releasing position.

1,509,258. DUPLEX WRENCH. JOHN A. REISER, Port Jervis, N. Y. Filed Feb. 10, 1923. Serial No. 618,336. 1 Claim. (Cl. 81—54.)



A wrench of the character described comprising a holding unit, a flange formed thereon and being provided with diametrically oppositely arranged openings, a collar provided with openings aligned with openings of the flange, means passing through the said openings for retaining the collar operatively associated with the flange, a flange formed on the collar and overlying the

flange of the holding unit to provide a recess therebetween, a nut engaging portion formed at the lower end of the holding unit, a turnable unit rotatable in the said

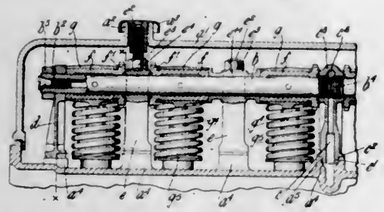


recess, a tubular portion formed thereon and being provided with a nut engaging portio aligned with the first mentioned nut engaging portion as and for the purpose specified.

1,509,259. METHOD AND APPARATUS FOR MANUFACTURING CUSHION TIRES. CARL E. RETT and GEORGE S. ANDERSON, Akron, Ohio, assignors to Lambert Tire & Rubber Co., Barberton, Ohio, a Corporation of Arizona. Filed Apr. 10, 1923. Serial No. 631,194. Renewed Aug. 7, 1924. 11 Claims. (Cl. 18—2.)

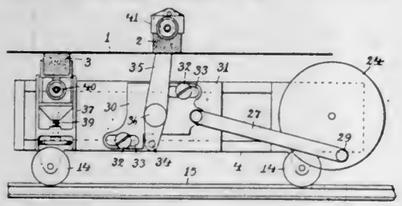
1. The method of manufacturing cushion tires which consists in associating a rim with a template, building up the tire base structure in the rim to the depth gauged by the template, holding the rim in a definite position on the template, placing crosswise, at intervals, blocks of rubber of a length greater than the width of the finished tire and at intervals substantially greater than the diameter of the holes in the finished tire, placing the tread structure around the blocks, removing the rim and its contents from the template, inserting the same in a compressing and vulcanizing mold, subjecting the mass to vulcanizing temperature and thereafter removing the tire from the mold and trimming the excess rubber therefrom.

1,509,260. SAND AND LIKE WASHING AND SEPARATING MACHINE. OLOF NILSSON RIKOF, Broxbourne, England. Original application filed July 14, 1921, Serial No. 484,789. Divided and this application filed Apr. 12, 1922. Serial No. 551,988. 2 Claims. (Cl. 83—86.)



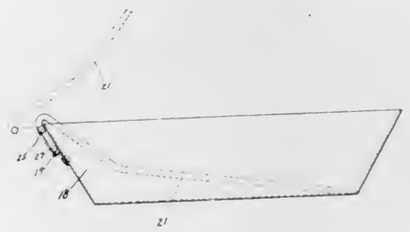
1. A device for separating the fine sand from the sludge discharged by a sand washing and separating machine, comprising a slowly revolving cone, longitudinal pockets fitted externally on said cone for the reception of the sludge, the pockets being open at the narrow, and closed at the wide end of the cone so as to retain the sludge while the sand settles and so as to decant the water at the narrow end by the gradual tilting of the pockets when passing over the cone, substantially as set forth.

1,509,261. SNOWPLOW. JOHN H. ROESKE, Normal, Ill. Filed Aug. 13, 1923. Serial No. 657,118. 2 Claims. (Cl. 37—47.)



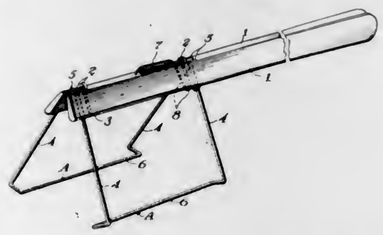
1. In a device for clearing highways of snow, a longitudinally extending frame, front and rear pairs of steering ground engaging wheels carried by the frame, a sliding snow engaging plow carried by the forward end of the frame, a rotatable drum carried by the frame, a beveled pinion carried by the frame, a rotatable post carried by the frame, a pinion carried by the post for engaging the first mentioned pinion, a cable trained about the drum and to the lower end of the plow, and means for connecting draft animals to the frame on each side thereof in rear of the snow plow.

1,509,262. VALVE MECHANISM FOR THE CYLINDERS OF INTERNAL-COMBUSTION ENGINES. FREDERICK HENRY ROYCE, Derby, England, assignor to Rolls Royce Limited, Derby, England. Filed May 14, 1924. Serial No. 713,284. 5 Claims. (Cl. 123—59.)



1. In valve mechanism for internal combustion engines, the combination of a valve operating member, a rocking element adapted to engage said member, a support on which said rocking member is mounted, an eccentric bush interposed between said rocking member and support and means for applying pressure axially to the bush for securing the same in position.

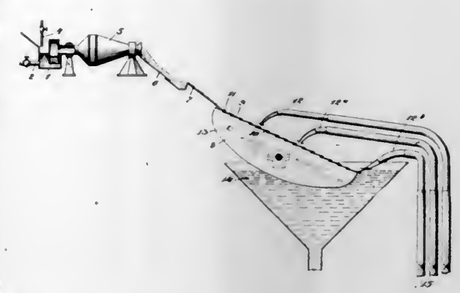
1,509,263. MACHINE FOR POLISHING GUT STRINGS. JOSEPH SALADINO, Chelsea, Mass., assignor to C. Saladino & Sons, Chelsea, Mass., a Copartnership consisting of Carmelo Saladino, Sr., Carmelo Saladino, Jr., Joseph Saladino, Salvatore Saladino, Michael Saladino, and Frank Saladino. Filed Dec. 4, 1922. Serial No. 604,969. 3 Claims. (Cl. 51—67.)



1. A string polishing machine comprising a longitudinally disposed drive shaft, a carrier adapted to move in a direction parallel with said shaft, a slide movably supported by said carrier, a plate slidably carried by said slide, an arm pivoted to said slide and having a polishing member at its upper end, means for slowly advancing said carrier and reciprocating said plate, said arm and plate being loosely connected, and means for supporting strings beneath and in contact with said polishing member, said shaft actuating said carrier and reciprocating means.

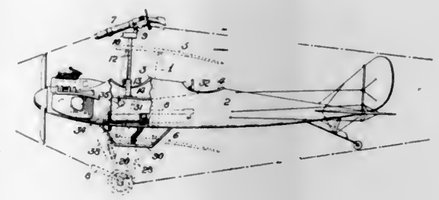
1,509,264. COOKING UTENSIL. JOHN SCHMITT, Portland, Oreg. Filed Nov. 14, 1919. Serial No. 338,026. 2 Claims. (Cl. 220—95.)

1. The combination with a cooking utensil, of two jaws opening in opposite directions provided upon the exterior of said utensil, a detachable handle comprising a pair of legs united one to the other with resilient closing effect, and jaw-engaging members consisting of bent ends formed upon the ends of said legs respectively, and united to said legs by inclinations so as to give support to the utensil in jaw-engaging assemblage.



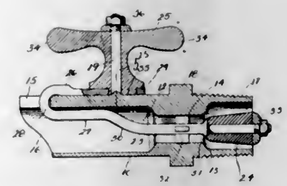
1,509,265. HANDLING IMPLEMENT. CLARE W. SHANE, Emmett, Idaho, assignor of one-half to William H. Shane, Emmett, Idaho. Filed Mar. 28, 1923. Serial No. 628,302. 1 Claim. (Cl. 294—50.)

A handling implement of the class described comprising two elongated and relatively flat handle members, means for hingedly connecting the marginal portions of the handle members for swinging movement one relative to the other, jaws carried by said handle members and extending laterally beyond the free marginal portions of the jaws, a coil spring disposed along the hingedly connected marginal portions of the handle members and positioned inwardly of and adjacent to the inner ends of the jaws, the extremities of the spring being extended through the handle members and secured to the inner ends of the jaws, said spring coacting with the handle members to automatically swing the same one away from the other.



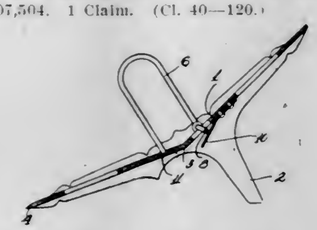
1,509,266. PROCESS OF ORE SEPARATION. CHARLES SPEARMAN, Westmount, Quebec, Canada. Filed Aug. 16, 1919. Serial No. 317,855. 7 Claims. (Cl. 83—85.)

1. The process of ore separation which includes treating the ore to endow divers contents thereof with different characteristics tending to produce segregation and agglomeration of a desired content, working the slightly moistened ore thus treated to agglomerate and bring to the surface further of the desired constituents, moving the said slightly moistened ore progressively in the form of a



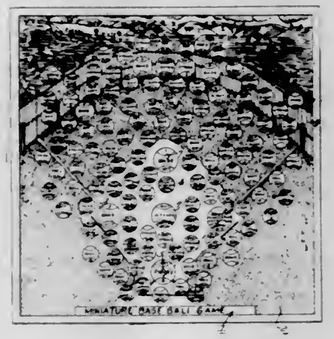
long, freely flowing sheet, and removing the desired particles from the surface of the sheet at successive stages in the course of the progress thereof.

1,509,267. AEROPLANE GUN. ELMER A. SPERRY, Brooklyn, N. Y. Filed Jan. 12, 1918. Serial No. 211,472. 16 Claims. (Cl. 89—40.)



2. In combination, an aircraft, a gun carried thereby at a point below the aircraft, means for raising said gun to a point within the aircraft, and means controlled from the aircraft for firing the gun when below the aircraft.

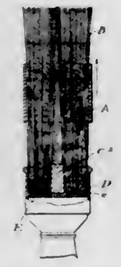
1,509,268. FAUCET. ALBERT RICHARD SPIKINGS, Lake Placid, N. Y. Filed July 27, 1923. Serial No. 654,201. 3 Claims. (Cl. 251—39.)



1. A faucet comprising an open ended casing having attaching means and a valve seat therein, a freely movable valve stem a portion of which extends exteriorly of said casing, means for guiding the valve stem in its movements, a valve member carried by said valve stem which coacts with said valve seat to permit or prevent the flow of fluid through said casing, and means for effecting the movement of said valve stem to cause the coaction of said valve member with said valve seat, said means including a valve actuating handle formed with an eccentric which coacts with a slot formed in the exterior portion of said valve stem.

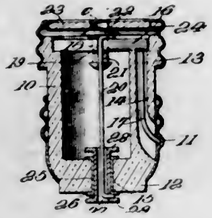
1,509,269. CALENDAR STAND OR SUPPORT. HOBART A. STACY and GEORGE A. OLSEN, Chicago, Ill., assignors to Success Calendar Stand Company, a Firm consisting of Louise F. Stacy, George A. Olsen, and Hobart A. Stacy, all of Chicago, Ill. Filed Dec. 18, 1922. Serial No. 607,504. 1 Claim. (Cl. 40—120.)

In a calendar stand, a hinge member for the leaves, pivotally secured to the upper face of the stand and swingable in an arc from operative to inoperative position, and a yielding member secured to the lower face of said stand and co-operating with said hinge member for yieldingly retaining the same in either of its positions.



1,509,270. MINIATURE-BASEBALL GAME-BOARD APPARATUS. JAMES D. TAGGART, Drumright, Okla. Filed Dec. 3, 1921. Serial No. 519,614. 1 Claim. (Cl. 46—61.)

In a game apparatus, a game board provided with a baseball diamond thereon including a home plate, foul lines extending from the home plate, a fence connecting the terminals of the foul lines, thereby fencing off the outfield, baseball representations including baseball symbols applied upon the face of the diamond and over the outfield, the fence and beyond the fence, thereby indicating advantages and disadvantages, and a chart of symbols corresponding to the advantage and disadvantage symbols on the board, and a plurality of members having baseball representations thereon adapted to be tossed upon the game board, for cooperation with the symbols on the game board, in combination with a score card ruled with intersecting lines to define columns for the numbers of players and columns for the different innings, each column consisting of a plurality of spaces within which may be inscribed the indicia corresponding to the results obtained by registration of the playing members with the symbols on the board.

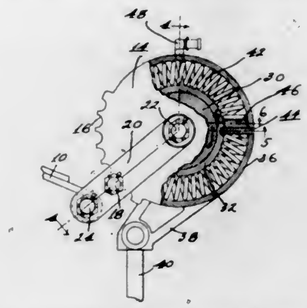


1,509,271. METHOD OF CONSTRUCTING BRUSHES. WILLIAM UNGER, Wooster, Ohio. Filed Nov. 6, 1922. Serial No. 599,426. 1 Claim. (Cl. 300—21.)

The herein described method of assembling a brush consisting in providing a bristle receiving socket with a measured quantity of liquid cement, assembling a group of bristles about a spacer plate or core with the bristle butts even, and within a pilot band shaped to register with the periphery of the said socket, then moving the spacer plate a short distance within the group of bristles so as to form a hollow space in the butt end and to loosen them to admit cement therebetween, inserting the bristles down

through the pilot band into the socket with the loose bristle butts immersed in the liquid cement, then removing the pilot band and forcing the spacer down to the bottom of the socket to bring closely together the butt end of the bristles.

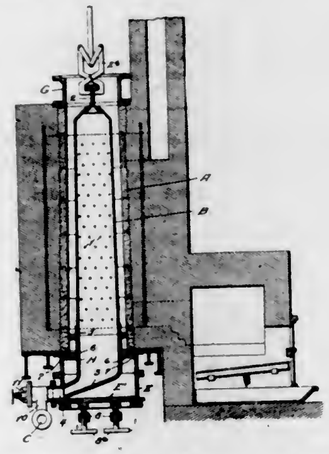
1,509,272. FUSE PLUG. LUIGI VECCHIO, Schenectady, N. Y., assignor to Electrical Inventions & Development Company, Schenectady, N. Y., a Corporation of New York. Filed June 25, 1920. Serial No. 391,595. 21 Claims. (Cl. 200—130.)



1. A fuse plug of the character described comprising a casing of insulating material having an internal chamber, a shell contact carried by said casing, a center contact, a contact member in circuit with the shell contact, a fuse wire removably connected at one end to said center contact and extended longitudinally through said chamber, means for anchoring the other end of said wire to said contact member, and means independent of the anchoring means for applying clamping pressure thereto.

1,509,273. METHOD OF OBTAINING EASILY-BLEACHED CELLULOSE FIBERS. BRUNO POSSANNER VON EHRENTHAL, Cothen, Anhalt, Germany. Filed July 8, 1921. Serial No. 483,376. 7 Claims. (Cl. 92—9.)

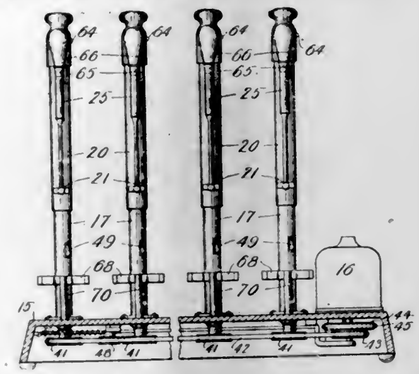
1. Method of obtaining easily bleached cellulose fibers from vegetable fibers and waste which consists in subjecting the raw material to an acidic hydrolytic action, treating the hydrolyzed material with dilute alkaline solutions and finally isolating the cells of the fibers by means of an oleic or fatty reagent, substantially as described.



1,509,274. SHOCK ABSORBER. AXEL W. WAHLIN and CARL B. ERICKSON, Chicago, Ill. Filed Oct. 24, 1921. Serial No. 509,882. 7 Claims. (Cl. 267—8.)

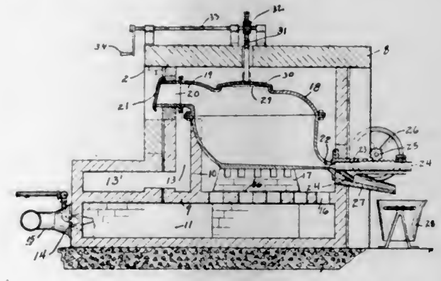
1. A shock absorber for automobiles including in combination, a case comprising two substantially circular plates, a bearing member therebetween adapted to be fixed to the axle of the automobile, a central pin on which the plates are adapted to rotate, arms mounted on the pin at one end, said arms having their other ends adapted to be attached to the spring of the automobile, resilient means interposed between the fixed bearing member and the rotatable case to retard relative

movement therebetween, and adjustable means between the arms and the circular plates whereby their relative positions may be changed to vary the tension in said resilient means.



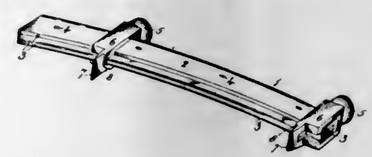
1,509,275. VERTICAL RETORT. GEORGE W. WALLACE, East St. Louis, Ill., assignor, by mesne assignments, to Economic Carbonization Company, a Corporation of Delaware. Filed Jan. 3, 1921. Serial No. 434,525. 10 Claims. (Cl. 202—14.)

1. An apparatus for distilling bituminous substances, comprising a vertical retort of substantially oblong shape in horizontal cross section provided at its lower end with an extension having a lateral outlet in the side of the same, a removable take-off duct in said retort of corresponding horizontal cross sectional shape that constitutes the sole outlet for the gases, vapors and liquids evolved in the distilling operation, and a discharge portion at the lower end of said take-off duct, arranged within the extension at the lower end of said retort and provided with a discharge opening that communicates with the lateral outlet in said extension.



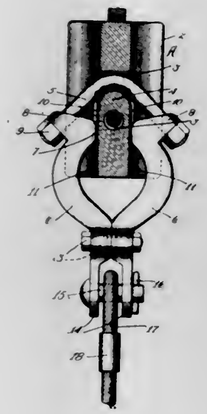
1,509,276. MIXING APPARATUS. HOWARD A. WARFEL, Yorktown, Ind. Filed Aug. 16, 1921. Serial No. 492,657. 17 Claims. (Cl. 259—131.)

1. In apparatus of the character disclosed; a plurality of tubular columns, each of said columns having a movable telescopic section, mixing elements and driving connections therefor carried within said movable column sections, driving means within the relatively fixed sections of the columns engageable with and disengageable



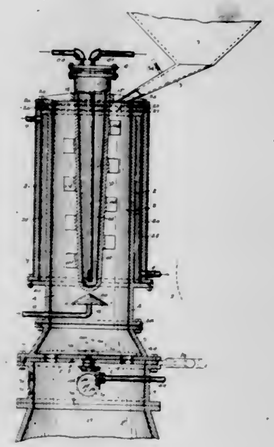
from the driving connections in the movable column sections and common operating means for said driving means in the several columns.

1,509,277. NONFERROUS MELTING FURNACE. CONRAD WEBRA, Waukesha, Wis. Filed Dec. 10, 1923. Serial No. 679,682. 8 Claims. (Cl. 263—14.)



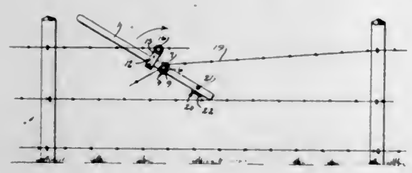
1. A melting furnace, comprising a chamber, a melting pot positioned entirely within the chamber and having horizontal extension portions provided with charging and discharging openings extending outwardly through said chamber, and means for supplying heat to said chamber and to approximately all sides and the top and bottom portions of the melting pot.

1,509,278. DEVICE FOR COATING PULLEYS WITH COMPOSITION. JOHN AGERUP, London, England. Filed July 19, 1923. Serial No. 652,603. 5 Claims. (Cl. 91—53.)



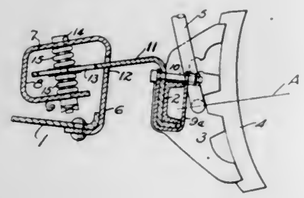
1. A device of the kind herein referred to, comprising a laterally curved holding bar provided with a longitudinal slot open at one edge of the bar, said bar being U-shaped in cross-section, and a strickle member secured in the said slot and projecting beyond the said edge of the bar.

1,509,279. STRAIN INSULATOR. ARTHUR O. AUSTIN, Barberton, Ohio, assignor, by mesne assignments, to The Ohio Brass Company, Mansfield, Ohio, a Corporation of New Jersey. Filed Apr. 10, 1919. Serial No. 289,089. 14 Claims. (Cl. 173—366.)



1. The combination with an elongated body of insulating material having a plurality of holes extending therethrough in a direction transverse to the direction of greatest length of said body and spaced from the ends thereof, of terminal members passing through said holes and extending in opposite directions beyond the opposite ends of said body, and means for spacing the extending portions of said terminal members from the lateral surface of said insulating body adjacent the ends thereof.

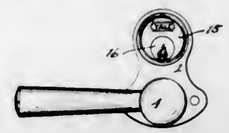
1,509,280. APPARATUS FOR TREATING GRAINS AND ORGANIC MATTER. ROBERT E. BAKER, Pittsburgh, Pa., and HARRY W. JORDAN, Syracuse, N. Y. Filed Sept. 13, 1923. Serial No. 662,586. 12 Claims. (Cl. 34—34.)



1. In a sterilizing heating unit, the combination of a main upright cylinder adapted to be filled with a column of grain, means for heating said cylinder for raising the temperature of the grain sufficiently to destroy the eggs of insects and fungus, means for effecting the gravitation of the column of grain from the cylinder at different speeds, and means for passing heated air upwardly through the grain of said column.

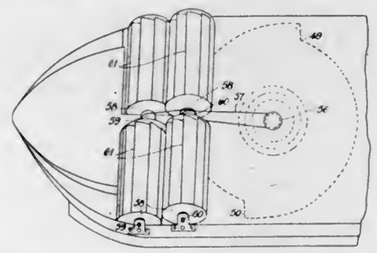
1,509,281. WIRE STRETCHER. LEOPOLD S. BOLD, La Farge, Wis. Filed Sept. 13, 1923. Serial No. 662,469. 3 Claims. (Cl. 254—81.)

1. A wire stretcher of the class described comprising an elongated lever, a wire clamping member carried by said lever, said wire clamping member including a cup-shaped member having a central aperture therein, a bolt having its head seated in said cup-shaped member and its shank passing through said aperture, a lock nut therefor, said cup-shaped member provided with notches in the annular flange thereof, to receive the free end of a wire, said bolt having its head portion engaging the portion of the wire extending across said cup-shaped member to clamp the same thereon.



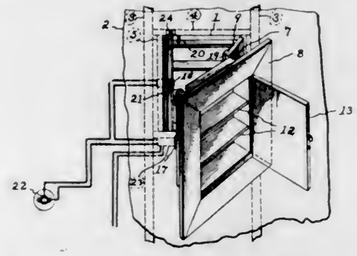
1,509,282. BRAKE-BEAM SUPPORT AND GUIDE. EDWIN G. BUSSE, Chicago, Ill., assignor to Chicago Railway Equipment Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 21, 1924. Serial No. 687,665. 20 Claims. (Cl. 188—213.)

5. In combination, a spring plank, a brake beam, a guide element secured to said beam extending over said spring plank, and means mounted on said spring plank for yieldingly directing sliding movement of said element over the plank.



1,509,283. AUTOMOBILE DOOR LOCK. CLARENCE P. CHAMBERLIN, Birmingham, Mich., assignor of one-half to Joseph N. Smith & Company, Detroit, Mich., a Corporation of Michigan. Filed Apr. 23, 1919. Serial No. 292,033. 8 Claims. (Cl. 70—29).

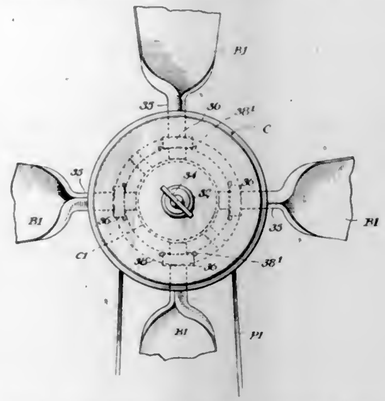
1. In a door latch, an oscillatable latch operating bar square in cross section and having a portion thereof practically round in cross section, a lock, and a lock plate having a square aperture slidably fitting the square bar, and means operated by said lock to move said plate



longitudinally of the bar to position the plate with the aperture encircling the rounded or the square portions of the bar.

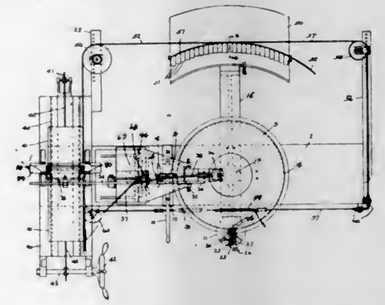
1,509,284. CONSTRUCTION OF SHIPS, BOATS, AND OTHER VESSELS. HENRY CLAY, Camden Town, London, England. Filed Apr. 12, 1921. Serial No. 460,616. 3 Claims. (Cl. 114—67.)

1. In ships, boats, and similar vessels, the combination with a bow portion having a shallow draught and a stern portion having a relatively deeper draught, of air storage chambers arranged beneath the bottom of the vessel and rotary apparatus carried by the vessel adapted to be actuated by the motion of the vessel through the water for compressing air from the surrounding atmosphere into the storage chambers.



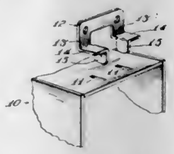
1,509,285. SECRET CABINET. MAX COLBOW, Jr., Cleveland Heights, Ohio. Filed Dec. 21, 1923. Serial No. 682,116. 9 Claims. (Cl. 20—1.11.)

1. A device of the character described, including a wall formed with a recess providing an inner cabinet, a movably mounted outer cabinet adapted to close the mouth of the recess, and a laterally projecting frame carried by the outer cabinet and arranged to fit against the wall and conceal the recess when the outer cabinet is in a closed position.



1,509,286. RADIATOR FAN. ELI FRANKLIN COLBY, Lake Mills, Iowa. Filed Aug. 8, 1922. Serial No. 580,511. 12 Claims. (Cl. 170—162.)

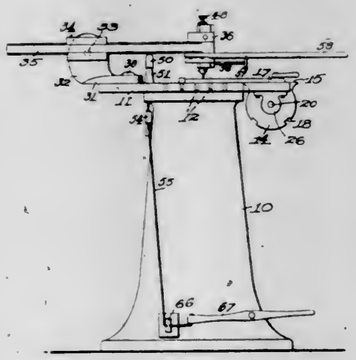
1. In a fan structure of the character described, annular casing having a plurality of radial openings, a plurality of fan blades, one for each of said openings, said fan blades in each instance having an inner end stem portion adapted to be extended within the opening of the casing, a pinion carried upon the inner end of each



fan blade stem, and a ring gear carried by the casing adapted to mesh with said pinions whereby to lock the fan blades against turning movement.

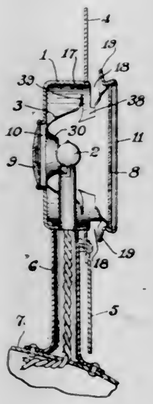
1,509,287. ENGRAVING MACHINE. GEORGE E. ECKLER, Akron, Ohio, assignor to The Franz Foundry & Machine Company, Akron, Ohio, a Corporation of Ohio. Filed Jan. 19, 1922. Serial No. 530,490. 15 Claims. (Cl. 90—13.1.)

1. In mechanism of the character described, the combination of a rotatable work-holder, a rotary cutter-spindle oscillatory about a transverse axis, and means including a template in the form of a pattern of the design to be cut, said template being adapted to correlate a rotative movement of said holder and oscillatory movement of said spindle.



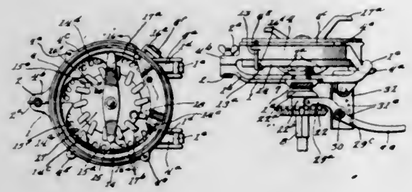
1,509,288. OUTLET BOX. SYLES R. FRALICK, Chicago, Ill. Filed Nov. 24, 1920. Serial No. 426,137. 1 Claim. (Cl. 247—21.)

The combination of an open-sided box member having parallel slots at right angles to an edge of its open side, and a ductile sheet metal attaching member having an ear arranged to stand at a right angle to the slotted



box-side and opposite base portions parallel with such side and fastening lugs on said base portions outside the plane of said ear and at right angles thereto, whereby the fastening lugs of said attaching member may be positioned in said slots of the box side in either one of two opposite positions and bent flat against the box side to secure such attaching member thereto.

1,509,289. ROUTING MACHINE. LESLIE H. GALE, Worcester, Mass. Filed Oct. 12, 1921. Serial No. 507,260. 9 Claims. (Cl. 90—13.)



1. In a routing machine, the combination with a flat routing table, of a plate support mounted to turn adjacent thereto and having a flat top adapted to be turned into position flush with said table, said support having a projecting portion adapted to be turned into a position to support a curved plate near said table.

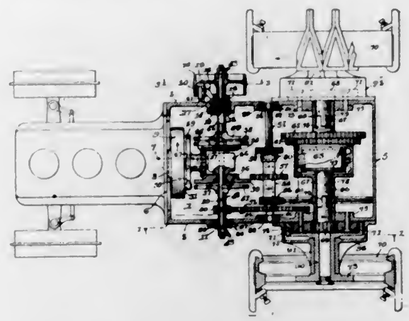
1,509,290. SIGNAL AND DISPLAY LAMP. ROSS F. GEORGE, Seattle, Wash. Filed Feb. 14, 1922. Serial No. 536,438. 4 Claims. (Cl. 40—132.)

1. A signal lamp casing having a peripheral slot for escape of light, with the metal representing the slot area bent outward to form a reflector for such escaping light, the casing having a peripheral groove paralleling said slot and a display plate having an edge seating in said groove.

1,509,291. SEED-DISCHARGING MECHANISM. RICHARD H. GRIFFITH, Bellevue, Ohio, assignor to The Ohio Cultivator Company, Bellevue, Ohio, a Corporation of Ohio. Filed Oct. 24, 1921. Serial No. 509,791. 11 Claims. (Cl. 221—118.)

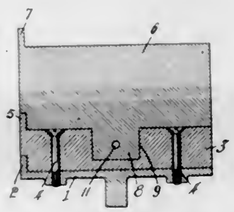
1. In a seed planter, a ring base, a hopper on the base, a plate retainer ring hingedly connected to the bottom of the base, a feed disc resting on the retainer ring and having an outer annular portion with its outer periphery fitting snugly within the inner periphery of the ring base and provided with a plurality of downwardly inclined seed cells and a raised central portion said seed disc being rotatable over the retainer ring and a distributor above the seed disc.

1,509,292. BRAKE DRUM. FREDERICK D. HANSEN and HERBERT W. TINKER, Milwaukee, Wis., assignors to Federal Pressed Steel Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Apr. 7, 1924. Serial No. 704,767. 6 Claims. (Cl. 188—218.)



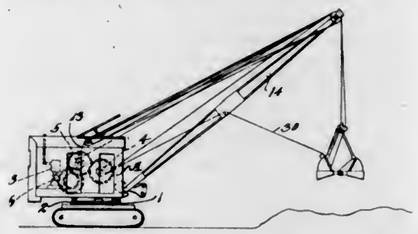
1. A brake drum formed of steel of uniform thickness, having a brake flange and a web provided with pressed-in ribs adapted to impart substantially true concentricity to said brake flange.

1,509,293. TRACTOR. CHARLES W. HART, Milwaukee, Wis. Filed Mar. 18, 1920. Serial No. 366,761. 18 Claims. (Cl. 74—57.)



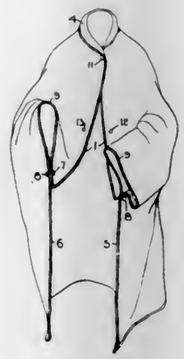
1. A tractor having a body provided with a transversely disposed axially movable shaft in its forward portion, a beveled gear set having two wheels rotatable in opposite directions about said shaft, a driving wheel in mesh with said oppositely rotating wheels, a centrally disposed bearing for the shaft provided with supporting

mountings for the driving and driven gear wheels, friction clutch connections for transmitting motion from said oppositely rotating wheels to said shaft, and means



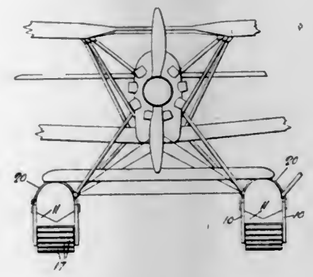
for shifting said clutch connections alternatively into and out of operative position to reverse the direction of shaft rotation.

1,509,294. FOOT-PEDAL EXTENSION. WALLACE M. HEAD, Toledo, Ohio. Filed July 12, 1923. Serial No. 651,022. 3 Claims. (Cl. 74—81.)



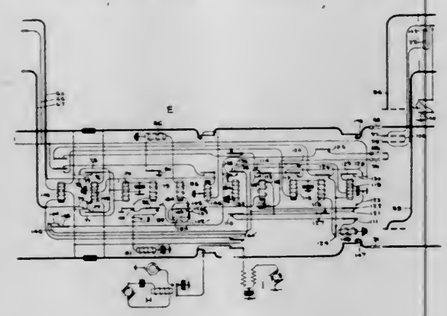
1. The combination with a foot pedal, of two separable foot pad members detachably mounted one over the other on the pedal and capable of use together, or the inner one capable of use alone, as pedal extensions.

1,509,295. CONVERTIBLE CRANE. ALPHEUS E. HOLCOMB and LESLIE A. RUSSELL, Milwaukee, Wis., assignors to Koehring Company, Milwaukee, Wis., a Corporation. Filed Aug. 11, 1922. Serial No. 581,200. 21 Claims. (Cl. 214—132.)



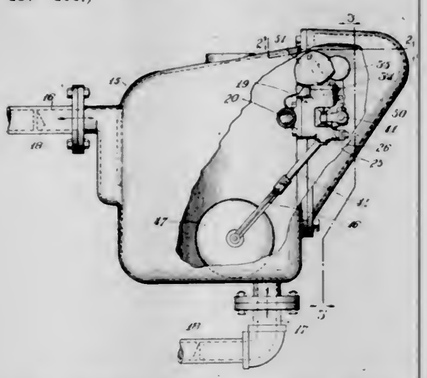
1. A crane comprising a body and interchangeable clam-shell, drag-line, and shovel cable and bucket apparatuses therefor, and operating mechanism adapted to operate any one of said apparatuses, with different driving speeds for the clam-shell and drag-line apparatuses.

1,509,296. CONVERTIBLE ROBE AND WRAP. HENRY C. HOPEWELL, Newton, Mass., assignor to L. C. Chase & Company, Boston, Mass. Filed Aug. 7, 1920. Serial No. 401,855. 1 Claim. (Cl. 2—88.)



A robe having the two members of a separable fastener arranged adjacent and midway one of the edges and on a line normal to the said edge and so positioned that by the engagement of said fastener members alone a fold is formed in the central portion of said robe edge tapering away at both sides of said medial line to present a collar, a second separable fastener having its two members arranged adjacent the said edge beyond the collar portion and at opposite sides of the said medial line, a pair of separable fasteners having one member of each arranged near the end corners of said edge and the other cooperating member of each arranged adjacent the edges extending from said corners and so spaced that when the said members are respectively engaged sleeve like folds are formed in the robe thus enabling the robe to fit the neck, shoulders and arms of a person and be worn as a wrap.

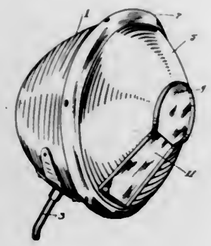
1,509,297. PONTOON SKID. JAMES M. H. JACOBS, Dayton, Ohio, assignor to Dayton-Wright Company, Dayton, Ohio, a Corporation of Delaware. Filed Dec. 12, 1921. Serial No. 521,587. 2 Claims. (Cl. 244—2.)



1. A detachable pontoon skid, for beaching or floating seaplanes comprising a frame member substantially conforming to the shape of the pontoon, a series of rollers supported in said frame member, and a caterpillar track running on the rollers, said skid being slightly buoyant in water and adapted to be immersed and allowed to rise up under the pontoon of the seaplane, and means for securing said skid to said pontoon.

1,509,298. AUTOMATIC TELEPHONE SYSTEM. EMIL JACOBSEN, Port Washington, N. Y., assignor to Automatic Electric Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 5, 1918, Serial No. 252,764. Renewed Feb. 15, 1924. 17 Claims. (Cl. 179—18.)

1. In a telephone system, a calling line, an automatic switch, a group of trunk lines accessible to said switch, means for operating said switch for causing it to automatically rotate over said trunk lines in search of an idle trunk line, and means for preventing said switch from automatically rotating if all of said trunks are busy and for giving the calling subscriber a busy signal either before or after said automatic rotation.



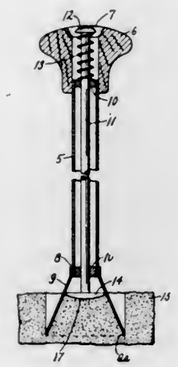
1,509,299. RETURN TRAP. OSCAR G. JOHNSON, Marshalltown, Iowa, assignor to C. A. Dunham Company, Marshalltown, Iowa, a Corporation of Iowa. Filed Apr. 3, 1922. Serial No. 548,934. 3 Claims. (Cl. 137—101.)

1. In combination, a shaft, a valve connected with said shaft and operated thereby, a weight arm revolubly mounted on said shaft and adapted to have a limited swinging movement thereabout, a float, and a float arm connected with said float and connected revolubly with said shaft and adapted to have a limited swinging movement with respect to said weight arm, the arrangement being such that the final portion of the movement of the weight arm about the axis of the shaft serves to rotate the shaft for operating the valve.

1,509,300. ANTIGLARE HEADLIGHT FOR VEHICLES. GEORGE H. JUDIA, Cisco, Tex., assignor of one-fourth to J. B. Mullnix and one-fourth to Jack Anderson, both of Cisco, Tex. Filed Dec. 3, 1923. Serial No. 678,113. 2 Claims. (Cl. 240—48.4.)

1. The combination with a headlight comprising a source of light and a reflector therefor, of a reflecting cover for said headlight consisting of a truncated cone-shaped body provided with a light emitting opening a portion of which is in the plane of the truncation and

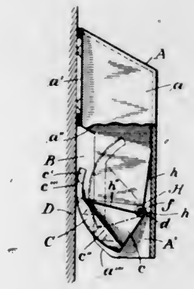
a portion of which is in the periphery, that portion of the opening in the periphery of the cover constituting an elongated, downwardly directed extension from that portion which is in the plane of the truncation.



1,509,301. NONSKID TIRE. EDWARD J. KEARNS, Springfield, Mass., assignor to New England Tire & Rubber Company, Holyoke, Mass., a Corporation of Delaware. Filed Jan. 22, 1924. Serial No. 687,691. 3 Claims. (Cl. 152—16.)

1. A vehicle tire having a tread composed of a series of laminations, certain of the laminations consisting of layers of tread rubber carrying cord treads embedded therein and disposed in lines radial to the tire, certain of the other laminations being composed of cushioning rubber, the laminations of cord carrying rubber being disposed alternately between the laminations of cushioning rubber, the laminations being disposed in lines radial to the tire and extending at right angles to the side faces of the tire, the laminations being relatively narrow and the outer ends of the cord being exposed through the tread face of the tire so as to have direct bearing engagement with the ground, the cushioning layers serving to provide a differential movement between the cord carrying layers and said cushioning layers during normal traction.

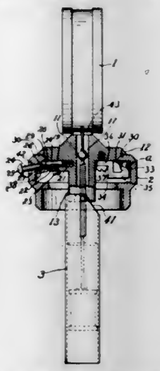
1,509,302. DEVICE FOR MAKING GOLF TEES. NIELS A. LARSSEN, St. Paul, Minn. Filed Feb. 1, 1924. Serial No. 689,886. 1 Claim. (Cl. 46—4.)



In a golf tee molding device, a tube, a funnel secured on one end of the tube and a handle secured on the other end, said handle having a bore concentric with the tube, said funnel adapted to retain a quantity of teeing sand in plastic condition, and means slidably mounted within the funnel, the tube and the handle for expelling the teeing sand in a frusto-conic, molded form with a rounded depression in the small end of said form, said teeing sand expelling means comprising a rod arranged centrally and longitudinally within the

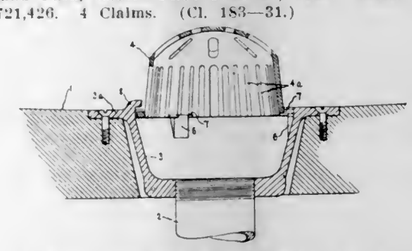
device and normally spring pressed toward the handle, a downwardly rounded button head on the lower end of said rod and within the funnel, a press button on

the upper end of said rod and within the bore of the handle, a compression coil spring about said rod and under compression between said push button and the adjacent end of the tube.



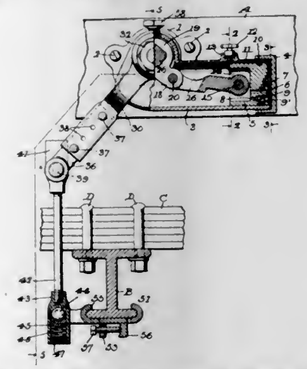
1,509,303. PAPER CLAMP AND HOLDER. ANDREW A. LEYARE and ALPHONSE MARTIN, Ogdensburg, N. Y. Filed Dec. 17, 1920. Serial No. 431,458. 1 Claim. (Cl. 24—248.)

A device of the character described comprising a casing having front and side walls, the rear lower portion of said side walls being cut away to form an opening for the reception of papers or the like, the front wall of said casing extending downwardly in a single plane, the bottom of said casing being entirely open, and an arcuate clamp eccentrically mounted in the front portions of said side walls adjacent the cutaway portions, a portion of the clamp being arranged in proximity to the bottom opening of the casing whereby said clamp will be accessible through the bottom opening so as to be lifted and turned about its pivot.



1,509,304. WATER GAUGE FOR AUTO RADIATORS. HARRY GORDON MACLELLAN, Angola, Ind. Filed Nov. 27, 1922. Serial No. 603,520. 9 Claims. (Cl. 220—86.)

1. In combination, a liquid gauge and mounting therefor comprising a flanged barrel member adapted to be attached to the filler flange of an auto radiator, a cover member for the filling passage carrying the gauge, means within the said cover and barrel members for pivoting one to the other so that the radiator may be filled by tipping the cover and gauge to one side without dis-



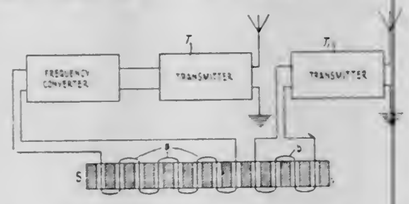
mounting them and the pivoting means is wholly concealed when the cover is closed, and means within the cover for latching the same in its closed position.

1,509,305. ROOF SUMP. RUSSELL C. MAHON, Highland Park, Mich. Filed June 21, 1924. Serial No. 721,426. 4 Claims. (Cl. 183—31.)

1. A sump comprising a catch basin and a cover member therefor, a lug upon said basin overhanging its mouth portion, a flange upon said cover member notched for registration with said lug in engaging the cover member with the basin, and a seating lug upon the basin proportioned to partially engage in said notch upon rotation of the cover member from the position of its initial engagement with its seat.

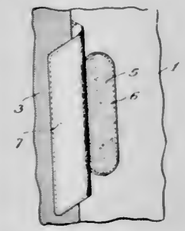
1,509,306. SHOCK CONTROLLER. PATRICK J. MURRAY and MATTHEW L. CLARK, Carbondale, Pa., assignors to Advance Car Specialty Manufacturing Company, Scranton, Pa. Filed May 24, 1923. Serial No. 641,211. 10 Claims. (Cl. 188—88.)

1. A shock controller comprising a casing having a cylindrical extension, a piston working in said extension, a plurality of passages through said piston, means for



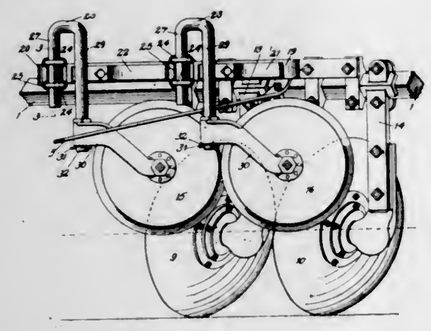
regulating the size of one passage, a ball valve for closing another passageway during movement of the piston in one direction, a longitudinal groove at the periphery of the piston, and means operated from the outside of the casing for regulating the effective size of the groove.

1,509,307. TUBE AND HINGE FOR TRANSFER BINDERS. GEORGE WASHINGTON NEWMAN, Chicago, Ill., assignor to Wilson-Jones Loose Leaf Company, a Corporation of Massachusetts. Filed Apr. 14, 1924. Serial No. 706,398. 5 Claims. (Cl. 129—12.)



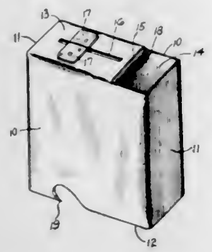
1. In a loose leaf binder, a hollow clamping member formed from a rectangular sheet of metal having its longitudinal edges brought into juxtaposition and hinge bearings having oppositely extending attaching flanges welded exteriorly of said member over said edges.

1,509,308. RADIO TRANSMISSION SYSTEM. MENDEL OSNOS, Berlin, Germany, assignor to Gesellschaft für Drahtlose Telegraphie m. b. H. Hallesches, Berlin, Germany, a Corporation of Germany. Filed Aug. 8, 1922. Serial No. 580,522. 4 Claims. (Cl. 250—17.)



1. A transmission system for wireless telegraphy and telephony comprising a plurality of transmitters, a high frequency machine having a winding composed of a plurality of sections electrically independent of each other, and separate connections between said sections and the transmitters for feeding the transmitters independently from the respective sections.

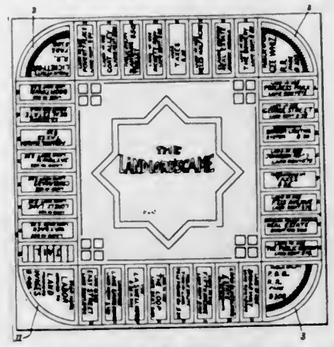
1,509,309. MATCH SCRATCHER FOR GARMENTS. HERMAN H. OTTO and HENRY A. OTTO, Rochester, N. Y. Filed Sept. 25, 1922. Serial No. 590,291. 4 Claims. (Cl. 44—48.)



1. In a match scratcher for wearing apparel, the combination with an outer garment having an inner facing at the front thereof, and a lining stitched to said facing, of a flexible, abrasive panel secured to the facing near the seam of the latter and the lining and a protective flap for the panel secured in said seam.

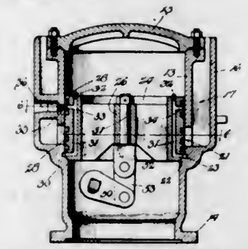
1,509,310. ROLLING COLTER FOR DISK PLOWS. WILLIAM L. PAUL, Berkeley, Calif., assignor to Deere & Company, Moline, Ill., a Corporation of Illinois. Filed Feb. 24, 1921. Serial No. 447,397. 9 Claims. (Cl. 97—209.)

1. In a disk plow the combination of a frame, a plowing disk and a colter; an arm rigidly mounted on the frame and extending forwardly a support for said colter pivotally mounted on the arm and normally rigid therewith but adapted to be swung laterally to vary the position of the colter relative to the cutting edge of the disk.



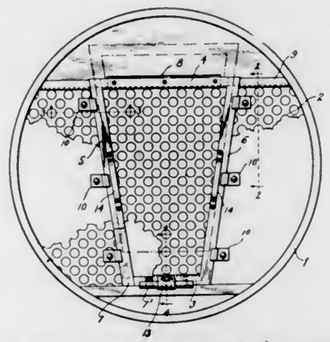
1,509,311. PROTECTOR FOR CIGARETTES. JOHN WALTER PERRY, Southport, Conn. Filed July 29, 1920. Serial No. 399,762. 1 Claim. (Cl. 206—41.)

As a new article of manufacture, a protector for cigarettes comprising a body shaped to fit a package of cigarettes and having one end open, a cover carried at the other end of said protector body and comprising a rigid section and a slidable section, a side of said body being cut away at its open end to provide a recess, one side of said recess being extended inwardly over the recess at the free edge of the body and sharpened to provide a cutter.



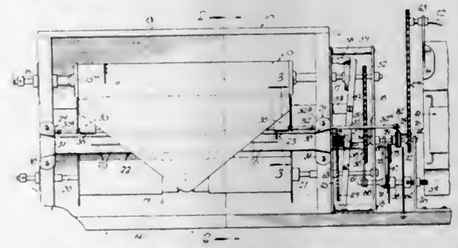
1,509,312. GAME BOARD. ELIZABETH MAGIE PHILLIPS, Washington, D. C. Filed Apr. 28, 1923. Serial No. 635,246. 5 Claims. (Cl. 46—63.)

1. A game-board, provided with corner spaces, intervening spaces of different denominations and values, some of the spaces of the different series corresponding and distinguished by coloring or other marking, so that the corresponding divisions may be recognized, a series of cards of changeable value, two or more of which are alike and which relate to two or more certain spaces on the



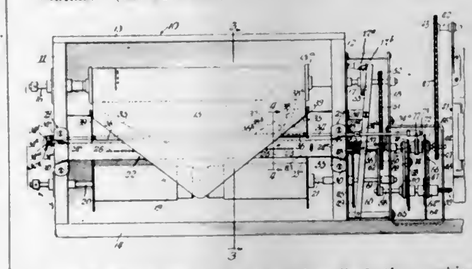
board, and a series of movable pieces to be used in conjunction with the spaces of the board and controlled by dice, so as to determine the play.

1,509,313. COMBINED THROTTLE AND DRIFT VALVE FOR LOCOMOTIVES. CLARENCE E. POWERS, Baltimore, Md. Filed Oct. 22, 1921. Serial No. 509,507. 17 Claims. (Cl. 251—159.)



3. A throttle valve including a casing having a steam inlet port and provided with an internal valve seat, a valve slidably fitting in the casing normally cooperating with said seat and covering the port, the valve being shiftable away from said seat to uncover the port, and means for bypassing steam entering between the valve and casing when the valve is closed.

1,509,314. INSPECTION DOOR FOR LOCOMOTIVE FRONT ENDS. JOHN P. POWERS, Escanaba, Mich., assignor of one-half to Thomas F. Powers, Chicago, Ill. Filed Oct. 15, 1921. Serial No. 507,917. 3 Claims. (Cl. 110—122.)

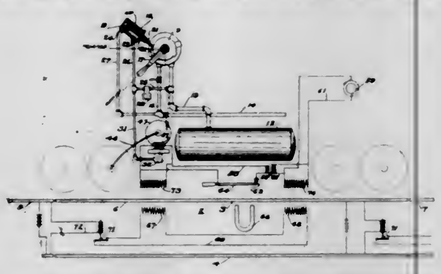


3. In a device of the kind described, the combination of a spark screen having, a door opening therein, an open frame fixed to said screen about said opening, a perforated door having a frame with oppositely disposed, inclined side edges, Z-shaped clip members fixed to said screen and having parts overhanging but spaced outwardly from the open frame and providing guides arranged complemental to said inclined side edges of said door frame so that said door frame is removably held in place against said open frame under its own weight, and handle members fixed to the opposite sides of the door frame.

1,509,315. TRACKER-BAR MECHANISM. THEODORE M. REIMERS, Oak Park, Ill., assignor to Smith, Barnes & Strobber Co., Chicago, Ill., a Corporation of Illinois. Filed May 16, 1922. Serial No. 561,455. 17 Claims. (Cl. 84—137.)

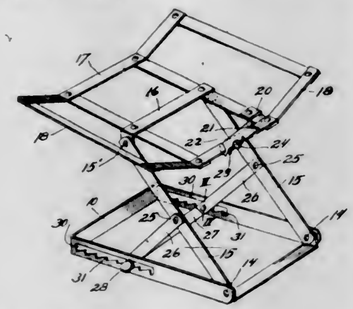
1. A tracker mechanism for automatically operated musical instruments comprising in combination, an endwise movable tracker bar, a control member movable with the lateral movement of the music sheet, a rotative endwise movable shaft connected to the tracker bar, said shaft having a threaded bearing to impart limited endwise movement in either direction to said shaft, spaced driven members fixed to said shaft, and a rotative driving member intermediate said driven members, adapted for engagement with either as the control member is shifted.

1,509,316. TRACKER-BAR MECHANISM. THEODORE M. REIMERS, Oak Park, Ill., assignor to Smith, Barnes & Strobber Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 16, 1922. Serial No. 594,702. 16 Claims. (Cl. 84—137.)



1. In a mechanism of the kind described, the combination of a music sheet roll shaft and an endwise movable tracker bar, a drive shaft for said roll shaft, a second shaft mounted for endwise movement when rotated, a device connecting said second shaft with the tracker bar, a rod, endwise movable in the weaving of the music sheet, permanently engaging means on said shafts for driving said second shaft in either direction, and means actuated in the endwise movement of said rod for connecting a part of said permanently engaged means to said drive shaft.

1,509,317. AUTOMATIC SPEED CONTROL FOR TRAINS. THOMAS M. RIGGLE, Oakland, Calif. Filed Aug. 17, 1922. Serial No. 582,407. 16 Claims. (Cl. 246—63.)

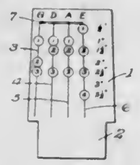


1. In an automatic speed control for trains, the combination with a brake valve and a series of insulated

track sections, of a magnet associated with one of said sections, means carried on the train arranged to be actuated by said magnet to place said brake valve in service

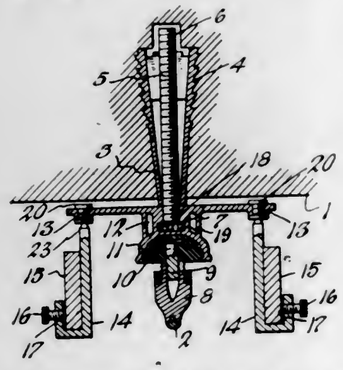
position when one of said sections is not in normal condition, and means governed by the speed of the train for varying the length of time which said first means will hold said valve in service position.

1,509,318. HEADREST FOR CASKETS. JOHN C. RUMSEY, Lawrence, Kans. Filed Mar. 10, 1924. Serial No. 698,165. 5 Claims. (Cl. 27—13.)



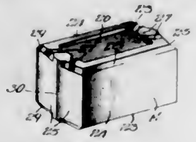
1. A head rest for caskets, comprising in combination with the interior cushion material of a casket, a supporting member adapted to be embedded in said material and to be maintained in position thereby, and a head rest element pivotally mounted on said supporting member and adjustable therewith to different elevations above the bottom of the casket.

1,509,319. VALVE CHAMBER FOR GAS MASKS. HIPPOLYTE SAUNIER, Paris, France. Filed Aug. 23, 1921. Serial No. 494,579. 2 Claims. (Cl. 128—141.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



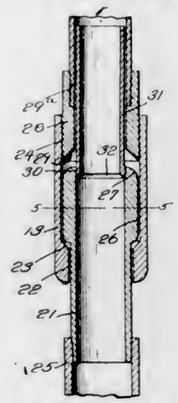
1. A valve unit for breathing apparatus, comprising two dish-like shells one covering the other, an inlet member secured to one shell and having a valve, an outlet tube passing through both shells and terminating in a valve and a cover closing one of the shells and through which said inlet member passes, said cover having perforations for the escape of exhalation.

1,509,320. DEVICE FOR USE IN LEARNING TO PLAY MUSICAL INSTRUMENTS. FRED M. SCHNEIDER, Blue Island, Ill. Filed June 19, 1922. Serial No. 569,505. 2 Claims. (Cl. 84—485.)



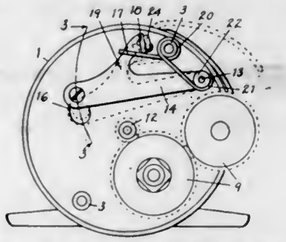
2. A device for use in learning to play stringed instruments embodying therein means representing the strings of a stringed instrument, numerals positioned adjacent the string representing means and representing the different fingers, and means in line with the numerals indicating the distance in inches said numerals are from a point corresponding to the nut of a stringed instrument.

1,509,321. COMBINED TROLLEY WIRE AND GUARD HANGER. ANTHONY SHACIKOSKI, Homer City, Pa. Filed May 6, 1924. Serial No. 711,512. 2 Claims. (Cl. 191—35.)



1. In a combined trolley wire and guard hanger, the combination with an anchor structure, of means carried by the anchor for supporting a trolley wire guard, said latter supporting means including a bracket having spaced apart two threaded bores for the reception of the insulator block or connection, said insulator connection having a threaded bore in the center, which is insulated from the outside, a guard supporting hook having a threaded upper end adapted to be threaded into said center bore, and a set screw adapted to secure the guard to the said hook.

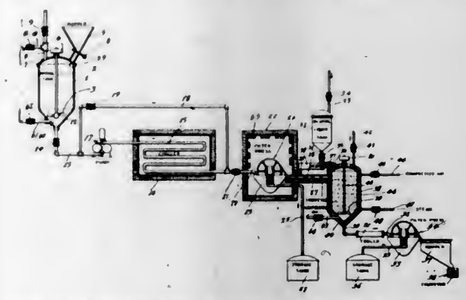
1,509,322. BUILDING-BLOCK CONSTRUCTION. LE ROY W. STEVENS, Chicago, Ill. Filed Nov. 29, 1920. Serial No. 427,145. 12 Claims. (Cl. 72—37.)



1. A wall composed of a series of superimposed rows of blocks, said blocks being constructed and arranged to provide interior spaces between the horizontal meeting faces of the blocks, and channels between the ends of adjacent blocks, said channels opening to a face of the wall and communicating with the first mentioned spaces, and bonding material in said channels and spaces.

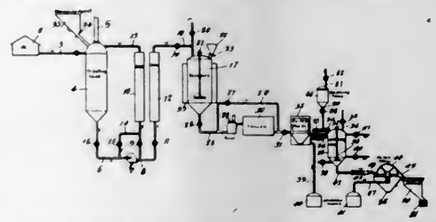
1,509,323. PUMPING APPARATUS FOR OIL WELLS. JAMES W. TAYLOR, San Antonio, Tex. Filed July 9, 1923. Serial No. 650,409. 5 Claims. (Cl. 103—233.)

4. A flow line for wells comprising a plurality of longitudinally movable sections and valves connecting adjacent ends of the sections, each valve including an upper structure and a lower structure, each of said lower and upper structures being adapted for engagement with an end of a casing section, one of said structures having an enlargement provided with rounded end portions, the other of said structures affording opposed oppositely beveled shoulders spaced apart a distance greater than the length of the enlargement of the other structure and between which said structure operates.



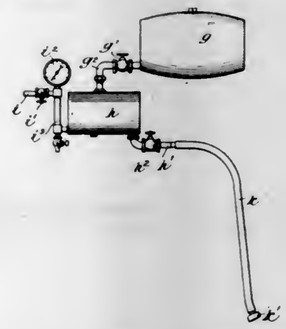
1,509,324. FISHLINE REEL. FRED W. TOREY, Grand Rapids, Mich. Filed July 30, 1923. Serial No. 654,620. 10 Claims. (Cl. 242—84.5.)

1. In a fish line reel, the combination with the reel frame comprising a head member including inner and outer plates, the inner plate being slotted, of a spool provided with an outwardly facing concaved flange, a relatively long lever-like brake member pivoted between said head plates adjacent the forward side thereof to project rearwardly beyond the axis of the spool and provided with a brake shoe disposed through said slot to engage within said flange of the reel, said brake member being provided with a centrally disposed upwardly projecting arm terminating in an outwardly turned lug, a thrust screw threaded into said outer head member to coact with the swinging end of said brake member, a spring mounted in said head to engage the lower edge of said lug whereby the brake lever is urged to engaging position, and a bail-like brake lever journaled in said frame to extend across the front thereof and provided with an arm engaging the said lug on said brake member whereby when said lever is liftel as by the line the brake is released.



1,509,325. PROCESS FOR LOWERING THE COLD TEST OF LUBRICATING OILS. JAMES W. WEIR and WILLIAM J. RYAN, Jr., Fillmore, Calif. Filed June 21, 1920. Serial No. 390,417. 6 Claims. (Cl. 196—18.)

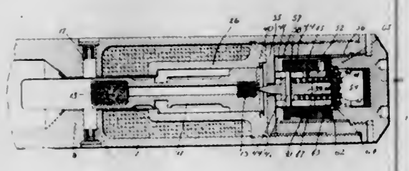
2. The process of lowering the cold test of lubricating oils which consists in combining with lubricating oil stock containing wax, a diluent and additionally adding thereto a comminuted wax adherent medium, then chilling the mixture thus produced to congeal the wax



upon the wax adherent medium, the diluted stock other than the wax remaining liquid and then separating the chilled associated wax and wax adherent medium from the liquid mixture.

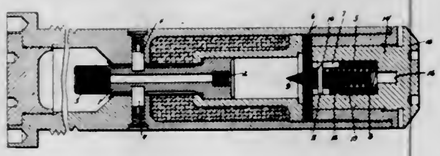
1,509,326. METHOD OF TREATING PETROLEUM OIL. JAMES W. WEIR, Fillmore, Calif. Filed June 11, 1924. Serial No. 719,341. 12 Claims. (Cl. 196—18.)

1. The process of treating mineral lubricating oils containing wax to effect both a decolorization thereof and a lowering of the cold test thru the aid of a single substance, which includes treating the lubricating oil with a comminuted decolorizing agent at a temperature not substantially less than 250° F. to effect a decolorizing of the oil, then cooling the mixture below the melting point of paraffin wax to congeal the wax throughout the decolorizing agent, and filtering the oil, below the melting point of paraffin wax, from the solid mass.



1,509,327. APPARATUS FOR AND METHOD OF CLEANSING UNITS OF MOTOR VEHICLES. JOHN F. WINCHESTER, Baltimore, Md. Filed Oct. 25, 1922. Serial No. 596,723. 5 Claims. (Cl. 74—56.)

1. In a motor vehicle, in combination with enclosed units thereof having movable operating parts therein, spray nozzles mounted in the walls thereof for discharge of a cleansing medium under pressure throughout the in-

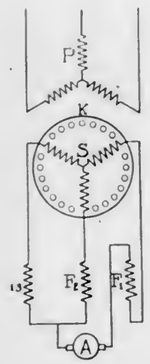


teriors, the form and disposition of said nozzles being such as to carry the cleansing medium effectively against relatively remote and inaccessible areas of the interiors.

1,509,328. FUSE FOR PROJECTILES. JOHN H. WOODBERRY, Washington, D. C. Filed Oct. 3, 1919. Serial No. 328,290. 6 Claims. (Cl. 102—39.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)

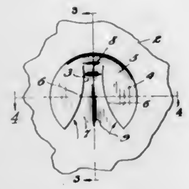
3. In a fuse structure, the combination with a normally unarmed firing pin armed by impact of the projectile carrying the fuse and means for delaying action of the pin after arming, of a driving spring for the firing pin, an automatically operable spring compressing member disposed against one end of said spring and provided with a tubular stem encircled by said spring and telescoping said firing pin, and centrifugally operable means for holding said spring compressing member in spring compressing position.

1,509,329. FUSE. JOHN H. WOODBERRY, Washington, D. C. Filed Oct. 22, 1919. Serial No. 332,564. 1 Claim. (Cl. 102—39.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)



A fuse embodying firing elements normally held spaced apart from each other and movable upon impact in the same direction, one of said elements carrying a detonator normally remote from the main explosive charge and moved upon impact to a position adjacent said charge, means energized by movement of the other element on impact for impelling said element toward its normal position after impact, and means for delaying the action of said impelling means.

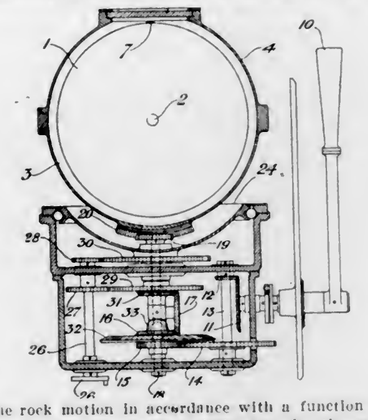
1,509,330. CURTAIN FIXTURE. EDYTH P. WYATT, Denver, Colo. Filed July 6, 1922. Serial No. 573,088. 3 Claims. (Cl. 156—24.)



2. A curtain fixture comprising a rod-member having a screw thread and a plain tapering end-portion, a head fastened by the screw thread, and a bracket-member having a seat to which the head is fitted.

1,509,331. INDUCTION SYNCHRONOUS MOTOR. TADAOKI YAMAMOTO and MASATARO KAWARADA, Tokyo, Japan. Filed July 16, 1921. Serial No. 485,196. 3 Claims. (Cl. 172—274.)

2. An induction-starting, self-synchronizing motor comprising an induction motor connected in cascade with a direct current series generator and mechanically coupled thereto, the stator winding of the induction motor being in the primary circuit and the rotor of the induction motor having a three phase winding connected to the series generator, the field winding of which is divided into three separate sections, one of these sections being connected to one of the three phase windings of the rotor of the induction motor in a reverse sense to the two others, in such a manner that the currents induced in the phases of the rotor winding act cumulatively magnetically as they flow through said field winding.

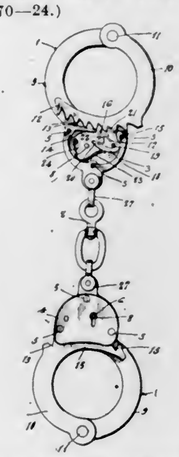


1,509,332. VENTILATOR FOR METALLIC WALLS. EDWARD R. ARMSTRONG, Columbus, Ohio, assignor to F. O. Shoedinger, Columbus, Ohio. Filed May 22, 1922. Serial No. 562,823. 4 Claims. (Cl. 98—26.)

3. In a sheet metal wall, a ventilator structure therein comprising outwardly projecting substantially semi-circular convexed lips, and a depressed central portion integrally formed with and lying between said lips to produce a plurality of air passageways.

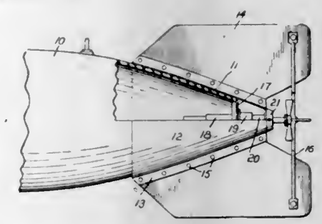
1,509,333. APPARATUS FOR THE CONTROL OF GUNFIRE ON SHIPBOARD. ARCHIBALD BARR and WILLIAM STROUD, Anniesland, Glasgow, Scotland, assignors to Barr and Stroud, Limited, Anniesland, Glasgow, Scotland. Filed Sept. 1, 1922. Serial No. 585,821. 8 Claims. (Cl. 235—61.)

2. Apparatus comprising a roll indicator for indicating rock, calculating mechanism, means for transmitting to the calculating mechanism motion in accordance with indications obtained from the rock indicator and means for transmitting to the calculating mechanism at any point



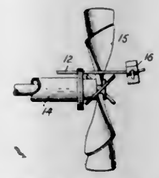
of the rock motion in accordance with a function of the range or angle of elevation of the gun, for the purposes set forth.

1,509,334. PULPER. ANDREAS BIFFAR, Miltenberg, Germany. Filed Aug. 22, 1921. Serial No. 494,140. 2 Claims. (Cl. 92—24.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



1. In a pulper in combination, three channels extending substantially in parallel to one another and having a steep gradient, a grinding device disposed at each end of said channels in such manner as to raise the pulp to the highest points of the channel bottoms and means for introducing the pulp into one of said grinding devices in axial direction.

1,509,335. SELF-LOCKING ADJUSTABLE HANDCUFF AND LEG SHACKLE. WILLIAM BOCKIN, Union Hill, N. J. Filed Oct. 22, 1918. Serial No. 259,266. 1 Claim. (Cl. 70—24.)



A hand cuff having a movable locking arm, a lock casing to receive the arm having a relatively large flat wall portion, an arm integral with and extending from said portion and pivoted at its free end to and against one side of the locking arm, a laterally projecting substantially U-shaped wall integral with said wall portion and of a depth slightly greater than the thickness of the distal end portion of the locking arm and partly closing the open end thereof, a cover, fastening members adjacent the free ends of said wall and integral with said wall securing said cover against said wall, one end of said wall having an inward extension provided with a concaved upper surface along which said locking arm is movable said extension serving to reinforce said arm about one of said fastening members, the other end of said wall being inwardly enlarged to reinforce said arm about another fastening member, a locking member pivoted within the casing for projection intermediate the free end of said extension and said enlargement to engage said locking arm, said locking member having direct contact with the enlarged end of said wall, a spring within the casing in engagement with said wall and with said locking member to urge projection of the locking member into engagement with said locking arm and into its path of locking movement when said locking arm is unlocked and said locking member having spaced shoulders one engageable by a key and the other directly engageable with the locking arm.

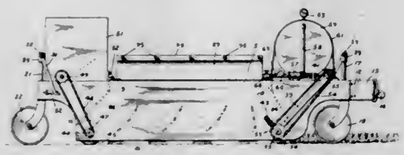
1,509,336. STABILIZER OR FIN ASSEMBLY OF A BOMB. WILLIAM A. BORDEN, U. S. Army. Filed June 27, 1922. Serial No. 571,221. 4 Claims. (Cl. 102—2.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)

1. A base cap and stabilizer construction for bombs, including a bomb body formed with a reduced rear end, a base cap adapted to embrace the rear end, said cap comprising sections bent outwardly along their longitudinal edges to form flanges, fins secured between the flanges, a closure element secured in the rear end of the body and formed with a rearwardly extending portion and a plug connected to said rearwardly extending portion, said plug formed with an enlarged head adapted to seat on the rear end of the cap to bind the cap in place upon the body.

1,509,337. SAFETY DEVICE FOR BOMBS. WILLIAM A. BORDEN and CLAUDIUS H. M. ROBERTS, U. S. Army. Filed June 27, 1922. Serial No. 571,224. 3 Claims. (Cl. 102—39.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)

2. The combination with a drop bomb, a fuse carried by the drop bomb and a fuse arming member provided with an aperture, of a safety wire projecting through the aperture and a friction member engaging with the protruding end of the wire to be stripped therefrom upon the application of a predetermined force tending to withdraw the wire.

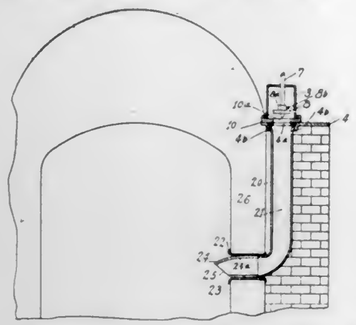
1,509,338. MANUFACTURE OF THREADS OF ANY THICKNESS FROM VISCOSE. EMILE BRONNERT, Mulhouse, France. Filed Nov. 17, 1921. Serial No. 515,990. 4 Claims. (Cl. 18—54.)



1. The process of producing viscose threads of any desired fineness from raw viscose, which comprises forcing the viscose through suitable openings into an acid precipitating bath containing sulphuric acid, the concentration of which bath is increased proportionately to the increase in fineness of the thread desired to be produced and to the increase in the size of the openings through which the viscose is forced, and in which part of the sulphuric acid is replaced by double its weight of ammonium sulphate.

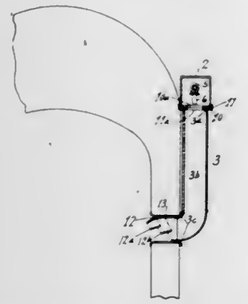
1,509,339. FAUCET. HENRY G. CORDLEY, Glen Ridge, N. J., and GEORGE R. LONG, Waterbury, Conn., assignors to Cordley & Hayes, New York, N. Y., a Corporation of New York. Filed Feb. 7, 1924. Serial No. 691,245. 3 Claims. (Cl. 251—39.)

1. In a faucet an outer shell consisting of an outer member of straight tubing and an inner member of straight tubing having towards its forward end a portion of reduced diameter adapted to fit within the rear end of the outer member, having its forward end portion so reduced in diameter as to leave between it and the interior of the outer member an annular space, and having its end adapted to serve as a valve seat, and a plug movable in the inner portion of the outer member, and adapted at its inner end to receive a pin which holds the valve securely against the end of the plug said valve being adapted to fit the valve seat on the end of the inner member, and having bayonet slots formed in said plug, and a pin, screwthreaded at its lower end, carried by the outer member extending through the bayonet slots of the plug.



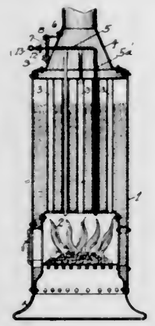
1,509,340. WEED BURNER. ISAAC S. CORSON, Great Falls, Mont. Filed Sept. 7, 1922. Serial No. 586,698. 3 Claims. (Cl. 126—271.2.)

1. The herein described weed burner comprising a body having side walls arranged to serve as a draft chamber, weed burning means supported at the lower portion of said walls, and a plurality of discs rotatively mounted on a shaft within said walls for extinguishing the flames when said weed burner is moved over the ground substantially as specified.



1,509,341. SMOKE CONSUMER. FRANK H. DILLON, Rock Island, Ill. Filed Aug. 30, 1920. Serial No. 406,824. 16 Claims. (Cl. 110—60.)

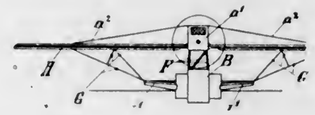
1. In a smoke consumer, the combination with a stationary plate carrying air tubes secured thereto, of a movable plate mounted thereon, openings in the movable plate corresponding approximately in size to the upper



ends of the air tubes, and air regulating valves suitably secured above the openings in the movable plate.

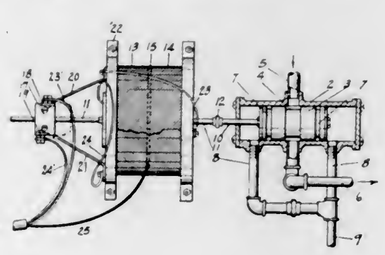
1,509,342. SMOKE CONSUMER. FRANK H. DILLON, Rock Island, Ill. Filed Aug. 30, 1920. Serial No. 406,825. 6 Claims. (Cl. 110—60.)

1. In a smoke consuming device, the combination with draft tubes, of nozzles secured therein above the level of the grate bars, each nozzle having a plurality of openings at its inner end, the upper opening projecting into the fire box and the other openings below and in the rear of the upper one.



1,509,343. SMOKE CONSUMER. FRANK H. DILLON, Rock Island, Ill. Filed Sept. 23, 1920. Serial No. 412,237. 6 Claims. (Cl. 110—53.)

1. In a smoke consumer for vertical tubular boilers, the combination with an air tube, having one end secured in a flue of such boiler to discharge at the lower end

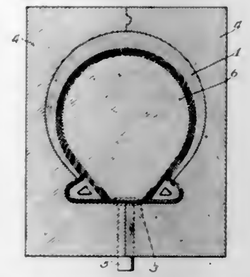


of the flue, and its outer end extending through the walls of the smoke stack thereof, of a steam nozzle mounted adjacent the outer end of the air tube, an air regulating valve mounted on the nozzle and a movable damper plate mounted adjacent the outer end of the air tube.

1,509,344. GIANT FLYING MACHINE. CLAUDIUS DORNIER, Friedrichshafen, Germany. Filed June 28, 1920. Serial No. 392,566. 3 Claims. (Cl. 244—2.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

3. In a flying machine in combination, a hull, a supporting plane above said hull, tandem motors above said plane in the plane of symmetry of the machine, a frame supporting said motors and forming part of the supporting plane structure, stub wings emerging from said hull, bracing means extending from the outer ends of said stub wings to the underside of said supporting plane, a casing around said motors and bracing means extending from said casing to the upper side of said supporting plane.

1,509,345. ELECTRICALLY-CONTROLLED REGULATING VALVE. SAMUEL J. DUNKLEY, Oakland, Calif., assignor to Dunkley Company, Kalamazoo, Mich. Filed Aug. 8, 1921. Serial No. 490,756. 3 Claims. (Cl. 137—139.)

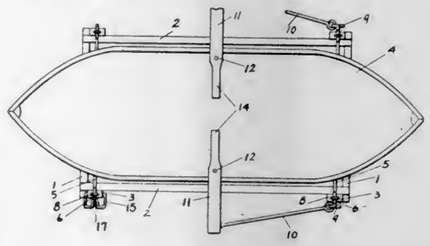


3. The combination of a suitable regulating valve, a solenoid with double coils, the armature thereof being of such length as to be reciprocated back and forth by the alternate action of said double coils, an electric supply with switch control for supplying current to the said solenoid, a connection from the armature of said solenoid to the said valve, and independent insulating switch means supported and carried by the armature of said solenoid to alternately connect the said coils to deliver current through the said switch alternately to the said coils to reciprocate the armature and actuate the valve and cut off the current, as specified.

1,509,346. METHOD AND APPARATUS FOR MAKING PNEUMATIC TIRES. JOHN L. G. DYKES, Chicago, Ill. Filed June 24, 1922. Serial No. 570,694. 15 Claims. (Cl. 18—53.)

12. A method for making rubber articles, comprising the building of the raw carcass complete in the desired form, forcing a flowing means under pressure into the interior of the article to form a non-compressible and non-yielding support, vulcanizing the article on this support, and then removing the support from the interior of the article.

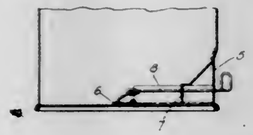
13. Apparatus for making rubber articles, comprising means whereon to build the raw carcass complete in the desired form, a vulcanizing mold, and a hard and non-



yielding support which is on larger size than said building means and adapted for use in the article during the vulcanization thereof, said support being formed in the article from a plastic and cementitious material.

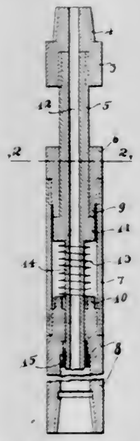
1,509,347. RAZOR STROP. GEORGE EDWARD FAUPEL, Beeville, Tex. Filed May 2, 1923. Serial No. 636,220. 1 Claim. (Cl. 51—200.)

In a razor strop, a plurality of straps and an elongated humidifying element interposed between adjacent straps, the humidifying element comprising a plurality of superposed strips formed of an absorbent material, a fabric casing for the superposed strips and stitching securing the casing and the strips together.



1,509,348. SWINGING TOY. LEWIS R. FLINT, Galesburg, Mich. Filed June 15, 1922. Serial No. 568,450. 4 Claims. (Cl. 46—69.)

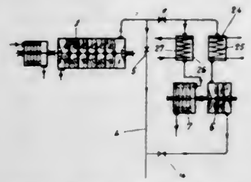
2. The combination of a supporting frame comprising a base and pairs of standards, a body disposed between said standards, half-shaped body hangers journaled on said standards whereby the body is supported for oscil-



lating movement and lateral movement thereof prevented, the arms of one hanger terminating in crank arms, levers mounted in a central opposed transverse relation on said body, and links connecting the outer ends of said levers to said crank arms.

1,509,349. MEASURING DEVICE FOR CANS. EDWARD E. FRANCE, Beaver Dam, Wis. Filed Sept. 23, 1922. Serial No. 590,109. 1 Claim. (Cl. 211—8.)

A can having an opening in its bottom portion, a drawer slidably arranged in the opening and having its outer end enlarged to cover the opening, a partition in the drawer, flanges in the can for preventing material entering the front part of the drawer, the inner end of the drawer being hinged to its bottom, a rod sliding through the front part of the drawer and the partition and hingedly connected with the end of the drawer and a handle on the outer end of the rod.

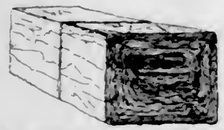


1,509,350. ROTARY JAR. LEO J. GIANELLA, Long Beach, Calif. Filed Aug. 29, 1922. Serial No. 584,984. 2 Claims. (Cl. 255—27.)

1. In a rotary jar, a stem made in sections having a passage therethrough and having telescopic and non-rotating engagement with one another, one section having abutments spaced axially and laterally in relation to the other section and adapted to facilitate free movements between the sections even when the abutments spread due to wearing, and the other section having a shouldered head adapted to abut against the abutments in the first-named section alternately.

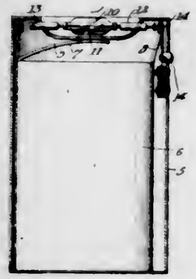
1,509,351. COMPRESSOR INSTALLATION. BENJAMIN GRAEMIGER, Zurich, Switzerland, assignor to Firm Aktiengesellschaft der Maschinenfabriken Escher Wyss & Cie., Zurich, Switzerland. Filed Apr. 6, 1923. Serial No. 630,331. 8 Claims. (Cl. 230—11.)

1. A compressor installation, comprising in combination, at least one main compressor, an additional compressor adapted to work in series with said main compressor for the purpose of obtaining a higher pressure, and a driving engine for said additional compressor driven by that portion of the medium compressed in the



main compressor which does not enter the additional compressor when working in series with the main compressor.

1,509,352. BOILER COMPOUND. CHARLES E. GUBB, Casper, Wyo. Filed Feb. 12, 1924. Serial No. 692,435. 2 Claims. (Cl. 87—27.)

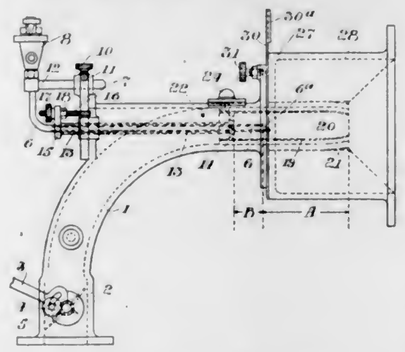


1. A boiler compound consisting of a mixture of soda ash, calcium oxide, oxalic acid and unrefined crude oil.

1,509,353. PACKING. CHARLES C. HALL, Kalamazoo, Mich. Filed Jan. 11, 1924. Serial No. 685,566. 3 Claims. (Cl. 154—45.5.)

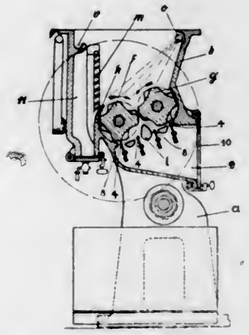
1. A packing comprising a sheet of aluminum and a sheet of lead crumpled, coated with lubricant, superimposed and rolled together so that the aluminum is at the outside, and compacted.

1,509,354. PORTABLE ILLUMINATING DEVICE. CARL HAMBUECHEN, New York, N. Y., assignor to National Carbon Company, Inc., a Corporation of New York. Filed Dec. 3, 1920. Serial No. 428,080. 6 Claims. (Cl. 240—8.5.)



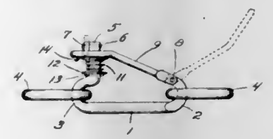
1. A portable illuminating device comprising a casing, a battery having a central terminal contained therein, a reflector of substantially parabolic section at one end of said casing, said reflector having an uninterrupted surface at the vertex of its parabolic section, an incandescent filament mounted at or near the focus of the reflector, and means for establishing electrical connection between said central terminal and filament through the vertex of the reflector.

1,509,355. PROCESS OF REFINING SUGAR-CANE JUICE. CYRUS HOWARD HAMGOOD, Nutley, N. J., assignor to The De Laval Separator Company, New York, N. Y., a Corporation of New Jersey. Filed May 7, 1921. Serial No. 467,529. 3 Claims. (Cl. 127—56.)



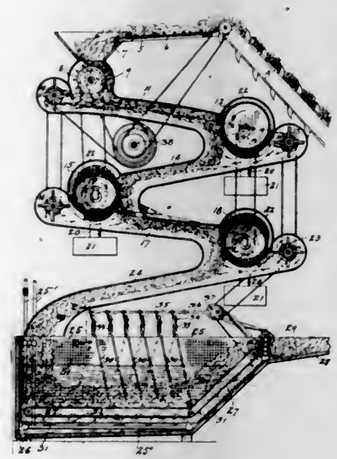
3. In the process of eliminating, from a liquid, solid or semi-solid impurities of higher specific gravity by means of centrifugal force in conjunction with a cushioning liquid, the process which comprises taking a liquid heavier than the liquid to be purified and mixing therewith another liquid lighter than the liquid to be purified and that forms with the heavier liquid a solution immiscible with and non-contaminative of the liquid to be purified, the proportions of the liquids being such as to provide a solution of higher specific gravity than the liquid to be purified, subjecting the liquid to be purified and the solution to centrifugal force and continuously flowing off the purified liquid.

1,509,356. LIQUID AND SOLID FUEL BURNER. HUGH HUTCHISON, Kilmarnock, Scotland, assignor to Hutchison's Turbinia Oil Burners Limited, Glasgow, Scotland. Filed Sept. 5, 1922. Serial No. 586,361. 6 Claims. (Cl. 158—73.)



1. A fuel burner having, in combination, a tubular casing for the passage of a comminuting agent, a tube within said casing with a space between said casing and said tube whereby said agent is divided into a primary and a secondary supply, a fuel nozzle within said tube, a device for gyrating said primary supply located behind said nozzle, a sleeve surrounding said nozzle and carrying said device; and means for moving said sleeve and said device longitudinally.

1,509,357. MACHINE FOR WASHING RUBBER AND THE LIKE. FRITZ KEMPTER, Stuttgart, Germany. Filed Nov. 12, 1923. Serial No. 674,409. 3 Claims. (Cl. 18—2.)

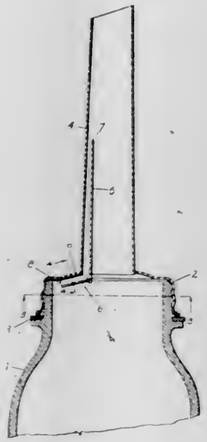


1. Device for washing rubber and the like, comprising in combination, a machine bed, a washing trough tiltably mounted on said bed, a pair of squeezing rolls mounted in said trough in parallel with each other, an inclined slotted bottom underneath said rolls, closing ledges removably disposed in the slots of said bottom and a lateral opening in said trough through which these ledges can easily be removed.

1,509,358. TIRE CHAIN FASTENER. JAMES B. KINSER, Tulsa, Okla. Filed June 11, 1923. Serial No. 644,658. 2 Claims. (Cl. 24—241.)

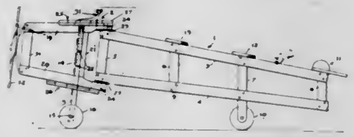
1. A locking hook comprising a body member formed at one of its ends with a stem portion, a locking lever pivoted to the other end of said hook and having an opening in its free end adapted for reception of said stem portion, and a lug rotatably secured to the end of said stem portion and adapted for longitudinal alinement therewith in one position to pass through the opening in the locking lever and in its other position to prevent disengagement of said locking lever from said stem.

1,509,359. MACHINE FOR RENOVATING USED WOOL AND COTTON JOURNAL-BOX WASTE. THOMAS M. LAWSON, Indianapolis, Ind. Filed May 12, 1923. Serial No. 638,654. 5 Claims. (Cl. 91—13.)



1. In a machine for reclaiming used waste, means for picking and shredding the material to loosen it, air means for throwing the loose material, a rotary perforate resistence in the path of the thrown material stopping the waste and allowing cinders, grit and dirt to pass to clean the waste, a tank containing hot liquid oil into which the waste is then deposited, means for agitating it in the oil and means for removing the oil excess from the product.

1,509,360. DISPENSING CAN. DAVID D. LEWIS, Kalamazoo, Mich. Filed Feb. 14, 1924. Serial No. 692,726. 2 Claims. (Cl. 221—28.)

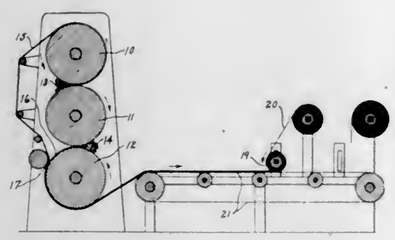


1. A dispensing can of broad mouth jar type in combination with a screw top and central spout disposed axially of said can provided with a vent formed by a

sheet metal partition to one side of said spout and extended laterally to the same side of the cap within the mouth of the receptacle whereby the air inlet is entirely within the spout and the whole vent means encased so

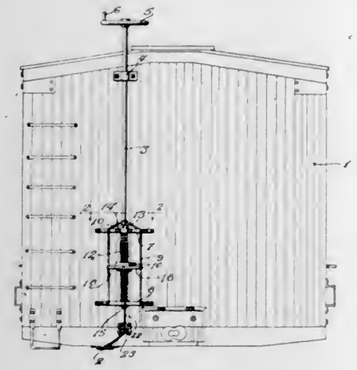
that the can may be vented when pouring by the lateral extension being disposed on the upper side and the vent checked by turning till the lateral extension points downwardly and is submerged.

1,509,361. CHILD'S AIRPLANE VEHICLE. GEORGE B. LOWDEN, San Francisco, Calif. Filed Aug. 27, 1923. Serial No. 659,558. 2 Claims. (Cl. 208—165.)



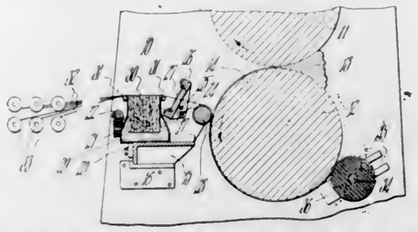
1. A child's airplane vehicle comprising an elongated body portion of skeleton construction, a wheel carried by the body portion intermediate of the ends thereof, a seat on the body portion, an upright body plate, wheels carried on opposite sides and at the lower end of the body plate, said body plate having a slot extending from its upper end downwardly therein between the sides thereof, bars extending through the slot in the plate adjacent the upper and lower extremities of the slot, one end of said body portion being disposed between the inner ends of said bars, means for pivotally connecting said end of the body portion with said bars, a post mounted in the slot and engaging said bars and transverse frames simulating wings mounted on the upper and lower bars and extending laterally on opposite sides thereof.

1,509,362. HIGH EXPLOSIVE. JOHN MARSHALL, Swarthmore, Pa., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Apr. 25, 1922. Serial No. 556,420. 7 Claims. (Cl. 52—6.)



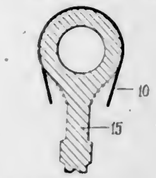
1. A blasting explosive composition comprising more than 25% of a finely comminuted propellent powder, and from about 1 to 10% of an aromatic nitro-compound completely gelatinized with said powder.

1,509,363. RUBBER STOCK AND METHOD OF PREPARING THE SAME. CHARLES EDWARD MAYNARD, Northampton, Mass., assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed Mar. 29, 1923. Serial No. 628,483. 4 Claims. (Cl. 154—2.)



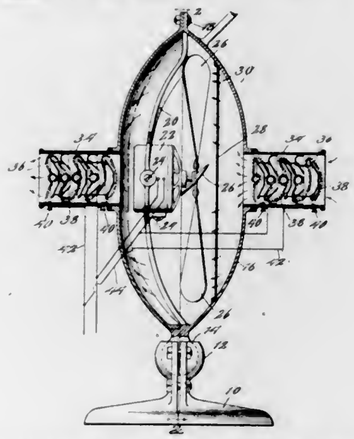
4. A method of producing sheet rubber stock which comprises laminating two plies of stock in such a manner that the edge portion of one extends beyond the edge of the other to give a thin marginal portion, the stock being of a consistency and quality adapted to dry out when wound in contact with fabric, and winding the two-ply stock with an intermediate lining of fabric, whereby the body of the sheet is caused to become dry and the marginal portions to remain tacky on account of the absence of pressure contact with the fabric.

1,509,364. CAR BRAKE. HARRY S. MEEK, Needles, Calif. Filed May 22, 1923. Serial No. 640,737. 1 Claim. (Cl. 74—120.)



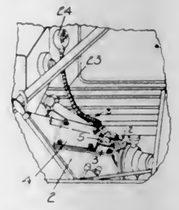
In a car brake, the combination of vertically spaced brackets, vertical guides extending between the brackets, a worm journaled in the brackets and arranged parallel with the guides, a head comprising a central hub and arms extending from the hub, the hub having an annular seat at its upper end and being internally threaded at its lower end to engage the worm and the arms having notches at their ends to slidably engage the guides, a lubricant holder in the seat at the upper end of the hub, an eye on the front side of the head, a flexible element secured in said eye and adapted to be connected to a brake rod, and means for rotating the worm.

1,509,365. METHOD AND MACHINE FOR PRODUCING CORD FABRIC. THOMAS MIDGLEY, Springfield, Mass., assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed Apr. 17, 1919. Serial No. 290,760. 18 Claims. (Cl. 154—1.)



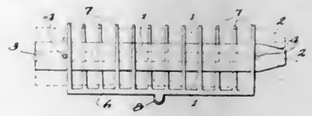
1. The method of making cord fabric consisting in applying a rubber solvent to a plurality of cords, pressing the cords against one surface of a sheet of uncured rubber, and pressing a second sheet of uncured rubber against the uncoated side of the cords.

1,509,366. METHOD OF FORMING TIRE CASINGS. THOMAS MIDGLEY, Hampden, Mass., assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed July 10, 1920. Serial No. 395,323. 8 Claims. (Cl. 154—14.)



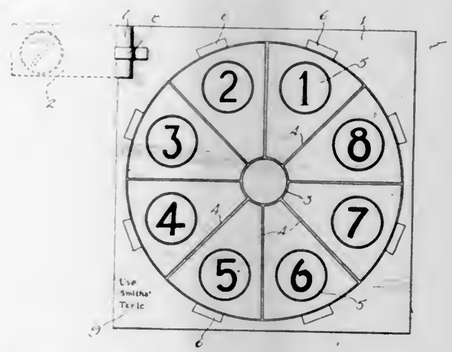
4. The method of applying fabric to cores or formers comprising forming the fabric into a bias cut band, locating the band about an expansible tube, expanding the center of the band to substantially the diameter of the core or former at its crest leaving the side portions of the band relatively less stretched, removing the band from the tube, and applying the band to the core or former.

1,509,367. DRYING APPARATUS. JOHN J. MILLER, Chicago, Ill. Filed Aug. 28, 1922. Serial No. 584,751. 4 Claims. (Cl. 34—26.)



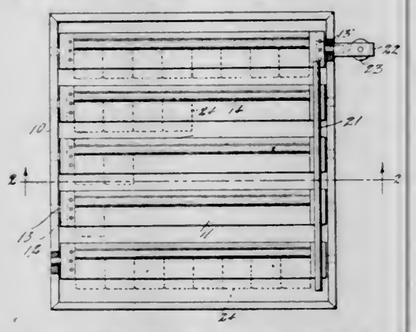
3. In an air-blast drying apparatus, the combination with a casing, a ball and socket mounting therefor, a motor suspended in said casing, fan-blades carried by said motor, a perforated baffle plate in juxtaposition with the fan-blades, aligned removable nozzles carried at the opposite sides of said casing, heating elements in said nozzles, and a plurality of dished baffles alternate ones of which extend to the inner walls of said nozzles and are provided with centrally disposed openings.

1,509,368. SPEEDOMETER-DRIVE MEANS. EDWARD D. MYERS, Shelby, Mich. Filed Nov. 26, 1921. Serial No. 517,888. 4 Claims. (Cl. 74—7.)



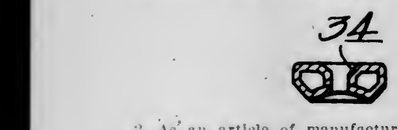
4. In a speedometer drive structure, the combination with a clutch spring support with a shell-like hub and cross pin therein, of a worm gear having a hub disposed within the hub of said clutch spring and having a bayonet hook to engage said cross-pin, as specified.

1,509,369. GARDEN-RAKE ATTACHMENT. CHARLES L. MCKESSON, Los Angeles, Calif. Filed July 24, 1923. Serial No. 653,547. 3 Claims. (Cl. 55—10.)



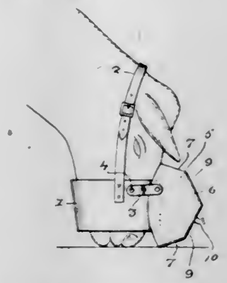
1. A rake attachment comprising a strip of spring material arranged to be inserted between the teeth of a rake and by frictional contact with the teeth and by its own spring action on said teeth to hold itself in adjusted position.

1,509,370. GAME. SOSAKU NAGASE, Chicago, Ill. Filed Apr. 13, 1923. Serial No. 631,883. 1 Claim. (Cl. 46—56.)



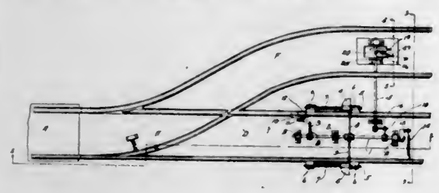
A game comprising a paper sheet, a plurality of different visible characters arranged on said sheet, an extension sheet bearing a duplicate of one of said characters, said extension being adapted to be folded back upon the face of the sheet, and a strip for securing the folded portion to said sheet, whereby the duplicate character is normally hidden, the breaking of the strip permitting the extension sheet to be unfolded, thereby bringing the hidden character into view.

1,509,371. EDUCATIONAL APPLIANCE. CHARLES R. NALLE, Wichita Falls, Tex. Filed June 5, 1923. Serial No. 643,565. 7 Claims. (Cl. 35—12.)



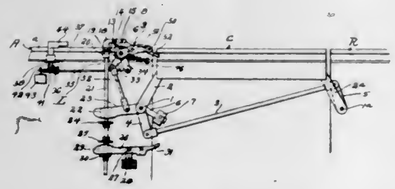
1. In an educational appliance, a frame, a plurality of card holders journaled in said frame, means on each holder for detachably holding cards, and means for inverting all the holders at the same time.

1,509,372. BALL SEAT AND METHOD OF FORMING THE SAME. WILLIAM H. NEEDHAM, Worcester, Mass., assignor to Boston Pressed Metal Company, Worcester, Mass., a Corporation of Maine. Filed Sept. 28, 1922. Serial No. 591,195. 2 Claims. (Cl. 113—51.)



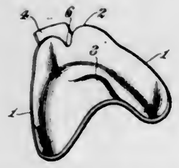
2. As an article of manufacture, a ball seat formed from sheet metal and having a concave seat portion, a supporting portion, and a plurality of separate inturned points positioned closely adjacent each other and projecting inward from said supporting portion to firm engagement with the convex inner side of the ball seat.

1,509,373. CALF WEANER. JOHN E. NEWSUM, Dacoma, Okla. Filed Dec. 23, 1922. Serial No. 608,694. 1 Claim. (Cl. 119—131.)



A weaner of the character described comprising a nose band, means for retaining said nose band upon an animal, links bent outwardly intermediate their ends and having their inner ends secured upon opposite sides of the nose band, a closure member for the outer end of the nose band and being secured thereto through the medium of connection with the outer ends of the links, said closure member being spiked and provided with curved portions providing the side walls thereof and the walls adjoining the curved walls being substantially V-shaped in cross section for cooperative association with the spikes to cause the closure to swing to inoperative position when one of these parts engages the ground.

1,509,374. FEEDER FOR KICKBACK DUMPS. JAMES A. NOLAN, Bowerston, Ohio. Filed Aug. 4, 1923. Serial No. 655,600. 7 Claims. (Cl. 214—50.)

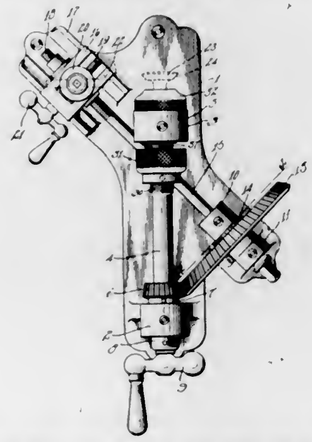


1. In an apparatus of the character described, in combination with a dump, an approach track leading thereto, a receiving track leading from the approach track adjacent to the dump, means for deflecting an empty car leaving the dump from the approach track onto the receiving track, stop members mounted on the approach track beyond the receiving track, means actuated by a loaded car traveling on the approach track for closing said stop members, and positively operating means actuated by an empty car traveling on the receiving track for opening the stop members.

1,509,375. AUTOMATIC LANDER. JAMES A. NOLAN, Bowerston, Ohio. Filed Oct. 1, 1923. Serial No. 665,960. 10 Claims. (Cl. 187—97.)

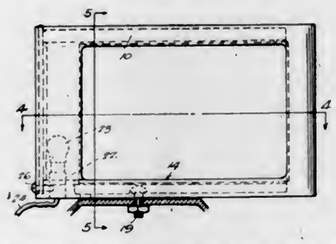
5. In combination with a landing and tracks leading to and from the landing, a cage movable past the landing and provided with a car-receiving track section, landers normally extending into the path of travel of the cage, cage actuated means for withdrawing the landers when the cage travels past them in one direction, and for holding the landers in inoperative position, cage actuated means for releasing the landers, returning them to normal position when the cage travels past said landers in the other direction, and means actuated by a car traveling on one of said tracks for placing the first mentioned cage actuated means in condition to be again actuated by said cage upon its return movement.

1,509,376. DENTAL IMPRESSION TRAY. FRANK C. RODGERS, St. Louis, Mo. Filed June 16, 1920. Serial No. 389,384. 14 Claims. (Cl. 32—6.)



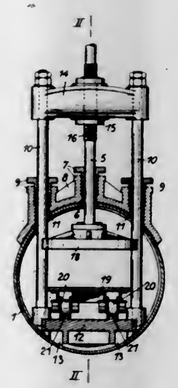
1. A dental impression tray formed to provide a distally open arched trough having shallow post dams formed thereon and following the transverse curvature of the trough.

1,509,377. DENTAL IMPRESSION TRAY. FRANK C. RODGERS, St. Louis, Mo. Original application filed June 16, 1920, Serial No. 389,384. Divided and this application filed Apr. 17, 1922. Serial No. 554,167. 10 Claims. (Cl. 32—6.)



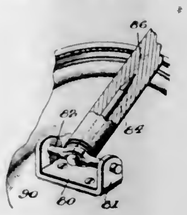
1. A dental impression tray having lingual and labial flanges bounding a distally open arched trough provided with shallow post dams following the transverse curvature of the trough.

1,509,378. VALVE LATHE. WALTER CHAS. SCHROECK and WILLIAM LISSMANN, Chicago, Ill. Filed Nov. 24, 1922. Serial No. 603,064. 2 Claims. (Cl. 82—1.)



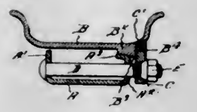
1. A valve lathe comprising a base, shaft carrying bearings projecting upwardly from said base, a hollow shaft having a slotted end, valve stem engaging members disposed in said slots, a sleeve mounted on the slotted end of said shaft and having grooves to receive said members, said sleeve being mounted in one of said bearings and said shaft being mounted in another bearing, and means for moving said members into engagement with a valve stem.

1,509,379. DISPLAY DEVICE FOR MOTOR CARS. CLARENCE SIMS, Lancaster, Ohio. Filed Oct. 22, 1923. Serial No. 670,084. 2 Claims. (Cl. 40—132.)



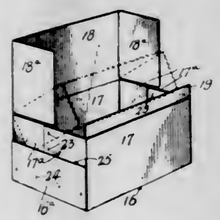
2. A display or advertising device of the character described consisting of a generally triangular rigid frame or casing open at the larger of its two ends and having side walls provided with enlarged openings and with guide beams along the upper and lower edges of said openings and also along the vertical edges of the side walls at the open end of the casing, side panels insertable through the open end of the casing into the first mentioned grooves to normally cover the said side openings, a door slidable vertically into and out of the last mentioned grooves to normally close the open end of the casing, clamping means depending through the base of the casing, a bulb holder mounted through the base of the casing, and means to detachably clamp the said closure door and the said bulb holder in place.

1,509,380. VULCANIZING KETTLE. JOSEF TALALAY, Berlin, Germany. Filed May 10, 1924. Serial No. 712,428. 1 Claim. (Cl. 18—4.)



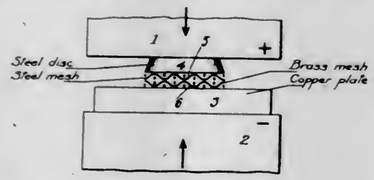
In a device of the kind described, a vulcanizing kettle, detachable closing means for the kettle, a press table within the kettle, rib-like feet integral with the under surface of the table and resting upon the interior of the base of the kettle, integral tracks on the upper surface of the table parallel with the guide edges thereof, a rolling platform mounted upon the tracks, substantially parallel spaced draw bars secured to the table and gas-tightly guided in the kettle walls, a connecting member secured to the draw bars outside of the kettle, adjustable operating means guided in said connecting members and gas-tightly passing through the kettle walls into the interior thereof, and a compressing member swivelly connected to the operating means in the interior of the kettle and guided in the draw bars.

1,509,381. CLEANING DEVICE. GEORGE G. TOWNSEND, Frostburg, Md. Filed Mar. 31, 1922. Serial No. 548,356. 2 Claims. (Cl. 306—19.)



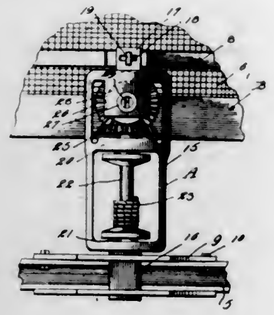
2. A cleaning device for use in bath tubs and the like comprising a head, an attaching member secured to the head and provided with a pair of ears, a pivot rod having its ends rotatably connected to said ears, a spindle rotatably extended through the intermediate portion of said rod, and a handle connected to said spindle, the connection between the attaching member, the rod and the spindle providing a universal connection between the handle and the head.

1,509,382. AUTOMOBILE WHEEL RIM. JAMES H. WAGENHORST, Jackson, Mich. Original application filed Apr. 2, 1921, Serial No. 458,005. Divided and this application filed Dec. 31, 1923. Serial No. 683,745. 14 Claims. (Cl. 301—19.)



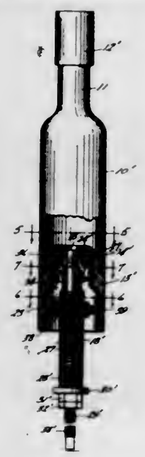
1. A demountable tire-carrying rim having a rim base on which the tire seats, a portion projecting inwardly from said rim base, and apertures formed in said rim adjacent said inwardly projecting portion and in the curved or rounded portion of the rim base, and lugs having studs projecting into said openings and riveted to the rim base, the adjacent portions of the lugs contacting with the inwardly extending portion of the rim, whereby each lug will fulcrum against the inwardly projecting portion under lateral stress and prevent dislocation of the lugs.

1,509,383. BOX. HARRISON B. WALTER, Chicago, Ill., assignor to Chicago Mill and Lumber Company, Chicago, Ill., a Corporation of Illinois. Filed May 31, 1923. Serial No. 642,382. 4 Claims. (Cl. 229—33.)



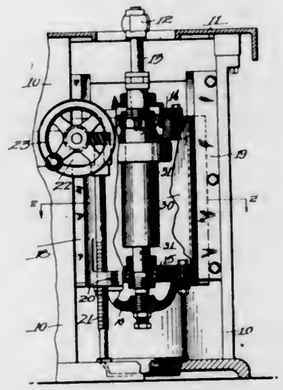
1. A box made from fibre or paper board having sides, a bottom and a top closure, the said parts being provided with end extensions to form the ends of the box, the end extensions of said sides being folded into overlapping engagement and being secured together near their top edges, and the end extensions of the bottom being folded against the end extensions of the sides and being secured thereto near said bottom and providing open top pockets, the end extensions of the top closure being adapted to be either inserted into said pocket or to be folded against and to overlap the outer surface of said extensions of said bottom and to be secured to said last mentioned extensions.

1,509,384. WELDING. VALENTINE E. WALTER, Brooklyn, N. Y., and WILLIAM J. LALLY, Meriden, Conn., assignors to Thomas E. Murray, Brooklyn, N. Y. Filed Mar. 22, 1923. Serial No. 626,746. 3 Claims. (Cl. 219—10.)



1. The method of welding together two pieces of different resistances which consists in placing at least two filling pieces between them, one adjacent to each work piece and corresponding in resistance thereto and passing a welding current and pressing the pieces together.

1,509,385. EMERGENCY DRUM. MARSHALL A. WHATLEY, Redwood, Miss. Filed Nov. 27, 1923. Serial No. 677,287. 1 Claim. (Cl. 254—166.)

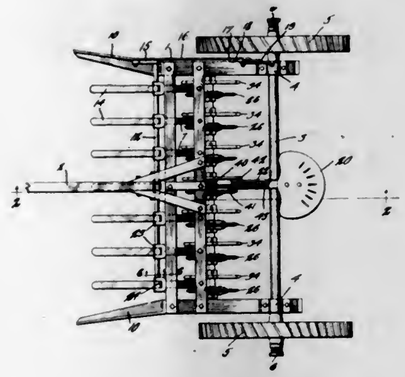


The combination with a motor vehicle including a crank shaft, a radiator and a dead axle, a transversely extending supporting bar disposed across the radiator, superimposed U-shaped clamps connected with the dead axle, of means for facilitating the pulling of the automobile out of the mud or the like when the same becomes stuck on a roadway including a frame, a depending ear formed on the frame arranged to be placed in said clamps connected with the dead axle, an ear formed on the upper end of the frame adapted to engage the supporting bar, a key for detachably connecting the ear formed on the upper end of the frame with the bar, a vertical driven shaft rotatably carried by the frame, a drum connected with the driven shaft, a horizontally arranged drive shaft carried by the frame, means operatively connecting the drive and driven shaft together, and a connecting shank detachably connected with the drive shaft and with the crank shaft of the engine.

1,509,386. PRESSURE-RELIEF VALVE. ROBERT A. WILSON, Dallas, Tex., assignor to Guiberson Corporation, Dallas, Tex., a Corporation of Delaware. Filed Mar. 13, 1923. Serial No. 624,874. 7 Claims. (Cl. 277—45.)

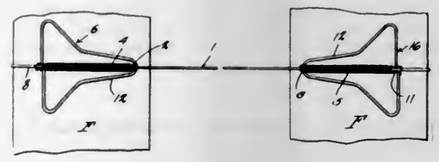
1. In a relief valve device, a housing having a pipe coupling, a valve cage mounted in the housing and having an annular valve seat, a main valve engaging upon said seat and depending therethrough, said valve having a vertical bore and an inlet port intersecting said bore, a piston valve slidable in said bore, a stem depending from the main valve, and variable tension means in said stem and engaging said piston valve for normally sealing the same.

1,509,387. SHAPER-DRIVING MECHANISM. JOHN J. WITT, Winchendon, Mass., assignor to Goodspeed Machine Company, a Corporation of Massachusetts. Filed Oct. 16, 1922. Serial No. 594,699. 2 Claims. (Cl. 144—134.)



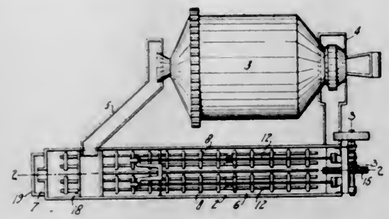
1. In a shaper, a frame having spaced vertical side guiding members, a spindle casing comprising a substantially semi-cylindrical shell disposed substantially in front of its axis with the space at the rear of said axis unobstructed and having bearing surfaces at its side edges engaging said guiding members, a spindle mounted in upper and lower bearings on said casing behind said semi-cylindrical shell, driving means for said spindle disposed between said upper and lower bearings and entirely enclosed at the front side by the semi-cylindrical shell portion of said casing, and means to raise and lower said casing.

1,509,388. BOTTLE-CAPPING MACHINE. CALVIN L. BEARDSLEY, Rock Island, Ill. Filed Dec. 6, 1921. Serial No. 520,433. 4 Claims. (Cl. 226—84.)



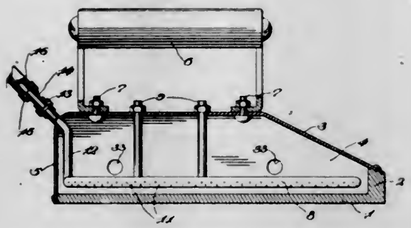
1. A bottle capping machine comprising in combination a support, a die reciprocably carried by the support, means for actuating the die, a rigid jaw carried by the support disposed below the die, a coil spring secured at its upper end to the support, and at its lower end to the die for normally holding the die in a raised position, a movable jaw, including a semi-cylindrical shank for housing said spring, for cooperation with the rigid jaw for holding a bottle, and means pivotally securing the upper end of the shank of the movable jaw to said support.

1,509,389. CUTTING MACHINE. JOHN P. BERNARD, Orosi, Calif. Filed Nov. 17, 1922. Serial No. 601,560. 2 Claims. (Cl. 55—118.)



1. A device of the class described embodying a frame; a ground wheel journaled thereon; a support on the frame; a rotatable member journaled on the frame and comprising cutting arms coacting with the support; a rotary holder journaled on the frame at the side of said member and having hooks disposed adjacent to the outer ends of the arms of the rotatable member; and means for driving the rotatable member and the holder from the ground wheel.

1,509,390. CURTAIN-ROD BRACKET. NEWTON J. BISHOP, St. Louis, Mo. Filed Oct. 9, 1922. Serial No. 593,329. 1 Claim. (Cl. 156—19.)

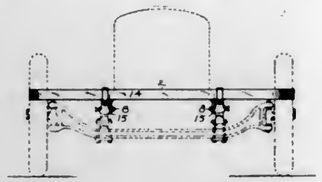


A rod supporting bracket of the class described comprising a single piece of wire bent to form a substantially triangular body with an arm extending longitudinally therefrom in the same plane midway one side of said triangle and equipped with a frame engaging hook, and a second arm extending in a plane at right angles to the first mentioned arm and coiled at its base to provide an eye through which said first mentioned arm extends, said second arm having an eye at its free end to receive the rod to be supported, the two remaining sides of the triangle meeting at a point located opposite and remote from the junction of said arms.

1,509,391. ORE-TREATING SYSTEM. ALFRED L. BLOMFIELD, Colorado Springs, Colo., assignor to The Dorr Company, New York, N. Y., a Corporation of Delaware. Continuation in part of application Serial No. 274,052, filed Jan. 30, 1919. This application filed May 18, 1922. Serial No. 561,873. 4 Claims. (Cl. 83—81.)

1. In combination, a classifier adapted to separate solids in a liquid according to their size and having a reciprocatory member for actuating oversize to a point of discharge, and mechanism for reciprocating said member including an indicatory appliance for indicating variations in a resistance to the movement of the oversize.

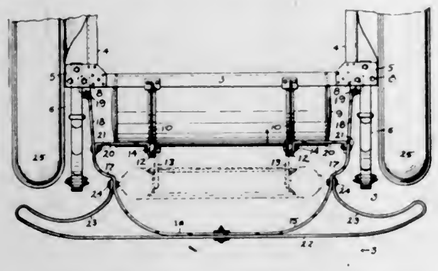
1,509,392. GAS IRON. WILLIAM BONK, Buffalo Center, Iowa. Filed Dec. 27, 1922. Serial No. 609,256. 1 Claim. (Cl. 158—23.1.)



In an iron, a relatively thick tapering base, an upstanding rib at the small end of the base, a housing detachably carried by said base, an inclined tapering forward wall integral with the housing and having its lower end secured to the upstanding rib, a burner within the housing in close proximity to the base and including parallel side bars, transverse brace rods connecting the side bars of the burner, suspending bolts connected to the brace rods and to the upper wall of the housing for supporting said burner, a supply pipe formed on said burner and projecting outwardly through said housing, and a nipple detachably carried by said supply pipe.

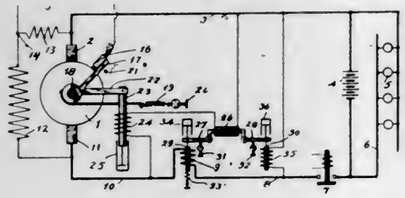
1,509,393. AMMONIUM NITRATE EXPLOSIVE. LEON O. BRYAN, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Apr. 25, 1922. Serial No. 556,422. 10 Claims. (Cl. 52—9.)

1. A blasting explosive comprising ammonium nitrate and more than 10% of a finely ground propellent powder.



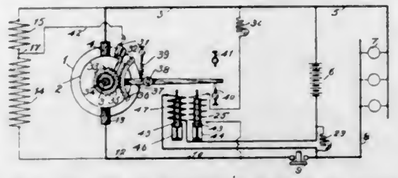
1,509,394. VEHICLE BUMPER. WILLIAM G. COX, Cleveland, Ohio, assignor, by mesne assignments, to The Eaton Axle and Spring Company, Cleveland, Ohio, a Corporation of Ohio. Filed Aug. 14, 1922. Serial No. 581,754. 2 Claims. (Cl. 293—55.)

2. A spring bumper for an automobile, comprising a main impact bar having spring loop portions at its opposite ends terminating in curved arms having laterally-offset extremities, and each loop end of said main bar having a resilient spring bar engaged at its inner end therewith and connected between its ends with said



main bar and curved rearwardly to provide a spring portion and bent downwardly at its inner end to permit attachment to the spring shackle bolt, said downwardly bent inner end having a bolt-opening therein.

1,509,395. SPRING BUMPER FOR AUTOMOBILES. WILLIAM G. COX, Cleveland, Ohio, assignor, by mesne assignments, to The Eaton Axle and Spring Company, Cleveland, Ohio, a Corporation of Ohio. Filed Aug. 14, 1922. Serial No. 581,755. 3 Claims. (Cl. 293—55.)

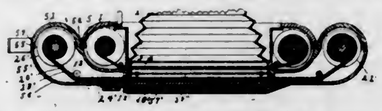


2. A rear bumper for an automobile, comprising an arched member spanning the gasoline tank and spare-tire bracket having bent extremities secured to the spring supporting plates at the respective corners of the automobile frame, together with an impact member connected to the center of said arched member and extending laterally on opposite sides beyond the supporting springs of the vehicle.

1,509,396. ELECTRIC REGULATION. JOHN L. CREVELING, White Plains, N. Y., assignor to Gould Coupler Company, a Corporation of New York. Filed Feb. 3, 1917. Serial No. 146,412. Renewed Dec. 22, 1922. 36 Claims. (Cl. 171—312.)

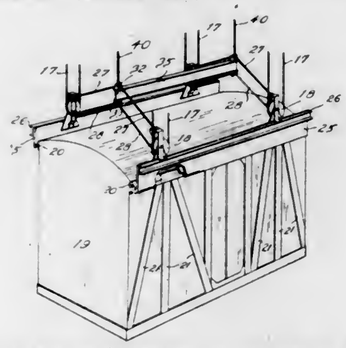
23. The combination with a generator having a plurality of field coils in series with each other of means for varying the relative energization of said coils with respect to each other comprehending operating means and responsive means controlling the operation thereof affected by electrical fluctuations.

1,509,397. ELECTRIC REGULATION. JOHN L. CREVELING, Tucson, Ariz., assignor to Gould Coupler Company, a Corporation of New York. Filed Nov. 4, 1919. Serial No. 335,616. 40 Claims. (Cl. 171—221.)



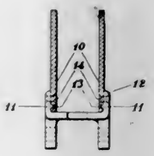
37. The combination with a variable speed generator having a commutator, an external circuit including a storage battery connected therewith, a field circuit, and means for connecting the field circuit independently with said commutator, of automatic means for varying said point of connection affected upon fluctuations in voltage of said battery.

1,509,398. DISTRIBUTING APPARATUS FOR MATRICES OF TYPE-CASTING MACHINES AND THE LIKE. CLARENCE H. CROWELL, Fort Worth, Tex. Filed Jan. 7, 1924. Serial No. 684,791. 2 Claims. (Cl. 199—37.)



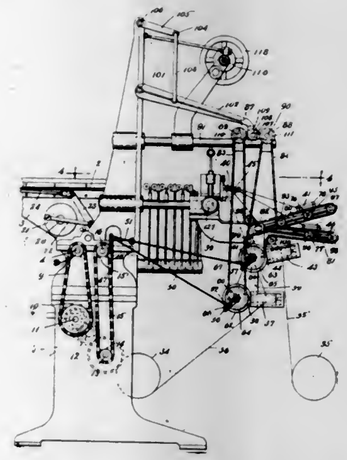
1. In a type-casting machine provided with a distributer box bar having a socket therein; an adjustable bar point having a shank projected into said socket and a screw for clamping said shank in said socket.

1,509,399. ROLL ATTACHMENT FOR CAMERAS. ISAAC J. FELTENSTEIN, St. Joseph, Mo. Filed June 7, 1921. Serial No. 475,586. 6 Claims. (Cl. 95—31.)



1. In combination with a camera having a rear exposure opening and rolls for supporting a film in position for exposure at said opening, an attachment to the rear portion of said camera, and rolls mounted in said attachment for supporting a second film at the exposure opening when the same is not covered by the first-mentioned film.

1,509,400. HOISTING CRADLE. BENJAMIN F. FITCH, Evanston, Ill. Filed Apr. 22, 1921. Serial No. 463,531. 37 Claims. (Cl. 214—115.)

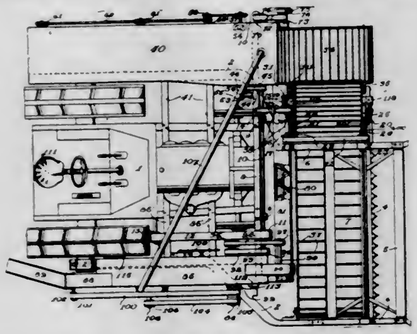


1. In a hoisting mechanism, the combination with an articulated cradle hinged at each end, and adapted to engage a load, means for raising and lowering the cradle, and means operable independently of the raising and lowering means for engaging the hinged portions, and for buckling them to bring the cradle into position to engage and raise a load.

1,509,401. RECEIVER FOR MACHINE GUNS. WALTER T. GORTON, U. S. Army. Filed July 12, 1922. Serial No. 574,556. 2 Claims. (Cl. 89—2.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)

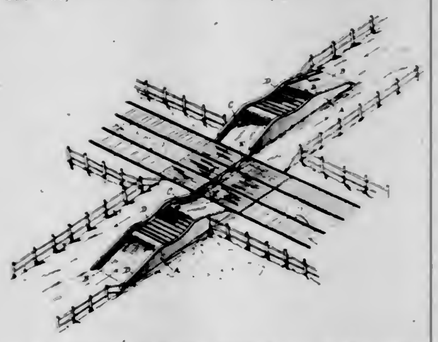
2. A receiver for machine guns, including side plates each formed with a longitudinal groove near its lower edge, a bottom plate of channel formation, each flange of the bottom plate having a longitudinal rib adapted to enter the groove in a side plate and a riveted joint between each flange of the bottom plate and a side plate, said joint located above the tongue and groove connection.

1,509,402. TEXTILE MACHINE. EDGAR F. HATHAWAY, Wellesley, Mass., assignor, by mesne assignments, to Barber-Colman Company, Rockford, Ill., a Corporation of Illinois. Filed July 10, 1916, Serial No. 108,388. Renewed Oct. 18, 1922. Serial No. 595,462. 71 Claims. (Cl. 28—44.)



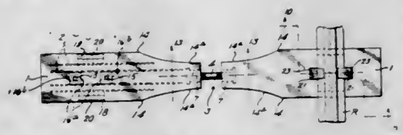
1. A warp-drawing machine, having, in combination, drawing-in mechanism, two warp carriages for supporting a plurality of groups of warp threads and respectively mounted for traversing movement, and automatic traversing means combined with compensating means for said carriages.

1,509,403. HARVESTER. EMMETT HOWARD and JOSEPH W. KAYS, Eugene, Oreg. Filed Feb. 20, 1922. Serial No. 537,970. 10 Claims. (Cl. 56—20.)



5. The combination with a power unit, of a cutter carried by and across the front end of the power unit, a

thresher carried by one side of the power unit, a cleaner carried by the opposite side of the power unit, conveyors

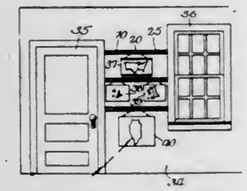


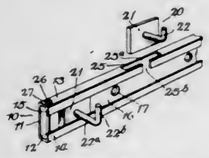
connecting the cutter with the thresher and the thresher with the cleaner, and means for maintaining the cleaner in a level position.

1,509,404. HIGHWAY GRADE-LEVEL CROSSING FOR RAILWAYS. OTTO JOHNSON, Portsmouth, N. H. Filed Aug. 7, 1924. Serial No. 730,556. 3 Claims. (Cl. 238—3.)

1. A highway grade-level crossing for railway-roadbeds in which the highway is divided into two one-way driveways, the right-hand driveway being provided with an elevated platform long enough to receive a car and having an inclined approaching section and an inclined exit-section, the latter terminating near the adjacent railway-rail.

1,509,405. SEGMENTAL CROSSTIE AND RAIL-HOLDING STRUCTURE. VAN RENSSELAER CHOATE KING, Radnor, Pa., assignor to King's Concrete Cross Tie Corporation, New York, N. Y., a Corporation of New York. Filed Oct. 4, 1923. Serial No. 666,492. 24 Claims. (Cl. 238—31.)

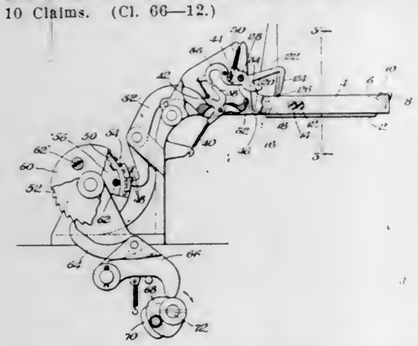




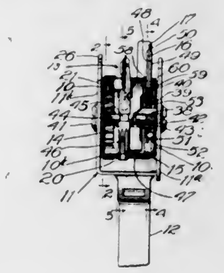
5. A cross tie comprising a pair of elongated and alined concrete tie heads; in the inner end of each tie head, a plurality of interiorly threaded socket blocks anchored against endwise, axial and tipping movements and located one above the other; and for each transversely opposed pair of sockets, a stiff, one piece coupling rod reversely threaded at its ends; the plurality of coupling rods forming compression and tension truss members.

1,509,406. PLASTIC COMPOSITION AND METHOD OF MAKING THE SAME. CHARLES E. KRAUS, Brooklyn, N. Y. Filed Apr. 17, 1919. Serial No. 290,671. Renewed Dec. 14, 1923. 15 Claims. (Cl. 106—10.)

11. A fired cohesive article of manufacture containing thoroughly mixed mineral material and a mineral substance normally having colloidal properties much in excess of ordinary clays.



1,509,407. MAP HOLDER. ARCHIBALD E. MACQUARRIE, Minneapolis, Minn. Filed Mar. 24, 1923. Serial No. 627,527. 1 Claim. (Cl. 248—48.)

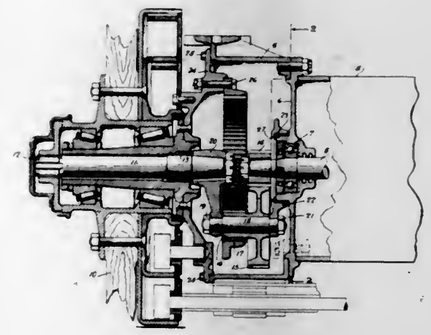


A supporting device comprising a bar having a vertical rear wall, outwardly extending top and bottom walls, and vertical flanges extending downwardly and upwardly from said top and bottom walls respectively with a longitudinal slot between them, and a supporting attachment comprising a plate movable longitudinally of said bar between said rear wall and said flanges and between said top and bottom walls and having a hook projecting outwardly through said slot, said top wall having an opening therein to permit said plate to be brought into operative engagement with said bar and said flange extending downwardly from said top wall being provided with a notch forming a communication between said opening and said slot to permit the passage of said hook, said notch having a lesser dimension longitudinally of said bar than said plate.

1,509,408. KNITTING MACHINE. MAX C. MILLER, Cumberland Hill, R. I., assignor to Jenckes Knitting Machine Company, Pawtucket, R. I., a Corporation of Rhode Island. Filed Jan. 8, 1919. Serial No. 270,192. 10 Claims. (Cl. 66—12.)

1. A rotary needle cylinder knitting machine having, in combination, a latch ring having a feed throat, a permanent bridge substantially closing the top of the throat arranged to engage the latches of the needles which are raised to the inactive level during reciprocatory knitting, a plurality of yarn guides and means for moving them under the bridge into and out of feeding position.

1,509,409. KNOTTER. BURT A. PETERSON, Rockford, Ill., assignor, by mesne assignments, to Barber-Coleman Company, Rockford, Ill., a Corporation of Illinois (1922). Filed Apr. 1, 1920. Serial No. 370,396. 37 Claims. (Cl. 289—5.)



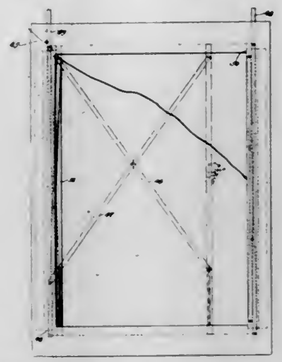
17. In a knot-tying implement, the combination of a spindle, and a tying bill comprising a stationary portion rigid with the spindle, a pivot pin mounted in said stationary portion, a clamping and shearing member mounted on said pivot pin, and a bill spring also mounted on said pin, the upper end of the spindle having a longitudinal bore therein adapted to receive the lower end of the bill spring, and the walls of said bore being shaped to provide opposed bearing surfaces for the opposite sides of the bill spring.

1,509,410. SELF-OPENING PARACHUTE. JOHN WITHERS RUFF, Charleston, S. C. Filed July 22, 1919. Serial No. 312,488. 10 Claims. (Cl. 244—21.)

1. In a device of the class described, the combination of a case consisting of a normally flat base or back having co-planar spring controlled extensions or flaps adapted to be folded inwardly on the base to form a closure for the case, the spring tensioned locking means for maintaining the flaps in closed position, and flexible means cooperating with said spring tensioned locking means whereby the same may be moved into position for releasing the flaps from the front of the operator.

1,509,411. REDUCTION GEARING. JOSEPH A. ANGLADA, Jenkintown, Pa. Filed Apr. 21, 1921. Serial No. 463,428. 2 Claims. (Cl. 74—7.)

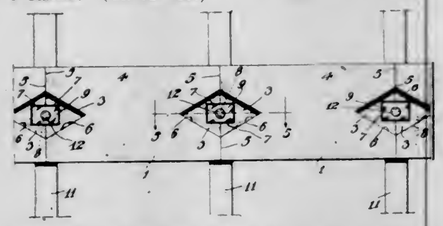
1. In gearing of the character disclosed, a gear case having a removable end wall, an internal gear carried by and removable with said end wall, a driven shaft journaled in said removable end wall, a spider carried by the driven shaft, stub shafts carried by said spider, a motor shaft supported in alinement with the drive shaft, a pinion on said motor shaft and gears on the stub shaft in mesh with said pinion and carrying pinions in mesh with the internal gear, all whereby the removal of the end wall of the gear case will effect the removal of the internal and other gears from the driving pinion, and a ring member connecting the free ends of the stub shafts and of larger internal diameter than the driving pinion so as to pass freely thereover in the separation of the parts described.



1,509,412. PRODUCTION OF META-NITROBENZALDEHYDE. DON W. BISSELL, Buffalo, N. Y., assignor to National Aniline & Chemical Company, Inc., New York, N. Y., a Corporation of New York. Filed Jan. 24, 1920. Serial No. 353,822. 6 Claims. (Cl. 260—136.)

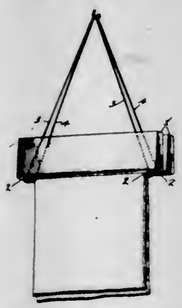
1. The method of nitrating benzaldehyde, which comprises gradually adding benzaldehyde to about 2½ times its volume of a cold mixture of nitric and sulfuric acids containing about 28 to 30% nitric acid, about 63 to 66% sulfuric acid and about 4 to 7% water, cooling and agitating the mixture during the addition, regulating the rate of addition and the cooling so that the temperature of the reacting mixture is held between approximately 5 and 10° C., and separating the nitrated benzaldehyde from the reaction mixture.

1,509,413. TRIPHENYLMETHANE COMPOUND AND METHOD OF PRODUCING SAME. DON W. BISSELL and ROBERT B. MCCANN, Buffalo, N. Y., assignors to National Aniline & Chemical Company, Inc., New York, N. Y., a Corporation of New York. Filed Nov. 29, 1920. Serial No. 427,127. 9 Claims. (Cl. 260—68.)



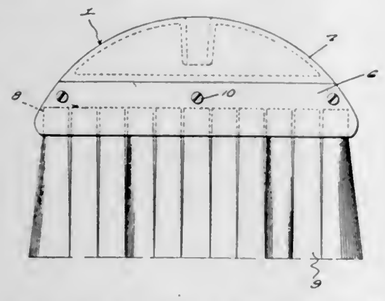
2. The method of effecting the preparation and sulfonation of 3-hydroxy-4',4''-tetraethyldiaminotriphenylmethane, which comprises subjecting meta-hydroxybenzaldehyde and diethylaniline to condensation with sulfuric acid, cooling and pulverizing the resulting product and subjecting it directly to sulfonation with oleum, whereby the 3-hydroxy-4',4''-tetraethyldiaminotriphenylmethane is obtained in the form of its sulfonic acid without intermediate isolation of the free base.

1,509,414. PLATE HOLDER. HARVEY LEWIS BOYER, Philadelphia, Pa. Filed May 31, 1919, Serial No. 300,979. Renewed Feb. 25, 1924. 2 Claims. (Cl. 95—66.)



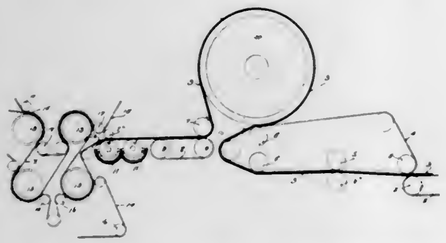
1. The combination with a carrier for a sensitized element; of a roller; a curtain mounted on said roller and movable therefrom over the sensitized element; with means for actuating said curtain consisting of a lazy tongs attached thereto and a member for actuating said lazy tongs.

1,509,415. BUILDING BLOCK. WILLIAM BRIDDES, Darby, Pa. Filed Oct. 19, 1923. Serial No. 669,457. 4 Claims. (Cl. 72—19.)



1. A building block having a cavity in its face and a recess within the cavity, the cavity and recess leading to the edge of the block and being adapted to receive means for securing the block to a building and a filler to cover the securing means.

1,509,416. GARMENT HANGER. THOMAS F. BURGESS, Scarsdale, N. Y. Filed Sept. 15, 1922. Serial No. 588,310. 2 Claims. (Cl. 211—13.)



1. A garment hanger comprising a pair of plates, said plates having openings near each end of each plate extending through the plate edgewise, and pull cords passing through said openings at each end of each plate and with the ends of each cord secured to the other plate near the ends thereof, said edgewise openings in the plates being angularly disposed to prevent substantial frictional contact of said cords with the sides of the openings when the device is in use.

1,509,417. BRUSH HEAD. JAMES E. CALDWELL, Fayetteville, Tenn. Filed Apr. 16, 1924. Serial No. 706,950. 1 Claim. (Cl. 15—177.)

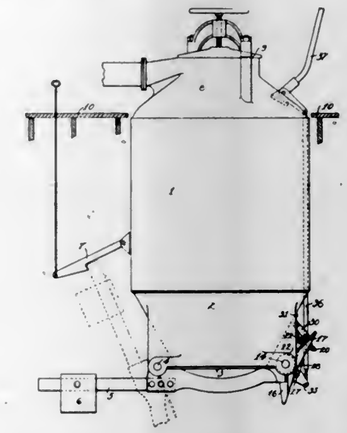
A brush head comprising a body portion having a handle receiving opening provided in the upper portion thereof and arranged centrally therein, the lower portion of the body portion being cut away, a clamping plate cooperating with the cut away portion, said cut away portion and the clamping plate being provided with opposed cooperating recesses formed in the inner opposed faces thereof providing a plurality of sockets in the bottom of the brush head, a series of bunches of bristles having their upper ends disposed in said sockets, and securing bolts extending through the clamping plates and the cut away portion.

1,509,418. METHOD OF MAKING CRÊPE PAPER. AUSTIN E. COFRIN, Green Bay, Wis. Filed Oct. 20, 1920. Serial No. 418,221. 2 Claims. (Cl. 92—69.)

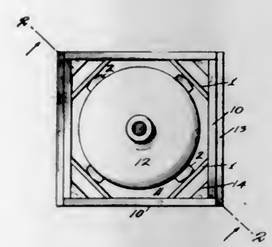
1. The method of making and crêping paper as a continuous process which comprises forming the paper stuff into a web, drying the web, moistening the dried web as it passes from the drying apparatus and crêping the thus uniformly moistened web before again drying.

1,509,419. COLLAPSIBLE TUBE. SAMUEL BAYARD COLGATE, Orange, and MARTIN HILL ITTNER, Jersey City, N. J., assignors to Colgate & Company, Jersey City, N. J., a Corporation of New Jersey. Filed Dec. 17, 1923. Serial No. 681,067. 3 Claims. (Cl. 221—60.)

1. A collapsible container comprising a tube with a nozzle having screw threads on its outer surface lying below the face thereof, a central orifice in the nozzle, a packing washer lying on the face at the nozzle and having its opening in registry with the orifice, a flange extending upwardly from the face of the nozzle around the rim of the washer and having an edge overlying this rim, a cap threaded on the nozzle, means on the cap for preventing its complete removal from the nozzle, a dome formed on the lower face of the cap in registry with the orifice, this dome being of less diameter than the circular flange, and an opening through the cap at one side thereof.



1,509,420. FOUNTAIN PEN. JACOB EDELMAN, Brooklyn, N. Y., assignor to Rose Edelman. Filed Aug. 20, 1923. Serial No. 658,336. 5 Claims. (Cl. 120—47.)

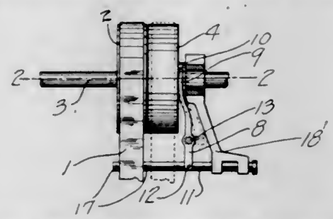


1. In a fountain pen, in combination, a barrel, a plunger stem operating and housing cap releasably threaded to the outer end of the barrel and continuous therewith, a filling plunger, an operating stem for said plunger having a plurality of telescoping sections with bayonet slot connections there between and a bayonet slot connection between said cap and the outer of the stem sections, said stem sections normally telescoped with respect to each other and into said cap with the plunger retained in outermost position in the barrel, said parts being constructed and arranged in such manner that in the unthreading and withdrawal movement of the cap, the plunger stem becomes extended and the bayonet slot connections rendered effective for plunger operation, and in the replacement of the cap, the telescoping connections become released and the stem collapsed within the cap.

1,509,421. CLOSURE-RETAINING DEVICE. JOHN H. FRANCIS, Cleveland, Ohio, assignor to The Kilby Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed Apr. 21, 1920. Serial No. 375,483. 15 Claims. (Cl. 292—224.)

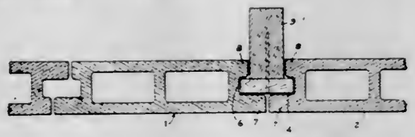
1. In combination, an eccentrically mounted shaft, a hook journaled thereon, positive means for rotating said hook about said shaft into operative position, and means for then rotating said shaft to impart translatory movement to said hook.

1,509,422. CARBOY. HERBERT H. GARIS, Easton, Pa., assignor to J. T. Baker Chemical Company, Phillipsburg, N. J., a Corporation of New Jersey. Filed Oct. 16, 1923. Serial No. 668,802. 5 Claims. (Cl. 217—54.)



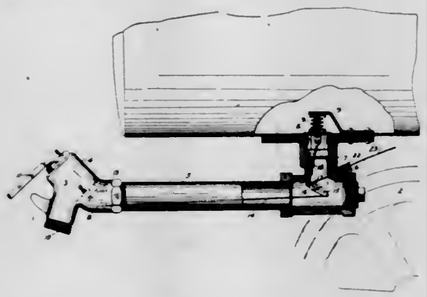
1. In a carboy, the combination with the liquid-holding receptacle and housing thereof, of resilient cleats diagonally bridging the corners of said housing and having their ends supported by the side walls of the latter, and bearing members positioned between said cleats and said receptacle.

1,509,423. DEAD-BELT-SHIFTING DEVICE. CORMAN E. GARNER, Columbus, Ohio. Filed Sept. 14, 1922. Serial No. 588,171. 2 Claims. (Cl. 64—4.)



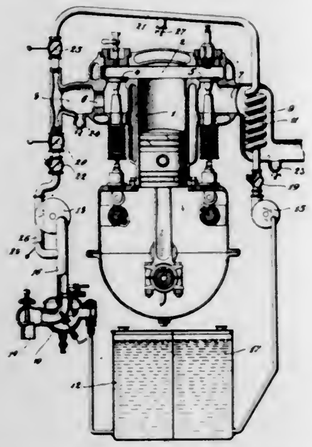
1. A device of the character described, comprising, in combination with the suitably suspended line shaft and live pulley and belt thereon; a hanger; a sleeve mounted on the hanger adjacent the live pulley and loosely embracing the line shaft; an idler pulley of equal diameter with the live pulley, freely journaled on the said sleeve at the side of the live pulley; a bracket extended laterally and horizontally from the hanger, same having a guide-way parallel to the line

shaft; a shift-rod slidingly mounted in the guide-way; shift fingers on the shift-rod at each side of the belt; a shift lever pivoted to the shift rod, same having fingers



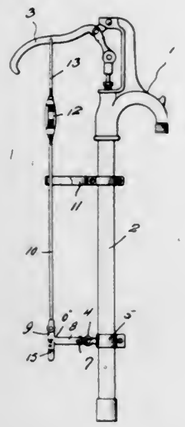
interposed between the hanger and idler pulley and having a handle hole therethrough; and a handle hinged to the ceiling and passed down through the handle hole of the shift lever.

1,509,424. BUILDING TILE. EDWARD J. GARRARD, Richmond, Calif. Filed Oct. 24, 1921. Serial No. 509,972. 2 Claims. (Cl. 72—16.)



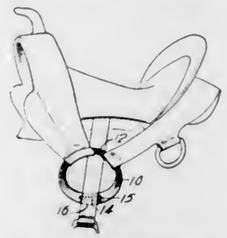
1. A building construction comprising a wall or like structure made up of a plurality of tiles, each of said tiles having like ends formed with grooves adapted to aline with the similar grooves of the next adjacent tiles, the walls of said grooves on one side being shorter than the walls on the opposite side, studding extending between the shorter walls, and a key strip on the studding engaging in and substantially filling the space provided by the grooves of tiles disposed on opposite sides of the studding.

1,509,425. OUTLET-VALVE SYSTEM. WALLACE M. GIFFEN, Alameda, Calif., assignor of one-third to Nelson W. Thompson, Oakland, Calif., and one-third to George C. Noble, Berkeley, Calif. Filed June 19, 1922. Serial No. 569,481. 12 Claims. (Cl. 137—21.)



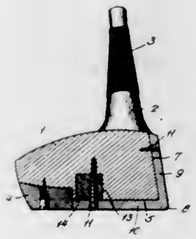
12. A valve system for tank trucks, comprising, a safety valve and a dispensing valve, and connections therebetween, the safety valve forming part of the bottom of said tank, the dispensing valve adapted to open and close by a rotary motion and the safety valve adapted to open and close by a reciprocating motion, the opening of said safety valve being dependent upon the opening of the said dispensing valve, but the closing of said safety valve being dependent at times, upon spring means carried by said valve in conjunction with manually operable means connected therewith.

1,509,426. APPARATUS FOR FORMING FUEL CHARGES FOR INTERNAL-COMBUSTION ENGINES. NORRIS B. GREGG, Jr., St. Louis, Mo. Filed Oct. 13, 1919. Serial No. 330,189. 5 Claims. (Cl. 123—25.)



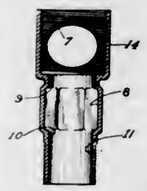
1. In an apparatus for forming fuel charges for internal combustion engines, the combination of a source of hydrocarbon fuel supply, means for generating superheated steam under pressure, a chamber arranged for the reception of fluid from said source and said means, means for inducing pressure upon fluid supplied from said source to said chamber, and means for regulating the supply of steam under pressure from said first mentioned means.

1,509,427. DRAIN ATTACHMENT FOR HAND-OPERATED PUMPS. CARL BENNETT HAGEN, Ute, Iowa. Filed May 12, 1924. Serial No. 712,691. 2 Claims. (Cl. 137—34.)



2. A drain attachment for a hand operated pump comprising a drain valve in the stand pipe of the pump, a valve actuating member associated with said valve, an elongated rod connected at one end to the valve actuating means and at its opposite end to the handle of the pump whereby said valve actuating means is operated by the handle to open and close said valve, guide means for said rod, and a stop member associated with the valve actuating means.

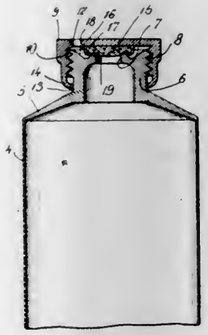
1,509,428. RIGGING RING. PHILIP JOSHUA HENRY, Sacramento, Calif., assignor to The Van Voorhies-Phinney Co., Sacramento, Calif., a Corporation. Filed Apr. 22, 1924. Serial No. 708,295. 2 Claims. (Cl. 54—46.)



2. A relatively thin substantially oval rigging ring having its oval opening eccentrically arranged whereby to provide a widened portion along one of its long sides, said widened portion having an elongated strap receiving slot, and a plurality of outwardly curved portions at the ends of the ring forming strap retaining means.

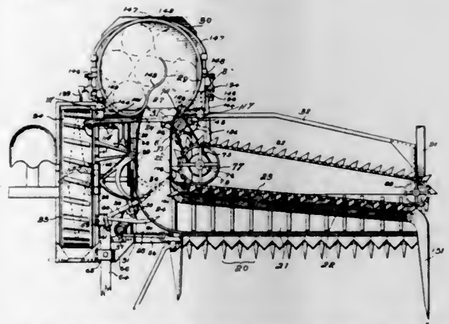
1,509,429. GOLF CLUB. JOHN A. HILLERICH, Louisville, Ky. Filed Jan. 19, 1924. Serial No. 687,296. 3 Claims. (Cl. 46—4.)

1. A golf club head comprising a body portion having a channeled forward driving face and a channeled lower sole face, the channels in said faces intersecting at the lower forward edge of said body portion and having side walls which diverge toward said edge; and an integral metallic angle member having an upwardly extending front flange and a rearwardly extending lower flange respectively disposed in said channels, the edges of said flanges being inclined to correspond to the inclination of the said walls of said channels to provide a wedging action therebetween and a wedging action between the flanges of said angle member and the body portion of said club.



1,509,430. FAUCET AND METHOD OF MAKING THE SAME. JOHN H. HORSBURGH, Cleveland, Ohio. Filed Oct. 16, 1922. Serial No. 594,695. 9 Claims. (Cl. 29—157.)

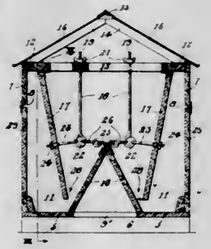
1. The method of making a faucet comprising shaping a thin metallic disc into a cup form, shaping said cup into a hollow product having a large open section and a reduced closed section with an intermediate abrupt valve seat the area of whose smallest bore is no less than that of said closed section, removing the tip of the closed section, forming a polygonal nut portion intermediate the ends of the reduced section, said nut portion having the cross area of its interior no less than that of the smaller end of the tube, and threading the larger and reduced ends of the tube internally and externally, respectively substantially as set forth.



3. A faucet having integral walls of thin metal and comprising an inflow section having a nut portion intermediate its ends, an enlarged exit section, an annular bent portion connecting the two sections together and serving as an abrupt valve seat, neither the nut portion nor the bent portion having a smaller bore than that of the inflow section, and a valve plug in threaded engagement with said exit section and adapted to engage said valve seat.

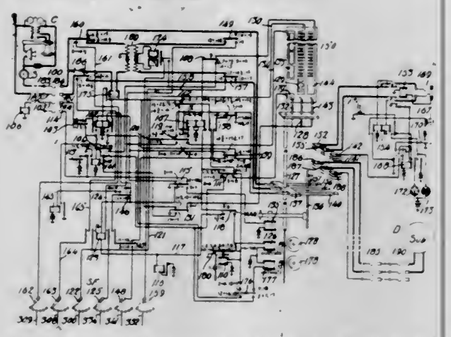
1,509,431. COLLAPSIBLE TUBE. MARTIN HILL ITTNER, Jersey City, N. J., assignor to Colgate & Company, Jersey City, N. J., a Corporation of New Jersey. Filed Dec. 17, 1923. Serial No. 681,077. 3 Claims. (Cl. 221—60.)

1. A collapsible container comprising a tube with a nozzle having screw threads formed on the external surface thereof, a central orifice in the nozzle, a depression in the face of the nozzle spaced from the orifice to form a seat, a cap threaded on the nozzle, means on the cap engaging the nozzle to prevent complete removal of the cap, a circular flange on the inner face of the cap, a packing disc lying within the flange, the latter having an inturned edge overlying the rim of the disc, and being positioned opposite and adapted to enter the depression when the disc is against the seat, and an opening through the cap communicating with the depression.



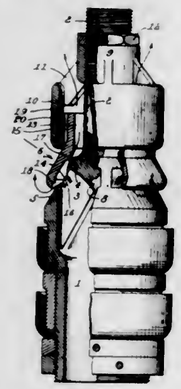
1,509,432. COMBINED REAPER, BINDER, AND SHOCKER. JOSEPH M. JOHNSON, Rich Hill, Mo. Filed Mar. 25, 1921. Serial No. 455,505. 4 Claims. (Cl. 56—70.)

3. In a shock former, a guide device curved to embrace a plurality of bundles, and having an entrance opening, an inner guide piece extended from one side of the entrance



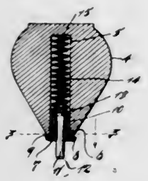
into the guide device aforesaid in a relation with the opposite side of the entrance to snugly receive bundles therebetween, means to deliver bundles to the former, means to tie a shock therein, means to raise the guide device above a shock therein, and means to simultaneously discharge a shock.

1,509,433. AUTOMATIC HOG FEEDER. GEORGE A. KNILANS, Fort Atkinson, Wis. Filed Feb. 28, 1924. Serial No. 695,730. 2 Claims. (Cl. 119—53.)



2. In a device of the kind described, a housing having end walls, and lateral access openings in the side walls and a floor, a partition resting on the floor and extending longitudinally between the end walls to provide feeding troughs, longitudinally extending boards hinged at their upper edges in the upper part of the housing and depending toward the floor in spaced relation to the floor and partition to constitute hopper sides, and means for varying the gap between the lower edges of said boards and the partition for controlling the passage of feed from the hopper to the trough, said means including flexible connections between the partition and the boards, and depending longitudinally adjustable rods carried by the upper portion of said housing and connected to the central portions of said flexible connections for raising and lowering said central portions to move the hinged boards toward and away from said partition, and depending doors covering the access openings and arranged to swing inwardly against the hinged boards to jar the latter.

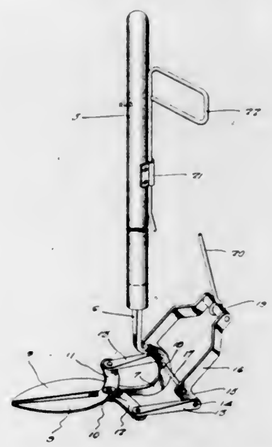
1,509,434. TELEPHONE-EXCHANGE SYSTEM. OTTMAR H. KOPP, Brooklyn, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 28, 1921. Serial No. 465,294. 9 Claims. (Cl. 179—27.)



1. In a telephone exchange system, a calling subscriber's line, selector switches for extending a connection from said line, a register sending mechanism for controlling said switches, means associated with said calling line for setting the registers of said sending mechanism in accordance with the designation of a desired connection, an operator's position, a signaling device associated with said operator's position, means operative after a delayed setting of said registers for operating said signaling device, a trunk circuit, and means effective upon the response of the operator to said signaling device for cancelling the setting of said registers imposed by the calling subscriber and for resetting said registers to control the extension of said calling line to said trunk circuit.

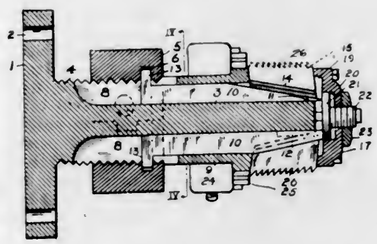
1,509,435. VALVE FOR DEEP-WELL PUMPS. FRED J. LUKINS, Huntington Park, Calif. Filed Mar. 13, 1923. Serial No. 624,719. 5 Claims. (Cl. 103—225.)

1. In a pump plunger, an axial stem, a valve guide comprising a hub, a cylindrical shell connected thereto by radial arms, said guide being adapted for adjustable positioning on said stem.



1,509,436. TOP. LOUIS MARX, Brooklyn, N. Y. Filed Oct. 31, 1921. Serial No. 511,562. 3 Claims. (Cl. 46—32.)

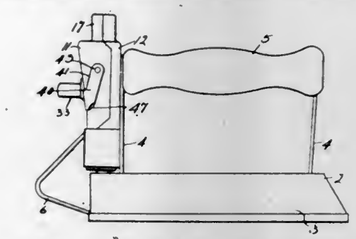
1. A bounding top comprising a body, an axially disposed bore extending vertically from the apex through the major portion of said body, a sleeve formed of unyielding material rigidly secured within the outer end of the bore opening and having an annular rim flush with the edges of said opening, a peg slidable axially in said sleeve, a collar formed on the peg stem normally bearing on the inner end of said sleeve, and a resilient connection between said collar and the bottom of said bore in alinement with said peg yieldingly forcing the peg to its outermost position through said sleeve with its tip beyond said annular rim.



1,509,437. AGRICULTURAL IMPLEMENT. ADOLPH MEYER, Newaygo, Mich. Filed Nov. 26, 1923. Serial No. 677,126. 1 Claim. (Cl. 30—11.)

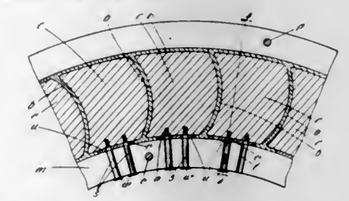
An agricultural implement of the character described comprising a vertical elongated handle having a shank fixed to the lower end thereof, said shank terminating in a horizontal forwardly directed end portion, a pair of jaws projecting forwardly from the free end of the shank and having their rear ends pivoted together and upon the free end portion of the shank, said jaws having crossed arms extending rearwardly and laterally in opposite directions from the pivotal connection of the jaw, rearwardly extended links connected to the outer ends of the

arms, vertically swinging bell crank levers pivotally mounted upon the shank rearwardly of the jaws, and a vertically movable operating rod slidably attached to the handle, and pivotally connected at its lower end to the upper ends of the bell crank levers.



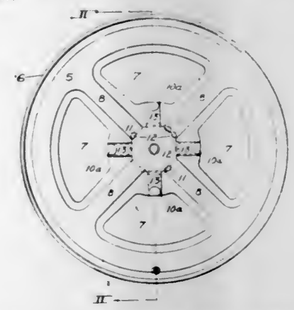
1,509,438. MEANS FOR CUTTING UNDERCUT THREADS. GEORGE E. MILLER, Etna, Pa. Filed June 6, 1922. Serial No. 566,239. 3 Claims. (Cl. 10—145.)

1. In a thread-cutting device, a body, a collapsible thread-cutting die carried thereby and means guiding the die at an angle to the axis of the device, and means for moving the die in the body, the cutting face of the die having thread-cutting teeth, each with one face undercut and inclined in the same general direction as the direction of movement of the die, but at an angle not greater than the angle which the said direction of movement makes with a line perpendicular to the axis of the device, whereby the dies may, after the device has cut a thread, be moved inwardly in their said guiding means so as to withdraw the teeth of the dies from the thread without rotating the said device.



1,509,439. COMBINATION CONNECTER PLUG AND AUTOMATIC SWITCH. WILLIAM MORLOK, Philadelphia, Pa. Filed Dec. 4, 1922. Serial No. 604,706. 4 Claims. (Cl. 219—25.)

1. The combination with an electric iron comprising a base, a handle and a support, of a connecter plug for detachable connection with said iron, a switch in said connecter plug, means to normally hold said switch in a closed position, and means for contact with the surface



on which the iron is resting when in a tilted position to actuate the first named means to cause the switch to be opened.

1,509,440. MOLD FOR THE PRODUCTION OF AIR TUBES FOR PNEUMATIC TIRES. THOMAS BAKER MCLEROTH, London, England. Original application filed May 5, 1922, Serial No. 558,635. Divided and this application filed Mar. 7, 1923. Serial No. 623,392. 7 Claims. (Cl. 18—45.)

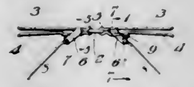
3. For the production of the tube proper of an air tube for a pneumatic tire, comprising a series of compartments into which open apertures in said tube proper, a tubular patch closing said apertures and valveless rubber feed tubes mounted on said tubular patch and projecting through said apertures one into each compartment, a mold comprising two annular sections divided on a substantially central plane and adapted to be clamped together, a plurality of cores in said sections, and aperture-producing means carried by said cores for producing at the inner periphery of the tube apertures through which the cores may be withdrawn.

1,509,441. REEL FOR MOTION-PICTURE FILMS. EDWIN G. NESS-WANER, Pittsburgh, Pa. Filed Mar. 20, 1923. Serial No. 626,287. 14 Claims. (Cl. 242—74.)

1. A reel for motion picture films comprising a hub and side plates, said hub having a co-axially extending slot therein adapted to receive a film, and a tooth at each edge of the slot projecting part way across it for engaging a perforation in a film, the tooth at one side

of the slot being adapted to engage the film when the reel is revolved in one direction and the tooth at the other side of the slot being adapted to engage the film when the reel is revolved in the opposite direction.

1,509,442. AZO DYES. JAMES P. PENNY, Buffalo, N. Y., assignor to National Aniline & Chemical Company, Inc., New York, N. Y., a Corporation of New York. Filed July 13, 1922. Serial No. 574,789. 4 Claims. (Cl. 260—70.)

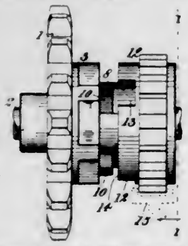


1. The hereindescribed new azo dyestuffs obtainable by combining two molecular proportions of a diazotized aminoazodisulfonic acid of the benzene series, with one molecular proportion of 5.5'-dihydroxy-2.2'-dinaphthylurea-7.7'-disulfonic acid, which dyestuffs are, after being dried and pulverized, in the shape of their alkaline salts brown to red powders soluble in water with a crimson color, soluble in concentrated sulfuric acid with a bluish-green color; and dyeing cotton in a neutral bath bluish red shades, leaving wool and silk almost entirely unstained, and being discharged to a white with hydrosulfite.

1,509,443. EXPANDING REAMER. FRANK J. PETERSON, Swissvale, Pa. Filed Jan. 20, 1923. Serial No. 613,965. 8 Claims. (Cl. 77—75.5.)

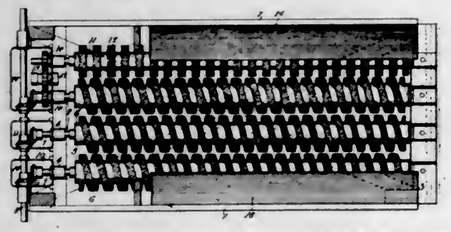
1. An expanding reamer comprising a mandrel having a series of longitudinal grooves therein whose depth increases from one end of the mandrel toward the other, a series of segmental longitudinally extending bits, and a key on under face of each bit and movable therewith engaging in a groove in the mandrel and slidable therein to adjust the bits to different positions, and means for holding the parts in the different positions to which they are adjusted.

1,509,444. NECKWEAR-ATTACHING DEVICE. ARTHUR W. PITHOUSE, Philadelphia, Pa. Filed Dec. 4, 1923. Serial No. 678,439. 3 Claims. (Cl. 24—81.)



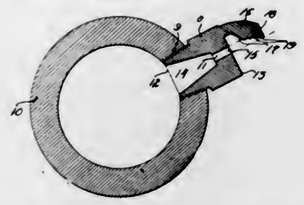
1. A device for attaching an article of neckwear to a collar consisting of a clip formed of parallel pairs of limbs between which the edge portions of a collar may be received, a central loop to which said pairs of limbs are connected and a lever mounted upon each of the inner of said limbs adapted to engage the limbs and thereby close the limbs on the collar and retain the clip tightly thereon.

1,509,445. PLATE FOR STOVES. DAVID SCHWARTZ, Newark, N. J. Filed Mar. 27, 1924. Serial No. 702,418. 1 Claim. (Cl. 126—215.)



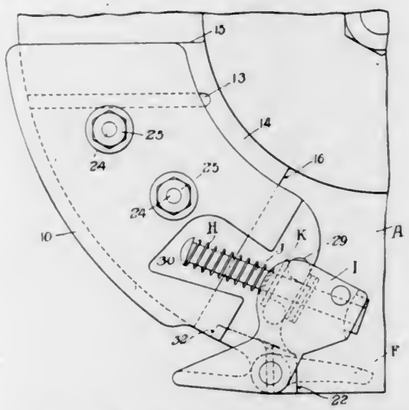
A plate for stoves comprising a one-piece flat ring having a trough extending around its outer edge, the plate having feet on its bottom face, said feet being formed as curved bands with flat lower faces so as to insure the plate resting level on the grill of a stove.

1,509,446. CLUTCH. BRONSON C. SKINNER, Dunedin, Fla., assignor to Skinner Machinery Company, Dunedin, Fla., a Corporation of Florida. Filed Oct. 3, 1921. Serial No. 504,875. 1 Claim. (Cl. 192—47.)



In combination with a drive sprocket formed with a recess opening at one end of the hub thereof and said recess being formed on its interior with a plurality of symmetrical angularly disposed clutch dog engaging faces, a driven shaft rotatably mounting said sprocket, a sleeve keyed to said shaft and extending into said hub recess, said sleeve provided on its periphery with a plurality of radially disposed clutch dog mounting depressions, a clutch dog pivotally mounted in each of said depressions with its free end adapted for swinging movement by gravity beyond the periphery of said sleeve to engage with said dog engaging faces, said dogs adapted to project beyond the end of said recess hub, a collar mounted for free movement on said sleeve and inwardly cut at its end to provide a plurality of dog receiving recesses for the reception of the free ends of said dogs when in engagement with said faces, and means for laterally moving said collar to position the same within the path of the projecting portions of said dogs and for holding the same stationary relatively to the rotating hub whereby said dogs on the rotation of said shaft are caused to pass beneath a portion of said collar separating said slots whereby said dogs are withdrawn from engagement with said faces.

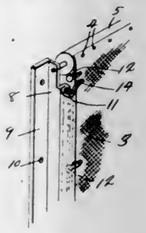
1,509,447. POLISHING MACHINE. BRONSON C. SKINNER, Dunedin, Fla., assignor to Skinner Machinery Company, Dunedin, Fla., a Corporation of Florida. Filed Feb. 23, 1924. Serial No. 694,573. 6 Claims. (Cl. 146—202.)



1. A fruit treating apparatus, comprising a bed formed of a series of parallel spaced downwardly inclined rotatably mounted brushes disposed in substantially the same plane, means for rotating the brushes in the same direction, a rotatable buffer brush arranged at one side of the series with its periphery elevated above the surface of the bed, and means for rotating said latter brush.

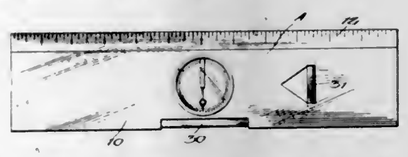
1,509,448. SPRAYING NOZZLE. CHARLES W. SKINNER, Newfield, N. J. Filed Aug. 9, 1921. Serial No. 490,856. 3 Claims. (Cl. 299—121.)

1. A spraying nozzle including a body portion provided with a duct, and a shoulder formed integral with and extending outwardly from said body portion and having a portion slanting across a part of the outlet end of said duct, said slanting portion being provided with grooves extending transversely across.



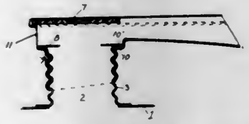
1,509,449. WEFT-REPLENISHING MECHANISM FOR LOOMS. EDWARD S. STIMPSON, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Apr. 17, 1922. Serial No. 553,341. 3 Claims. (Cl. 139—251.)

1. A weft replenishing loom having, in combination, a fixed magazine-carrying stand; a bracket removably fastened to said stand, said bracket having a bearing at its lower end which fits beneath a portion of the stand; a pivot stud carried by said bearing; a headed pin extending through said bracket and the pivot stud, the head of the pin being located immediately beneath the stand when the bracket is secured thereto whereby the pin cannot become loose or detached; and a bobbin head support swinging on said stud.



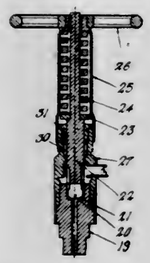
1,509,450. AUTOMOBILE SCREEN. EDWARD J. SWEENEY, Council Bluffs, Iowa. Filed July 13, 1920. Serial No. 395,877. 1 Claim. (Cl. 296—138.)

The combination with an automobile window opening, of a screen therefor, said screen comprising a horizontally disposed roller adjacent the upper side of the window opening, a wire mesh screen carried by said roller and unrolled from the forward side thereof, the lower end of the wire mesh screen being provided with a horizontally disposed stiffening rod, latching means carried adjacent the lower end of the window opening for engaging and holding the reinforcing rod, channel guides adjacent the opposite sides of the window opening, said guides comprising angularly shaped bars secured to a support adjacent the inner side of the roller, an outwardly extending flange carried by said bars, said roller having bearings in said outwardly extending flanges, the outer ends of said outwardly extending flanges



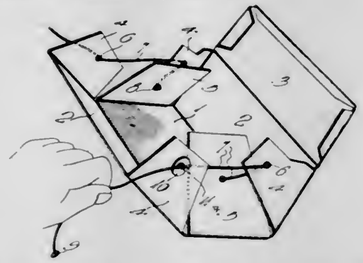
being bent upon themselves to form channels in vertical alignment with the outer side of the roller, the upper outer side of said channels being provided with upwardly and outwardly extending integral guide lugs, and relatively close headed members carried by the sides of the wire mesh screen and having their heads disposed in the channeled members, said wire mesh screen being held against bulging inwardly incident to air pressure as the vehicle moves forwardly and the wire mesh allowing the passage of air through the screen and excluding foreign matter.

1,509,451. MEASURING INTRUMENT. FRED D. TAMPLIN, Chicago, Ill. Filed Feb. 24, 1923. Serial No. 620,958. 3 Claims. (Cl. 33—215.)



1. A measuring instrument comprising a body, an inclinometer including a dial plate and a rotatable weighted pointer associated with said body, a spirit level and plumb carried by the body and a graduated rule secured to one edge of said body.

1,509,452. CONTAINER. PAUL TARAS, Leonia, N. J. Filed Oct. 15, 1923. Serial No. 668,586. 2 Claims. (Cl. 221—19.)

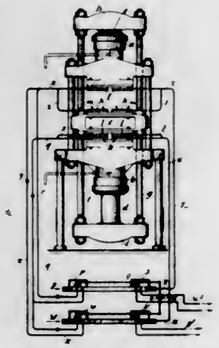


1. A liquid container having an opening therein, a screw cap for the opening, an air inlet on the side of said cap, a resilient element fixed to the inside of the top wall of said cap, a spout handle opposite said air inlet formed integral with the cap extending from the side thereof and below said element the cap being so mounted that when it is turned a limited amount in one direction the container is open through the spout, and when it is turned in the other direction it operates to seal the container with said element.

1,509,453. HOMOGENIZER FOR LIQUIDS. FRANCOIS XAVIER OVIDE TRUDEL, Montreal, Quebec, Canada. Filed Feb. 19, 1923. Serial No. 620,092. 5 Claims. (Cl. 99—2.)

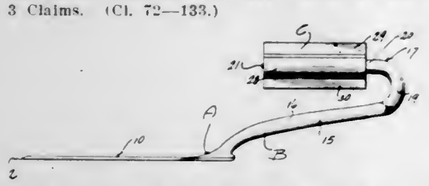
5. In a homogenizer for liquids, a plurality of separately cast pump cylinders communicating together, a valve on one of the cylinders in communication therewith through a valve seat having a concentric annular rib located between the centre and the outer circumference of said valve seat, the contacting area of the valve and valve seat being relatively small and located remote from an inlet opening to said valve seat, an air chamber on another of said cylinders and a pressure gange communicating with same, a safety valve upon a third cylinder, plungers for the aforesaid cylinders, and means for actuating said plunger.

1,509,454. COLLAPSIBLE LUNCH BOX. JOHN UNSER, Carthage, N. Y. Filed Feb. 12, 1923. Serial No. 618,547. 2 Claims. (Cl. 229—41.)



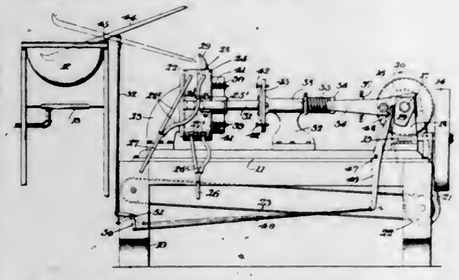
2. A folding lunch box comprising a plurality of sides connected together by cords, said sides being provided with foldable end-flaps arranged in overlapping relation, said end-flaps being provided with alined holes, separate cords passing slidably through said holes and connected at their inner ends with said flaps, the free outer ends of said cords being adapted to pass in opposite directions over the top of the box to provide a handle for carrying the latter, and anchoring means secured to said flaps, the free ends of said cords being adapted to be detachably connected with said anchoring means.

1,509,455. DOUGH-FORMING MACHINE. JOSEPH VALENTA, Taft, Calif. Filed Oct. 3, 1922. Serial No. 592,091. 4 Claims. (Cl. 107—4.)



1. In a device of the character described, in combination, a bottomless hopper; plural pairs of opposed rolls in vertical arrangement below said hopper; an exuding plate between the upper of said pairs below the axial plane thereof; closure means comprising hinged stripping plates between said upper rolls and said exuder; and cut-off means below said exuder.

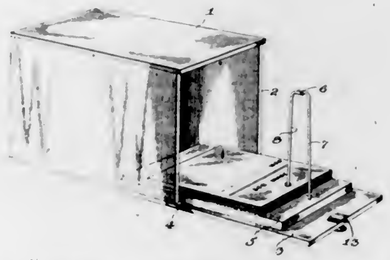
1,509,456. HYDRAULIC MOLDING PRESS. JOSEF VAN HÜLLEN, Crefeld, Germany. Filed Oct. 9, 1922. Serial No. 593,411. 7 Claims. (Cl. 18—17.)



1. A hydraulic press for making, by means of moulds, articles from shapable raw materials, such as celluloid, caoutchouc, soft metals, sheet metal, comprising a movable system of reciprocating pressure pistons, a pressure table mounted in said system to follow the strokes of said pistons, and stationary abutments mounted to cooperate with the two surfaces of the table.

1,509,457. MASON'S TOOL. FRANK L. WICKHAM, Lennon, Mich. Filed Nov. 13, 1922. Serial No. 600,753. 3 Claims. (Cl. 72—133.)

1. As an article of manufacture, a shaping tool comprising a substantially cylindrical shaped body portion, and radial projections extending therefrom and longitudinally thereof provided upon their extremities with beading and shaping surfaces of various kinds.



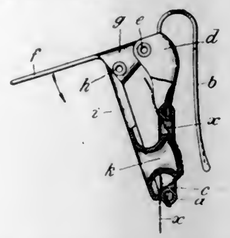
1,509,458. DIE-CASTING MACHINE. RUBEN H. WILLIAMS, Flint, Mich. Filed Mar. 7, 1923. Serial No. 623,423. 11 Claims. (Cl. 22—57.)

1. In a casting machine, a supporting frame, a stationary mold section arranged thereon, a reciprocatory mold section mounted for movement toward and away from the stationary mold section, a stationary guide mounted upon

the bracket, a reciprocatory rod having sliding engagement with the stationary guide, and connected with the reciprocatory mold section to move it, a stop element mounted upon the reciprocatory rod, a compressable coil spring surrounding a portion of the reciprocatory rod and arranged in advance of the stop element, a collar slidably mounted upon the reciprocatory rod in advance of the compressible coil spring and engaging therewith, a stop element mounted upon the reciprocatory rod in advance of and spaced from the slidable collar, a rotatable shaft arranged transversely upon the supporting frame and embodying a crank, a pitman pivotally connected with the crank and pivotally connected with the slidable collar, means for introducing molten metal into the mold sections, and means automatically operated by the transverse shaft for operating the molten metal feeding means.

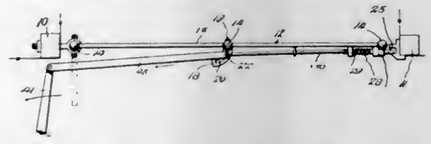
1,509,459. PRESCRIPTION FILE. DUNCAN E. WILLIAMSON, Seguin, Tex. Filed Apr. 3, 1924. Serial No. 704,012. 2 Claims. (Cl. 129—1.)

1. A file cabinet including a box provided with a front opening, a door for closing said opening, a hinge for attaching said door adjacent the bottom of the opening, and a lug attached to the box and arranged to support the door horizontally and flush with the bottom of the box when in open position, a base-board adapted for sliding movement into and out of said box, and a divided loop secured to said base-board.



1,509,460. WINDOW-SHADE ADJUSTER. JOHN L. ZELLER, Los Angeles, Calif. Filed Nov. 4, 1922. Serial No. 599,079. 3 Claims. (Cl. 156—25.)

1. In combination with a window shade roller, an expansible tubular element at each end of the roller having a slot through which the shade material depends, and means co-acting with said elements whereby the effective diameter of either element may be increased.



1,509,461. PINCH SUPPORT FOR GARMENTS (WOVEN OR KNITTED GOODS). ALBERT AERI and FRANÇOIS JEANTET, Geneva, Switzerland. Filed Oct. 23, 1922. Serial No. 596,466. 2 Claims. (Cl. 24—246.)

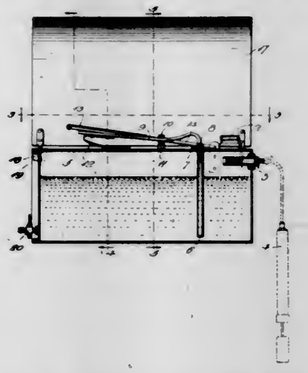
2. A garment supporting clasp comprising, a loop carrying member, a loop, having bent edges forming a roll, carried by said member, a two piece toggle member cooperating with the loop carrying member, one of the toggle pieces being an actuating member, the other toggle piece being an actuated member and having a shank portion curved to conform to the curvature of the loop, and a knob carried by the shank portion, whereby fabric can be pressed into said loop, by said knob and held therein, wherein the loop carrying member is of stamped metal, and has pivoting ears, the actuating toggle member being pivoted in

said ears, the actuated member being pivoted to the actuating member eccentrically to the pivot of the actuating member.

1,509,462. GATE FASTENER. LLOYD ANDERSON, Onawa, Iowa. Filed Feb. 5, 1923. Serial No. 617,092. 3 Claims. (Cl. 292—164.)

1. The combination with a pair of gateposts, a gate pivoted at one end to a post of the pair and provided at its free end with a latch coacting with a catch plate on the other post of the pair, a casting secured to the gate intermediate the ends thereof and having a slot extending outwardly from the gate and curving toward the pivoted end thereof, the side of the casting next adjacent the latch of the gate being provided with a second slot communicating with the first named slot, a pivot bolt directed through the first named slot, a link extending through the second named slot and attached to the pivot bolt at one end and having its opposite end engaged with the latch, a longitudinally movable member engaged with the pivot bolt, and means for shifting the longitudinal member.

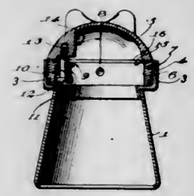
1,509,463. PROCESS OF MANUFACTURING ESTERS. ARTHUR A. BACKHAUS, Baltimore, Md., assignor to U. S. Industrial Alcohol Co., Inc., a Corporation of West Virginia. Filed Nov. 4, 1921. Serial No. 512,749. 9 Claims. (Cl. 260—166.)



1. The process of manufacturing an aliphatic ester comprising allowing an acid and a monohydric alcohol to interact in the presence of a fused inorganic catalyst maintained at a temperature sufficient to drive off the water formed during the interaction.

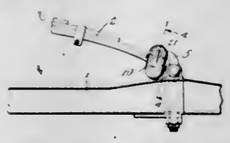
3. The process of manufacturing an ester comprising mixing an acid and an aliphatic alcohol in the presence of an inorganic catalyst maintained at a temperature sufficient to drive off water formed during the interaction, conducting the products formed into a condensing chamber wherein the water is removed, and then separating the ester from the remainder of the products.

1,509,464. POULTRY DISINFECTING DEVICE. THOMAS ALBERT BARRY, New Holland, Ill. Filed Feb. 25, 1924. Serial No. 695,120. 1 Claim. (Cl. 119—159.)



A disinfecting device comprising a tank for containing disinfectant under pressure and having a substantially horizontal top, a discharge pipe for the disinfectant extending through the top of said tank, a lever fulcrumed between its ends over the top of said tank, a valve carried by one end of said lever and fitting in

the discharge end of said pipe to close the latter, a spring disposed between the top of said tank and the other end of said lever to normally maintain said lever in the position wherein the discharge end of said pipe

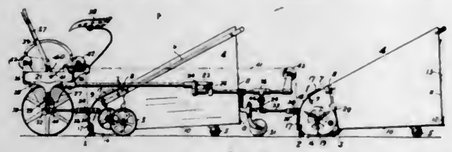


is closed by said valve, and a treadle pivoted at one end above the top of said tank and bearing upon the last named end of said lever to operate the latter and open said valve when depressed.

1,509,465. CAP FOR RADIATORS AND THE LIKE. JOSEPH LIVINGSTON BAYA, Atlanta, Ga. Filed May 13, 1924. Serial No. 713,011. 3 Claims. (Cl. 220—33.)

1. A device of the character described comprising a top having a lug with a threaded opening, a threaded ring arranged to be screwed upon the threaded portion of a radiator filling neck, means including a set screw carried by the ring for fixing the ring in position, a lip carried by the ring, a stud providing the pivotal connection for the top upon the ring so that the top may be swung across the filling neck at right angles to the axis of the opening, said stud having a threaded end to enter said threaded opening and having a head, and means including a spring situated on the stud between the head and said lip to seat the top under tension.

1,509,466. SPRING-SHACKLE LUBRICATOR AND COVER. ALBERT B. BEITMAN, Cleveland Heights, Ohio. Filed Dec. 6, 1920. Serial No. 428,467. 10 Claims. (Cl. 267—54.)

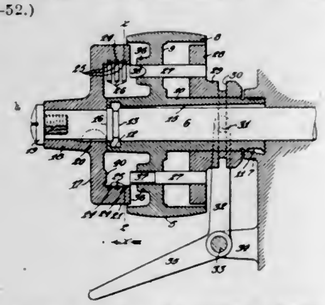


1. As a new article of manufacture, a lubricant-containing casing designed to enclose a spring shackle and arranged to admit the shackle support and the end of the vehicle spring, the said casing being free to swing with the shackle.

1,509,467. METHOD FOR THE SIMULTANEOUS PRODUCTION OF DEMINERALIZED AMYLACEOUS SUBSTANCES AND LOWER NITROGENOUS MATTER FOR FOOD PURPOSES BY THE USE OF TUBERS OR CEREALS IN WHOLE OR BROKEN GRAINS. AUGUSTE BOIDIN, Seclin, France, and JEAN EFFRONT, Brussels, Belgium. Filed Nov. 9, 1921. Serial No. 514,099. 3 Claims. (Cl. 99—11.)

1. Process for the treatment of farinaceous matters consisting in submitting the same, without any previous treatment, to a slightly acid fermentation, at a temperature of at least 50° C. and with the use of a very reduced amount of liquid, thereby allowing to obtain, on the one hand, concentrated nitrogen containing extracts and, on the other hand, the amylaceous matter deprived of minerals.

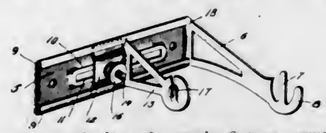
1,509,468. GANG LAWN CLEANER AND RAKE. WILLIAM P. M. BRAUN, Philadelphia, Pa. Filed Mar. 29, 1922. Serial No. 547,676. 8 Claims. (Cl. 55—145.)



1. A gang lawn cleaner and rake comprising in combination a set of self-supporting sectional cleaner and rake units each comprising a sweeper section having a roller and driving wheels and a carrying section having ground wheels and said sections articulated for a limited range of relative movement, a self-supporting frame comprising an interconnected wheeled bolster and a wheeled reach having a fifth wheel, radius rod and slot-and-pin connections between the frame and each unit for trailing the latter with freedom for rocking and vertical movements in respect to the frame, and lifting gear between the frame and each sweeper section for tilting the latter on its driving wheels to lift the roller and for thereafter tilting both sections in respect to the ground wheels to clear the driving wheels.

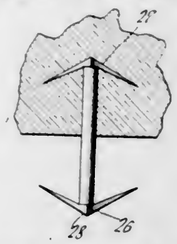
4. A gang lawn cleaner and rake comprising in combination a wheeled frame of which the wheels operate to make the frame self-supporting, wheeled cleaner and rake units, draft connections between the frame and units, and lifting gear between the frame and units.

8. A gang lawn cleaner and rake comprising in combination a wheeled frame having a reach, a yoke turnably mounted on the reach, a wheeled cleaner and rake unit, and draw bars connected with the unit and yoke.



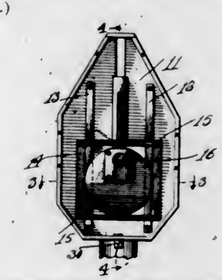
1,509,469. CLUTCH AND SPEED-CONTROLLING DEVICE. CARL A. BRINK, Cranston, R. I., assignor, by mesne assignments, to The New England Trust Company, trustee, a Corporation of Massachusetts. Filed June 10, 1921. Serial No. 476,473. 20 Claims. (Cl. 192—52.)

1. In a clutch and speed-controlling device, the combination of a driving-element, a driven-element, a series of annular split clutch-members arranged to frictionally



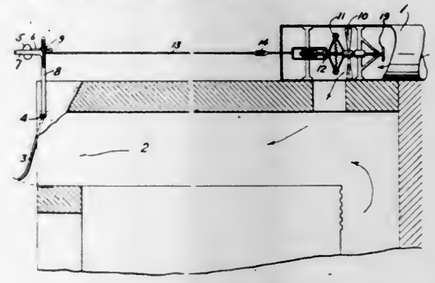
engage with one of said elements, and means to successively connect the several clutch-members with the other element to operate said members to effect a clutching-action with a gradually augmented force.

1,509,470. ROLLER SHADE AND CURTAIN FIXTURE. THOMAS W. BURGESS, Providence, R. I. Filed May 18, 1922. Serial No. 562,024. 2 Claims. (Cl. 156—24.)



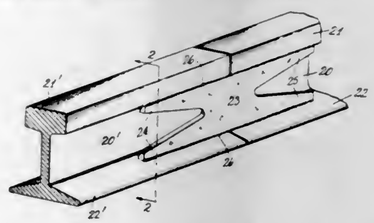
1. A combined shade and curtain fixture, comprising a horizontally disposed baseplate provided with an indented central longitudinal portion extending nearly the entire length thereof having a longitudinal slot therein extending substantially the length of said indented portion, marginal longitudinal grooves, and an integral curtain rod supporting bracket extending horizontally forward therefrom at the outer end thereof, a shade roller bracket having a base slidably mounted in said marginal grooves, and an integral arm extending from the outer end thereof for supporting one end of a shade roller rod, whereby a shade approximately equal in width to the curtain rod may, when desired, be supported therein, and means slidable in said longitudinal slot for locking the shade roller bracket to said curtain bracket base in any predetermined position.

1,509,471. SPARK PLUG. PAUL B. BURHANS, Sanford, Fla. Filed Feb. 21, 1920. Serial No. 360,271. Renewed Feb. 25, 1924. 3 Claims. (Cl. 123—169.)



1. In a spark-plug having spaced terminals, one insulated from the other, a conducting-body positioned between the terminals, said conducting-body having like enlarged heads on its opposite extremities, one head being embedded in insulation, the heads having current-transmitting points directed respectively toward said terminals.

1,509,472. WINDMILL. EZRA O. CAREY, Marion, Ind. Filed Aug. 28, 1922. Serial No. 584,793. 1 Claim. (Cl. 74—14.)

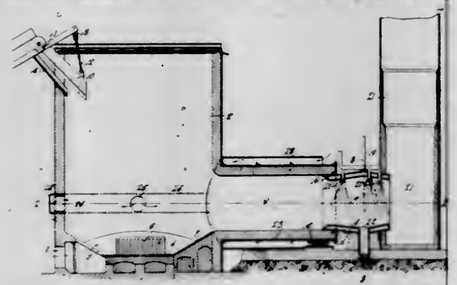


In a device of the kind described, a casing having a removable front plate, the lower part of said casing and front plate being made to retain oil, a pair of vertical guide rails mounted on the rear wall of said casing, a frame comprising a pair of vertical members engaging outside faces of the guide rails and transverse members connecting said vertical members and positioned in front of the guide rails, a wind wheel shaft extending into the casing, an eccentric mounted on the wind wheel shaft and positioned between the transverse members of the frame, a bracket extending up from the upper transverse member to the upper part of the frame and having a lateral extension at its upper end passing through the rear wall of said casing, said casing being provided with a vertical slot to accommodate said lateral extension and a sucker rod connected with the lateral extension outside of said casing.

1,509,473. DRAFT REGULATOR. JOSEPH J. FOWDEN, Philadelphia, Pa. Filed Nov. 16, 1920. Serial No. 424,431. 2 Claims. (Cl. 236—15.)

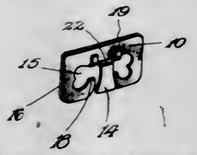
1. In a draft regulator the combination of an air duct including a boiler-chimney-flue, an apron damper in the flue, a movable weight mounted on the damper to overbalance the same, a fan arranged in the air duct and provided with a centrifugal governor mechanism, and connections between the weight and governor mechanism, substantially as described.

1,509,474. JOINT. CHESTER F. GAILOR, Brooklyn, N. Y., assignor to The Rail Joint Company, New York, N. Y., a Corporation of New York. Filed May 12, 1922. Serial No. 560,274. 4 Claims. (Cl. 238—164.)



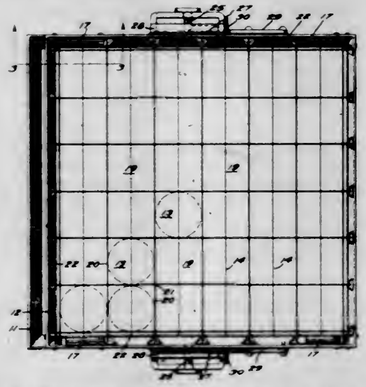
1. A welded rail joint including the rails, a connecting plate fitting the fishing spaces of both rails and having the top and bottom edges thereof welded their full lengths respectively to the head and base flanges of the rail, the top and bottom edge portions of the plate being of equal length and the vertical cross-section of the plate decreasing from its central portion toward its ends.

1,509,475. WOOD-REFUSE DESTROYER. CHARLES HARRISON, Vancouver, British Columbia, Canada. Filed Nov. 14, 1923. Serial No. 674,775. 6 Claims. (Cl. 110—8.)



4. A refuse burner, comprising in combination, a cylindrical chamber having a closed top and a bottom sloping upward from the four sides of a square central area, grates in the sloping sides, means for delivering air for combustion directly to these grates, means for delivering

the material to be burnt into the upper end of the cylindrical chamber, means for separating the smaller from the larger material during such delivery, means adjacent the lower part of the chamber for delivering the furnace gases therefrom, a horizontally disposed cylindrical combustion chamber into which the furnace gases are de-

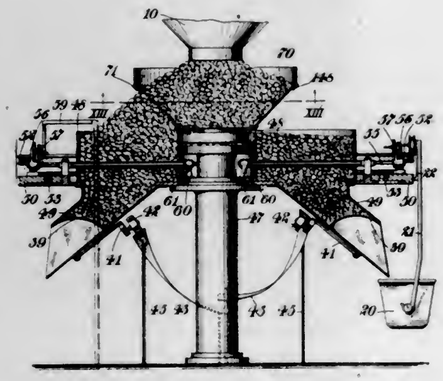


livered, said combustion chamber secured to the burner chamber, means for supporting the other end of the combustion chamber and providing for endwise expansion from the burner chamber, a water-jacketed passage connecting the outer end of the combustion chamber to the smoke-stack, and means in this jacket for delivering a spray of water across its area.

1,509,476. COLLAR FASTENER AND METHOD OF MANUFACTURING THE SAME. JOHN A. JUMER, Two Harbors, Minn. Filed Jan. 16, 1924. Serial No. 686,678. 2 Claims. (Cl. 24—101.)

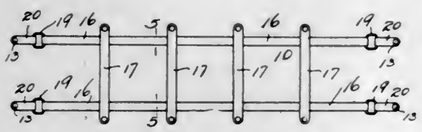
1. A method of producing an article of manufacture of the class described consisting in forming a substantially rectangular blank from sheet material, then cutting one edge of the blank to provide a bay with a central tongue and narrow fingers, and lastly bending the fingers and tongue in opposite directions and spacing them from the plane of the blank.

1,509,477. EGG CARRIER. MORRIS KASSER, San Francisco, Calif. Filed Feb. 7, 1923. Serial No. 617,435. 14 Claims. (Cl. 294—87.)



1. An egg carrier comprising a pair of relatively movable frames having apertures extending through the frames, and means for moving the frames to aline the apertures.

1,509,478. PLASTIC COMPOSITION. CHARLES E. KRAUS, Brooklyn, N. Y. Filed Jan. 21, 1921. Serial No. 438,997. 32 Claims. (Cl. 106—10.)

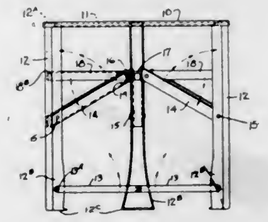


21. A refractory material containing a small quantity of bentonite.

1,509,479. ROPEWAY BUCKET CONVEYER SYSTEM. HENRY OTTO, Walthamstow, London, England. Filed Apr. 10, 1922. Serial No. 551,152. 19 Claims. (Cl. 214—42.)

1. In a ropeway bucket conveyer system, the combination with an automatic bucket-charging device of automatic means for coupling it to a bucket at one point of its travel, means for causing the bucket-charging device to charge the bucket while moving circularly with it, automatic means for disengaging the bucket from the bucket-charging device at a later point in its travel and means for returning the bucket-charging device to its initial position by moving it in a single direction in the path in the form of a complete circle, to a portion only of which the path of the bucket corresponds.

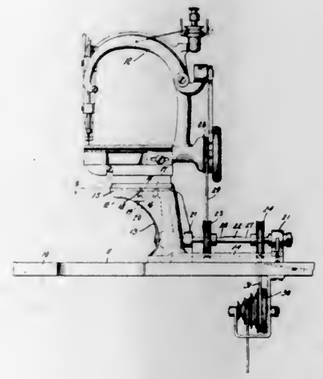
1,509,480. AUTOMOBILE HAT CARRIER. JOSEPH WALTER PARKS, Altoona, Pa. Filed Sept. 21, 1922. Serial No. 589,611. 1 Claim. (Cl. 45—13.)



A hat and small luggage carrier for auto tops comprising supporting tabs adapted to be attached to the underside of said top and including a ring portion, a pair of main straps of loop formation and including buckles for adjusting the length of the same, said straps engaging in the ring portions of the tabs, and transverse members having their ends slidably engaging the main straps whereby they may be shifted into article supporting position.

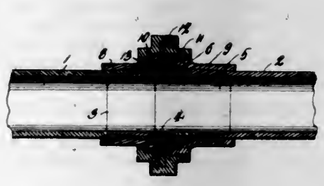
1,509,481. NONGLARE STRUCTURE. EDWARD I. PETOW, Hyannis, Mass., assignor of one-half to New England Gluss Works, Providence, R. I., a Partnership composed of Albert Weiner, Isaac L. Rice, and Alexander Weiner. Filed Oct. 4, 1923. Serial No. 666,623. 3 Claims. (Cl. 91—68.)

1. A non-glare structure comprising a transparent sheet and a film associated therewith and including essence d'orient.



1,509,482. COLLAPSIBLE FURNITURE. JOSEPH POLIVKA, Chicago, Ill. Filed Jan. 20, 1922. Serial No. 530,534. 2 Claims. (Cl. 155—151.)

1. An article of the kind described, comprising a flexible member forming substantially an equilateral triangle, a supporting leg of channel cross-section for each corner of said member, a brace of channel cross-section pivoted intermediate each of said legs and inclined upwardly toward its upper pivotal end, a member forming a common pivotal support for said upper ends of said braces, and struts extending from and pivoted only at said common pivotal support and having a square abutment with said leg, said struts and braces being relatively fixed and pivotally mounted to said common pivotal support and movable with it and adapted when in folded position to lie within said channelled legs.

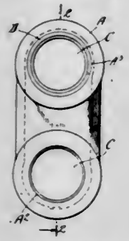


1,509,483. SEWING-MACHINE SUPPORTING AND DRIVING DEVICE. ANTON POPPER and LEOPOLD ADELHOFER, New York, N. Y. Filed July 16, 1921. Serial No. 485,158. 1 Claim. (Cl. 74—21.)

The combination with a work table, of a support thereon comprising a base and a bed rising from said base laterally projecting therefrom, said bed being provided with a plurality of holes arranged in a row, a sewing machine head on said bed including a driven pulley, a lug projecting down from the base of said sewing machine head into one of said holes, a screw-threaded bolt on said sewing machine head extending through another one of said holes, whereby the position of said sewing machine head on said bed may be varied, a counter-shaft rotatably mounted on said support above its base, a pulley on said counter-shaft in alignment with said driven pulley, a belt running over said pulleys, a second pulley on said counter-shaft, a power transmitter including a pulley depending from the underface of said table, a belt running over the second pulley on the counter-shaft and the pulley on said transmitter, the shaft of said driven pulley and the shaft of said power trans-

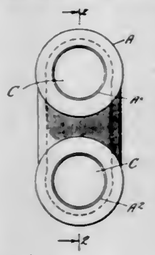
mitter pulley extending in parallel relation to said counter-shaft, both pulleys on said counter-shaft being adjustable longitudinally thereon.

1,509,484. COUPLING. EVAN POWELL, New York, N. Y. Filed Dec. 9, 1922. Serial No. 605,879. 1 Claim. (Cl. 285—86.)



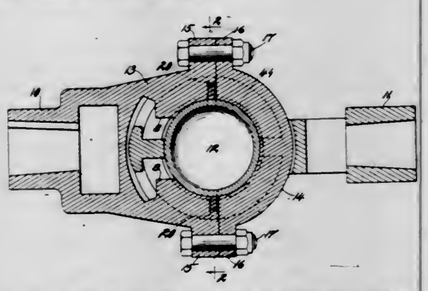
In a coupling of the class described, a pair of inner sleeves capable of partially telescoping in relation to each other, a bead provided exteriorly on the end of the outer one of the sleeves, a second bead provided exteriorly a distance from the end of the other sleeve so as to leave a space between the beads when the sleeves are engaged with each other, two sections of pipe formed of malleable material, one section over each sleeve, a pair of outer sleeves capable of being disposed over the section of pipe on the inner sleeves for holding said sections of pipe over the inner sleeves with their ends between the beads, the interior of said outer sleeve being flared adjacent their meeting ends, exterior flanges provided on the meeting ends of said outer sleeve and a coupling nut having a flange extending inwardly at one end for engagement with one of the flanges on the outer sleeve and interiorly threaded for engaging the other flange on the outer sleeve.

1,509,485. HANDHOLE. JOHN PRIMROSE, New York, N. Y., assignor to Power Specialty Company, New York, N. Y., a Corporation of New York. Filed Jan. 10, 1923. Serial No. 611,815. 9 Claims. (Cl. 220—25.)



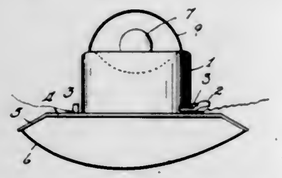
1. A hollow element formed with one or more hand hole openings and with a master opening through which

closing devices for said openings, too large to pass through the first mentioned openings may be inserted in



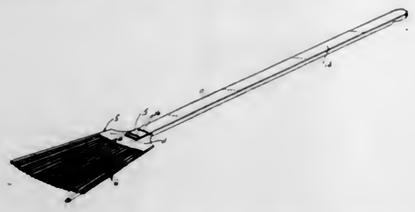
said element, and means secured to said element at the margin of said master opening to restrict said opening so that it may be closed by one of the inserted devices.

1,509,486. HANDHOLE. JOHN PRIMROSE, New York, N. Y., assignor to Power Specialty Company, New York, N. Y., a Corporation of New York. Filed Jan. 29, 1923. Serial No. 615,637. 2 Claims. (Cl. 220—25.)



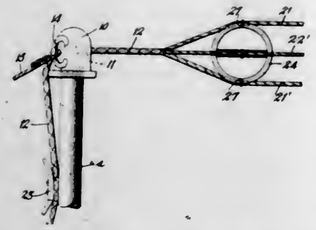
1. A hollow metallic element provided with one or more openings and internally removable closing devices for said openings, which are too large in diameter to pass through any of said openings and about which said hollow element is cast.

1,509,487. LUBRICANT FEED. CARROLL H. RICHARDS, Newton, Mass. Filed June 15, 1922. Serial No. 568,488. 10 Claims. (Cl. 64—102.)



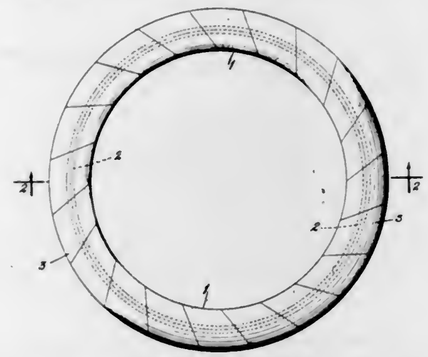
1. In combination with a rotatable member having a bearing surface and formed with a hollow interior to contain lubricant, the wall of the said container being formed with an aperture therethrough, a feed member inserted in said aperture, said feed member having a longitudinal interior passage which at the inner end thereof communicates with the hollow interior of the container, said feed member having a passage on the outer side thereof, one end of which communicates with the outer end of said interior passage, the other end of said outside passage communicating with the bearing surface.

1,509,488. ELECTRIC HANDLAMP. ALLEN J. RISHEL, Reading, Pa. Filed Jan. 23, 1923. Serial No. 614,376. 1 Claim. (Cl. 177—329.)



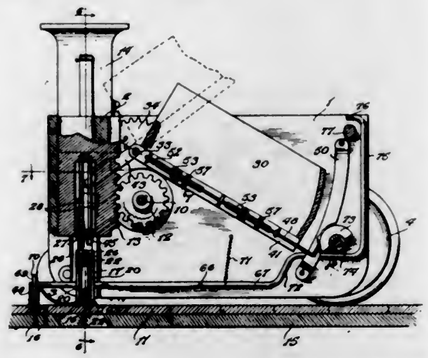
In a hand electric lamp, the combination of a hollow cylindrical casing provided with a depression in its top to form a reflector, a threaded opening in the top centrally of said depression to form a lamp socket, a lamp in the socket, a lamp guard engaging said top, a source of current, a circuit including said source of current and said lamp, a switch in said circuit housed within the casing, means for actuating said switch projecting through the wall of the casing and means mounting said casing upon the hand in such position as to permit ready actuation of the switch by the thumb of the hand.

1,509,489. INSECT SWATTER. AUGUST ROCHWITE, Hartford, Wis. Filed Jan. 14, 1922. Serial No. 529,320. Renewed Feb. 27, 1924. 2 Claims. (Cl. 43—137.)



2. A swatter of the character described comprising a flexible body member having a multiple of slits extending longitudinally thereof and terminating adjacent one end of the body member, said slits dividing the central portion and one end of the body member into a multiple of lashes, the opposite end of said body member having a gore disposed at the central portion of said end, the walls of said gore being adapted to substantially engage each other when the body member is secured to a handle to cause the lashes to substantially radiate from said end portion of the body member.

1,509,490. NET AND SUPPORTS FOR RING TENNIS. FREDERICK L. SAWYER, Evanston, Ill. Filed May 22, 1922. Serial No. 562,685. 9 Claims. (Cl. 46—59.)



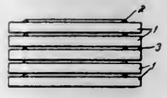
1. For the game of ring tennis a net, supports therefor, said net comprising strands, spreaders to separate said strands, said strands terminating at each end into a single rope to be attached to said supports.

1,509,491. RING FOR RING TENNIS. FREDERICK L. SAWYER, Evanston, Ill. Filed May 22, 1922. Serial No. 562,686. 3 Claims. (Cl. 46—65.)

2. For the game of ring tennis, a ring, of a diameter not less than six inches or more than fourteen inches, tubular walls therefor of elastic material containing means within said walls to counteract distortion in the plane of the ring and means to counteract distortion in the plane at right angles to the plane of the ring.

1,509,492. FLOOR-NAILING MACHINE. CLARENCE SCHAUB, Indianapolis, Ind. Filed June 13, 1923. Serial No. 645,104. 7 Claims. (Cl. 1—1.)

1. In a floor-nailing machine, the combination of a housing, a nail support mounted in the housing, a stop mechanism carried by the housing and adapted to hold the same at a point where a nail is to be driven, a driver co-operating with the nail support, and means actuated by the driver for releasing the stop device to permit travel of the housing.

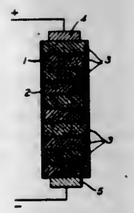


1,509,493. LIGHTNING ARRESTER. JOSEPH SLEPIAN, Swissvale, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Feb. 11, 1922. Serial No. 535,810. 52 Claims. (Cl. 175—30.)

1. A lightning arrester comprising a plurality of plates of high resistance material disposed in contact with each other.

5. A lightning arrester comprising a plurality of plates of high resistance material disposed in contact with each other at a relatively small number of points and being separated by small gaps at the remainder of the contact surfaces.

1,509,494. PROTECTIVE DEVICE. JOSEPH SLEPIAN, Swissvale, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Feb. 16, 1922. Serial No. 536,910. 38 Claims. (Cl. 175—30.)

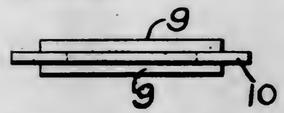


1. In a protective device, a substantially plane plate and an elevated portion thereon, the height thereof being between 1 and 16 mils.

9. A method of making plates which comprises forming a plate having an elevated portion thereon and then subjecting said elevated portion to a relatively high temperature.

37. A lightning arrester comprising a plurality of plates of high resistance material disposed in contact with each other at a relatively small number of points and being separated at the remainder of the contact surfaces, the contacting portions of one or more of the plates having higher specific resistance than the spacer portions of the contacting surfaces, the spacing and resistivity being such that the space current flow always takes the form of a glow discharge.

1,509,495. PLATE AND METHOD OF TREATING THE SAME. JOSEPH SLEPIAN, Swissvale, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 1, 1922. Serial No. 548,637. Renewed July 29, 1924. 18 Claims. (Cl. 219—51.)

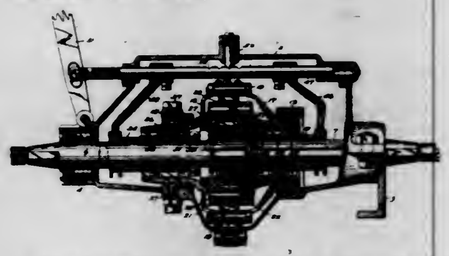


1. A plate of resistance material, the edges thereof having a higher resistance than the body.

1,509,496. PLATE AND METHOD OF TREATING THE SAME. JOSEPH SLEPIAN, Swissvale, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 1, 1922. Serial No. 548,638. Renewed Jan. 31, 1924. 28 Claims. (Cl. 219—51.)

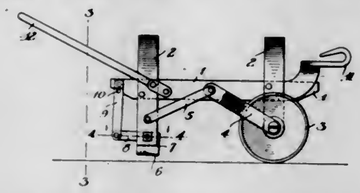
1. A plane plate of high-resistance material having portions of the plane surface thereof of higher resistance than the body portion.

1,509,497. SPARK-GAP STRUCTURE. JOSEPH SLEPIAN, Swissvale, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 2, 1922. Serial No. 591,798. 24 Claims. (Cl. 175—30.)



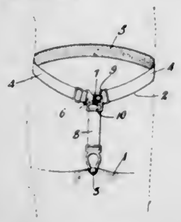
1. A gap structure for lightning arresters comprising a plurality of plates spaced apart and means therebetween to cause the gaps between adjacent plates to break down at about 350 to 450 volts, at least some of said plates being of relatively high resistance material.

13. A lightning arrester comprising a plurality of plates of relatively high resistance material, mica spacers therebetween, the thickness thereof being 3 to 5 mils, and a coating of india ink on said spacers.



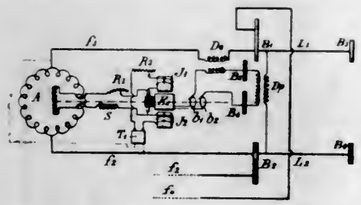
24. A lightning arrester comprising a pair of spaced bodies, at least one of which is of relatively high-resistance material, and means therebetween to cause the gap between said bodies to break down at approximately the voltage necessary to maintain the discharge.

1,509,498. TRANSMISSION MECHANISM. CHARLES E. STARR, Oakland, Calif., assignor to Perfecto Gear Differential Co., Seattle, Wash., a Corporation of Washington. Filed July 20, 1922. Serial No. 576,266. 5 Claims. (Cl. 74—34.)



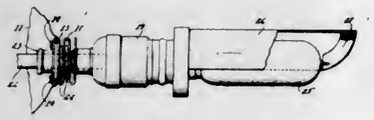
1. A transmission system comprising a driving and a driven shaft, a center gear fixed for rotation with said driving shaft, a ring gear journaled concentric with said driven shaft, a gear mounting journaled concentric with said driven shaft, a planet gear journaled on said mounting and in mesh with said ring and center gears, a fixed element, a sleeve slidably non-rotatably engaged with said fixed element and optionally engageable with said ring gear or said gear mounting, a sleeve slidably engaged with said driven shaft for rotation therewith and optionally engageable with either or both said gear mounting and ring gear, and means for moving said sleeves.

1,509,499. CELERY-CUTTING MACHINE. ARTHUR W. THOMPSON and HOMER W. THOMPSON, Irondequoit, N. Y. Filed Nov. 27, 1922. Serial No. 603,566. 3 Claims. (Cl. 55—18.)



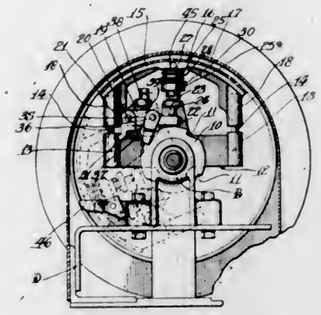
1. A celery cutting machine comprising a frame including longitudinal bars, transversely arranged forward and rear arch members attached to the bars and extending downwardly beneath the same, wheels mounted on the forward arch member at the bottom thereof, and a horizontally disposed knife mounted on the rear arch member at the bottom thereof.

1,509,500. GARTER. JOHN M. VAN HEUSEN, Boston, Mass. Filed Nov. 21, 1922. Serial No. 602,338. 3 Claims. (Cl. 241—6.)



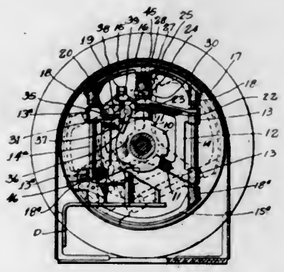
1. In a band garter, the combination of a leg encircling band of pile fabric presenting on its inner surface contact filaments downwardly and inwardly inclined to the leg or drawers leg of the wearer, a sock supporting strip, a permanent pivotal connection between one end of the said leg encircling band and the said sock supporting strip, means for pivotally attaching the free end of the leg encircling band to the said pivotal connection, and means for limiting the pivotal motion of the permanently attached end of the leg encircling band without hindering the free adjustment of said band to the leg.

1,509,501. APPARATUS FOR EXCITING ALTERNATORS. ANDRÉ BLONDEL, Paris, France. Filed Feb. 28, 1920. Serial No. 361,978. 13 Claims. (Cl. 171—141.)



7. Means for reducing the hunting action of alternators coupled in parallel or the maximum current delivered when short-circuited, comprising means for transforming alternating current exchanged between the alternators and means for utilizing the transformed current to produce a diminution of the exciting current of an alternator.

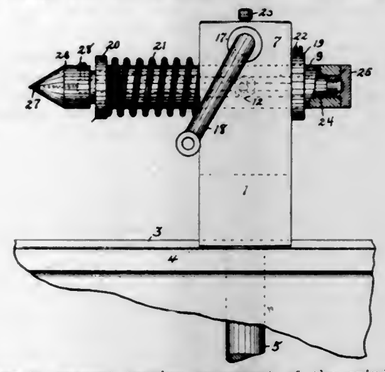
1,509,502. LIGHTING DEVICE FOR SEWING MACHINES. FREDERICK DIEHL, Elizabeth, N. J., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a Corporation of New Jersey. Filed Jan. 23, 1922. Serial No. 531,029. 4 Claims. (Cl. 240—2.)



1. A sewing machine lighting device comprising a support adapted for attachment to a sewing machine goosenecked, a plaited spring secured at one end to said support, and an electric lamp-socket carried horizontally at the other end of said plaited spring closely adjacent said support.

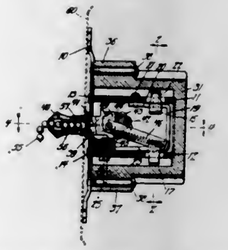
1,509,503. GATHERING REEL. EDWARD J. DOBERSTEIN, Blue Island, Ill., assignor to Goodman Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 13, 1922. Serial No. 543,156. 3 Claims. (Cl. 192—16.)

1. In a device of the class described, a reel, a friction drum operatively connected with said reel, a frame rotatably mounted concentric with said drum, driving mechanism for said reel, friction means carried by and guided to move radially respective to said frame, ratchet mechanism affording operative connection between said frame and driving means in one direction of rotation of the latter, means on said frame actuated by the driving torque to move said friction means into driving engagement with the drum and means limiting the rotation of said frame in the direction opposite to that in which it is driven.



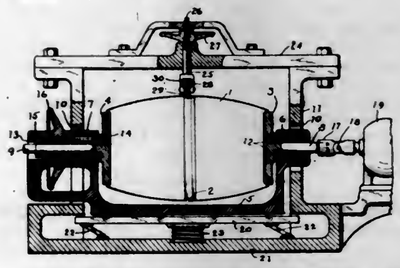
1,509,504. GATHERING REEL. EDWARD J. DOBERSTEIN, Blue Island, Ill., assignor to Goodman Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 13, 1923. Serial No. 680,335. 4 Claims. (Cl. 192—16.)

1. In a device of the class described, a reel, a friction drum, a frame concentrically mounted with said drum, a friction clutch mounted on one side of said frame, a part carried by said frame and movable radially for actuating the friction clutch, and means connected with said part and diametrically opposed thereto whereby the centrifugal force of said moving part is counterbalanced.



1,509,505. TAILSTOCK. OHMER KENNETH GARRARD, Fort Wayne, Ind. Filed June 27, 1922. Serial No. 571,162. 3 Claims. (Cl. 82—31.)

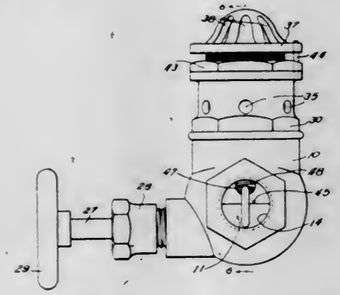
1. In a tail stock for machines of the class described, a bifurcated tail block having a pair of jaws; a longitudinally movable spindle extending between the jaws; a clamping means for said jaws; an adjustable stop on one end of the spindle acting against the tail block; an adjustable flange on the opposite end of the spindle; an open coil compression spring on the spindle between said flange and the adjacent face of the tail block;



means to prevent turning movement of the spindle in the tail block; and a supporting center in the forward end of the spindle.

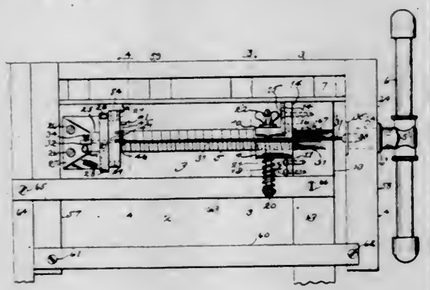
1,509,506. WALL SWITCH. DAVID D. GORDON, Chicago, Ill., assignor to McGill Manufacturing Company, Valparaiso, Ind. Filed Apr. 15, 1921. Serial No. 461,571. 9 Claims. (Cl. 200—68.)

1. In an electric wall switch, a mounting plate, an insulation frame plate permanently secured to said plate and extending therefrom, switch mechanism including a contact arm mounted upon said frame plate and having an operating lever and support extending through the face of the mounting plate, and a cooperating stationary contact carried by the frame plate.



1,509,507. AUTOMATIC WELDING MACHINE. EMIL GRUENFELDT, Cleveland, Ohio, assignor to The Hydraulic Steel Company, Cleveland, Ohio, a Corporation of Ohio. Filed May 6, 1921. Serial No. 467,391. 4 Claims. (Cl. 113—59.)

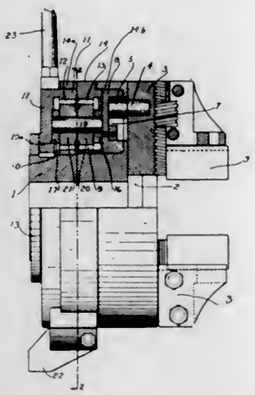
1. In a welding machine, a stationary welding device, a rotary support for an article having a circumferential seam to be welded, means for rotating the article to present successive portions of the seam to the welding de-



vice, said rotary support being mounted for vertical and horizontal movement, and stationary means adjacent said welding head to position said seam with respect to said welding device.

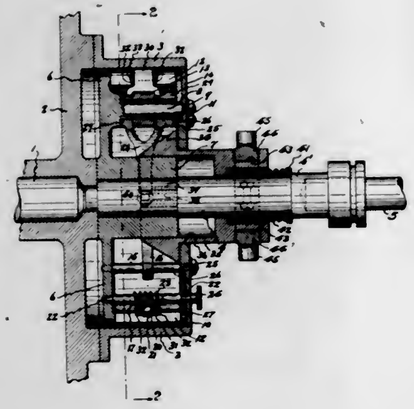
1,509,508. COMBINED CHECK, NEEDLE, AND SAFETY VALVE. ALBERT GRUNWALD and MARTIN BALCKER, Chicago, Ill., assignors to Marquette Tool & Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 10, 1921. Serial No. 436,041. 11 Claims. (Cl. 277—54.)

1. As a unitary structure a valve casing having an inlet and an outlet, a partition between the inlet and outlet and having an opening therethrough, an automatically operating valve for controlling the said opening, there being an additional opening through the partition and forming communication between the said inlet and outlet, means adapted to be set to vary the size of the last recited opening, and an automatically actuated pressure relief valve connected with the casing.



1,509,509. BENCH VISE. CARL L. GUSTAFSON, Chicago, Ill. Filed May 2, 1922. Serial No. 557,846. 5 Claims. (Cl. 81—36.)

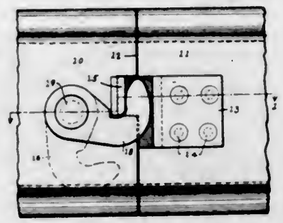
1. The combination with a cabinet-maker's bench of movable screw and vise jaws, a bearing-bracket in which the inner end of said screw is journaled, a nut-member movable into and out of engagement with the threads of the screw, an interlock member keyed to said screw, a nut-releasing device also mounted in said bracket and in the movable jaw and arranged to be engaged by said interlock member to release the nut-member when the screw is turned in one direction.



1,509,510. CHUCK. ELLSWORTH JULE HANNA, Chicago, Ill., assignor to Thomas Elevator Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 6, 1924. Serial No. 690,938. 2 Claims. (Cl. 279—114.)

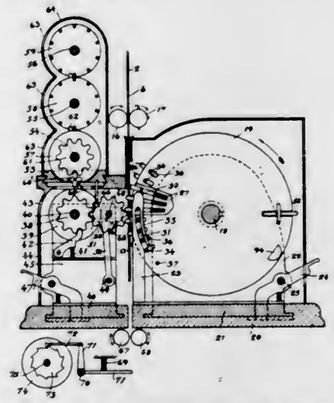
1. In a chuck, a hub having grooves in one face, jaw member supported in said grooves, studs projecting from the rear face of said jaws, rollers mounted upon said studs, a cam gear rotatably mounted upon said hub and having a cam groove for receiving said rollers, a hub gear keyed upon said hub, adjacent said cam gear, and provided with a bearing, a rotatable ring gear supported upon said bearing, and provided with interior

teeth, a stationary gear having internal teeth secured adjacent the inner side of said ring gear, and a rotatable spider having planet gears mounted upon said hub, the planet gears meshing with the forementioned gears.



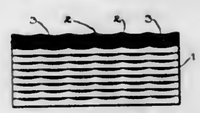
1,509,511. FRICTION CLUTCH. CONRAD HOERL, Newark, N. J. Filed May 25, 1923. Serial No. 641,323. 14 Claims. (Cl. 192—75.)

11. In a clutch mechanism, an eccentrically pivoted and expansible clutch member, a pivoted operating lever having a cam-portion, an adjustable thrust post threaded into and projecting from the free end of said clutch member to engage said cam-portion of said operating lever, means for rotating said thrust post to adjust the clutch member, and a clevis means interconnecting said thrust post with said cam portion of said operating lever.



1,509,512. RIM. OTTO H. JONSKI, Cleveland, Ohio, assignor to The Standard Parts Company, Cleveland, Ohio, a Corporation of Ohio. Filed May 10, 1922. Serial No. 559,873. 8 Claims. (Cl. 301—30.)

1. In a transversely split rim, the combination of a tongue secured to one end of the rim and projecting across the split, the opposite end of the rim having a recess extending thereinto from the split and adapted to receive said tongue, and a member pivoted on said



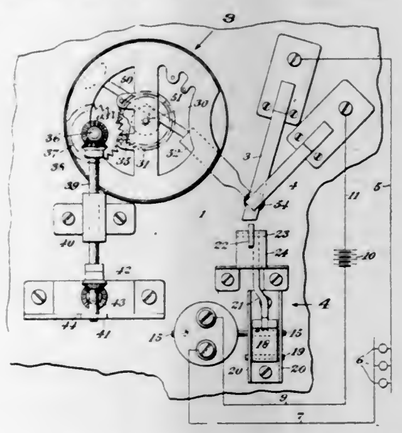
opposite end of the rim and adapted to interlock with said tongue to prevent circumferential separation of the rim ends.

1,509,513. MACHINE FOR SUMMING UP NUMERAL DATA. KARL EMIL LEONARD LIEDSTRAND, Stockholm, Sweden. Filed Apr. 7, 1920. Serial No. 372,005. 3 Claims. (Cl. 235—91.)

1. In a machine for summing up data represented by slots of different lengths and formed in cards for statistical or similar purposes, the combination of means for moving the cards successively through the machine, a number of movable members located at the path of the cards, means for introducing said members into the slots for an invariable distance while the cards are moved continuously past the members, and a registering device arranged to be shifted by the members for a number of steps corresponding to the respective lengths of the slots.

1,509,514. LIGHTNING ARRESTER. GEORGE M. LITTLE, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed July 13, 1922. Serial No. 574,762. 11 Claims. (Cl. 175—30.)

1. A plate of high-resistance material comprising a substantially flat body portion and a plurality of ribs thereon, the distance between adjacent ribs being substantially less than the largest dimension of said plate, the resistance of said ribs being higher than that of the body portion.

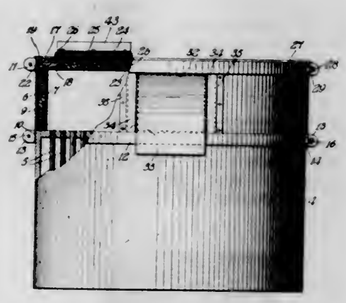


11. A space-current discharge device comprising at least one pair of electrode plates having a discharge gap therebetween, one of said plates carrying a plurality of ribs contacting with the other plate for spacing the same, the distance between said spacing ribs being substantially less than the largest dimension of said plates, the organization being such as to cause a glow discharge at voltages above a predetermined value and to permit no space-current discharge at voltages materially below said value.

1,509,515. LIGHTNING ARRESTER. GEORGE M. LITTLE, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed July 13, 1922. Serial No. 574,763. 11 Claims. (Cl. 175—30.)

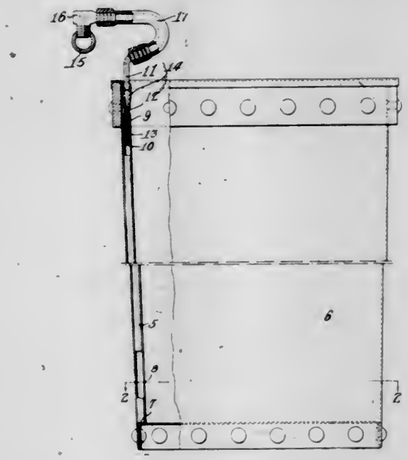
1. A lightning arrester comprising a plurality of plates of high-resistance material, elevated portions thereon to keep the major parts thereof separated and a thin spacer of insulating material therebetween.

1,509,516. TIME-CONTROLLED LIGHTING SYSTEM. GUSTAVE LUSSI, Philadelphia, Pa. Filed May 18, 1923. Serial No. 639,736. 9 Claims. (Cl. 161—1.)



1. In a lighting system, the combination, with a single electric circuit having two gaps therein, of manually controllable means for closing one of said gaps, time measuring means, cooperating, selective, time limiting means, and means automatically actuated thereby to close the other of said gaps, the manually controllable means being operable to optionally keep the circuit closed or allow it to open.

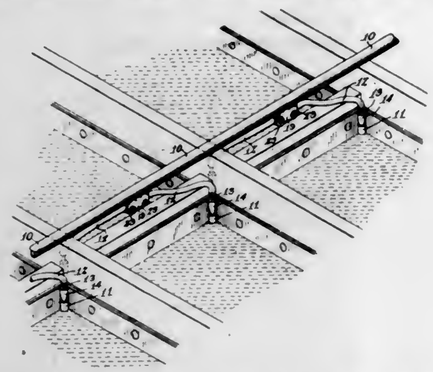
1,509,517. DETACHABLE SMOKE HOOD. ROBERT G. MARR and GEORGE A. VEDDER, Port Richmond, N. Y. Filed Jan. 19, 1924. Serial No. 687,237. 14 Claims. (Cl. 110—1.)



8. The combination with a vertical fire tube boiler and means for supporting it upon the chassis of an automobile, of a smoke hood secured to the upper end of said boiler and comprising outer and inner metallic

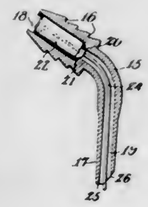
shells, and heat insulating material located between said shells, said hood having a lateral smoke outlet extending through said shells, a cover of substantially the area of the boiler head, formed hollow and filled with heat insulating material, the upper end of said hood and said

cover being provided the one with an annular flange to engage and fit the other, and an annular clamping member surrounding the engaging portions of the hood and cover for rigidly but detachably securing them together.



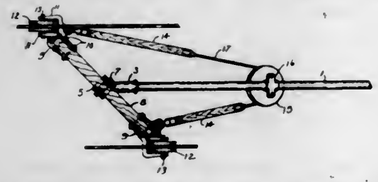
1,509,518. AIR PIPE FOR ICE CANS. JOSEPH A. MARTOCELLO, Philadelphia, Pa. Filed May 17, 1921. Serial No. 470,439. 4 Claims. (Cl. 62—139.)

1. An ice can, in combination with a circulation tube therefor, permanently attached to the can, and an insert for the tube fitting within the upper end of the tube, having a smaller cross section of opening than the tube to reduce the air feed and keep large particles of foreign matter out of the main tube by this smaller cross section and at its upper end internally tapered to receive an air supply nozzle.



1,509,519. AIR CONNECTION FOR ICE CANS. JOSEPH A. MARTOCELLO, Philadelphia, Pa. Filed Oct. 24, 1921. Serial No. 509,894. 2 Claims. (Cl. 62—139.)

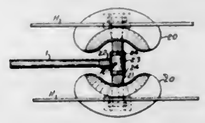
1. In a circulation system for ice cans, an air lateral parallel with one of the ice can walls, cans located upon opposite sides of the lateral, air circulation pipes in said cans, a double valve connected beneath the lateral at a point intermediate the length of the ice can walls and having outlets from said valve extending generally in



the direction of the extension of the lateral and flexible connections from the outlets to the pipes in opposite cans.

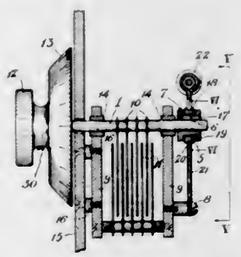
1,509,520. AIR VALVE AND NOZZLE. JOSEPH A. MARTOCELLO, Philadelphia, Pa. Filed Nov. 16, 1921. Serial No. 515,650. 4 Claims. (Cl. 251—120.)

1. In a device for connecting air laterals and the air circulation pipes of ice making cans, the combination of a nozzle having a bore and a counterbore at the rear to provide a valve seat, a valve therein normally engaging the seat, there being a path free from contact from the perimeter of the valve to the opening surrounded by the valve seat when the valve is in closed position to permit a constant flow of air therethrough and a wire connected with the valve and extending through the nozzle for access from the front of the nozzle to unseat the valve and permit blowing out of the air through the valve.



1,509,521. CURRENT-COLLECTING DEVICE. SAMUEL S. MATTHES, Mansfield, Ohio, assignor to The Ohio Brass Company, Mansfield, Ohio, a Corporation of New Jersey. Filed Nov. 18, 1921. Serial No. 516,034. 22 Claims. (Cl. 191—57.)

6. A current collector for gathering current from adjacent conductors comprising a support member, a plurality of current collecting members each to engage a conductor, spaced from each other and spaced and insulated from the support, the distance between the collecting members being greater than the perpendicular distance between the conductors.

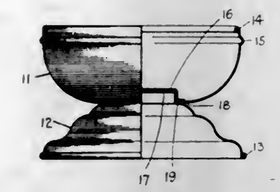


18. The combination with a trolley pole, of a cross-head pivotally supported thereon, two current collectors mounted adjacent to opposite ends of the cross-head, and a guard arm extending from each end of the cross-head to a point adjacent to the trolley pole.

1,509,522. CURRENT COLLECTOR. SAMUEL S. MATTHES, Mansfield, Ohio, assignor to The Ohio Brass Company, Mansfield, Ohio, a Corporation of New Jersey. Filed Mar. 1, 1922. Serial No. 540,147. 12 Claims. (Cl. 191—57.)

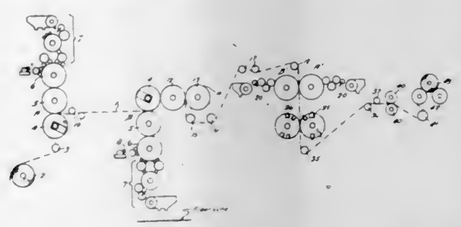
1. A current collecting device comprising a support member, a head adapted to swing in a substantially vertical plane transverse of the longitudinal axis of the support member, a pair of current collecting members supported by the head and means to insulate the current collecting members from each other; each collecting member comprising a substantially horizontally disposed surface and an upstanding flange the outer surface being convex to a substantially vertical plane.

1,509,523. VERNIER. DAVID J. MONOSMITH, Spencer, Ohio, assignor to The Monosmith Brothers Company, Spencer, Ohio, a Corporation of Ohio. Filed May 19, 1924. Serial No. 714,261. 11 Claims. (Cl. 188—83.)



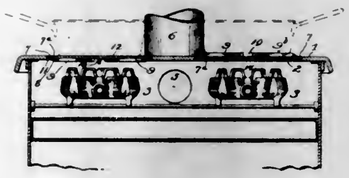
1. A vernier for the adjustment of manually-operated instruments, consisting of movable means for changing the instrument setting; means for indicating the amount of such change; a friction element for facilitating rough adjustments and providing resistance which is unyielding below a certain maximum applied force and is substantially constant for all speeds of movement of the changing means; and a viscous liquid friction element for facilitating fine adjustments and offering only a very slight resistance to slow easy movements of the changing means and a rapidly increasing resistance as the speed is accelerated.

1,509,524. CONTAINER. CHARLES C. MORRISON, New York, N. Y., assignor, by direct and mesne assignments, to Passaic Metal Ware Co., Passaic, N. J., a Corporation of New Jersey. Filed Feb. 15, 1923. Serial No. 619,080. 16 Claims. (Cl. 65—59.)



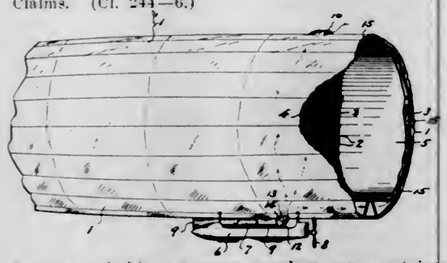
1. A container comprising a receptacle portion and a cover portion of resilient material, engaging means on said cover portion adapted for frictional engagement with the receptacle to close the latter, one of said portions

having a recess and the other a projection adapted to engage said recess, said last-mentioned engaging means on said cover portion being spaced from said first-mentioned



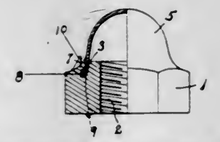
engaging means, whereby said cover portion may serve as a stand for said receptacle portion when uncovered, and be frictionally connected thereto forming a unitary structure.

1,509,525. METHOD OF AND APPARATUS FOR PRODUCING MANIFOLD CONTINUOUS FORMS. HERBERT E. MURRAY, East Cleveland, and GEORGE A. MAYER, Lakewood, Ohio, assignors to The Manifold Printing Company, Cleveland, Ohio, a Corporation of Ohio. Filed Nov. 7, 1921. Serial No. 513,326. 8 Claims. (Cl. 101—221.)



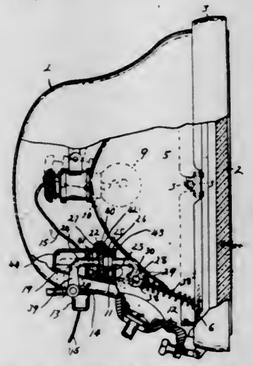
1. In printing apparatus of the character set forth, the combination of a pair of printing couples wherein the arrangement of the constituents of one couple is the reverse of that of the other so that a web of paper directed therethrough will be printed by the respective couples on opposite sides thereof, and a pair of printing cylinders between which the web is passed, each cylinder consisting of printing and impression elements, the printing elements of one cylinder cooperating with the impression elements of the other so that said cylinders print on opposite sides of the web.

1,509,526. GAS STOVE. HENRY W. O'DOWD, Jersey City, N. J., assignor to William M. Crane Company, a Corporation of New York. Filed Dec. 1, 1921. Serial No. 519,276. 4 Claims. (Cl. 126—214.)



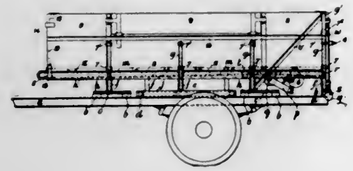
1. A utensil supporting grid adapted to seat in reverse positions in a pot opening in a gas stove above the heating burner therein, said grid comprising a peripheral flange and supporting members extending inwardly from the flange and offset axially relative to the face of the flange to produce a utensil receiving and supporting cavity in the grid.

1,509,527. AIRSHIP. HUMPHREY F. PARKER, New York, N. Y. Filed June 24, 1921. Serial No. 479,997. 11 Claims. (Cl. 244—6.)



6. In an airship, an outer envelope, gas containers within and spaced apart from said outer envelope, heat exchanging means for transferring waste heat from the airship motors to a stream of air, and a conduit having an adjustable end adapted to be positioned to receive the heated air from said heat exchange means or cold air from the atmosphere, said conduit having a delivery end communicating with the space intermediate said gas containers and said outer envelope.

1,509,528. CAP NUT. CHARLES F. RICHARDS, Detroit, Mich., assignor of one-half to Frank G. Van Dyke, Detroit, Mich. Filed Aug. 12, 1922. Serial No. 581,340. 1 Claim. (Cl. 85—35.)



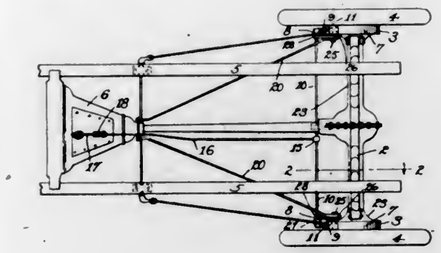
A cap-nut comprising a body and a cup-shaped cap, the cap having a rib at its edge the nut being formed with a circular groove in one end to receive the end of the cap, the outer wall of said groove being bent inward to lie against said ribbed end, the outer surfaces of the cap and of said wall being substantially continuous the rib on the cap having a substantially radial outer surface and said outer wall having a substantially radial shoulder contacting with the rib.

1,509,529. HEADLIGHT ATTACHMENT. ERNEST O. SEITZ, Detroit, Mich., assignor to C. M. Hall Lamp Company, Detroit, Mich., a Corporation of Michigan. Filed Aug. 28, 1922. Serial No. 584,675. 8 Claims. (Cl. 240—41.)

1. The combination with a lamp casing, of a reflector in said casing, an arm operably connected to said reflector for moving the same, a housing secured to said casing, and means in said housing surrounding said arm for resisting movement of said arm.

1,509,530. TRANSPORT LORRY AND OTHER VEHICLE. ARTHUR FORBES SHIRREFF, Bridgwater, England. Filed Oct. 25, 1922. Serial No. 596,889. 6 Claims. (Cl. 208—27.)

1. A transport vehicle comprising a understructure, rollers on said understructure constituting runways, a superstructure longitudinally movable over said rollers, and a bottom to said superstructure composed of independent swingable members whose operable positions are controlled by said rollers, and means for moving said superstructure.

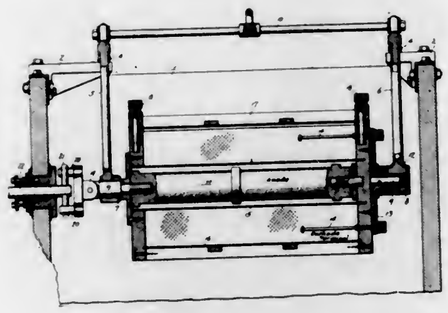


1,509,531. GARMENT FASTENER AND THE LIKE. EDGAR JOHN SHERRIFF, Bristol, England. Filed July 18, 1923. Serial No. 652,315. 2 Claims. (Cl. 24—222.)

1. A fastener for garments and the like, comprising unjointed flexible strips adapted to be superposed, means for securely holding the said strips at or near at least one end against undesirable relative to and fro motion, when the strips have been fastened together to close the fastener, and means disposed between the ends for holding the said strips against relative logitudinal and transverse motion when the fastener is closed.

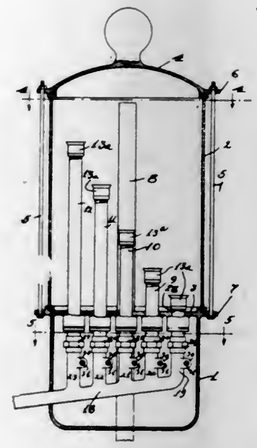
1,509,532. AUTO BRAKE. OLIVER E. STEWART, Brooklyn, N. Y. Filed Aug. 29, 1923. Serial No. 659,948. 2 Claims. (Cl. 188—77.)

1. In an auto brake device, the combination of a brake drum on each rear wheel, of a brake band on each drum, angular brackets one on each side, a rock shaft journalled in said brackets, an angle lever fast on said shaft at each end, one arm of said lever engaging one end of the brake band for direct pull thereon tangent to the arm, a bolt connected to the remaining end of said brake band and extending upwardly therefrom, the other arm of the angle lever projecting from the axis substantially at a right angle to said first arm and connected with the bolt



at its upper end and in alinement therewith, an arm fast to the rock shaft, and a pull rod connecting said arm with the brake lever on the car control portion.

1,509,533. METHOD FOR SEASONING WOOD. ROLF THIELEN, Madison, Wis., dedicated, by mesne assignments, to the Citizens of the United States of America. Filed Oct. 27, 1923. Serial No. 671,221. 1 Claim. (Cl. 34—24.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)



The herein described method for seasoning wood, consisting of subjecting said wood to an atmosphere whose temperature and humidity are maintained at high levels and low levels alternately: the temperature and humidity at the respective levels, the length of time during which said temperature and humidity are maintained at each level, and the rate of change of said temperature and humidity from one level to another being regulated in accordance with a predetermined time schedule.

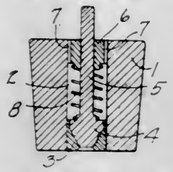
1,509,534. ELECTROPLATING MACHINE. GUERIN TODD, Millburn, N. J., assignor to The Hanson & Van Winkle Company, Millburn, N. J., a Corporation of New Jersey. Filed June 26, 1923. Serial No. 647,857. 5 Claims. (Cl. 204—11.)

1. An electroplating machine, comprising in combination, a vat, a rotatable cylindrical container suspended in the vat, said container having heads and an interior and an exterior perforated drum, an anode bar within the inner drum and cathode terminals supported entirely from the head and extending into the annular space betwen the drums free of contact with the perforated drums, and also extending through the head and a conducting plate outside the head to which said cathode terminals are secured.

1,509,535. APPARATUS FOR DISPENSING FLUIDS. AUSTIN L. WERTZ, Dubuque, Iowa. Filed July 8, 1921. Serial No. 483,164. 1 Claim. (Cl. 221—100.)

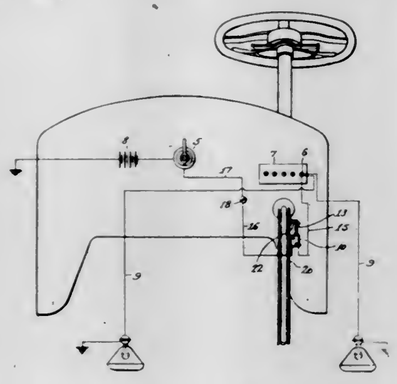
In a fluid dispenser, a fluid container, a plurality of stand pipes of different elevations in said container, a common delivery pipe connected to said stand pipe, a valve in the top of each stand pipe, operating mechanism for each valve including a horizontal shaft extending into each stand pipe and means for separately rotating each shaft for elevating said valves, said operating mechanism holding said valves in elevated position.

1,509,536. HAIR CURLER. RAMON O. WILLIAMS, Brooklyn, N. Y. Filed Mar. 14, 1924. Serial No. 699,189. 1 Claim. (Cl. 132—42.)



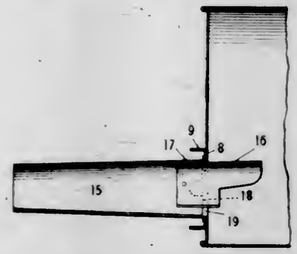
A hair curling or waving device comprising a fork composed of stiff material and a pair of tubes composed of soft material having a web connecting adjacent ends thereof, said tubes serving to removably ensheath the fork tines.

1,509,537. AUTOMATIC BUNG FOR BARRELS. FREDERICK WOERTHER, Salem, Ohio. Filed Sept. 7, 1923. Serial No. 661,389. 1 Claim. (Cl. 217—99.)



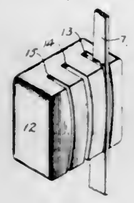
A device of the kind described, comprising a tapered bung having a central bore therethrough; a valve seat fitted into the inner end of the bore and a valve stem

sleeve at the outer end, the said valve stem sleeve having notches cut at the sides thereof; a valve seated to the valve seat and having a stem extended loosely out



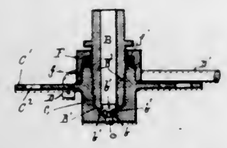
through the valve stem sleeve; and an expansive coil spring set over the valve stem and braced between the said valve and the said sleeve.

1,509,538. LIGHT DIMMER FOR MOTOR VEHICLES. BENJAMIN F. BAILEY, Jr., Lucedale, Miss., assignor of one-third to Benjamin I. Trotter, Lucedale, Miss. Filed Jan. 20, 1922. Serial No. 530,597. 4 Claims. (Cl. 171—97.)



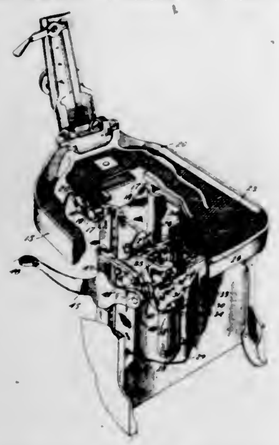
1. A motor vehicle having a spark-control rod and a finger-piece on the steering-head for manipulating it, a lighting system for the headlights of the vehicle, a dimmer-switch in the supply circuit thereof, and means whereby this switch may be opened and closed by a rotative operation of said spark-control rod without interfering with the regular use of said spark-control rod or restricting its range of movement.

1,509,539. FUNNEL FOR POWDER KEGS. ARTHUR H. BASSLER, Belleville, Ill. Filed Sept. 26, 1923. Serial No. 664,835. 5 Claims. (Cl. 221—61.)



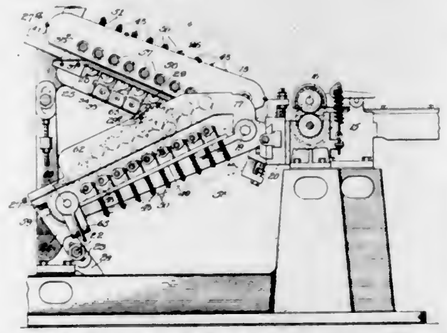
1. In a device of the class described, the combination with a tubular member forming a non-elastic pouring spout, of a spring retaining member carried thereby and yielding to make frictional contact with the edges of pouring openings of substantially different diameters, said retaining member also forming a deflector for the contents of the keg.

1,509,540. PHONOGRAPH ATTACHMENT. THOMAS H. CAMPBELL, Temple, Tex. Filed June 20, 1922. Serial No. 569,687. 1 Claim. (Cl. 274—27.)



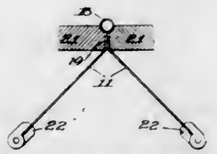
As an article of manufacture, a tone modifier to be applied to the needle bar of a phonograph sound box comprising a block of substantially rigid material having a groove therein of tortuous form.

1,509,541. FLUID-FUEL BURNER. ALMUS T. CARNES, Kansas City, Mo. Filed Dec. 8, 1923. Serial No. 679,415. 1 Claim. (Cl. 158—53.)



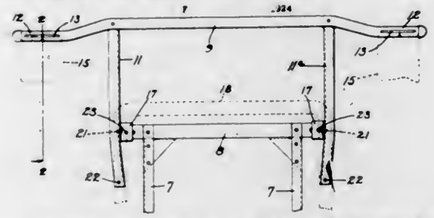
In a fluid fuel burner, a jet tube, a conical point on said tube having a jet opening in the apex of said point, and a plurality of jet openings in the conical surface thereof, an internally screw threaded thimble having a conically shaped shoulder therein coinciding with the conical point on said tube and adapted to control the jet openings in the conical surface of said tube, means to rotate said thimble, external threads on said thimble, a gasket on said tube and seated on the upper end of said thimble and an internally threaded stuffing-box ring screwed on said thimble adapted to compress said gasket.

1,509,542. DENTAL CHAIR. FRANK E. CASE, Canton, Ohio, assignor to The Harvard Company, Canton, Ohio, a Corporation of Ohio. Filed Aug. 30, 1922. Serial No. 585,315. 7 Claims. (Cl. 155—26.)



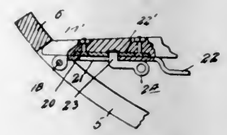
1. A dental chair or the like including a pedestal, a tilting seat mounted thereon, an abutment in the pedestal, a plurality of strips depending from the seat, plates slidably supported by the pedestal between the several strips, an adjustable clamping block slidably supported by the pedestal, and means for clamping the plates and strips between the block and the abutment.

1,509,543. MACHINE FOR EXPANDING METAL. LEWIS E. CURTIS, Warren, Ohio, assignor to The Youngstown Pressed Steel Company, a Corporation of Ohio. Filed May 2, 1923. Serial No. 636,092. 11 Claims. (Cl. 164—66.)



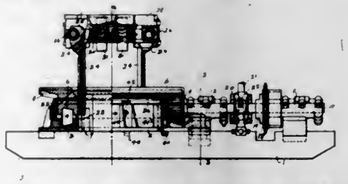
1. In a machine for expanding previously slitted metal blanks, a bed or way, means for feeding the unexpanded portion of a blank along said bed or way, means for expanding the metal blank by deflection of the strands thereof, and retaining means adapted to hold said blank in engagement with the bed or way, said retaining means being adapted to travel along said bed or way, with the blank.

1,509,544. METHOD OF FORMING EXPANDED-METAL CORNER BEADS. LEWIS E. CURTIS, Warren, Ohio, assignor to The Youngstown Pressed Steel Company, a Corporation of Ohio. Filed Aug. 10, 1923. Serial No. 656,689. 3 Claims. (Cl. 113—116.)



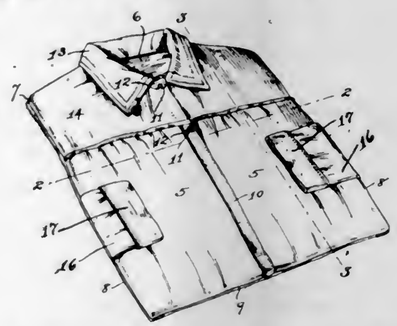
1. The method of forming an expanded metal corner bead, which comprises, in succession, forming a sheet with a central groove, slitting the metal at the sides of said groove, partly closing the inner edges of said central groove, shaping the central groove portion and the adjacent unslitted metal to form a substantially circular bead and a flattened stem portion, and expanding the metal of the slitted sides in its proper angular relation.

1,509,545. ADJUSTABLE FENDER BRACE. PETER C. DAHL, Wahpeton, N. Dak. Filed Mar. 22, 1924. Serial No. 701,121. 8 Claims. (Cl. 293—55.)



1. The combination with a car frame and wheel fenders, of a bar having means for connection with the adjacent ends of opposite fenders, and supports for said bar on said frame, and adapted for adjustment of said bar to fit fenders of different sizes.

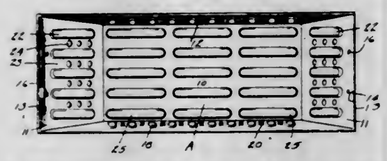
1,509,546. PUSH SLEIGH. OLAF DALE, Portland, Oreg. Filed June 2, 1923. Serial No. 642,938. 1 Claim. (Cl. 280—23.)



In a sleigh having a frame including a cross bar and seat bars mounted for movement transversely of the cross bar, means for detachably connecting the seat bars with the cross bar comprising a blade pivotally mounted upon the cross bar and provided at its intermediate portion with a key hole slot, said blade having an offset free end portion, the blade being mounted for swinging movement transversely of the cross bar, and a pin pivotally mounted at the under side of the seat bar, said pin having angularly disposed end portions, and provided at its free end with an enlarged head, the free end portion of the said pin adapted to pass through the key hole slot in the plate, and the axis of turning movement of the pin being disposed approximately at a right angle to the length of the seat bar.

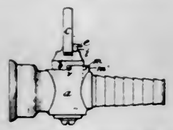
1,509,547. ROTARY. HARRY R. DECKER, Houston, Tex. Filed Sept. 18, 1920. Serial No. 411,270. 7 Claims. (Cl. 255—23.)

1. A rotary, including a base plate, a rotary table mounted thereon and formed with a beveled gear face and an annular groove, a driving pinion in mesh with said gear face, an anchor for holding the table on the base plate, said anchor consisting of an annular upstanding flange integral with the base plate, and closely surrounding the rotary table; an arcuate rib fitted into said groove and anchor posts formed integrally with the rib and secured to the flange on opposite sides of said pinion.



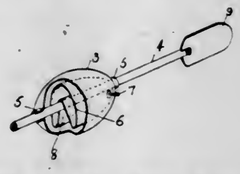
1,509,548. DISPLAY SAMPLE. JESSE S. FLEISCHER, Baltimore, Md., assignor to Liberty Manufacturing Co., a Corporation of Maryland. Filed Dec. 30, 1922. Serial No. 609,897. 3 Claims. (Cl. 35—17.)

1. A display garment sample having a fabric front and a fabric back,—the fabric front having shoulder and neck portions and the fabric back having shoulder and neck portions whereby the two portions will embody all the neck and shoulder features of a garment,—said front and back fabric portions being permanently secured together



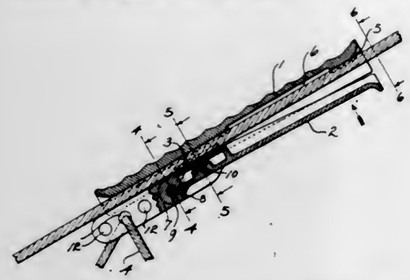
along their upper edges from the neck-opening to the opposite side-edges and said two portions also being permanently secured together along the opposite sides and across the bottom edges thereof whereby the sample of two fabric thicknesses will display both the upper front and upper back portions of what appears to be a folded skirted garment.

1,509,549. VENTILATED CONTAINER. ANSEL FREELAND, Nevada, Iowa. Filed Aug. 23, 1923. Serial No. 658,920. 4 Claims. (Cl. 220—1.)



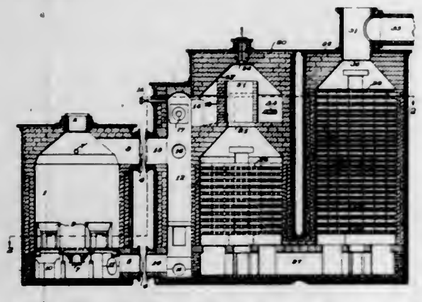
4. A sheet metal container comprising a bottom, two end walls and two side walls, the side walls and the end walls having spaced depressions formed therein for forming spaced inwardly extending ribs terminating short of the top and bottom edges of said walls and arranged in a vertical plane, the material between said ribs having openings therein and said bottom having upstruck ribs therein.

1,509,550. LOCKABLE GAS COCK. ANTONIO GALLO, Peekskill, N. Y. Filed Jan. 22, 1921. Serial No. 439,101. 1 Claim. (Cl. 251—164.)



In a lockable gas cock the combination with the plug of the cock of a horizontal chamber in the plug separate from the gas passage through the plug, an inner portion of the chamber larger than the outlet from the chamber, a bolt within the chamber fitting the larger and the smaller diameters of the chamber, the bolt having a lateral movement within the chamber the smaller outer end of the bolt extending beyond the chamber, a recess in the gas-cock body adapted to receive the small outer end of the bolt, a spring within the larger chamber to push the bolt outwardly, the larger part of the bolt slotted lengthwise, a beveled face within the slot, and a vertical recess in the plug intersecting the bolt slot, a push plug in said recess, the inner end of the push plug flattened to pass through the slot in the bolt, a portion of the flattened plug reduced in width and forming a bevel surface to engage with the bevel in the slot in said bolt, and a retractile spring under the push-plug, all as herein set forth.

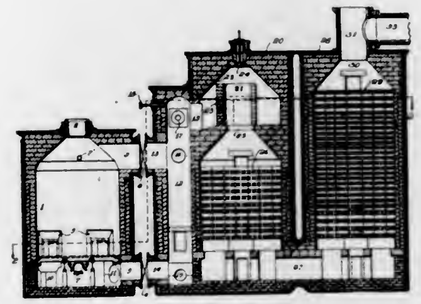
1,509,551. COMBINED FLOAT AND PADDLE FOR USE WHILE BATHING. ANDREW GIBSON, Turramurra, New South Wales, Australia. Filed Apr. 5, 1924. Serial No. 704,464. 1 Claim. (Cl. 9—21.)



A combined float and paddle device comprising a shaft with blades at each end a centrally positioned float consisting of an outer covering of fabric material containing an inflatable bag adapted to envelope the shaft.

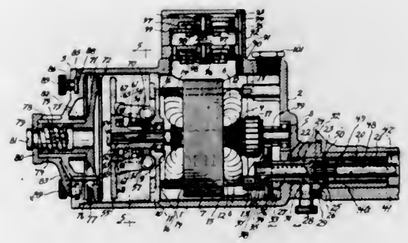
1,509,552. EMERGENCY SLIDE. GEORGE W. HARDY, Los Angeles, Calif. Filed Aug. 16, 1922. Serial No. 582,280. 2 Claims. (Cl. 227—25.)

2. An emergency slide adapted for use on an inclined guy wire, comprising a member grooved to slidingly engage said wire, a lever pivotally secured to said member, a braking shoe pivotally mounted on one arm of said lever, said arm extending adjacent the grooved member with the braking shoe positioned to be brought into engagement with said guy wire, the second arm of said lever providing an attachment position for a supporting member, such attachment position being in such position that the weight of an operator may be applied to actuate said braking shoe, said first-named arm and sliding member being shaped to permit the lever and grooved member to be simultaneously gripped and forced together by the operator to control the sliding speed.



1,509,553. PROCESS FOR MANUFACTURING WATER GAS. THOMAS F. HOLDEN, Washington, D. C., assignor of one-third to Robert D. Weaver, Washington, D. C., and one-third to Calvin Vos, New York, N. Y. Filed Oct. 17, 1922. Serial No. 595,112. 9 Claims. (Cl. 48—205.)

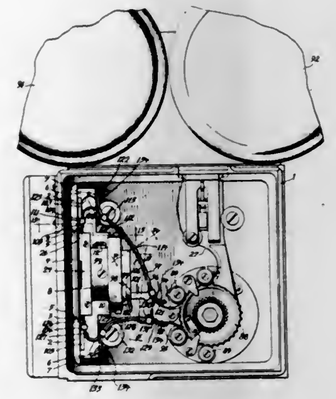
6. The process of making water gas which consists in making a gas in a generator by a succession of up and down steam blasts, passing the water gas in a single stream into an economizing chamber, thence dividing said water gas into a plurality of streams by contact with and around the highly heated walls of a primary mixing chamber, thence into said chamber and there enriching the gas, thence into and through a secondary mixing chamber, and thence into and through a superheater.



1,509,554. APPARATUS FOR THE MANUFACTURE OF WATER GAS. THOMAS F. HOLDEN, Washington, D. C., assignor of one-third to Robert D. Weaver, Washington, D. C., and one-third to Calvin Vos, New York, N. Y. Original application filed Oct. 17, 1922, Serial No. 595,112. Divided and this application filed Apr. 3, 1923. Serial No. 629,619. 11 Claims. (Cl. 48—80.)

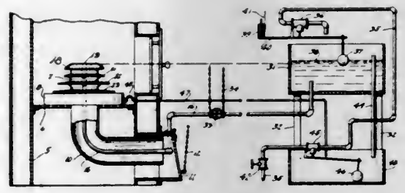
1. An apparatus for making water gas, comprising a generator, a carbureter connected therewith, an economizing chamber formed at one side of said carbureter and connected to the generator, said chamber having a lateral outlet passage connected to a primary fixing

chamber formed at the top portion of the carbureter, and a secondary mixing chamber within the carbureter having checker-work disposed therein.



1,509,555. ELECTRIC-MOTOR DRIVE AND CONTROL MEANS FOR MOTION-PICTURE MACHINES AND THE LIKE. ALBERT S. HOWELL, Chicago, Ill., assignor to Bell & Howell Company, Chicago, Ill., a Corporation of Illinois. Filed June 3, 1920. Serial No. 386,395. 27 Claims. (Cl. 88—17.)

1. A motor drive for motion picture machines including an electric motor, a driving connection therefrom adapted to drive a motion picture mechanism disposed at one end of the motor and including a shaft offset from the motor axis, and a speed governor adapted to control the speed of the motor disposed at the other end of the motor in alinement therewith.

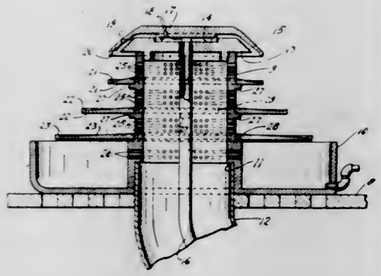


1,509,556. INTERMITTENT-FEED MECHANISM. ALBERT S. HOWELL, Chicago, Ill., assignor to Bell & Howell Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 8, 1921. Serial No. 499,294. 24 Claims. (Cl. 88—18.4.)

1. An intermittent feed mechanism including a stationary plate having two parallel slots therethrough, means forming a guide therewith including a stationary member facing a face of said plate opposite said slots, a pair of ratchet bars guided for longitudinal movement in respective slots and adapted for movement normal to said plate, a member mounted for reciprocation parallel with said slots opposite the other face of said plate and having oppositely facing surfaces spaced longitudinally of said slots and oppositely engaging said bars to cause the same to reciprocate therewith and adapted to permit movement of the bars normal to said plate,

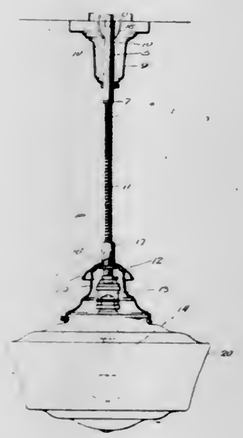
springs engaging said reciprocating member and respective bars for yieldably urging said bars toward said stationary member, and a rotating device for effecting reciprocation of said reciprocating member.

1,509,557. FLUID-FUEL BURNER AND SUPPLY APPARATUS. ROSCOE V. JEFFERSON, Chicago, Ill. Filed Oct. 25, 1922. Serial No. 596,783. 4 Claims. (Cl. 158—36.)



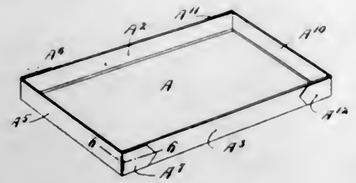
1. An apparatus of the kind described comprising a fluid fuel burner arranged to be mounted on the grate of a furnace, a fuel reservoir, a valve controlled conduit connecting said reservoir with said burner, a supply conduit leading into said reservoir, a valve in said supply conduit controlled by a float in said reservoir, an emergency tank connected by an overflow conduit with said reservoir, a safety valve in said supply conduit, a float in said emergency tank for controlling said safety valve, and an overflow conduit connecting said burner with said emergency tank.

1,509,558. FLUID-FUEL BURNER. ROSCOE V. JEFFERSON, Chicago, Ill. Original application filed Oct. 25, 1922, Serial No. 596,783. Divided and this application filed Nov. 5, 1923. Serial No. 672,705. 7 Claims. (Cl. 158—91.)



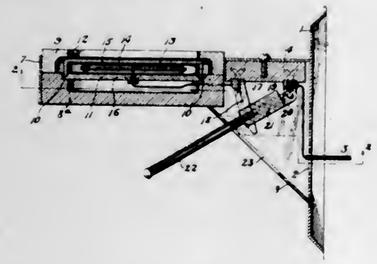
7. A liquid fuel burner comprising a cylindrical air distributing member arranged to be mounted on a furnace grate, a catch pan formed integral around the lower part of said member, an air pipe mounted within said member and being adapted to extend to ar[illegible] opening

on said furnace, openings around said member within said pan, a top plate removably mounted on and extending outwardly from the upper end of said member, a cap removably mounted over said top plate and curved downward over the edge thereof, a fuel supply pipe



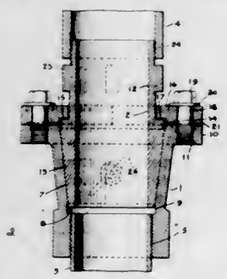
leading to the space between said top plate and cap, a series of baffle plates removably mounted between said top plates and pan and arranged for successively receiving the fuel from said top plate, and a plurality of series of air openings provided around said member adjacent each plate.

1,509,559. ELECTRIC LIGHTING FIXTURE. VALERIUS T. JENNINGS, Chicago, Ill., assignor to Hanger Electric Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 5, 1924. Serial No. 690,784. 6 Claims. (Cl. 240—78.)



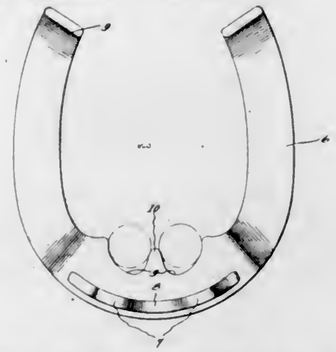
1. In an electric lighting fixture, a hollow pendant stem of uniform external diameter throughout, and threaded at both ends, a threaded bushing threadedly secured in the lower end of said stem, and having a shouldered portion bearing against the end of the stem, the diameter of said shouldered portion being no greater than that of the stem, and a metallic fixture stem of less diameter than said pendant stem, whereby a canopy fitting the stem may be slipped along said fixture stem, for containing conductor wires and for supporting a lamp, said fixture stem being permanently secured in said bushing.

1,509,560. FOLDED BOX AND PROCESS OF MAKING THE SAME. ELIE W. LABOMBARDE, Nashua, N. H. Filed Mar. 3, 1921. Serial No. 449,452. 6 Claims (Cl. 229—32.)



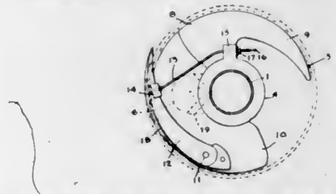
1. A box comprising a wall provided with a flap; and another wall having a portion substantially flush with the end of said flap, the latter being connected to said other wall adjacent to said portion.

1,509,561. ELECTRIC HEATER. EARL W. LOTHAMER, Canton, Ohio. Filed Sept. 7, 1922. Serial No. 586,645. 3 Claims. (Cl. 219—19.)



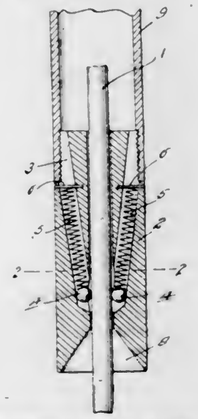
1. An electric heater including a bracket adapted to be permanently secured to a wall, an insulated housing carried upon the bracket, a heating element enclosed within said housing, an electric circuit connected to the heating element and a switch in said circuit carried by the bracket.

1,509,562. ROTATABLE PIPE JOINT. WALLACE MACGREGOR, Berkeley, Calif. Filed May 8, 1922. Serial No. 559,189. 3 Claims. (Cl. 285—133.)



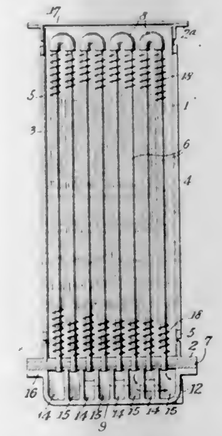
1. A coupling comprising a joint member having at one end means providing for its connection with a pipe or fitting and provided with a frustro-conical seat, one end of said seat terminating in a cylindrical portion, another joint member having a frustro-conical portion engaging in said frustro-conical seat with the inner end of said frustro-conical portion extending into and spaced circumferentially from said cylindrical portion, said frustro-conical portion terminating at its outer end in a cylindrical portion, which cylindrical portion extends into the outer end of the frustro-conical seat.

1,509,563. HORSESHOE QUOIT. WILLIAM J. MARTIN, Cleveland, Ohio. Filed June 11, 1923. Serial No. 644,693. 2 Claims. (Cl. 46—65.)



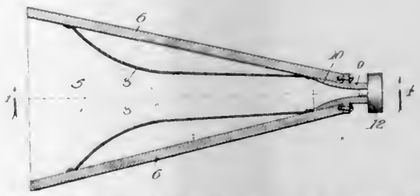
2. A quoit, the inner edge of which is provided with a pair of tapered recesses with a pointed projection between them.

1,509,564. STEAM OIL-WELL AUGER. HENRY L. MCDUFFEE, Gilroy, Calif. Filed Aug. 11, 1923. Serial No. 656,892. 4 Claims. (Cl. 255—61.)



3. A steam oil well auger comprising a steam pipe line adapted to extend into the bore of a well, an auger attached to the lower end of said pipe line and comprising a fixed scraper blade and a pivoted scraper blade, means for regulating the movement of the pivoted scraper blade, said auger having a central power portion provided with means for directing laterial jets of steam therefrom against the sides of the bore of the well.

1,509,565. FISHING TOOL. EMIL V. OSWALD, Lost Hills, Calif. Filed May 16, 1923. Serial No. 639,244. 1 Claim. (Cl. 294—108.)

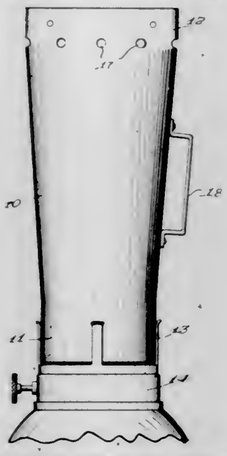


A fishing tool adapted for use in deep wells comprising a body, a series of bores arranged about the axis of the body, said bores being open throughout their lengths, gripping balls within the bores, springs located within the bores and bearing against the balls, pins disposed transversely across the bores and confining the upper ends of the springs, and a tube connected with the body and having an end portion which surrounds the upper open ends of the bores.

1,509,566. AIR COOLER. JOSEPH PRICE, New York, N. Y., assignor to The Griscom Russell Company, New York, N. Y., a Corporation of Delaware. Filed July 8, 1921. Serial No. 483,355. 9 Claims. (Cl. 257—221.)

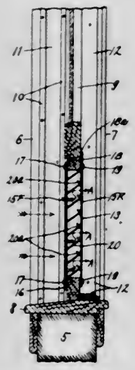
1. An apparatus of the class described having a containing shell, a gas passage through the shell, and a fluid passage in heat-exchanging relation therewith comprising, tubular elements arranged in a plurality of transverse rows, each element including a pair of tubes interconnected at one end and open at the other, and means for connecting the elements of each of said transverse rows in parallel and connecting the elements of different transverse rows in parallel whereby the width of the gas passage is not fixed by the number of elements in parallel.

1,509,567. AMPLIFIER. HENRY K. SANDELL, Chicago, Ill. Filed Feb. 15, 1923. Serial No. 619,144. 1 Claim. (Cl. 181—27.)



An amplifier having a substantially flat bottom wall of triangular shape, supporting members rising therefrom, a top wall resting upon said supporting members and curved from the mouth of the amplifier to its throat, and curved side members of non-vibratable material secured to said supporting members.

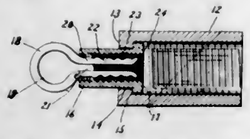
1,509,568. METAL LAMP CHIMNEY. BENJAMIN SILVERMAN, Chattanooga, Tenn., assignor of one-half to J. Russel Earp, Chattanooga, Tenn. Filed Nov. 7, 1923. Serial No. 673,259. 1 Claim. (Cl. 126—235.)



A heater for the purpose described comprising a tubular member circular in cross section at its lower end and of elongated rectangular form at its upper end, said lower end being adapted to fit within the crown of a

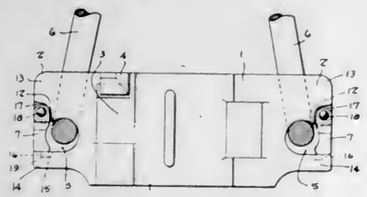
lamp, the upper end being provided in each end wall with a notch, said notches being alined and adjacent one side wall of said upper end, and cross bars extend-

ing across the upper end between the side walls and adjacent the end walls, said cross bars lying substantially in the plane of the bottoms of said notches, said upper end further having vent openings beneath said cross bar.



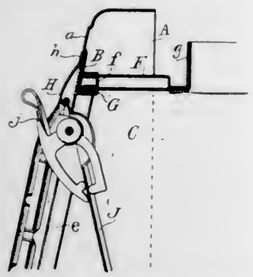
1,509,569. WINDOW-VENTILATING DEVICE. CHARLES V. SWANSON, Velva, N. Dak. Filed June 27, 1924. Serial No. 722,723. 2 Claims. (Cl. 98—31.)

2. A ventilator frame, comprising two quadrangular, horizontally aligned frames hingedly connected, a screen on the outer side of each frame, a screen on the inner side of each frame, a quadrangular metal frame for each screen adapted to hold each screen in place, deflector blades mounted horizontally and intermediate said screens and having each an outwardly and downwardly sloping part and an upwardly and outwardly inclined part, one of said metal frames on the inner side extended horizontally at the adjacent vertical edges of the hinged frames and adapted to cover the vertical joint rearwardly of the hinge for the purpose described.



1,509,570. SWIVEL CONNECTER FOR KEY CHAINS. WILLIAM H. SYKES, Edgewood, R. I., assignor to Livermore & Knight Co., Providence, R. I., a Corporation of Rhode Island. Filed Apr. 14, 1924. Serial No. 706,400. 2 Claims. (Cl. 59—95.)

2. A swivel connecter for key chains comprising a body member with a central bore and having an end wall with an opening therethrough, a tubular swivel member extending through said opening and enlarged on its inner end to shoulder against the inner surface of said end wall, an eye member formed of wire folded upon itself into loop form with its ends slightly spaced apart and



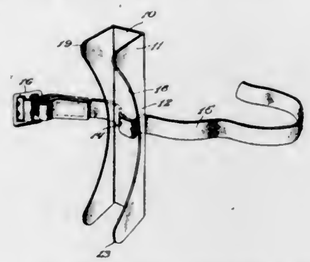
extending into the bore of said swivel member, the contiguous surfaces of both said shank and bore of said swivel member being roughened and soldered together, solder being also positioned in the space between the members of said shank to prevent them from springing inwardly under tension.

1,509,571. CASING ELEVATOR. EDWARD TIMMS and WILLIAM S. GRAU, Los Angeles, Calif., assignors to Union Tool Company, Torrance, Calif., a Corporation of California. Filed Mar. 19, 1923. Serial No. 626,041. 2 Claims. (Cl. 294—90.)

1. A casing elevator having a lateral projecting ear substantially horizontally apertured to receive a supporting bail, a lug receiving recess in said ear adjacent the aperture, a lateral lug portion formed at the opposed side of said aperture, and a latch member having at one end a lug portion engaging said lug receiving recess and having bifurcations at the other end engaging said lateral lug.

1,509,572. WARM-AIR REGISTER. WILLIAM T. TRUAX, Battle Creek, Mich., assignor to United States Register Company, Battle Creek, Mich., a Corporation of Michigan. Filed Apr. 23, 1921. Serial No. 463,982. 1 Claim. (Cl. 98—54.)

In a warm air register, the combination with a register box having walls comprising parallel sheets of metal, a grooved connecting member having bent edge portions clamping the edge portions of the said sheets whereby the sheets and the connection are held together, a register frame having an inner sunken border edge portion arranged flatwise against the bends of the said connecting member, bendable sheet metal sealing strips each having a flat portion arranged upon the said sunken border portion of the frame and co-extensive therewith,

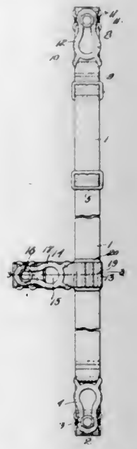


each sealing strip having a bent portion passing through the opening in the register frame and a bent portion clamped to one of the said wall sheets by the said bent edge portion of the connecting member, and an open-work front plate having a flat edge portion arranged upon the said flat portions of the sealing strips which lie in the said sunken inner border edge portions of the frame.

1,509,573. TIRE CHAIN. GEORGE H. WATERS, Glenfield, N. Y. Filed Mar. 15, 1924. Serial No. 699,576. 3 Claims. (Cl. 152—14.)

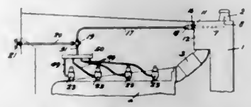
2. A cross chain, comprising a plurality of similar units, each unit having a bevelled tire engaging base and an outwardly extending flange, loops formed upon the units and extended in parallelism with the bases, each unit having near the end opposite to the loop end a pair of oppositely disposed loop engaging and elongated openings extending through the flange thereof, said flange further provided with a slit extending from each opening to the outer edge of the flange, and means secured to the terminals of said assembly for attaching said assembly to side chains.

1,509,574. KICKING BOOT. WILLIAM E. WOLFE, Recluse, Wyo. Filed July 31, 1923. Serial No. 654,864. 1 Claim. (Cl. 119—127.)



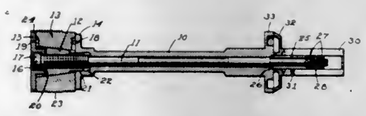
A boot of the class described comprising a metal body having a flat straight central web and flat straight side flanges turned back from said web, said flanges having a comparatively slight height midway their ends and considerably greater height at each end thereof, and edges of arcuate contour between said ends and the middle portion of the flanges, said central web being provided with longitudinal slits between said flanges at its center, a flexible strap engaging through said slits and provided with fastening means, the body being adapted to fit against the front side of an animal's leg across the joint therein with the side flanges embracing the leg and the strap being adapted to pass around the leg above the joint.

1,509,575. PROCESS OF PRODUCING OXALIC ACID. CHARLES O. YOUNG, Pittsburgh, Pa., assignor to Carbide and Carbon Chemicals Corporation, a Corporation of New York. Filed Apr. 5, 1920. Serial No. 371,536. 2 Claims. (Cl. 260—116.)



1. Process of preparing oxalic acid from water-soluble substances capable of yielding the same by oxidation, comprising circulating a gaseous mixture of nitrogen oxids and oxygen in contact with an aqueous solution of such substance in a closed circulating system, and supplying substantially undiluted oxygen in proportion to satisfy the reaction requirements.

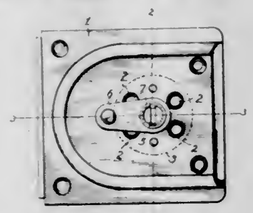
1,509,576. HOSE SUPPORTER. ANTHONY S. ANDERSON, Milton, Mass. Filed Nov. 12, 1921. Serial No. 514,540. 2 Claims. (Cl. 241—1.)



1. A sock supporter comprising a strap; means adjustably connecting one end of said strap to the body portion thereof to provide a loop; a garment engaging clasp adjustably engaged with said loop; a garment engaging clasp at the opposite end of said strap; a sleeve adjustably mounted on said strap between said loop and said last mentioned clasp, and a laterally extending garment engaging clasp carried by said sleeve.

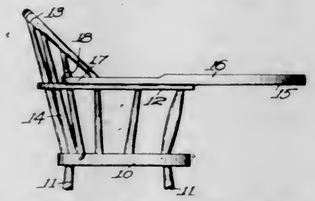
1,509,577. ATTACHMENT FOR INTERNAL-COMBUSTION ENGINES. GEORGE BALLWEBER, Cincinnati, Ohio. Filed Oct. 16, 1919. Serial No. 331,038. 2 Claims. (Cl. 123—25.)

1. In a device of the class described, the combination with an internal combustion engine, of a radiator connected therewith, adjustable automatically operated intake valves in central communication with the top of each engine cylinder, a pipe connection from each intake valve internally communicating with a distributing chamber, a pipe attached to and communicating with said chamber, and with the top interior of said radiator and a manually operated valve in said pipe for controlling vapor flow to said chamber.



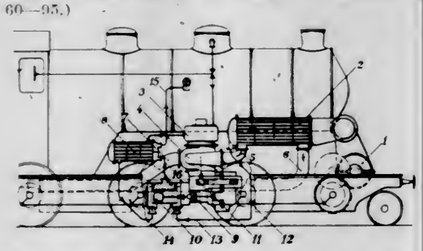
1,509,578. ADJUSTABLE INTERNAL GAUGE. JOHN BATH, Worcester, Mass. Filed Oct. 18, 1922. Serial No. 595,428. 8 Claims. (Cl. 33—178.)

1. An adjustable internal gauge having, in combination, a support having an elongated axis a plurality of gauge bars movable radially in said support and having inner bearing surfaces inclined relatively to the axis of the gauge, means engaging said inclined bearing surfaces and effective to move said bars simultaneously



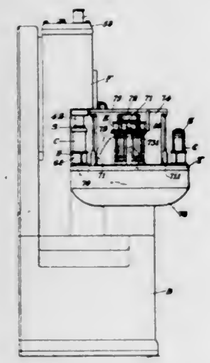
radially, said gauge bars having screw threads thereon, and a threaded pilot mounted adjacent the outer ends of said gauge bars and held from angular movement relative thereto.

1,509,579. LOCK. OTTO H. BENKE, Stamford, Conn., assignor to The Yale & Towne Manufacturing Company, Stamford, Conn. Filed Aug. 14, 1923. Serial No. 657,278. 1 Claim. (Cl. 70—46.)



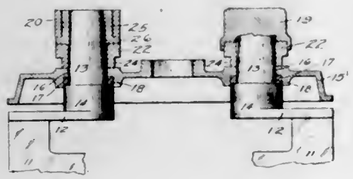
The combination with the cover plate of a rim lock, of a plate removably secured to said cover plate, a roll back mounted in said plate, a roll back cam removably secured to said roll back, said plates having aligning bolt holes, the bolt holes in the cover plate being sufficiently large to permit the heads of cylinder securing bolts to seat against the removable plate.

1,509,580. CHILD'S CHAIR. RODERIC L. BENT, Gardner, Mass., assignor to S. Bent & Bros., Inc., a Corporation of Massachusetts. Filed May 16, 1922. Serial No. 561,533. 1 Claim. (Cl. 155—126.)



A child's chair having a back with an outer frame and spindles therein, a tray with rearwardly projecting arms having their rear ends curved inwardly substantially in the plane of the tray, means encircling certain of said spindles within said outer frame and pivotally secured to the inner ends of said arms, said means comprising sheet metal clamps each having a portion embracing one of said spindles and having flat end elements disposed adjacent each other at the side of said spindle, and said tray arms being pivotally secured to said end elements.

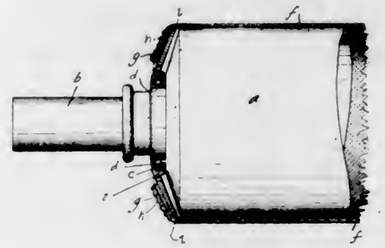
1,509,581. CONDENSING STEAM LOCOMOTIVE. HEINRICH BOLTSHAUSER, Zurich, Switzerland. Filed May 13, 1922. Serial No. 560,607. 2 Claims. (Cl. 60—95.)



2. A condensing steam locomotive, comprising a circulation pump for the cooling water for the condenser, a steam power engine arranged to drive the circulation pump, a preheater heated by the exhaust steam of said steam engine, and a piston pump driven by said steam power engine one side of said pump communicating with a collecting space for condensed water of the condenser and the other side of said pump communicating with a collecting space for condensed water of the preheater, all the condensed water drawn into the pump being forced through the preheater into the boiler of the locomotive.

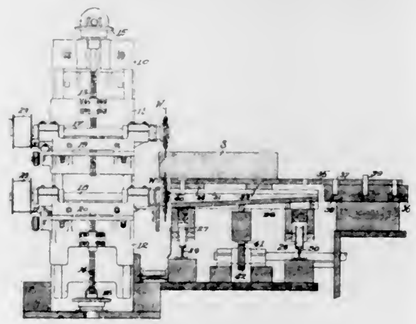
1,509,582. MACHINE FOR CRIMPING DRY-CELL JACKETS. HERBERT L. BOECHERS, Lakewood, Ohio, assignor to National Carbon Co. Inc., a Corporation of New York. Filed June 1, 1921. Serial No. 474,221. 25 Claims. (Cl. 93—55.)

1. In a crimping machine, the combination of a carrier, chucks thereon successively movable thereby to a crimping position, crimping members severally associated with said chucks, a crimping member at said crimping position adapted to successively cooperate with the aforesaid crimping members, and means for moving the cooperating crimping members at the crimping station.



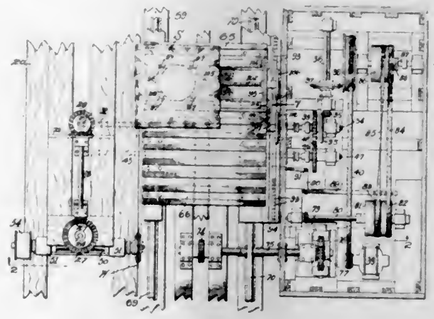
1,509,583. STORAGE-BATTERY SEALING DEVICE. WENDELL H. CALDBECK, Des Moines, Iowa, assignor to Vesta Battery Corporation, Chicago, Ill., a Corporation of Illinois. Filed Aug. 23, 1920, Serial No. 405,429. Renewed July 12, 1923. 4 Claims. (Cl. 204—29.)

1. In a sealing device for storage battery cells, the combination with a cover member having a hole therein, a post extended through said hole, said post having a shoulder, a gasket surrounding the post between the shoulder and the bottom of the cover member, a connector mounted on the upper part of the post and burned thereto, a sealing and locking collar rotatably mounted on the post between the connector and the cover member, said collar and connector having respectively on their adjacent surfaces a projection and a recess provided with inclined surfaces, the parts being so constructed that they may be assembled and



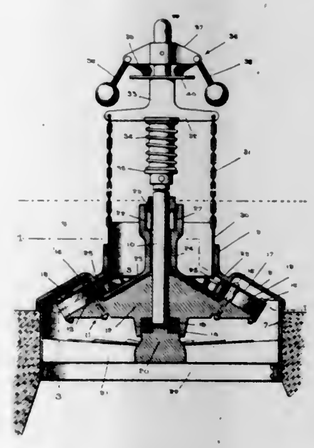
the connectors burned on when the projection is received in the recess and thereafter the collar may be engaged and rotated for causing the projection to ride out of said recess for forcing the shoulder of the post on which the collar is mounted against the gasket for effecting a tight seal.

1,509,584. PAPER-MACHINE COUCH ROLL. STEPHEN GROVER CHAMBERS, Oregon City, Oreg. Filed Apr. 11, 1923. Serial No. 631,474. 5 Claims. (Cl. 92—47.)



1. In a couch roll having a resilient covering, the combination of a roll provided with stub axles at its ends, a plate mounted for independent rotation about each of said axles, said plates being diametrically the same as, and constituting a continuation of the peripheral surface of, said couch roll, means for spacing the plates relatively from the roll ends so as to have no appreciable frictional bearing on such ends, the ends of the covering for said couch roll extending beyond the ends of the roll and engaged with said plate, whereby any creeping of the covering placed on the roll is rendered substantially uniform thruout its length.

1,509,585. EDGE TRIMMER FOR STONE BLOCKS. ELROY A. CHASE, Northfield, Vt. Filed Mar. 29, 1921. Serial No. 456,670. 9 Claims. (Cl. 51—86.)

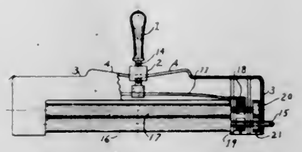


1. An edge trimmer for stone blocks having, in combination, a relatively narrow grinding wheel, a wheel shaft, driving means therefor, and means to support a block of stone adjacent said wheel and to move said stone in a curved path past said wheel in a direction substantially transverse to the axis thereof, the axis of movement of said stone being substantially removed from the plane of the grinding wheel along the axis of the wheel shaft.

1,509,586. EDGE-LINING MACHINE. ELROY A. CHASE, Northfield, Vt. Filed Mar. 29, 1921. Serial No. 456,671. 9 Claims. (Cl. 51—80.)

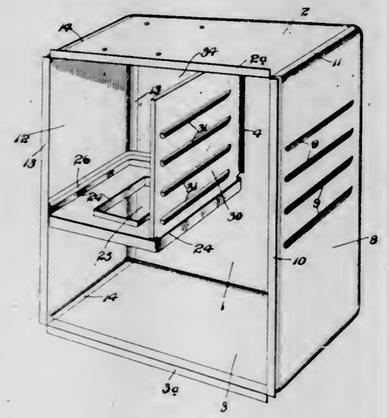
1. An edge lining machine having, in combination, a pair of grinding wheels, and means to raise and lower said wheels independently of each other, said means including a friction wheel and disc by adjustment of which the direction and speed of movement may be controlled.

1,509,587. WATER TURBINE. MELVILLE R. COLE, Monte Vista, Colo., assignor of one-half to William M. Vastine, Monte Vista, Colo. Filed Nov. 28, 1922. Serial No. 603,796. 5 Claims. (Cl. 253—166.)



1. A water turbine comprising a casing having an upper inlet, a vertical shaft in the inlet, a rotor carried by the shaft in said casing, a sleeve valve slidable in the inlet for controlling the flow of water to the rotor, means for suspending said valve from the shaft, and a governor carried by the shaft cooperable with said means for controlling the valve.

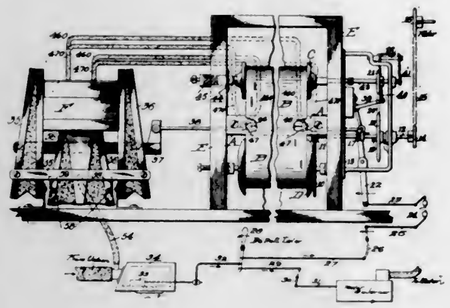
1,509,588. CLOTHES WRINGER. HARRY J. CRINER, Davenport, Iowa, assignor of one-half to Arthur G. Bush, Davenport, Iowa. Filed Jan. 24, 1922. Serial No. 531,362. 5 Claims. (Cl. 68—32.)



1. In a clothes wringer, the combination of a frame, wringer rolls mounted in said frame, a compression spring bar above said rolls, said frame having flanges extending

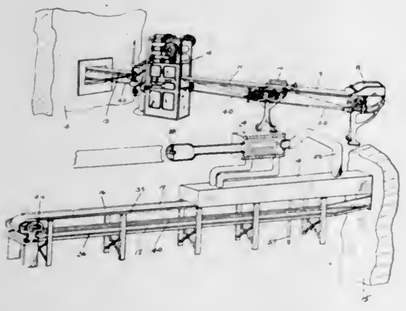
along the top thereof and having a slot between them, a block movable along said slot having lugs extending beneath said flanges, the latter being provided with notches

in which said lugs seat and a lever having one end secured to a fulcrum on said spring bar and extending through said block and provided with a handle.



1,509,589. REFRIGERATOR CONSTRUCTION. FRANK J. M. CURRAN, Grand Rapids, Mich. Filed Oct. 3, 1921. Serial No. 504,989. 4 Claims. (Cl. 62—89.)

3. In a refrigerator, a lining having a back, top, bottom and ends and an open front side, a frame having door openings therethrough secured at the open front of the lining, said frame including a vertical post located intermediate the sides of the frame and a horizontal rail located between the upper and lower sides of the frame and between the said post and a side of the frame, said post being vertically grooved on its rear side and said rail having a horizontal rearwardly projecting ledge on its rear side, a horizontal rib pressed inwardly, from the back of the lining in the same plane with said ledge, a vertical rib pressed inwardly from the back of the lining back of post, a pan supported on and between said ledge and horizontal rib, a vertical partition resting at one end of the pan, having its forward face received in the groove in the post and bearing at its rear portion against the vertical rib, and manually operable latching means attached to the back of the lining and adapted to releasably engage with the partition to hold the same against said vertical rib, said partition terminating short of the top of the lining at its upper end.

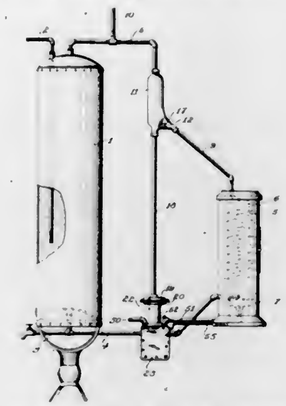


1,509,590. TRACKING MECHANISM FOR MUSIC SHEETS. THOMAS DANQUARD, New York, N. Y., assignor to Auto Pneumatic Action Company, a Corporation of New York. Filed Nov. 4, 1921. Serial No. 512,886. 8 Claims. (Cl. 84—140.)

1. The combination of an apertured tracker bar, means for drawing a perforated music sheet from a music spool forward over the tracker bar for playing, means for rotating the music spool for rewinding, an automatic tracking mechanism for maintaining the music sheet in proper

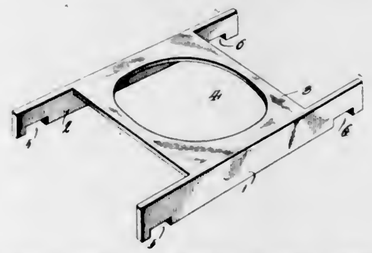
lateral position on the tracker while travelling forward, and means for bringing the music spool to central or intermediate position during the rewinding operation.

1,509,591. DEVICE FOR TREATING CHOCOLATE CONFECTIONS AND THE LIKE. JOHN E. DAVIS, Cincinnati, Ohio. Filed Dec. 1, 1922. Serial No. 604,243. 6 Claims. (Cl. 34—12.)



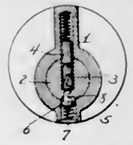
4. In a device of the class described the combination of an elongated table, a housing mounted on the table adjacent one end thereof, the housing having slots in its opposite ends, partitions within the housing extending between the table, the side and the top of the housing, the partitions having notches in their lower edges whereby to provide openings between the chambers formed in the housing, a belt conveyor supported by the table extending through the openings in the ends of the housing and through the openings between the chambers in the housing, means to move the belt through the chambers and over the table, and means within one of the chambers in the housing for varying the temperature interiorly and exteriorly of the chambers in the housing.

1,509,592. AUTOMATIC WATER HEATER. CORNELIUS JOSEPH DILLON and JOSEPH F. DILLON, Philadelphia, Pa. Filed Sept. 13, 1920. Serial No. 409,893. 15 Claims. (Cl. 236—32.)



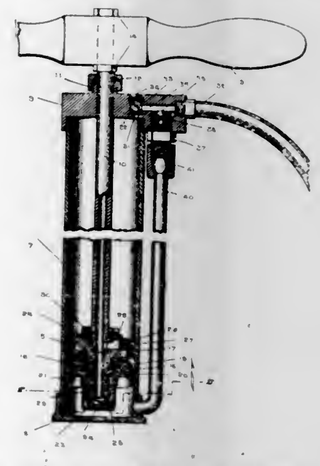
1. In a water-heating system, the combination of a circulating pipe, a burner, a reservoir interposed in the circulating pipe, an air chamber surrounded by said

reservoir, a pipe depending from and open to the air chamber, a valved passage connecting the circulating pipe



with said depending pipe, and means controlled by the pressure in the air chamber upon liquid in said depending pipe for regulating the flow of fuel to the burner.

1,509,593. STRAINER HOLDER. CHARLES J. FELGER, Churubusco, Ind. Filed Apr. 17, 1922. Serial No. 553,771. 1 Claim. (Cl. 248—30.)



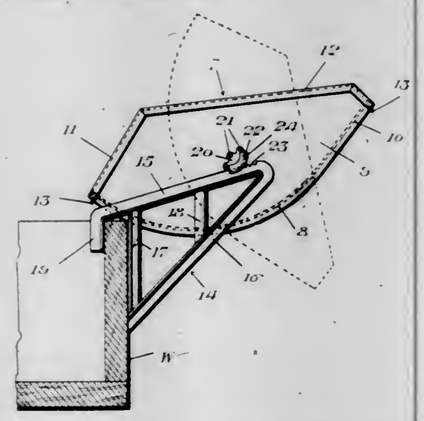
A strainer holder for the bowls of cream separators comprising a pair of spaced parallel disposed side supporting bars, a flat rectangular shaped body plate connected to and arranged between the side bars, and having an enlarged axial opening therein for the straining material, the flat side supporting bars depending from the side edges of the plate, the terminals of the bars extending beyond the ends of the plate and having their lower faces provided with notches for receiving the cream separator bowl, whereby shifting movement of the holder in relation to the bowl will be prevented.

1,509,594. PIN-TUMBLER LOCK. JOHN B. FREYSINGER, Stamford, Conn., assignor to The Yale & Towne Manufacturing Company, Stamford, Conn. Filed Aug 23, 1922. Serial No. 583,912. 1 Claim. (Cl. 70—47.)

In a pin tumbler lock, the combination of a cylinder, spring pressed drivers mounted in one side of the cylinder, a plug having bores, pin tumblers mounted in said bores, plungers mounted in the cylinder diametrically opposite the spring pressed drivers and each being greater in diameter than each of the bores in the plug, said plug having a longitudinal groove to receive said drivers when the plug shall have been given a one-half turn.

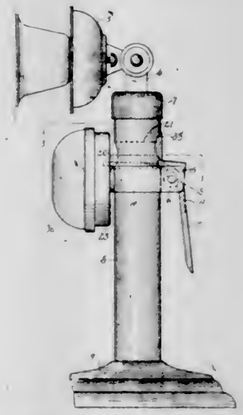
1,509,595. AIR PUMP. JOHN A. GROSVENOR, Monte Vista, Colo., assignor of forty per cent to William M. Vastine and forty per cent to James P. Veerkamp, both of Monte Vista, Colo. Filed June 23, 1923. Serial No. 647,334. 3 Claims. (Cl. 103—225.)

1. In a pump, a tubular air entry piston rod, a member secured on the inner end of said rod and having a tubular extension in communication with said rod, packing means on said extension, a nut screw-threaded on said extension for clamping the packing means against said member, a cap screw-threaded on said extension and bearing against said nut, a valve in said cap to seat against the end of said extension for preventing the reverse flow of air back through the extension and piston rod, said cap being slotted for the flow of air therethrough, said member having a port for the flow of air from said rod to the side opposite to said extension, and a check valve for closing said port to prevent the reverse flow of air back to said rod.



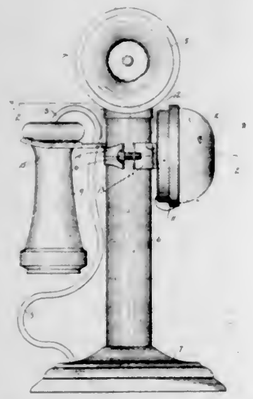
1,509,596. CORNCRIB, GRAIN BIN, AND OTHER SHEET-METAL STRUCTURE. HARRY C. HAMES, Columbus, Ohio, assignor to F. O. Schoedinger, Columbus, Ohio. Filed May 22, 1922. Serial No. 562,826. 2 Claims. (Cl. 98—26.)

2. A ventilator for sheet metal walls, comprising a pair of complemental lips projecting outwardly from a sheet metal wall and joined to said wall along semicircular boundary lines, said lips being provided with adjacent chord edges relatively spaced in a transverse direction so that the upper of said lips will extend outwardly along its chord edge beyond the corresponding edge of the lower lip, whereby an air inlet space or opening is produced between said edges having its ef-



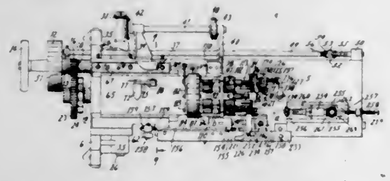
fective inlet area disposed solely in a transverse plane, and said lips being formed further to occupy positions lying entirely beyond the confining limits of the inner surface of said wall.

1,509,597. CAR UNLOADER. FRANCIS O. HELTZEL, Warren, Ohio. Filed Oct. 9, 1920. Serial No. 415,865. 3 Claims. (Cl. 214—38.)



1. A car unloader comprising a pair of brackets each having an inclined rail and means at the lower end of the rail for engaging over the upper edge of a car wall, a skip located between said brackets, and rockers secured to the sides of the skip and seated on said inclined rails for rolling motion, said brackets and rockers having teeth meshing with one another, and said rockers being located outwardly beyond the center of gravity of the skip so that the inner portion of the skip overbalances the outer portion, the bottom of the skip being concaved to seat on the upper edge of said car wall.

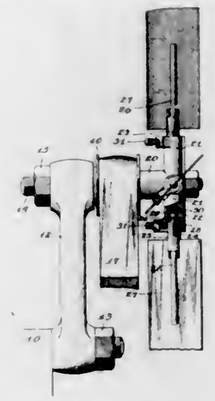
1,509,598. TOY DESK TELEPHONE. NORMAN N. HILL, East Hampton, Conn., assignor to The N. N. Hill Brass Co., East Hampton, Conn., a Corporation. Filed July 21, 1922. Serial No. 576,649. 3 Claims. (Cl. 46—46.)



1. In a toy desk-telephone, the combination with a base, of a standard rising therefrom, a transmitter surmounting the standard, a receiver connected by a cord with the toy, a bell offsetting from the upper portion of the standard, an operating-lever arranged in substantial alignment with the said standard and pivotally connected at its upper end therewith at a point opposite the said bell, and a bell-actuator extending transversely through the standard and connecting the said bell and lever, whereby the bell is operated by a closing and unclosing action of the hand upon the said lever, while the same retains its grasp upon the standard.

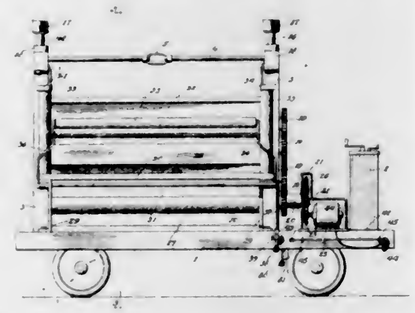
1,509,599. TOY DESK TELEPHONE. NORMAN N. HILL, East Hampton, Conn., assignor to The N. N. Hill Brass Co., East Hampton, Conn., a Corporation. Filed July 29, 1922. Serial No. 578,320. 2 Claims. (Cl. 46—46.)

1. In a toy desk-telephone, the combination with a base, of a standard rising therefrom, a transmitter surmounting the standard, a receiver connected by a cord with the toy, a two-part clamp clasping the upper portion of the standard, a bell mounted upon one member of the said clamp and furnished with an operating lever, and a receiver-hook originating upon one edge of the other member of the clamp, midway the length thereof, and extending horizontally outward therefrom at a right angle thereto.



1,509,600. MACHINE FOR PLACING RINGS ON BOBBINS AND THE LIKE. WINTHROP T. JACKMAN, East Corinth, Vt. Filed Feb. 21, 1923. Serial No. 620,368. 124 Claims. (Cl. 29—84.)

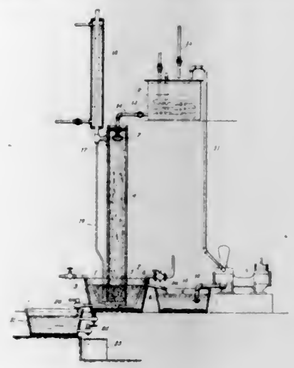
1. In a ringing machine of the class described, ring-locating means, bobbin-positioning means, and a spindle movable from an operative position relative to said first-named means to an operative position relative to said second-named means, and adapted to take a ring from said first-named means.



1,509,601. FAN. HARRY W. JOHNSON, ARTHUR F. JOHNSON, FREDOLPH JOHNSON, and CHARLES V. JOHNSON, Little Falls, Minn. Filed Sept. 11, 1922, Serial No. 587,541. Renewed Aug. 4, 1924. 4 Claims. (Cl. 170—162.)

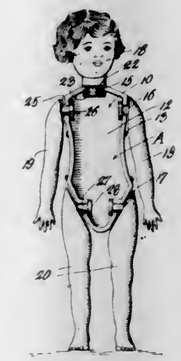
1. A fan for automobiles, comprising a hub, radiating blades extending therefrom, connections between the hub and each blade for radial and limited axial movement therebetween, the movement of each blade being independent of the movement of each other blade, means

operative under centrifugal force of the rotating fan for securing the blades in adjusted positions when the fan is being rotated.



1,509,602. STICKER PULLER FOR TIN MILLS. THOMAS W. MALONEY, New Castle, Pa. Filed Apr. 27, 1922. Serial No. 556,980. 7 Claims. (Cl. 29—17.)

6. In a machine for the purpose set forth, the combination of a supporting frame, rolls mounted therein to act upon sheets thereto, guiding brackets secured upon the frame adjacent said rolls, a sheet-receiving support slidably engaged with said brackets, a secondary sheet receiving support slidably fitted upon the first-mentioned support, a yieldable connection between the secondary support and the first mentioned support, a toggle having its lower member pivoted upon the supporting frame and having its uper member slidably engaged with the first-mentioned receiving support, means for bending and straightening said toggle, and a link connecting the toggle with the secondary sheet receiving support.



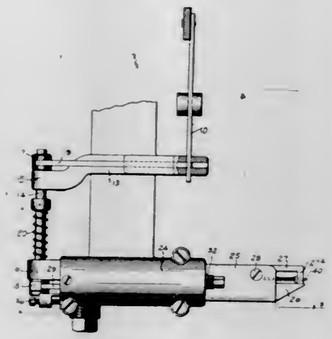
1,509,603. PROCESS AND APPARATUS FOR TREATING GASES. GAIL MERSEREAU, New York, N. Y., assignor, by mesne assignments, to Carbide and Carbon Chemicals Corporation, a Corporation of New York. Filed Sept. 16, 1918, Serial No. 790,080¾. Renewed Aug. 15, 1918. Serial No. 250,071. 16 Claims. (Cl. 260—166.)

1. The process which comprises bubbling a complex mixture of saturated and unsaturated hydrocarbon gases beneath the surface of a temperature controlling liquid, simultaneously but separately bubbling beneath said surface a halogen with which said unsaturated gas will

react to form a new product, allowing the volatile parts to rise through a rain of said liquid, and collecting the product separately from the unacted on gases.

1,509,604. DOLL. LULU A. MYERS, Bailey, Colo. Filed Nov. 27, 1922. Serial No. 603,665. 3 Claims. (Cl. 46—40.)

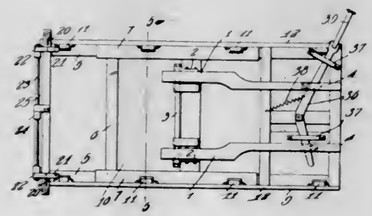
1. A doll comprising a hollow body including a front and a back section, means for detachably connecting the sections of the body together, the sections having mating bearing recesses formed in the meeting edges thereof, a head, arms and legs associated with the body, and inwardly extending bearing members carried by the head, arms and legs for fitting in said bearing recesses.



1,509,605. PROCESS OF MAKING ALUMINUM CHLORIDE. RALPH H. MCKEE, New York, N. Y. Filed Oct. 5, 1923. Serial No. 666,854. 6 Claims. (Cl. 23—13.)

1. The herein described process of making aluminum chloride which comprises treating aluminum containing materials with chlorine in the presence of an activated carbon.

1,509,606. WEFT-DETECTING MECHANISM. GEORGE K. NICHOLAS, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Nov. 20, 1920. Serial No. 425,509. 2 Claims. (Cl. 139—284.)

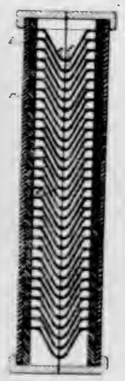


1. A weft detecting mechanism comprising a slide, a detecting member fixed to said slide, a second detecting

member pivotally mounted on said slide to move with said first detecting member and also relative thereto,

and a third detecting member mounted for longitudinal yielding movement on said second detecting member.

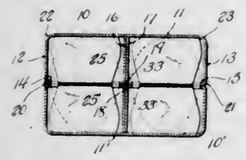
1,509,607. TRUCK BODY. BERT NOLL, Sistersville, W. Va. Filed June 22, 1923. Serial No. 647,108. 2 Claims. (Cl. 298—38.)



2. The combination with spaced beams for attachment to a supporting structure, of a body bottom hingedly connected to the beams, a lever carried by the bottom, keepers carried by the beams for engagement by the lever, yielding means for holding the lever normally in engaged position, and cooperating means upon the lever and body for holding the lever against movement relative to the body, a handle pivotally connected to one end of the lever, and means for holding the handle in depending position when the bottom is secured to the beams by the lever and keepers.

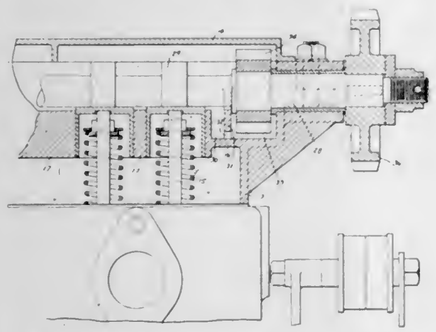
1,509,608. NONFERROUS ALLOY. ROLAND NORTHOVER, London, England, assignor to The Manganese Bronze and Brass Company, Limited, London, England. Filed Mar. 9, 1923. Serial No. 624,001. 1 Claim. (Cl. 75—1.)

An alloy for turbine blades and the like containing approximately 89 per cent copper, from 5 to 9 per cent nickel, from 3 to 1 per cent aluminium and from 2 to 0.5 per cent manganese.



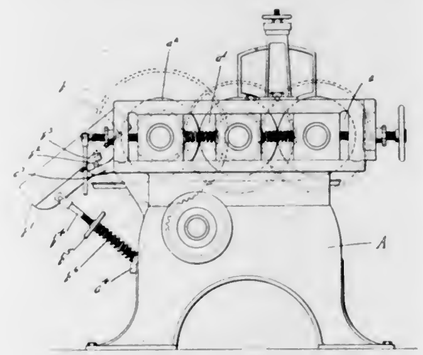
1,509,609. HIGH-TENSION FUSE. EMIL PFIFFNER, Budapest, Hungary. Filed May 13, 1924. Serial No. 713,107. 2 Claims. (Cl. 200—120.)

1. A high-tension fuse comprising in combination a fuse-wire and a multiple spark-gap which is electrically connected with the fuse-wire, the said multiple spark-gap consisting of a plurality of nestingly arranged electrodes insulated from one another and shaped to shield



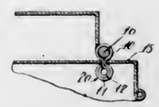
the fuse-wire and also shaped so that a plane perpendicular to the fuse-wire intersects more than one of the electrodes.

1,509,610. EGG CARTON. ALBERT RETZER, Milwaukee, Wis. Filed Mar. 23, 1923. Serial No. 627,029. 3 Claims. (Cl. 229—29.)



1. A carton open at both ends comprising an outer wall, a side wall continuous therewith, an inner wall continuous with said side wall and having apertures therein, a flap continuous with said inner wall, a second side wall continuous with said outer wall, a second inner wall continuous with said second side wall and having apertures therein, a second flap on said second inner wall and means for locking said flaps together.

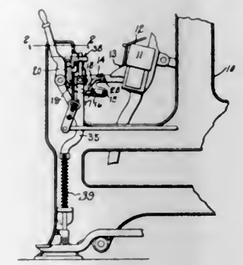
1,509,611. DUAL OVERHEAD CAM SHAFT AND OILING SYSTEM THEREFOR. ROBERT M. ROOF, Anderson, Ind., assignor to Laurel Motors Corporation, Anderson, Ind., a Corporation. Filed Sept. 27, 1923. Serial No. 665,222. 3 Claims. (Cl. 123—90.)



1. In an internal combustion engine, the combination of a cylinder head including valves with upwardly extending stems, a pair of overhead cam shafts, a support positioned therebetween, tappet means slidably supported by said support and interposed between said shafts and said valves and removable with said support without removing the valves, a pair of meshing gears on said shafts, and a cover for said support for enclosing said shafts and gears whereby said gears are adapted to spray lubricant upon said shafts and tappets.

1,509,612. KNIFE FOR INK MILLS. JOHN RUCKRIEGEL, Cincinnati, Ohio, assignor to The J. H. Day Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Dec. 10, 1921. Serial No. 521,493. 11 Claims. (Cl. 83—12.)

2. A scraper knife of the class described comprising a body, and blades extending from opposite sides of the body, and each blade having a surface in alignment with one of the opposite sides of the body, and each blade having a transversely extending scraping edge at its free end.

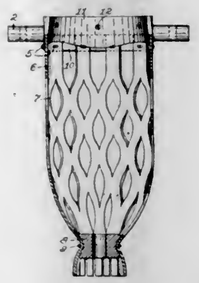


1,509,613. HINGE CONSTRUCTION. JACOB I. RUSSAKOV, Chicago, Ill. Filed Nov. 22, 1923. Serial No. 676,447. 4 Claims. (Cl. 16—128.)

1. In hinge construction, the combination of a base having a relatively long and narrow slot-like opening therethrough, a hinge pin-holder of sheet metal formed with a substantially tubular part wider than said slot-like opening and with two integral leaf-like parts extending from the tubular part and being positioned in said opening and being face to face thereat, said tubular part being tightly against one side of the base, each of said leaf-like parts being turned into a substantially tubular part to constitute locking means tightly positioned on the side of the base opposite to that on which is positioned the first-mentioned tubular part, and a hinge pin in one of said tubular parts.

1,509,614. CENTER STOP MOTION FOR LOOMS. EPPA H. RYON, Waltham, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Oct. 30, 1922. Serial No. 597,698. 2 Claims. (Cl. 139—375.)

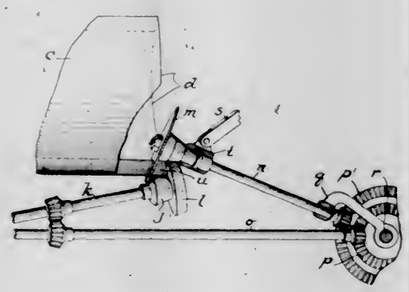
1. In a loom having a center filling fork, loom stopping mechanism including a bar yieldingly movable longitudinally, and means to latch said bar in inoperative position, in combination, a releasing mechanism comprising a rod extending crosswise of the loom, an arm mounted to swing, a releasing member connected to said rod and pivotally supported on said arm, said member being disposed adjacent said bar, means to move said member yieldingly



to inoperative position, and means rendered operative by said center filling fork effective to move said rod endwise and to thereby swing said member on said arm toward said bar to unlatch said bar and release said loom stopping mechanism.

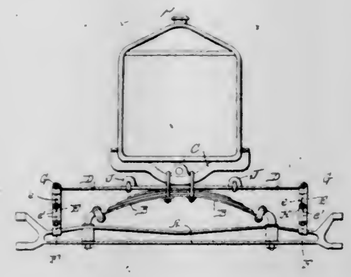
1,509,615. MULTIPLE-BLADE KNIFE SWITCH. IRA R. SELTZER, Waterbury, Conn., assignor to The Gordon Electric Manufacturing Company, Waterville, Conn., a Corporation. Filed Aug. 26, 1921. Serial No. 495,669. 1 Claim. (Cl. 200—172.)

In a knife-switch, the combination with a plurality of parallel pivotal switch-blades having integral upstanding rivets, of a coupling-plate of insulating material transversely-arranged upon the upper edges of the said switch-blades for the upward passage through it of the said rivets, which are upset upon its upper face, a cover-plate of insulating material superimposed upon the said coupling-plate and adapted to cover the swaged ends of the said rivets, a switch-handle, and means located between the switch-blades and their rivets for securing the said cover-plate and the said switch-handle to the said coupling-plate.



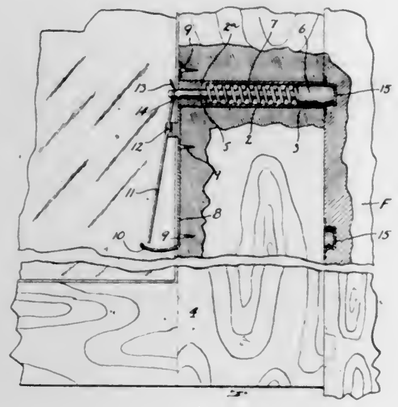
1,509,616. POCKET FOR POOL TABLES. HENRY W. SINKEY and WILLIAM L. TUTTLE, Shell Rock, Iowa. Filed Nov. 1, 1923. Serial No. 672,149. 1 Claim. (Cl. 46—12.)

In combination, a pool table pocket-sack, an arcuate member having a conical inner face, having oppositely projecting pins adapted to be removably secured upon a table, and having around its lower outer face an arcuate



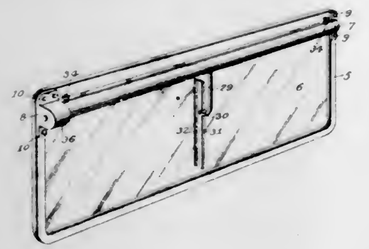
groove, an arcuate strip removably secured in said groove, the upper margin of said pocket-sack being detachably secured upon a depending portion of said arcuate strip, and a cushioning liner mounted removably upon and fitting the inner conical face of said arcuate member with its upper edge flush with the top of the latter.

1,509,617. METHOD OF CUTTING BARS FROM CENTRIFUGAL CASTINGS. KARL A. SODERSTROM, Philadelphia, Pa. Filed Apr. 17, 1923. Serial No. 632,716. 7 Claims. (Cl. 29—148.)



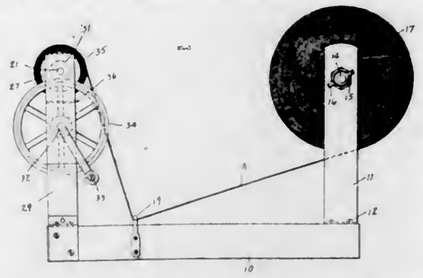
1. The method of producing bars consisting in spirally cutting a centrifugally cast hollow ingot.

1,509,618. SHOCK ABSORBER AND STABILIZER FOR MOTOR VEHICLES. CHARLES WALDERMAR NORMAN SORENSEN, Hamilton, New Zealand. Filed June 4, 1923. Serial No. 643,359. 1 Claim. (Cl. 267—45.)



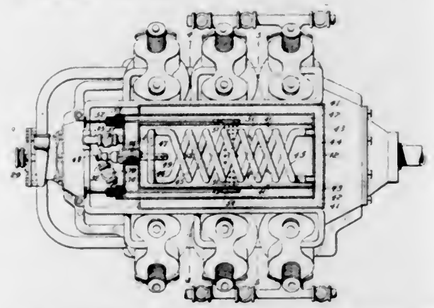
In a vehicle, the combination, with the body, an axle therebeneath, and a main bow spring interposed between the two and connected at the top of its bow to the body and its ends to the axle; of an auxiliary shock-absorbing and stabilizing spring interposed between the main spring and the body and arranged parallel with the former and the axle and in the vertical plane thereof; and a depending coupling link between each end of the auxiliary spring and the adjacent axle end but free of connection with the main spring; each link embodying upper and lower members having their inner ends overlapped, the upper member having its outer end formed to receive the adjacent end of the auxiliary spring and fastened to the same, and the lower member having its outer end clamped to the axle, the inner end of one member of the link being provided with a longitudinal slot and the inner end of the other member being provided with a longitudinal series of bolt holes, and a bolt interchangeably engaged in said holes and projecting through said slot to adjustably connect the overlapping ends of the two members together and thereby vary the length of the link and the tension of the auxiliary spring.

1,509,619. COMBINATION SASH LIFT AND LOCK. LEE R. TALBERT, Los Angeles, Calif. Filed Nov. 16, 1922. Serial No. 601,307. 3 Claims. (Cl. 292—173.)



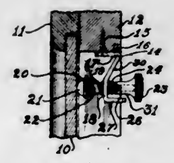
1. A sash fastening device comprising a shell adapted to be mounted in a sash, a bolt having a shank slidably mounted in said shell and provided with a head to engage a complementary keeper in the contiguous window frame, means for normally pressing the bolt to the locking position, said means comprising a compressed spring surrounding the shank of the bolt and confined in the shell, and a substantially plane lever mounted on the sash and having a fork connected to the shank of the bolt so as to withdraw the bolt from locking position.

1,509,620. WINDSHIELD CLEANER. HOMER L. TAYLOR, Bridgeport, Conn. Filed Feb. 21, 1924. Serial No. 694,279. 3 Claims. (Cl. 15—253.)



1. A wind shield cleaner comprising spaced apart brackets each having a hub, said hubs extending toward each other, a housing tube having its opposite ends fitted on said hubs, a carrier shaft in said tube and having its opposite ends mounted in said hubs, means for rotating said shaft, oppositely extending feed groove portions on said shaft, a carrier slide adapted to ride in said feed groove portions, a wiper arm with wiper pad carried by said carrier slide and adapted to wipe a wind shield glass, the housing tube having a longitudinal slot allowing passage of said wiper arm, and set screws in the end portions of said housing tube and engaging said hubs, whereby said slot can be given any desired adjustment with respect to the wind shield and the axis of said wiper shaft, for the purpose described.

1,509,621. PAPER AND FABRIC ROLLER. CHARLES E. TOMPKINS, Tipton, Ind. Filed Feb. 23, 1923. Serial No. 620,672. 3 Claims. (Cl. 242—56.)

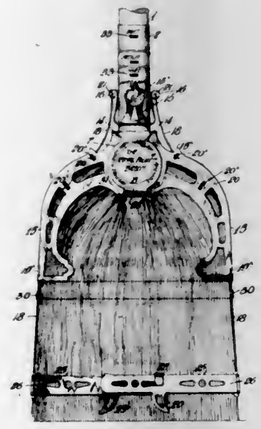


1. In a roll winder, the combination of a rotatable shaft, an apertured plate positioned at one end upon said shaft, a head slidably supported upon the other end of said shaft, and a member supported by said head and receivable by said apertured plate for positioning it adjacent said shaft.

1,509,622. POWER PLANT. WALTER E. TRENT, Washington, D. C., assignor, by mesne assignments, to Trent Process Corporation, Washington, D. C., a Corporation of Delaware. Filed Apr. 17, 1919. Serial No. 290,797. 44 Claims. (Cl. 60—46.)

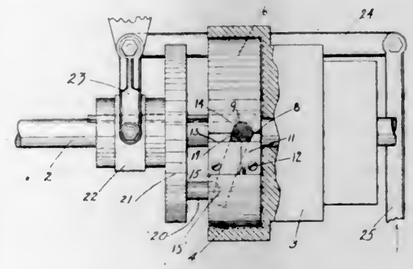
1. A generator of the character described having a combustion chamber therein for burning a combustible fuel, said generator also having a fluid chamber adjacent the combustion chamber, means for controlling the passage of a fluid to the fluid chamber and to the combustion chamber whereby a fluid energy of intermixed steam and gaseous products of combustion may be produced in the combustion chamber, or independent separated energies of products of combustion and steam may be produced in said combustion and fluid chambers, and means for carrying said energies from the generator for independent cylinder expansion.

1,509,623. ANTIRATTLER. RUDOLPH J. VOYT, Cicero, Ill. Filed Feb. 28, 1923. Serial No. 621,698. 5 Claims. (Cl. 292—74.)



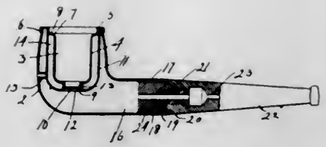
1. In a device for preventing windows from rattling, a support attached to the window frame, an element carried by said support, and springs of different tension on said element on opposite sides of said support to cause the element to resiliently contact the window.

1,509,624. ALLOY. RICHARD WALTER, Dusseldorf, Germany. Filed June 26, 1920. Serial No. 392,081. 5 Claims. (Cl. 75—1.)



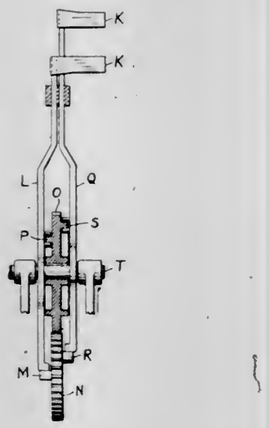
1. As a new product of manufacture an acid-proof high-silicon alloy, containing an admixture of boron in effective amounts.

1,509,625. BROOM-TENSIONING DEVICE. STEPHEN G. WILSON, Philadelphia, Pa. Filed Mar. 16, 1922. Serial No. 544,139. 9 Claims. (Cl. 15—169.)



1. In a broom tensioning device, a longitudinally adjustable band encircling the sweeping part of the broom, straps at the edges of the broom and connected with said band, supporting means for said straps and means co-operating with said straps to permit their movement in one direction and to restrict their movement in an opposite direction.

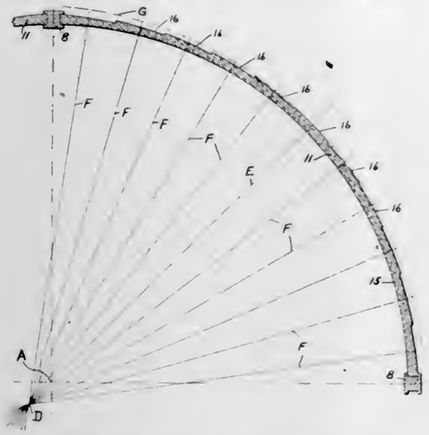
1,509,626. CLUTCH. ALBERT WORCESTER, Los Angeles, Calif. Filed Aug. 25, 1922. Serial No. 584,262. 5 Claims. (Cl. 192—78.)



1. A clutch comprising, in combination, an expansible clutch member having a circular periphery, a device having a clutch chamber and in which said member is expansible to frictionally engage said device, said member including a split annulus with a rigid end, and means for expanding said annulus, said means including a semi-cylindrical rocking element reactive between the rigid and the free end faces of the split annulus, said element having a shoulder engaging the yielding end of the annulus and having a rocking bearing in the rigid end of the annulus.

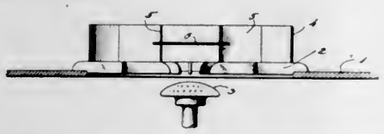
1,509,627. TOBACCO PIPE. BENJIMAN BANK, Philadelphia, Pa. Filed Sept. 10, 1920. Serial No. 409,359. 3 Claims. (Cl. 131—12.)

3. A tobacco pipe including a bowl providing a chamber, an inner casing suspended within said bowl and providing a tobacco chamber in direct communication with the bowl chamber and an intermediate casing surrounding the inner casing within the bowl and spaced from the walls of said inner casing and bowl to provide an intermediate air chamber for communication with the atmosphere at two separated points.



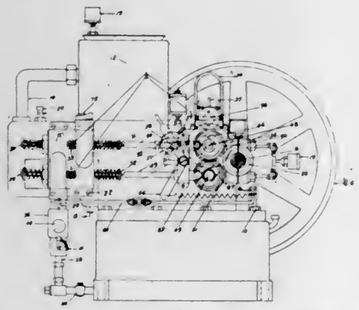
1,509,628. COMBINED MAT AND BLENDING DEVICE. SAMUEL BARDY, Philadelphia, Pa., assignor to Bardy Motion Picture Machine Company, Philadelphia, Pa., a Corporation of Delaware. Filed June 5, 1922. Serial No. 566,173. 6 Claims. (Cl. 88—16.8.)

3. A mat for a motion picture machine comprising separate plates with an exposing opening between the adjacent edges of the plates, and a separate cam mechanism for reciprocating each plate, the cam mechanisms being arranged to move the plates relatively slowly on their forward movement and rapidly on their return movement and to cause the plates to move in unison during substantially their entire forward movement and to successively move the plates on their return movement.



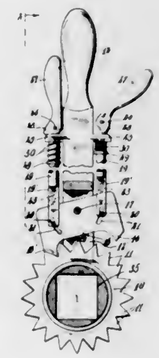
1,509,629. RECTIFYING LENS. SAMUEL BARDY, Philadelphia, Pa., assignor to Bardy Motion Picture Machine Company, Philadelphia, Pa., a Corporation of Delaware. Filed June 5, 1922. Serial No. 566,174. 4 Claims. (Cl. 88—16.8.)

1. A lens for rectifying the movement of a continuously moving film of a motion picture machine, comprising a lens formed of one piece of glass and arranged to be continuously rotated across the axis of an objective lens system, one of the surfaces of the lens being of spherical form and whose center is on the axis of rotation and in the plane of the axis of the objective lens system and the other surface of which is composed of a number of sections of spheres, each having a center



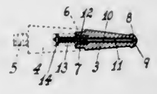
different from the centers of all the other spheres, all of said centers being in the plane of the axis of the objective lens system.

1,509,630. HEAT DEFLECTOR FOR GAS BURNERS. LLOYD W. BATES and EZRA H. TRAUT, Detroit, Mich. Filed Mar. 7, 1923. Serial No. 623,362. 3 Claims. (Cl. 126—215.)



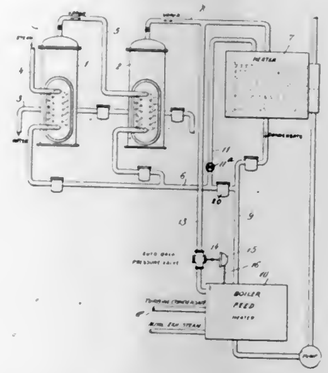
1. A device for the purpose described comprising a utensil supporting member adapted to be supported above a gas burner, said member including a central deflecting plate intermediate of the height of said supporting member and spaced from the upper horizontal surface of the member which forms a seat for the utensil.

1,509,631. TWIN MOTOR. FRANK A. BENTZLIN, Andrus, Wis. Filed Dec. 6, 1922. Serial No. 605,276. 13 Claims. (Cl. 123—57.)



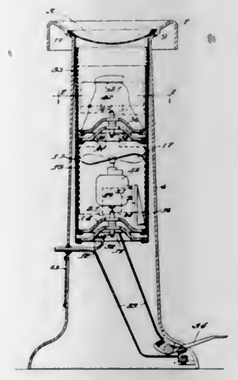
7. In an internal combustion motor of the four cycle type, the combination of a plurality of cylinders, a housing secured to said cylinders provided with inlet, exhaust, and a plurality of ignition chambers; valves in said housing opening each ignition to the inlet and exhaust chambers, each cylinder being provided with a port communicating with an ignition chamber, a push rod for operating an exhaust valve, a member projecting from said rod, and a pivoted cam member adapted to engage said projecting member and raise and hold the exhaust valve off from its seat.

1,509,632. WRENCH. GIULIO BRACCI, Detroit, Mich. Filed Nov. 15, 1923. Serial No. 674,864. 4 Claims. (Cl. 81—62.)



1. A wrench comprising a disk-like head having star teeth on its periphery, a handle pivoted to said head, a double ended pawl pivoted midway between its ends to said handle, a pair of slots formed in said pawl one near each end thereof, a pair of rods extending along opposite sides of said handle and carrying on one end elements adapted to engage in the said slots, springs connected to said rods and to the ends of said pawl and adapted to move the ends to which they are connected away from the said head, and means for setting said rods in longitudinally adjusted positions on the said handle.

1,509,633. TOBACCO-SMOKING PIPE, CIGARETTE AND CIGAR HOLDER. WILLIAM T. BRADSHAW and GUSTAVE EDWARD SCHMIDT, Oakland, Calif. Filed Mar. 21, 1921. Serial No. 453,945. 1 Claim. (Cl. 131—12.)

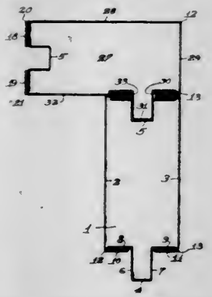


In a tobacco smoking pipe, cigarette or cigar holder, a mouth-piece provided with a longitudinal conduit, said conduit being enlarged near its inner end forming a shoulder, a valve seat at the outer end of the mouth-piece, a valve adapted to normally rest in said valve seat, a valve stem connected to the valve and extending longitudinally of said conduit, a nut on the inner end of said valve stem, said valve stem and nut projecting from said mouth-piece, a spring interposed between said nut and said shoulder whereby the valve is normally held in closed position, the pipe stem being provided with a socket at its outer end to provide a housing for the projecting portion of said valve stem and nut, and means whereby the mouth-piece may be detachably connected to a pipe stem.

1,509,634. COMBINED EVAPORATOR AND FEED-WATER HEATING SYSTEM. STANLEY BROWN, Garden City, N. Y., assignor to The Griscom Russell Company, New York, N. Y., a Corporation of Delaware. Filed Jan. 26, 1920. Serial No. 353,998. 9 Claims. (Cl. 257—30.)

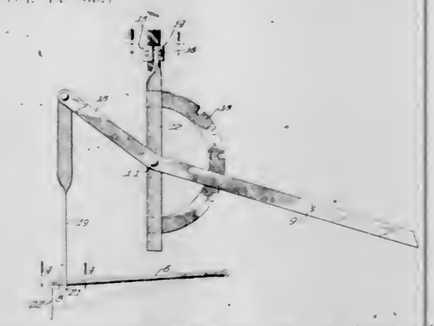
1. In a power plant system, the combination of a boiler feed heater at relatively low pressure for receiving the returns from the steam-utilizing apparatus of an evaporator plant for making up the fluid loss from the power plant system, means for condensing the vapor from said evaporator system comprising a condenser, the pressure in said condenser being appreciably higher than that in said boiler feed heater, a vapor line leading thereto, and a branch from said vapor line to said heater, and means controlled by the temperature of the heater for regulating the quantity of vapor delivered through said branch line for maintaining said heater at a predetermined temperature.

1,509,635. LAVATORY FIXTURE. STANDISH S. BUDLONG, Rockford, Ill. Filed May 23, 1921. Serial No. 471,792. 11 Claims. (Cl. 219—39.)



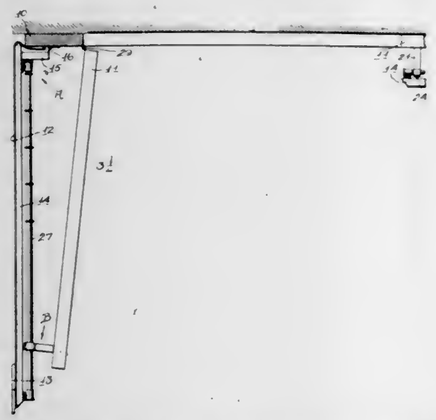
1. In a lavatory fixture, the combination of a pedestal, a heater and a blower unit therein, each unit having a tubular casing and an electric connection, said casings forming an air channel through which a current of air may be delivered upwardly, and an electric circuit including said connections, and permitting removal of said units with their respective electric connections.

1,509,636. FUSED BIFOCAL LENS. LUCIAN W. BUGBEE, Indianapolis, Ind., assignor to Franklin Optical Company, Indianapolis, Ind., a Corporation. Original application filed May 5, 1921, Serial No. 467,141. Divided and this application filed Apr. 12, 1923. Serial No. 631,531. 4 Claims. (Cl. 88—54.)



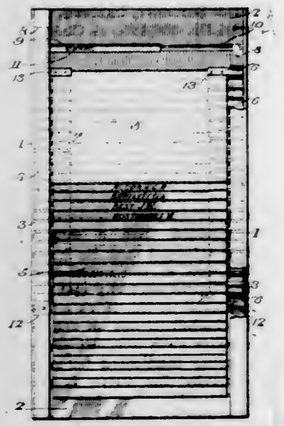
1. A lens for eyeglasses and spectacles having a distance field of uniform power, and a near vision field of gradually increasing power from its line of juncture with the distance field.

1,509,637. WALL CONSTRUCTION. WILLIAM J. BURTON, Detroit, Mich. Filed Jan. 25, 1922. Serial No. 531,625. 5 Claims. (Cl. 189—34.)



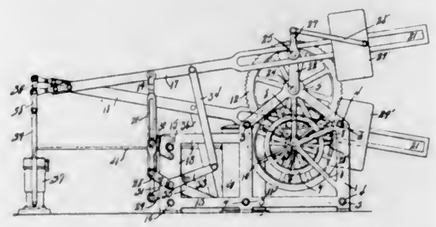
1. A hollow sheet metal wall comprising a series of sections or panels each having two substantially parallel side members and separate end members formed, one with a tongue portion and the other with a groove to receive the tongue on an adjacent section, the side and end members of each section being interlocked along their joining edge portions.

1,509,638. CLUTCH-OPERATING ATTACHMENT FOR TRACTORS. GUSTAVE B. CARLSON, Winnebago, Ill. Filed Mar. 11, 1922. Serial No. 543,114. 1 Claim. (Cl. 74—39.)



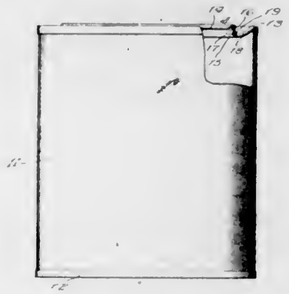
In a tractor, in combination with the clutch pedal and a frame part of the tractor, a clutch-operating attachment comprising a bracket having a notched sector and shaped to provide a jaw adapted to fit against one side of said frame part and to support the bracket from an overhead position in operative relation to the clutch pedal, a jaw complemental to the first jaw and adapted to fit against the opposite side of said frame part, means for clamping said jaws together for detachably securing the bracket to the interposed frame part, a lever pivoted on the bracket and having a latch connection at its operating end with the notched portion of the sector, and means connecting the operated end of the lever with the clutch pedal so as to operate the latter for disengaging the clutch by movement of the lever in one direction and permitting the clutch pedal to be independently operated for disengaging the clutch when said lever is in the clutch-engaged position.

1,509,639. DRAPERY HANGER FOR CASEMENT WINDOWS. JAMES J. CONDON, Robinsdale, Minn. Filed Mar. 6, 1922. Serial No. 541,317. 2 Claims. (Cl. 156—19.)



1. The combination with a window frame and a sash hinged horizontally thereon, of a cornice board correspondingly hinged on the frame and overreaching said sash, a rod on the inner side of the cornice board and a compensating bracket supplying a tie between the sash and cornice board and serving to support the free end of the latter, said bracket including an arm anchored at its lower end on the sash, also a block swiveled to turn horizontally on the upper end of said arm, said block having a bore therein for slidably receiving said rod, the horizontal pivoting of the block providing for free sliding movements of the same on the rod without the necessity of play between said parts.

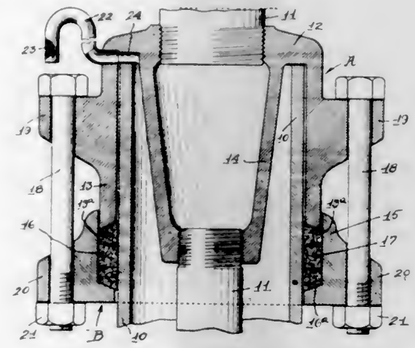
1,509,640. CARD-SYSTEM FILING DEVICE. WILLIAM G. CONOVER, Philadelphia, Pa. Filed Apr. 11, 1919. Serial No. 289,220. 7 Claims. (Cl. 129—16.)



1. In a card system filing device, a journal for a card adapted to extend laterally therefrom and permit the card to be rotatable and slidable on its mounting, and a clip from which said journal extends, said clip being adapted to be attached to the card, said clip being formed with means which are adapted to penetrate the card and fix the clip thereto.

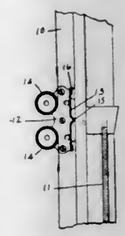
1,509,641. POWER JACK FOR COMPRESSORS AND THE LIKE. WILLIAM L. BAYTON, Fort Worth, Tex. Filed Sept. 19, 1922. Serial No. 589,107. 4 Claims. (Cl. 74—14.)

1. A power jack having a frame, a driven shaft journaled in said frame, a pair of fulcrums carried by said frame, a pair of walking beams mounted on said fulcrums and operatively connected together, a power transmitting shaft journaled in said frame, slidable weights mounted on said walking beams, cranks rigid with said power shaft and operatively connected to said weights, and gearing driven by said driven shaft for operating said cranks for actuating said walking beams and said weights.



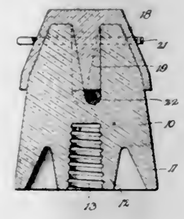
1,509,642. CONTAINER. JOHN PHILIP FLICK, Hamilton, Ohio, assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Nov. 3, 1921. Serial No. 512,464. Renewed Aug. 15, 1924. 6 Claims. (Cl. 220—42.)

1. A container, comprising a body, a top part provided with an annular channel and an upstanding interior flange, and a cap adapted to be secured upon said flange, said annular channel being provided with an upward identation 18 extending into said upstanding flange, and said cap being formed with a depending flange 16 which encounters said indentation on application of the cover.



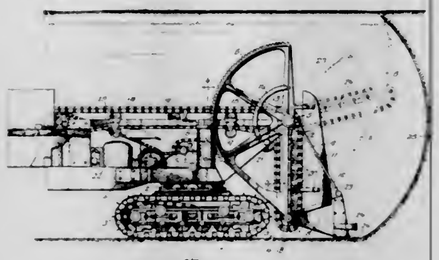
1,509,643. WELL CAP. L. ALBIN FORSBERG, Braham, Minn. Filed Apr. 20, 1923. Serial No. 633,426. 3 Claims. (Cl. 166—14.)

1. In a device of the class described, a cap comprising a head, a depending annular flange and a depending axial pipe coupling both integral with said head, said coupling reaching downward as far as the lower edge of said flange, a follower, a compressible sealing ring interposed between said flange and follower and means



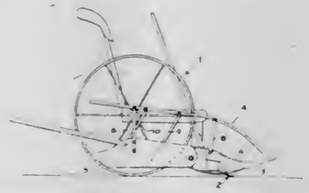
for clamping the cap and follower together to grip the ring between the same and against a casing to which the cap is applied.

1,509,644. DOUBLE ROLLER-SHADE AND SHIELD SUPPORTING BRACKET. WILLIAM H. FORSE, Jr., Anderson, Ind. Filed Jan. 16, 1922. Serial No. 529,464. 2 Claims. (Cl. 156—10.)



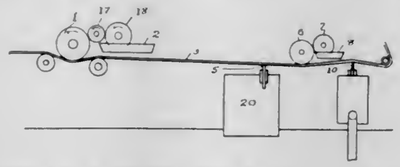
1. The combination with a plurality of roller shades, and a shield having flange means at one edge, of a plurality of shade supporting brackets having sockets for supporting said shades, a plurality of pairs of cooperating projecting portions on each bracket for detachably supporting the shield, and flange means thereon cooperating with said projecting portions for limiting the detachable movement.

1,509,645. INSULATOR. MARVIN J. FOSS, Faribault, Minn. Filed Feb. 2, 1922. Serial No. 533,619. 2 Claims. (Cl. 173—314.)



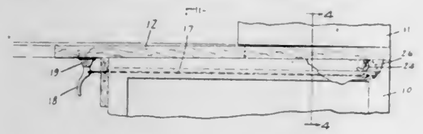
1. In an insulator, the combination of a body having a zig-zag wire receiving slot therein, and a cap for the body having a zig-zag rib fitting in said slot for limiting a wire against displacement from the slot.

1,509,646. TRENCH AND TUNNEL EXCAVATOR. JAMES C. FRENCH, Cleveland, Ohio, assignor, by mesne assignments, to E. C. Austin Machinery Company, a Corporation of Illinois. Filed May 15, 1918, Serial No. 234,072. Renewed Aug. 15, 1924. 12 Claims. (Cl. 214—90.)



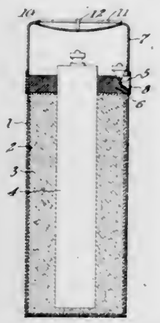
1. In an excavator, the combination of a body, a segment mounted to oscillate about a horizontally disposed axis on the front end of said body, a pinion on the body to operate the segment, a scoop pivoted on the segment to tilt toward and away from said axis, an endless conveyer, means on the body to support one portion of said conveyer, means on the segment to support the other portion of the conveyer, so that the conveyer will carry away the discharge from the scoop, a connection on the body to operate said conveyer, a truck having traction devices, and a turn table to support said body on said truck, so that said scoop is movable back and forth sidewise while in operation.

1,509,647. ATTACHMENT FOR MOWING MACHINES. CHRIS P. GEORGE, San Luis Obispo, Calif. Filed Sept. 30, 1922. Serial No. 591,622. 1 Claim. (Cl. 56—320.)



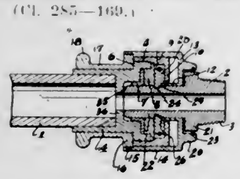
The combination of a mowing machine having a cutting device extending outwardly therefrom and provided with a mould board extending rearwardly from the outer end of the cutting device, of a guide member extending in substantially parallel relation to and well above the mould board and with its forward end disposed downwardly and in front of the cutting device, means for connecting the guide member with the cutting device and means of connection between the mould board and cutting device, and deflecting arms extending downwardly and inwardly from the guide member.

1,509,648. ART OF DE-INKING PLATE PRESS WIPERS. CHARLES J. GUTHERLET, Philadelphia, Pa. Filed June 2, 1923. Serial No. 642,991. 3 Claims. (Cl. 101—168.)



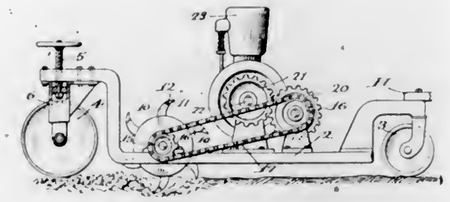
1. The art of removing from the porous wiper of a plate press the accumulated ink, which consists in oiling the back face of the wiper substantially without oiling the front face thereof until the wiper becomes permeated with oil and then removing the ink from the front face of the wiper mechanically.

1,509,649. AUTOMATIC LOCKING TABLE TOP FOR KITCHEN CABINETS OR THE LIKE. JACOB P. HAMEETMAN, Frankfort, Ind. Filed July 14, 1922. Serial No. 574,986. 1 Claim. (Cl. 45—16.)



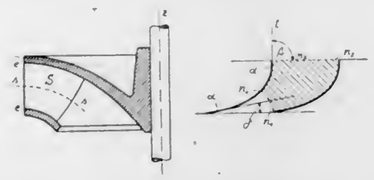
A releasable latching construction for two relatively movable and slidably supported members, comprising a transversely extending rod carried by one of said members and having its ends bent to form arcuate portions adapted to engage the other member, and a crank portion intermediate said arcuate portions and integral with said rod for rocking said arcuate portions into operative engagement with the other member.

1,509,650. HERMETICALLY SEALED DRY CELL. GEORGE W. HEISE, Elmhurst, N. Y., assignor to National Carbon Company, Inc., a Corporation of New York. Filed June 30, 1921. Serial No. 481,715. 9 Claims. (Cl. 201—88.)



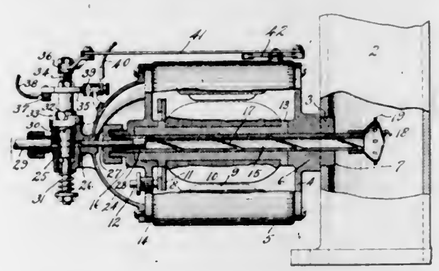
1. A dry cell containing a material capable of reacting chemically with a substance in said cell to produce a reduction of pressure in said cell.

1,509,651. COUPLING. WILLIAM CARL IETTGEN, Los Angeles, Calif. Filed June 2, 1920. Serial No. 385,965. 8 Claims. (Cl. 285—169.)



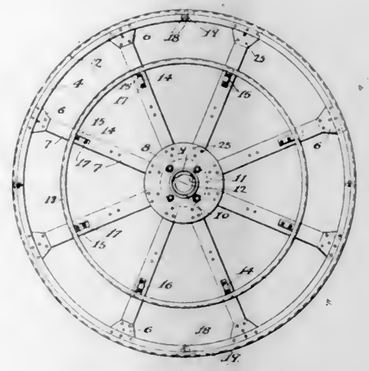
1. A coupling comprising a member having a socket and engaging means carried by said member and yieldably urged outwardly into said socket, a collar slidable upon said member and extending over the end of said socket with a sleeve extending rearwardly within said socket and arranged to engage said engaging means so as to retract the latter within said socket by longitudinal rearward movement of said collar upon said member, and a second member received within said socket and having a groove adapted to be engaged by said engaging means.

1,509,652. SOIL PULVERIZER. JOHN HAMPTON JOHNSON, Imperial, Calif. Filed July 27, 1923. Serial No. 654,161. 2 Claims. (Cl. 97—215.)



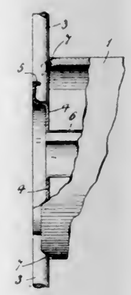
1. In a pulverizer, a rotary instrument comprising radial teeth, discs having recessed sides to receive the teeth, a driving axle extending through the discs, and means for holding the discs upon the axle to hold the teeth.

1,509,653. RUNNER WHEEL FOR TURBINES, ETC. VICTOR KAPLAN, Brunn, Czechoslovakia. Filed Sept. 1, 1921. Serial No. 497,746. 1 Claim. (Cl. 253—96.)



In a runner for water turbines, centrifugal pumps and the like, blades so shaped that the inlet or outlet angle for the greater part of the blade surface is less than $\frac{1}{4}$th of the outlet and inlet angle respectively, measured on the appertaining stream-lines, and that the total blade area is less than $1\frac{1}{2}$ times the area of the surface of revolution generated by the rotation of the runner inlet or outlet edge around the runner axis.

1,509,654. PRIMER. GLEN L. KARR, Royal Oak, Mich., assignor of one-third to Charles L. Butterfield and one-third to Jonas Sawdon, both of Grand Ledge, Mich. Filed Aug. 7, 1922. Serial No. 580,105. 11 Claims. (Cl. 123—187.5.)

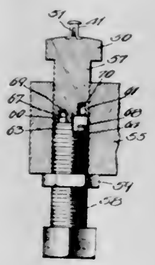


1. In a priming device for an internal combustion engine, an intake manifold, an atomizing head in said intake manifold, a motor for revolving said atomizing head, and fuel supply means to said head extending axially of said motor.

1,509,655. BAND WHEEL. OTTO B. KIBELE, Los Angeles, and JOHN T. SCOTT, Sierra Madre Camp, Calif. Filed May 10, 1923. Serial No. 637,949. 2 Claims. (Cl. 64—17.)

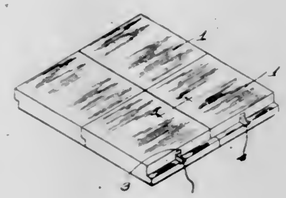
1. In a band wheel, a rim formed of a plurality of sections of channel iron each having an arcuate form and provided with inclined, channel-forming flanges, the inwardly inclined flanges thereof being secured together to reinforce the crown of a wheel having a central, circumferential, reinforcing fin formed of the inclined flanges secured together.

1,509,656. WIRE REEL. LAURENCE S. LACHMAN and EDWARD FELDA, New York, N. Y. Filed Feb. 28, 1922. Serial No. 539,900. 9 Claims. (Cl. 242—70.)



2. A metal reel comprising a drum, a hub disk or plate, wire spoke elements and wire rim, said spoke elements welded to said rim and welded at the center to the inside of the hub disk and cross welded to the outer edge of said drum.

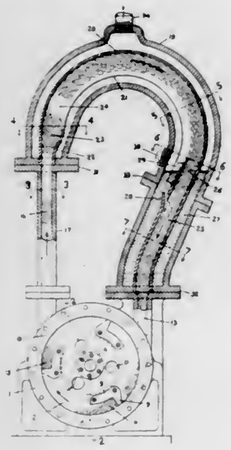
1,509,657. TOWEL RACK. MAURICE LACHMAN, New York, N. Y. Filed Feb. 2, 1923. Serial No. 616,492. 4 Claims. (Cl. 45—32.)



1. A towel rack bar the upper or towel supporting side of which has a longitudinally extending edge or corner forming a part of a helical curve around the longitudinal axis of the bar, the ends of said bar being fixed against rotation.

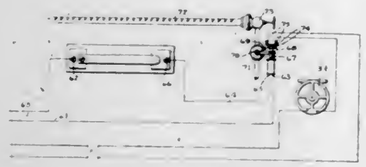
1,509,658. RELINING DEVICE FOR BRAKE BANDS AND THE LIKE. JAMES R. LEWIS, Chicago, Ill., assignor, by mesne assignments, to Inland Accessories Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 2, 1920. Serial No. 414,322. 2 Claims. (Cl. 218—3.)

2. In a tool of the class described, the combination of a base having a hole therein adapted to receive the stem of an anvil, an anvil having a stem projecting loosely into said hole, an adjusting screw in the base coaxial with said hole, the end of the screw having a step construction providing a projection on one side thereof, the stem of the anvil having a step construction including a projection on one side thereof, the two step constructions substantially interfitting with each other with said projections side by side, the arrangement being such that by partially withdrawing the stem of the anvil and turning it on its axis the projections will abut each other end to end.



1,509,659. PAVING BLOCKS. MILO V. LUCHICH and LAWRENCE OSTERMAN, Chicago, Ill. Filed Apr. 3, 1922. Serial No. 549,003. 2 Claims. (Cl. 94—13.)

1. A pavement, comprising a plurality of rabbeted blocks, each having hooked members projecting from the rabbets thereof and in the plane of the blocks, the hooks of each block adapted to interengage those of adjacent blocks to lock the same against separation in the plane of the pavement.



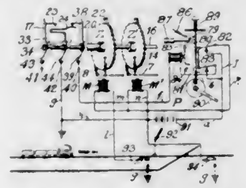
1,509,660. AIR COMPRESSOR AND SEPARATOR. GEORGE MCKERAHAN, Erie, Pa. Filed Aug. 13, 1923. Serial No. 657,161. 7 Claims. (Cl. 230—14.)

1. In a fluid separator for use with air compressors using liquid pistons, or for other purposes, a longitudinally curved conduit into which the fluids are discharged; a receiver inclosing or forming part of said conduit; an opening or openings on the radially inner side, with respect to its longitudinal curvature, of said conduit through which the lighter fluid is delivered to the receiver; a pipe connected to the discharge end of said conduit and leading to the exterior of the inclosing receiver; a throat at the junction of said conduit and pipe, said throat being adapted to be always completely filled by the inflowing stream of heavier fluid and thus closed against entrance of the lighter fluid; a body of the heavier fluid stored in

the aforesaid receiver; an inlet below the surface of the stored fluid connecting this fluid with the interior of the said pipe; and a pipe leading from the receiver for conveying away the lighter fluid.

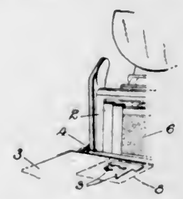
1,509,661. IRONING MACHINE. LEO POTTER, New York, N. Y., and ROBERT J. MONTERE, Newark, N. J.; said Montere assignor to said Potter. Filed Aug. 25, 1921. Serial No. 495,336. 15 Claims. (Cl. 68—9.)

1. In an ironing machine, a feeding element, driving means therefor, a heating element adapted to coact with the feeding element to iron the material and means for automatically stopping the feed of the material when the heating element reaches a predetermined temperature.



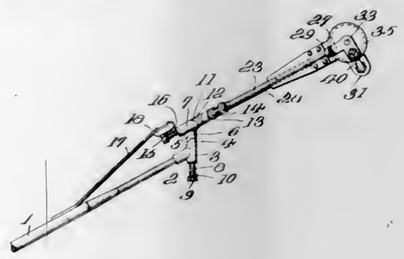
1,509,662. POSTAL CARD. FRANK ELWOOD BARNETT, Tampico, Mexico. Filed July 7, 1922. Serial No. 573,273. 3 Claims. (Cl. 282—27.)

1. A card board blank having a space at the top for printing, and a transverse line of perforations at the lower edge of the space, a copy sheet secured at its top edge to the rear side of the blank at the top for use in a type-writing machine, after a carbon sheet has been placed between the blank and copy sheet, that portion of the blank below the perforations being adapted to receive the writing and to be torn off along the line of perforations to constitute the postal card, the said portion of the blank being divided by a transverse crease line into an address-receiving flap, and a message-receiving card, the opposite face of which has printed thereon the required indicia to show that it is a postal card, whereby upon separating the blank at the line of perforations the top portion of the blank carries the copy sheet and acts as a holder and



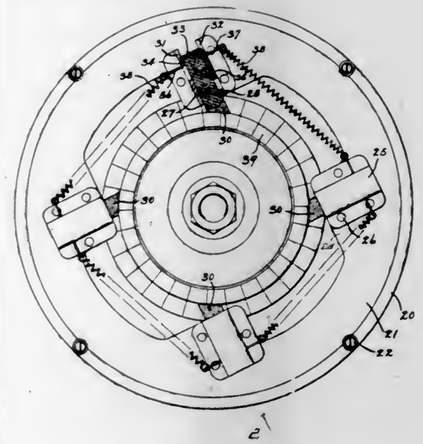
stiffener for the latter to facilitate filing the same away, while the address-receiving flap may be folded and secured against that face of the message-receiving portion below the said postal card indicia.

1,509,663. RAILWAY TRAIN-PROTECTION SYSTEM. GISBERT L. BOSSARD, Amsterdam, N. Y., and Rudolf Zangg, Bern, Switzerland, assignors, by direct and mesne assignments, to Bossard Railway Signal Corporation, Troy, N. Y. Filed Aug. 7, 1919. Serial No. 315,885. 7 Claims. (Cl. 246—78.)



5. In a train-protection system and in combination, a track; a pair of indicators each having an index, said indexes being of similar shape, differently colored and concentrically rotatively mounted; means whereby movements of the same degree are imparted to the respective indexes by the passage of the same car-unit over successive portions of the track; and means for controlling a train on the track operable only when said indexes are initially in alinement.

1,509,664. COLOR PRINTING. GEORGE H. BROWN, Cambridge, Mass. Filed Apr. 12, 1922. Serial No. 551,848. 8 Claims. (Cl. 101—426.)

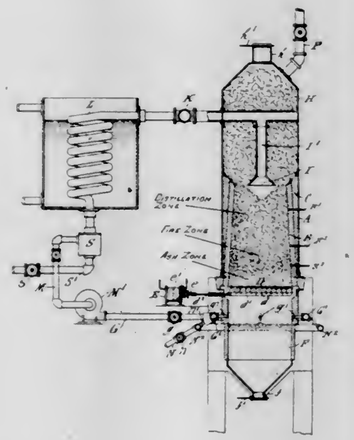


1. That improvement in the art of printing which consists in applying ink to a surface covered with particles of sharp sand, and then pressing the portion of the sheet which is to receive the ink against said particles.

1,509,665. CURRENT COLLECTOR. CYRUS B. BUCHANAN and CHARLES C. JOHNSON, Richmond, Va. Filed Aug. 1, 1921. Serial No. 488,986. 6 Claims. (Cl. 191—57.)

1. A trolley comprising a pole, a head adapted to swing in a vertical and horizontal plane, two shafts mounted in the head and insulated from each other, a trolley wheel mounted on each shaft and longitudinally movable thereon and spring means for holding the wheels normally a predetermined distance apart.

1,509,666. ELECTRICAL APPARATUS. JOHN G. CAMPBELL, Dayton, Ohio, assignor to Delco-Light Company, Dayton, Ohio, a Corporation of Delaware. Filed July 30, 1923. Serial No. 654,504. 7 Claims. (Cl. 171—324.)



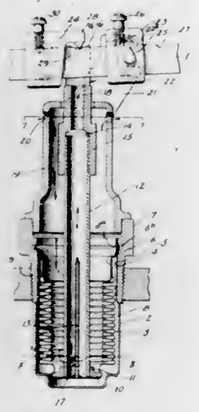
2. A brush rigging comprising in combination, a brush, a brush holder for slidably supporting the brush, said brush holder having a brush supporting wall engaged by one side of the brush; and means for yieldingly maintaining the brush in engagement with said wall, said means including springs connected with the brush and extending in diverging relations from the brush.

1,509,667. METHOD AND APPARATUS FOR DISTILLATION OF CARBONACEOUS MATERIAL. ROBERT M. CATLIN, Franklin, N. J., assignor to Catlin Shale Products Company, New York, N. Y., a Corporation of Delaware. Filed Aug. 17, 1921. Serial No. 492,885. 8 Claims. (Cl. 202—14.)

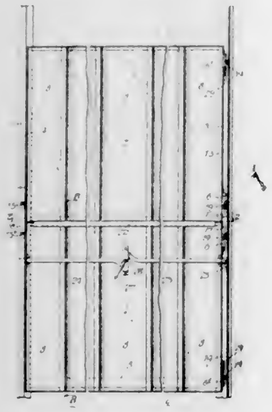
1. The process of distilling carbonaceous material containing a volatilizable portion and a combustible solid portion, which comprises feeding such material in a descending column, maintaining a zone of combustion at the lower part of the column by supplying a pre-

formed incombustible mixture of air and incombustible gas to the lower part of said combustion zone, regulating the quantity of said air-gas mixture to maintain a distillation zone above the combustion zone, regulating the proportions of said air-gas mixture to prevent combustion in said distillation zone, leading off the evolved gases and

vapors from the column above the distillation zone, separately obtaining from said evolved gases and vapors, the condensible portions thereof and also a supply of incombustible gas, and using said incombustible gas to form the incombustible air-gas mixture for subsequent distillation of carbonaceous material such as described.



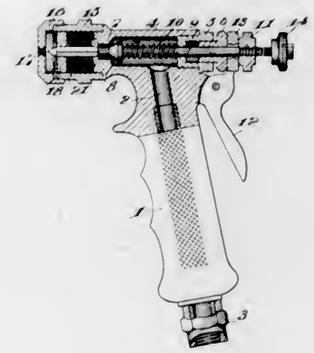
1,509,668. INSULATING UNIT FOR RAIL JOINTS. CLARKSON A. DISBROW, New Rochelle, N. Y., assignor to The Rail Joint Company, New York, N. Y., a Corporation of New York. Filed Mar. 11, 1924. Serial No. 698,495. 12 Claims. (Cl. 238—159.)



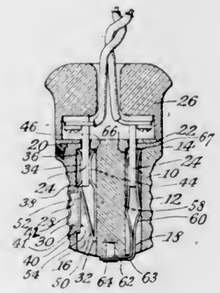
1. An insulating unit for rail joints having a removable wear section temporarily secured to the main body portion of the unit.

1,509,669. REGULATOR. LEWIS W. EGGLESTON, Buffalo, N. Y., assignor to American Radiator Company, Chicago, Ill., a Corporation of New Jersey. Filed Feb. 4, 1921. Serial No. 442,533. 12 Claims. (Cl. 236—26.)

9. In a regulator, the combination of an annular support, a thermosensitive member comprising outer and inner concentric cylinders spaced from each other, the inner cylinder being corrugated to permit longitudinal expansion and contraction, said cylinders being closed at one end, means annularly connecting the cylinders at their opposite ends to form a closed chamber between the same, means whereby said last-named means connects both said cylinders with said support, a closure member on the support and closing the internal chamber of the inner cylinder, a power-transmitting member connected operatively to the closed end of the inner cylinder and located in the internal chamber thereof, and means for circulating a cooling medium through said internal chamber and power-transmitting member.

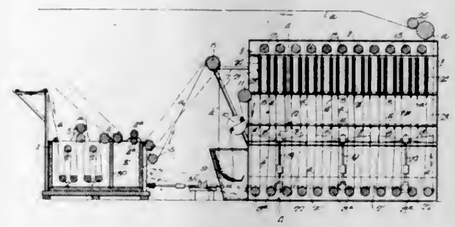


1,509,670. ELEVATOR DOOR. ADAM FISCHER, Chicago, Ill., assignor to Guaranty Iron & Steel Co., Chicago, Ill., a Corporation of Illinois. Filed Dec. 6, 1920. Serial No. 428,652. 3 Claims. (Cl. 20—19.)



1. An elevator door, comprising two sections vertically shiftable in opposite directions into and out of position to close an opening, guideways for said door sections, said guideways adjacent to the middle thereof and the lower end of the opening being inclined downwardly and outwardly and adjacent to the middle and the upper end of the opening being inclined upwardly and outwardly, and cam blocks at the corners of said door sections adapted to fit within said guideways for directing the vertical movement of said door sections, said cam blocks having the ends thereof inclined to coact with the inclined parts of said guideways for moving said door sections bodily transversely to the plane of shifting as said door sections are moved into and out of their respective positions to close said opening.

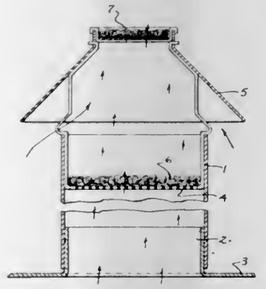
1,509,671. PAINT GUN. GRANT C. FISH and ALFRED H. CUMMINGS, Chico, Calif. Filed Apr. 17, 1922. Serial No. 553,517. 3 Claims. (Cl. 299—118.)



1. A spray-gun comprising a handle with a duct, adapted for connection with a source of liquid supply; a barrel carried by the handle, in communication with said duct and provided with a discharge opening; a valve for controlling said discharge opening; means for moving said valve to and from said opening; an apertured nozzle tip carried by the barrel in communication with the discharge opening thereof; an adjustable spraying member within said tip; and a connection between said valve and said spraying member to adjust said member by a movement of the valve independently of its movement to control said opening.

1,509,672. ATTACHMENT PLUG. ARTHUR C. GAYNOR, Stratford, Conn. Filed Mar. 4, 1922. Serial No. 541,031. 8 Claims. (Cl. 173—343.)

1. A device of the kind described which comprises a body of insulating material having a screwthreaded portion adapted to fit a socket, cavities extending through said body of insulating material, one of said cavities having a side passage to said threaded portion and separable spring members in said passage adapted to resiliently engage a blade member inserted into said passage and one of said members having a face resiliently mounted in said side passage and forming an outwardly pressed member adapted to engage the side of the socket and hold the body of insulating material in position.

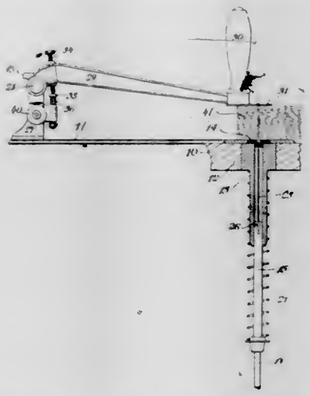


1,509,673. ROLLER CLOTH CARBONIZER. EDGAR B. KERST, Providence, R. I., and HERMANN BOGATY, Philadelphia, Pa., assignors to Proctor & Schwartz, Incorporated, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Sept. 27, 1922. Serial No. 590,947. 6 Claims. (Cl. 8—12.)

3. The combination in a cloth carbonizer of the roller type, of a casing enclosing a drying chamber and a carbonizing chamber; a heating chamber at one side of said chambers and connected thereto; a circulating fan in the heating chamber; a series of upper rolls and a series of lower rolls in the heating and carbonizing chambers; and a series of vertically arranged baffles for protecting the edge of the cloth, said baffles being V-shaped and located at the point where air in circulation enters the drying and carbonizing chambers.

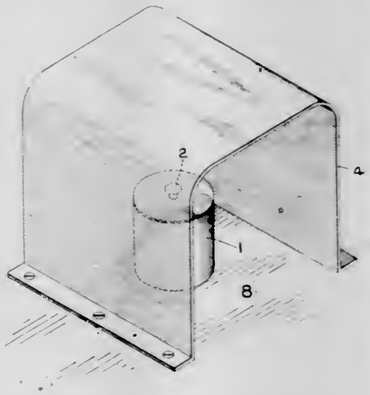
4. The combination in a cloth carbonizer of the roller type, of a casing enclosing a drying chamber and a carbonizing chamber; means for circulating heated air in said chambers; a series of upper cloth rolls and a series of lower cloth rolls in the drying and carbonizing chambers; and spreaders in advance of each roll for spreading the cloth before it passes around the rolls.

1,509,674. CONSUMER OF FLUE IMPURITIES. MANEMILEAN E. KOEHLER, Washington, D. C., assignor, by mesne assignments, to Gas & Electric Appliance Corporation, a Corporation of Maryland. Filed Mar. 29, 1923. Serial No. 628,536. 6 Claims. (Cl. 183—6.)



1. The method of eliminating soot and grease from cooking vapors which comprises leading said vapors through a flue containing metal wool to separate out and consume the soot and grease by slow combustion.

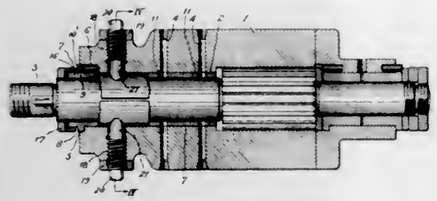
1,509,675. GARMENT-MARKING MACHINE. FREDERICK M. LASERSON, Brooklyn, N. Y., assignor, by direct and mesne assignments, of one-half to Lawrence M. Stein, Chicago, Ill., and one-half to Wade Stevenson, Buffalo, N. Y. Filed Aug. 25, 1920. Serial No. 406,010. 9 Claims. (Cl. 112—2.)



1. In a garment marking machine the combination with a horizontally disposed work support having a needle opening, of a needle mounted below the work sup-

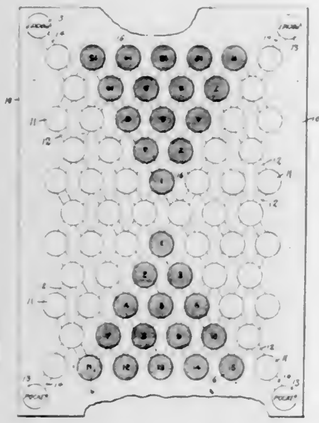
port to reciprocate in a vertical plane and to move upwardly through said opening and to penetrate said work,

and a manually controlled device cooperating with the work support to clamp the work therebetween during the upward movement of the needle.



1,509,676. FOOT-ACTUATED CIRCUIT-CONTROLLING DEVICE. RUBEN B. LAWRENCE, Bellevue, Pa., assignor to Federal Laboratories, Incorporated, Pittsburgh, Pa., a Corporation of Delaware. Filed June 21, 1922. Serial No. 569,823. 7 Claims. (Cl. 74—81.)

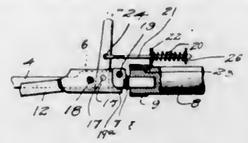
1. A foot actuated circuit controlling device adapted to be operated by the foot of a user normally standing in a substantially definite position relative to the device, and a protective means which requires the turning of the user's foot to an unnatural position to operate the device, substantially as described.



1,509,677. ADJUSTABLE BEARING. ERNEST J. LEES, Cleveland, Ohio, assignor to The Lees-Bradner Company, Cleveland, Ohio, a Corporation of Ohio. Filed May 23, 1919. Serial No. 299,215. 3 Claims. (Cl. 64—35.)

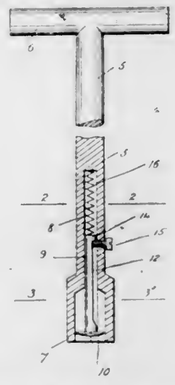
1. In a device of the character described, the combination with a support formed with a cylindrical bore and an opening leading through the wall of the support into said bore, of a bushing of cylindrical shape from end to end, the body portion of said bushing being formed with a pair of slits extending in a substantially circumferential direction and a longitudinally extending slit connected at its ends with said circumferential slits to provide an adjustable flexible section in the body portion of said bushing and continuous unbroken end sec-

tions fitting the wall of said bore, and means extending through said opening in the support to engage with and adjust said flexible section relative to said end sections of said bushing.



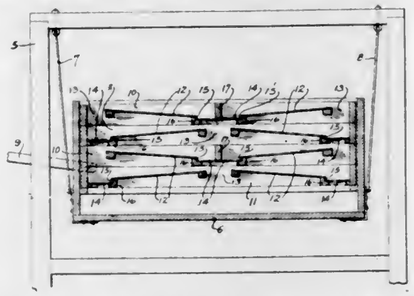
1,509,678. GAME. JOHN F. MACPHERSON and WILLIAM E. COTTRILL, Butler, Pa. Filed Apr. 14, 1922. Serial No. 552,665. 1 Claim. (Cl. 46—64.)

A game apparatus consisting of, a support forming a playing surface provided with conventional means to constitute a series of transversely extending spaced rows of spaced circular spaces, the number of the spaces in each alternate row being less than the number of spaces of the other rows and with each space of an alternate row opposing a pair of spaces of adjacent rows whereby these latter rows will project beyond each end of an alternate row, conventional means on said playing surface to constitute diagonally disposed paths extending in opposite directions and intersected by said spaces and further intersecting each other through said spaces, conventional means on said playing surface to constitute a pair of goals spaced from each outer row of open spaces, two pairs of said paths being of greater length than the other paths and projecting beyond said outer rows of spaces and each terminating at its projected end in a goal, and two differently colored sets of playing pieces traversing said paths.



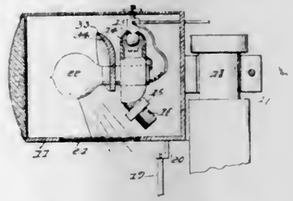
1,509,679. RAKE CLEANER. CHARLES C. MATTOX, Rockbridge, Ohio. Filed June 13, 1919. Serial No. 303,985. 2 Claims. (Cl. 55—146.)

1. A rake having a stripping plate, arms extending rearwardly from said plate, a U-shaped coupling, an upstanding arm rigid with said coupling having its lower portion disposed between the side walls of the coupling, the rear ends of said arms being disposed between the side walls of the coupling contiguous with



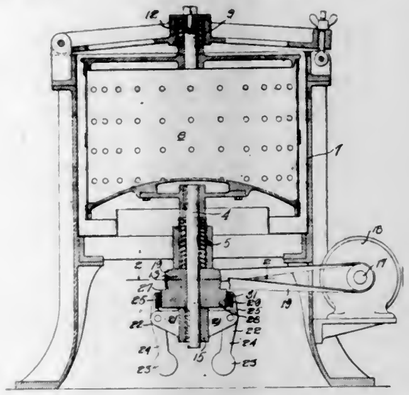
the upstanding arm and with the bottom wall of the coupling, and a retaining element passing through said coupling and first mentioned arms.

1,509,680. WRENCH. JAMES H. MEEK, Argos, Ind., assignor of one-half to William D. Smiley, Argos, Ind. Filed Feb. 1, 1924. Serial No. 689,874. 1 Claim. (Cl. 81—121.)



A wrench, comprising a stem having a box at one end for engaging with a nut, said stem having also a spring chamber of less width than the box arranged axially in line with it and having a screwthreaded hole in one side, an ejector for the nut having a head at its outer end which slides in the said box, said ejector having a shank which is slidable in the spring chamber and which is cut away on one side to form a stop at its inner end, a screw engaging with the said hole and operating to retain the head in the box, and an ejecting spring arranged between the inner end of the shank and the end of the spring chamber.

1,509,681. ORE CONCENTRATOR. WALTER EVERETT MENDENHALL, Moab, Utah, assignor to The Union Metals Extraction Company, Lake City, Colo., a Corporation of Colorado. Filed Mar. 23, 1923. Serial No. 627,153. 5 Claims. (Cl. 83—88.)

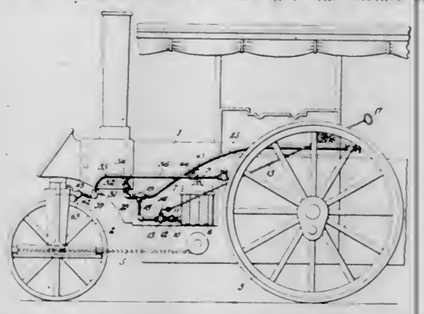


1. In an ore concentrator, a box mounted for longitudinal oscillation and having a series of trays arranged one above the other, each tray having a floor with an elevated outlet extending transversely across the tray, the floor being inclined downwardly from said outlet and having a level depressed portion connected by a vertical strip with the lower edge of the inclined portion.

1,509,682. HEADLIGHT. VENCESLAUS F. MIKOLASEK, Lankin, N. Dak. Filed Apr. 1, 1920. Serial No. 370,490. 2 Claims. (Cl. 240—41.)

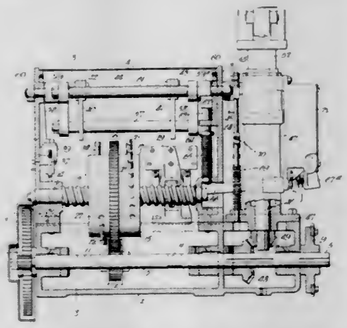
2. In a headlight, the combination with a stationary forwardly directed casing provided with a lens, of a fulcrum contained in said casing, a member suspended upon said fulcrum and provided with a rearwardly directed arm and carrying a forwardly directed lighting unit, and counterbalancing means on said arm to maintain the member perpendicularly suspended from the fulcrum whereby, as the casing is directed downwardly or upwardly according to the inequalities of the roadway, the light rays from the lighting unit may be directed downwardly or upwardly.

1,509,683. DRIVING CONNECTING MEANS. RALPH M. MILLER, Oakland, Calif. Filed Dec. 24, 1919. Serial No. 347,170. 1 Claim. (Cl. 192—105.)



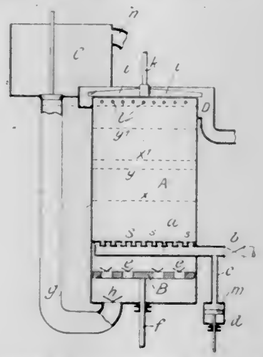
In a device of the character described, a vertically disposed driven shaft, a driving element mounted for rotation on said shaft and having a cylindrical outer face, a plurality of levers pivotally supported on said driven shaft and having one arm weighted in excess of the other, friction shoes on the other arms of said levers normally held in engagement with the cylindrical surface of said driving element whereby said driven element is caused to obtain the speed of the driving element gradually and from a substantially relatively stationary condition upon the rotation of said element.

1,509,684. OILING DEVICE FOR ROAD ROLLERS. DANIEL SHAW MONROE, Portland, Oreg. Filed Jan. 18, 1922. Serial No. 530,212. 7 Claims. (Cl. 94—50.)



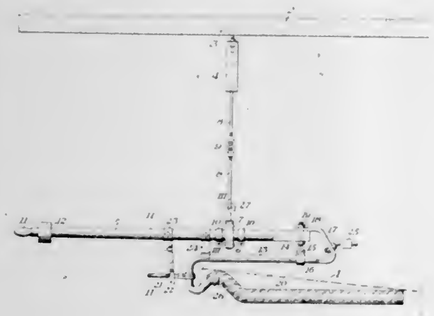
1. In a road roller provided with a steam generator, an oiling device for the pressure roller, comprising an oil reservoir, an ejector, pipes connecting the ejector with the steam generator and the oil reservoir, a discharge con-

duit connected to the ejector, spraying means connected to the discharge conduit and leading to the surface of a



roller, and means for controlling the flow of steam to the ejector and thereby controlling the discharge of the oil from the spraying means.

1,509,685. LIMIT DEVICE FOR HOISTING MACHINES. ROSCOE MOORE, Wilkes-Barre, Pa. Filed Nov. 29, 1919. Serial No. 341,438. 16 Claims. (Cl. 192—142.)



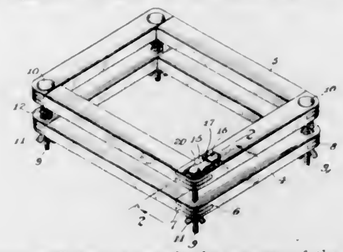
1. A limit device consisting of a drum driven from a machine to be controlled; a series of pins longitudinally adjustable and helically arranged on said drum; speed responsive mechanism including an element mounted to cooperate with said pins; and a switch controlled by said mechanism.

1,509,686. METHOD FOR THE LIXIVIATION OF MATERIALS. EINAR MORTERUD, Torderod, near Moss, Norway. Filed Dec. 6, 1923. Serial No. 679,041. 8 Claims. (Cl. 23—31.)

1. In a process of lixiviation of materials in a vessel provided with a screen covering its whole cross sectional area and where periods of feeding alternate with periods of lixiviation, the method which consists in introducing the material into the space above the screen from the underside of the screening surface through openings in the screening surface for the purpose of obtaining a mixture of the same consistency above the whole of the screening surface, and of removing the solid deposits on the screening surface by means of the new material introduced through the same.

1,509,687. APPARATUS AND METHOD FOR TRANSFERRING GLASS CYLINDERS. JOHN MURPHY, Hartford City, Ind., assignor to Window Glass Machine Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed July 26, 1920. Serial No. 398,901. Renewed Jan. 2, 1923. 21 Claims. (Cl. 214—1.)

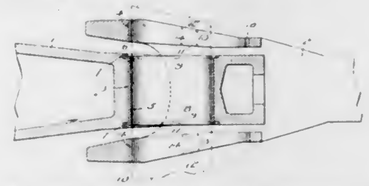
1. A carrying device for glass cylinders comprising an overhead track, a carrier arm flexibly suspended from said track to travel thereon, and a supporting arm mounted on the carrier and mounted for horizontal and vertical movement relative to said carrier and being adapted for endwise insertion into a glass cylinder, substantially as described.



4. A carrying device for glass cylinders, comprising an overhead track, a carrier arm flexibly suspended from said track to travel thereon, said carrier being mounted for horizontal turning movement on its suspension, and a supporting member mounted for horizontal and limited vertical movement independent of said carrier and having a free end adapted to engage a glass cylinder, substantially as described.

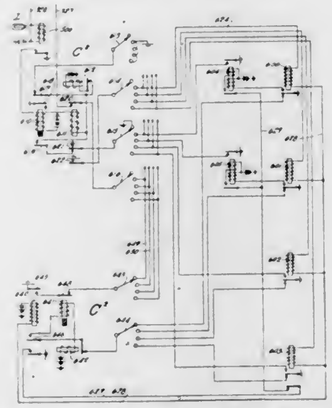
1,509,688. RECOVERY OF ARSENIC. CHARLES L. PARSONS, Hawkinsville, Ga., and HARRY P. BASSETT, Philadelphia, Pa.; said Bassett assignor to said Parsons. Filed Aug. 13, 1923. Serial No. 657,265. 8 Claims. (Cl. 23—13.)

1. In the treatment of arsenical metallurgical dusts and fumes containing water soluble arsenic compounds for the separation of arsenic from residual metal values, the process which comprises leaching the material with hot water to remove water-soluble compounds therefrom and extracting the residue with a hot solution containing alkali in about the amount required to give a di-alkali metal compound with oxids of arsenic present in such residue.



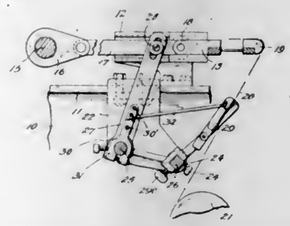
1,509,689. PRESS FOR TENNIS RACKETS AND THE LIKE. WILLIAM F. REACH, Chicopee, Mass., assignor to A. G. Spalding & Bros., New York, N. Y., a Corporation of New Jersey. Filed Dec. 24, 1923. Serial No. 682,387. 4 Claims. (Cl. 46—24.)

1. In a press, co-operating frames, means to connect said frames, one of said frames being formed with an aperture, a bolt passing through said aperture and having a head of greater diameter than the diameter of the aperture, said co-operating frame being formed with an aperture in register with said first mentioned aperture and of



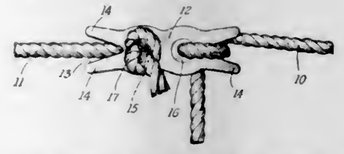
a diameter sufficient to permit the passage of the head of the bolt and means carried with said second mentioned frame to engage the bolt.

1,509,690. RAILWAY DRAFT APPLIANCE. WILLIAM J. REGAN, Wilkinsburg, and ENOCH GEORGE, Jr., Pittsburgh, Pa., assignors to The McConway & Torley Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Sept. 12, 1923. Serial No. 662,267. 5 Claims. (Cl. 213—69.)



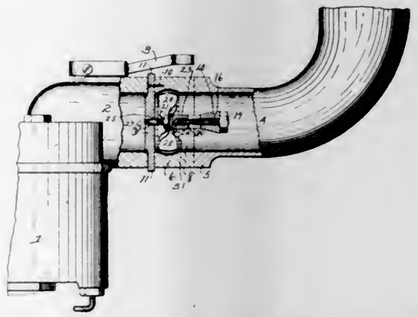
1. In a railway draft appliance, the combination with a draft member having a slot adapted to receive a key forming an element of the draft appliance, of a continuous unitary bushing mounted on said draft member and extending into the slot thereof, said bushing being provided with means adapted to engage said draft member to maintain said bushing in assembled position, and said bushing being adapted to be bent to cause said means to assume assembled position.

1,509,691. MULTIOFFICE TELEPHONE SYSTEM. RODNEY G. RICHARDSON, Chicago, Ill., assignor to Automatic Electric Company, Chicago, Ill., a Corporation of Illinois. Original application filed July 19, 1920, Serial No. 397,322. Divided and this application filed Dec. 3, 1923. Serial No. 678,193. 7 Claims. (Cl. 179—27.)



1. In a telephone system, a plurality of register sets at the exchange accessible to calling automatic subscribers for registering called telephone numbers, an indicating device common to said register sets for indicating registered numbers to an operator, and a consecution controller comprising an automatic step by step switch for switching registered calls on to said indicating device one at a time.

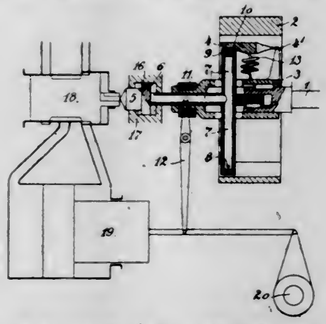
1,509,692. SHEAR ATTACHMENT FOR FLAT-KNITTING MACHINES. HERMAN P. RUF, New York, N. Y. Filed Oct. 30, 1923. Serial No. 671,663. 4 Claims. (Cl. 66—9.)



1. The combination with a flat knitting machine comprising a reciprocating needle bar and means to reciprocate the needle bar including a rotating shaft, of a shear attachment located beyond the knitting mechanism, and actuating means for the shear attachment operated from and synchronously with the operation of the means for reciprocating the needle bar.

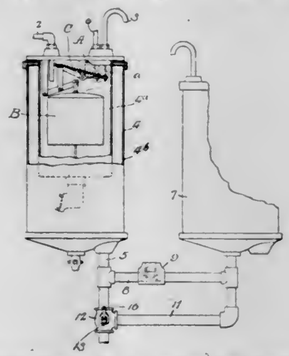
1,509,693. CLOTHESLINE FASTENER. RICHARD SCHORR, Newark, N. J. Filed Sept. 26, 1923. Serial No. 664,843. 2 Claims. (Cl. 24—129.)

1. A cord fastener comprising an elongated rectangular metallic plate having openings through the main portion thereof adapted to permit the passage of a cord, and having recesses in its ends suited to engage and bite a cord entered therein from either side of the plate, said recesses being convergently inclined to present projections having well rounded edges.



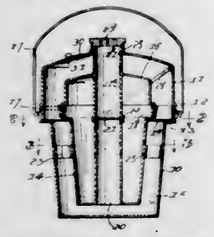
1,509,694. MIXER FOR CARBURETOR OUTLETS. CHARLES N. SILVER, Milwaukee, Wis. Filed July 21, 1919. Serial No. 312,124. 2 Claims. (Cl. 48—180.)

1. In an auxiliary fuel mixer for an internal combustion engine having a carburetor and intake manifold, the combination with an apertured fitting adapted to be secured between the carburetor outlet duct and intake manifold to constitute a continuation thereof, said fit-



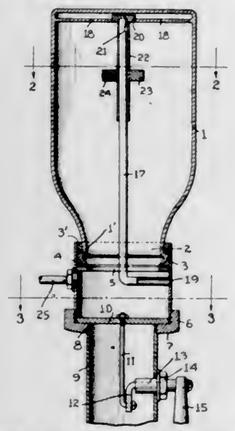
ting being provided at one end with diametrically opposed, radially extending slots; of a cross bar integrally connected with the fitting at the other end thereof, said cross bar spanning the aperture and extending transversely thereof; a second cross bar extending across the aperture and seated in said slots, said second cross bar being provided with a conical hole concentric with the aperture; a laterally extending pin on the second cross bar adapted to engage the fitting and retain the cross bar in position; a rotary fan member having at one end an adjustable bearing connection with the first mentioned cross bar; and a conical bearing member on the other end of said rotary fan member extending into the conical hole in the second cross bar.

1,509,695. APPARATUS FOR GOVERNING PRIME MOVERS. EDOUARD VOLET, Geneva, Switzerland, assignor of one-half to Ateliers des Charmilles, Société Anonyme, Geneva, Switzerland. Filed Aug. 26, 1922. Serial No. 584,583. 10 Claims. (Cl. 121—42.)



1. In an apparatus of the class described, the combination with a relay, a servo-motor and devices for controlling the admission of a motive fluid to a prime mover of a shaft, a fly wheel mounted on the shaft, a fluid conductor leading from the relay and connected to and revoluble with the said shaft, and a weight member carried by the shaft and adapted to control the flow of a fluid through an opening in the said conductor.

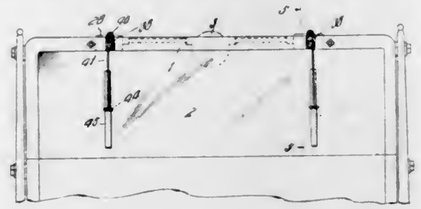
1,509,696. VACUUM-FEED FUEL-RESERVE DEVICE. LEONARD H. WHEELER, Chicago, Ill., assignor to Stewart-Warner Speedometer Corporation, Chicago, Ill., a Corporation of Virginia. Filed May 5, 1922. Serial No. 558,753. 3 Claims. (Cl. 158—46.5)



1. In combination with a vacuum fuel feeding device which comprises a bi-cameral receptacle having a primal chamber which has suction connection, fuel supply connection and atmosphere inlet, and which discharges by gravity into the secondary chamber; a second receptacle whose chamber is connected with the secondary chamber of the first receptacle; a one-way seating valve in the communication between said two receptacles opening for delivery of liquid into said second receptacle; a conduit in common to the two receptacles for their delivery to the carbureter; connections from said conduit-in-common, leading back toward the receptacles respectively for connection therewith at the same outlet at which the two chambers are connected for delivery from the first into the second, and means in the conduit mentioned operable at will alternatively for (a) cutting off both receptacles from the carbureter, (b) cutting off the first receptacle from the carbureter, leaving the second connected for delivery thereto, or (c) cutting off the second receptacle leaving the first connected for delivery thereto.

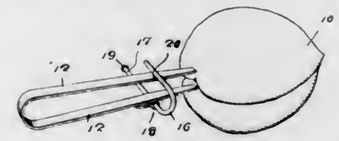
1,509,697. CULINARY VESSEL. SARAH K. ALLISON, Macomb, Ill. Filed Jan. 18, 1922. Serial No. 530,094. 1 Claim. (Cl. 53—2.)

A double boiler comprising inner and outer receptacles, the former being supported in spaced relation within the latter, a circulating drum rising from the bottom of the inner receptacle with its lower end open and communicating with the outer receptacle and provided with a perforated upper end, separately removable covers respectively for said inner and outer receptacles, the outer cover having an opening the inner cover having a depending circulating drum having a telescopical fitting engagement with the upper perforated end of the first drum, the drum on the inner cover extending upwardly beyond the inner cover and having a fitting engagement with and through the opening in the outer cover, and a perforated plug closing the outer cover and the extension drum.



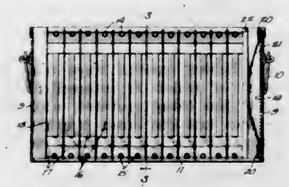
1,509,698. STORAGE TANK. JOHN F. ANDERSON, San Francisco, Calif. Filed Dec. 13, 1923. Serial No. 680,477. 8 Claims. (Cl. 4—26.)

1. A flushing tank having an air vent pipe extending longitudinally of the tank and opening to the atmosphere at the lower end of said tank, said air vent pipe



being provided with an opening communicating with the tank at the upper end of the pipe, and float control means for closing said opening and sealing the air vent pipe against the tank.

1,509,699. WINDSHIELD CLEANER. ARLO GRANT ATCHISON, Santa Barbara, Calif. Filed Dec. 15, 1923. Serial No. 680,987. 2 Claims. (Cl. 15—253.)

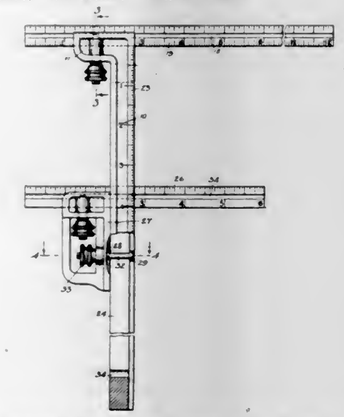


1. In a windshield cleaner, a motor, a rod, guide means for the rod, connections between the motor and said rod whereby the latter is reciprocated, racks on the end of the rod, housings for the racks, shafts passing through the housings and through the upper bar of the windshield, a gear on each shaft in mesh with each rack, a spring arm adjustably connected to each pivot, and a squeegee carrying casing pivotally secured to each arm, as and for the purpose set forth.

1,509,700. PEELING DEVICE. THOMAS F. BEHL, Allentown, Pa. Filed Sept. 7, 1923. Serial No. 661,428. 3 Claims. (Cl. 294—35.)

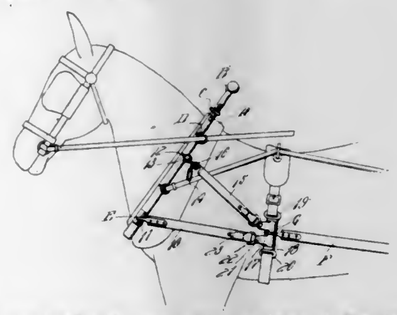
1. A device for holding fruit comprising a pair of tongs, stone gripping jaws for the tongs, means whereby the jaws may be inserted into the fruit upon opposite sides of the stone and pivotally mounted means carried by and slidable transversely of the tongs for holding the jaws in gripping position.

1,509,701. FILM AND PLATE HOLDER. HAROLD D. BERNSTEIN, New York, N. Y. Filed Dec. 7, 1923. Serial No. 679,189. 7 Claims. (Cl. 95—100.)



1. In a holder for sensitized sheets, a casing, a plurality of separators insertable into said casing and between which the sensitized sheets are mounted and held in spaced relation with respect to each other by said separators, and a retaining member insertable between one end of said casing and an adjacent separator and exerting a yieldable pressure upon said separator to retain the separators and sensitized sheets in position in the casing.

1,509,702. FUSE PLUG. HAROLD J. BERRIAN, Fishers Island, N. Y. Filed Feb. 9, 1923. Serial No. 618,078. 1 Claim. (Cl. 200—130.)



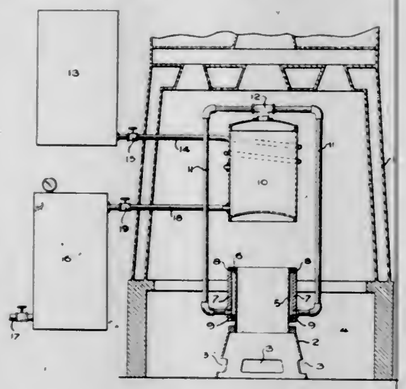
A fuse plug comprising a body portion including a stem, a cylindrical extension formed on one end of the stem, the stem extension having a chamber therein, contacts fitted in the chamber, a fuse carrying portion including a pair of contacts adapted to be detachably fitted in said chamber and engage the contacts therein, a fuse wire carried by said fuse carrying portion connecting the contacts thereof together, an extension formed on the inner face of the fuse carrying portion, and said body portion having a socket for receiving said extension.

1,509,703. CARPENTER'S SQUARE. JAMES S. BOURGEOIS, Roxbury, Mass. Filed Feb. 2, 1923. Serial No. 616,534. 3 Claims. (Cl. 33—95.)

1. A carpenter's square comprising a stock having a transverse groove at one end thereof, a blade mounted in said groove for sliding movement relatively to said stock, said stock having a longitudinal slot in the same plane with the transverse groove, a second blade mounted in said slot for longitudinal adjustments and lateral sliding movements with respect to said stock, and means for maintaining said blades in their relatively adjusted positions.

1,509,704. HAME TUG. ALLEN L. BOWLEN, Versailles, Mo. Filed Nov. 27, 1923. Serial No. 677,314. 2 Claims. (Cl. 54—32.)

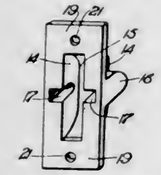
1. In a harness construction, a hame, a tug permanently pivotally connected with the lower portion thereof, a chain permanently connected with the upper portion



of the hame, a second tug having one end detachably connectible with a selected link of the chain, and means connecting the rear ends of both tugs and providing means for attachment of a trace.

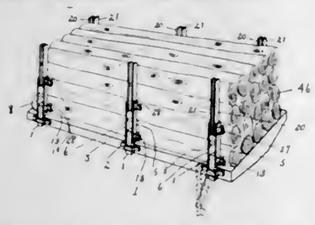
1,509,705. ELASTIC WHEEL FOR VEHICLES. GEORGES BROULHIET, St. Etienne, France. Filed Sept. 19, 1922. Serial No. 589,130. 4 Claims. (Cl. 152—29.)

1. A solid wheel of elastic material having layers of fibrous material secured to the side surfaces thereof to provide lateral rigidity.



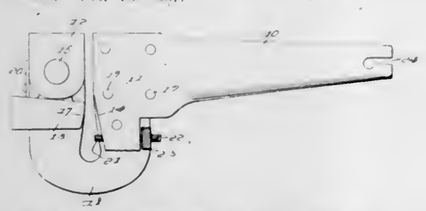
1,509,706. OIL BURNER. CLARENCE VICTOR BRYAN, Laurel, Ontario, and JOHN JAMES BRYAN, Amaranth Station, Ontario, Canada. Filed May 12, 1923. Serial No. 638,544. 1 Claim. (Cl. 158—53.)

In an oil burner, the combination with the burner proper, of a mixing chamber positioned above the burner in spaced relation thereto, an air intake pipe to the mixing chamber, an oil intake pipe wound around the mixing chamber and connected thereto, a T union at the top of the mixing chamber, opposed mixture carrying pipes connected at their upper ends to the T-union and at their lower ends to the opposed sides of the burner, said pipes in addition to carrying the mixture to the burner from the mixing chamber supporting the mixing chamber in position.



1,509,707. SLIDING SASH WINDOW. ERNEST L. BURKETT, Greensborough, Victoria, Australia, assignor of one-half to Simon Joseph, Melbourne, Victoria, Australia. Filed June 29, 1921. Serial No. 481,307. 1 Claim. (Cl. 16—195.)

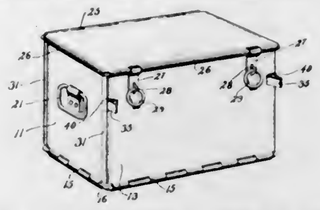
A bracket adapted to fit in an opening formed approximately mid-length the central beading of a sliding sash window, said bracket being of plate formation with a central gear-receiving opening having its side walls extended outwardly with respect to the window sash, said walls being recessed to receive a supporting shaft, the recesses opening through the face of the bracket, and to the gear receiving opening, a supporting shaft mounted in said recesses and limited in movement toward the



rear of the bracket and freely movable toward the face of the bracket, a gear mounted on said shaft and extended in both directions beyond the bracket, and gear racks adapted to be secured to the window sash and operating weight therefor, said racks being simultaneously and reversely operated in the movement of the gear.

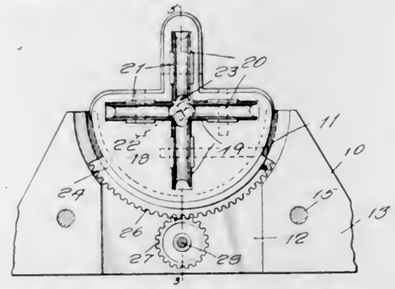
1,509,708. SIDE STAKE FOR FLAT CARS. JAMES E CANNAN, Utica, N. Y. Filed Mar. 17, 1924. Serial No. 699,825. 6 Claims. (Cl. 105—384.)

3. In a side stake for flat cars, means for pivotally mounting said stake, said stake being formed in sections, bolts for pivotally mounting said sections with relation to each other, pins adapted to bind, whereby to hold said sections in upright relation to each other, and chains for holding said pins adjacent said stakes.



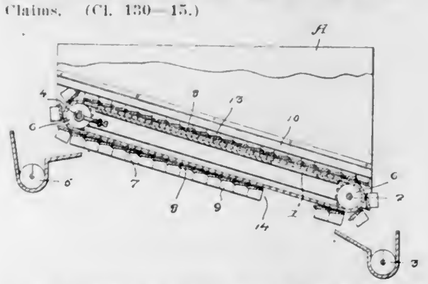
1,509,709. SAW SET. HENRY L. CARMAN, Flagstaff, Ariz. Filed Aug. 17, 1922. Serial No. 582,418. 2 Claims. (Cl. 76—65.)

1. A saw set having spaced inner and outer jaws, with the former of which is connected an operating shank, the inner jaw being provided with an obliquely disposed anvil face and the outer jaw with a pivotally mounted hammer provided at its inner end with a poll for cooperation with the anvil face and having at its outer end an impact face, and a locking cam for securing a hammer in its inoperative position.



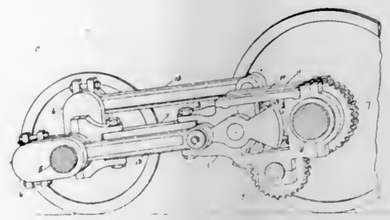
1,509,710. EGG CASE. CHARLES W. CHAMBERS, Vanoss, Okla. Filed Mar. 5, 1923. Serial No. 622,982. 1 Claim. (Cl. 220—7.)

In a device of the class described, a bottom, front, rear and end walls, hinged connections between the bottom wall and the remaining walls, hooks mounted on some of the walls and devices to be engaged by the hooks and including rolled portions and inclined portions for sliding engagement by the edges of the adjacent walls, and resilient fastening devices connected with the end walls and including offset portions, the front and



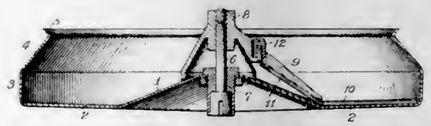
rear walls having slots through which the resilient devices pass, permitting engagement by the offsets when the end walls have been raised to a position where the edges clear the inclined portions of the hook engaging devices.

1,509,711. FAIR LEAD. RAY K. CHAPMAN and ERNEST G. MESSER, Elma, Wash. Filed Oct. 8, 1923. Serial No. 667,268. 2 Claims. (Cl. 254—190.)



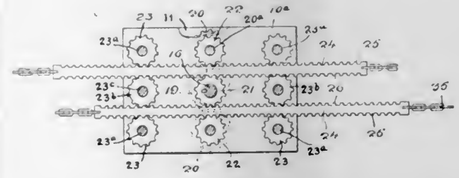
1. In a fair lead, a base, a sheave plate mounted for rotation in the base, a plurality of concentered sheaves mounted in said sheave plate and each having a grooved periphery, the periphery grooves at the adjacent portions of the sheaves combining to define a substantially circular opening, the groove of each of said sheaves discharging into the groove of the next adjacent sheaves whereby side strain upon a cable engaged with any of said sheaves will shift the cable from the engaged sheave into engagement with a sheave adjacent thereto, and means carried by the base and coacting with the sheave plate for rotating the sheave plate or for locking the sheave plate in adjusted position.

1,509,712. THRASHER. BERT C. CHAPPELL, Rockville, Mo. Filed Aug. 6, 1921. Serial No. 490,249. 4 Claims. (Cl. 130—15.)



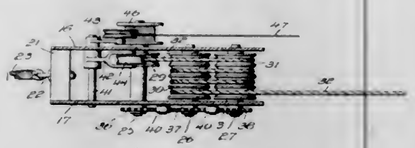
1. In a thrasher, a thrasher shoe having an opening in the floor thereof, an endless apron movable over the said floor and having a sleve portion for registration with the said opening, and means for adjusting the apron to move the sleve portion into and out of registration with the said opening.

1,509,713. POWER TRANSMISSION. CHARLES LEE COOK, Louisville, Ky. Filed Jan. 24, 1921. Serial No. 439,609. 4 Claims. (Cl. 105—84.)



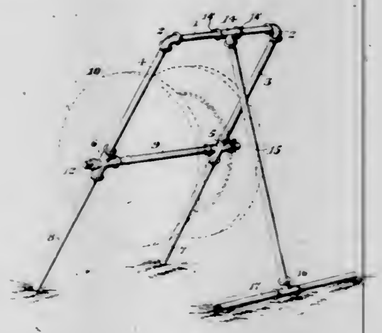
1. A power transmission, comprising a crank and gear reduction mechanism and a vertically disposed forked frame for same; said frame being adapted to ride on a pair of axles, one at either end, and being in two parts, adapted to swing laterally.

1,509,714. PAN FOR CORN-POPPING MACHINES. CHARLES CRETORS, Chicago, Ill. Filed Dec. 23, 1921. Serial No. 524,377. 4 Claims. (Cl. 53—4.)



1. The combination of an open top popping pan having its bottom web formed with an upstanding central conical portion, with an outer flat annular portion and with a circular outer wall having an inturned marginal flange at top, the inner edge of said flange having an out-turned annular subflange, the construction preventing outward spattering of the heated butter particles in the operation of conditioning the popped mass of corn, and a power driven stirring means arranged in the chamber of the pan.

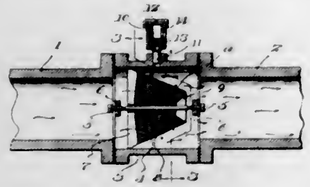
1,509,715. WIRE STRETCHER. FRANK DACAR, Holloway, Ohio. Filed June 25, 1923. Serial No. 647,677. 4 Claims. (Cl. 254—66.)



4. A wire stretcher comprising a body member including a pair of plates, a pair of rack bars located between the plates and carrying wire gripping means, said rack bars having both edges toothed, guide gears journaled between the plates and meshing with the teeth on the confronting edges of the rack bars, other gears journaled between the plates and meshing with the teeth on the outer edges of the rack bars and means for driving the rack bars comprising a shaft journaled through the body and carrying a gear meshing with the teeth on the inner edges of the rack bars and carrying a larger gear located to one side of the pair of plates, and other gears meshing with said last named gear and carried by the shafts of certain of the second named gears.

1,509,716. LOG CARRIER. WILLIAM G. DANIEL, Sunburst, N. C. Filed May 22, 1923. Serial No. 640,719. 1 Claim. (Cl. 212—89.)

In an apparatus of the class described, a support including spaced side members, a shaft member for rotation through said side members and extending at one end beyond one of said side members, a cable guide pulley fast upon said shaft between said side members, a cable winding drum fast to the extended portion of said shaft, a rock shaft mounted through said side members and extending at one end beyond the same, an arm attached to said rock shaft between said side members, a bearing pulley carried by said arm and adapted to bear on a cable member where it passes around said guide pulley, an arm attached to the extended terminal of said rock shaft, an idler cable guide pulley carried by said last mentioned arm at its free end, and a pull cable connected at one end to the winding drum and passing thence around the idler pulley, whereby when strain is applied to the pull cable the drum will be rotated and the bearing pulley forced against a cable passing over the guide pulley.

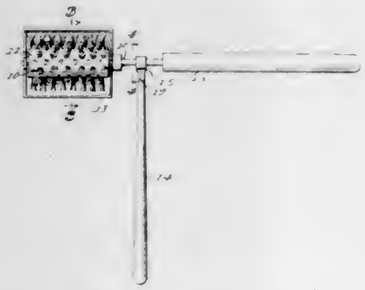


1,509,717. REEL CARRIER. CHARLES C. DAVIS, Northfield, Vt. Filed Nov. 27, 1923. Serial No. 677,263. 7 Claims. (Cl. 248—85.)

1. In a device of the character described, the combination with a frame having parallel side bars and one end cross bar, of a supporting bar removably carried by the side bars intermediate their ends and adapted to form a rotatable axis for a reel, and a combined draw bar and handle swingingly connected centrally of said cross bar and adapted when in one position to serve as a prop for said frame when standing upon a foundation and when in another position constituting a draft device, and when in still another position to be substantially parallel with and in folded relation to the said side bars.

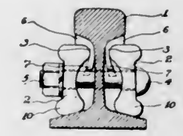
1,509,718. MIXING DEVICE. JOSEPH A. DEPOTIE, Cicero, Ill. Filed Dec. 10, 1923. Serial No. 679,770. 2 Claims. (Cl. 48—180.)

1. A mixing device of the class described comprising a casing adapted to be placed between the carbureter and intake manifold of an internal combustion engine, a propeller rotatably mounted in the casing and actuated by the vapors passing through the same, a frusto-conical shaped screen connected with the propeller for rotation therewith, said screen having its small end open and a



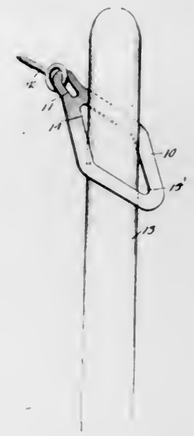
ring member connected with the small end and extending inwardly for retarding the flow of some of the explosive mixture through the device.

1,509,719. FOUNTAIN PEN AND ELECTRIC LIGHT. JOHN JOSEPH DEVINE, Middletown, Conn. Filed June 12, 1923. Serial No. 644,948. 3 Claims. (Cl. 240—8.4.)



1. In a device of the class described, a barrel member, a tubular member fitting within the barrel and extending at one end in advance of the same, the outer end of said tubular member being converged and with lateral recesses in the converging portions, an ink reservoir fitting within said tubular member, a holder for a pen point socket attached to said reservoir and connected therewith, a pen point socket engaging in said holder and open at the inner end to permit ink to flow from the reservoir thereto, an ink feed conductor leading from said socket and adapted to supply the pen point, a receiver for an electric lamp socket between the reservoir and the opposite side of the tubular member, a source of electric energy within the barrel, and means carried by the barrel for controlling the current to the lamp socket.

1,509,720. TOOTHBRUSH. JAMES A. DONNELL, Austin, Tex. Filed July 15, 1921. Serial No. 484,969. 1 Claim. (Cl. 15—25.)

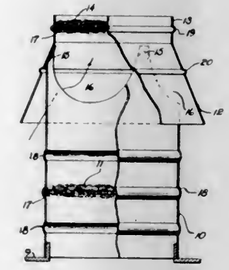


A tooth brush comprising a shaft having a collar thereon, a cylindrical brush mounted upon the shaft and spaced from the collar, a semicylindrical shield loosely mounted upon the shaft and bearing against the collar and having an end portion interposed between the brush and the collar, a pivot member connecting the outer end of the shield with the brush and disposed at the center thereof, a bearing head in which the shaft is journaled, and a handle pivotally connected with the bearing head.

1,509,721. RAILWAY-RAIL JOINT. HERBERT W. EDWARDS, Audubon, N. J., assignor to Economy Rail Joint Company, a Corporation of Delaware. Filed Dec. 13, 1923. Serial No. 680,501. 11 Claims. (Cl. 238—244.)

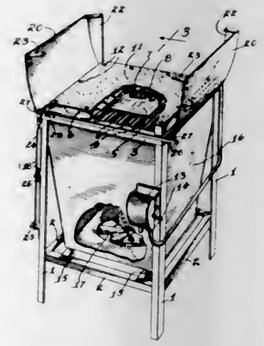
4. As an article of manufacture, a splice bar for rail joints disposed above the central portion of the rails comprising dovetail upper and lower portions and an intermediate thinner arc-shaped portion.

1,509,722. BROOM HOLDER. EMANUEL L. FENSTERMAKER, Lancaster, Pa. Filed Mar. 1, 1923. Serial No. 622,178. 5 Claims. (Cl. 24—249.)



1. A broom holder comprising a screw-eye, and a one-piece flat member suspended therefrom said member having a diamond-shaped central opening with its shorter axis extending horizontally across the member, substantially as set forth.

1,509,723. EYEGLASSES. EDWARD J. FINK, New York, N. Y. Filed Sept. 28, 1922. Serial No. 591,150. 14 Claims. (Cl. 88—42.)

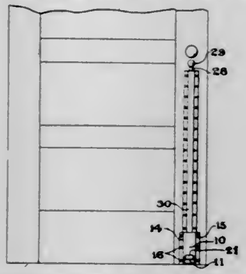


1. An ophthalmic lens containing as an integral part thereof a rim projecting laterally beyond the edge portion of the lens.

1,509,724. SOOT-CONSUMING DEVICE. PAUL FRAME, Baltimore, Md., assignor to Gas & Electric Appliance Corporation, a Corporation of Maryland. Filed Mar. 29, 1923. Serial No. 628,537. 6 Claims. (Cl. 183—5.)

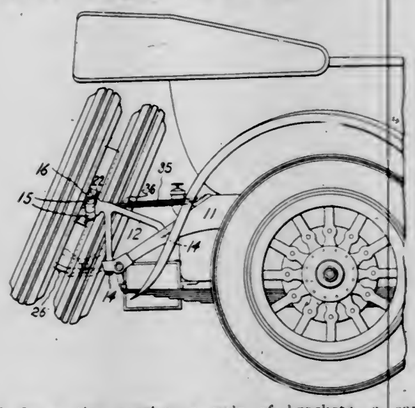
1. A device for catching flue impurities comprising a split expansible ring removably carrying a non-combustible non-fouling steel wool mat.

1,509,725. APPARATUS FOR PREPARING PHOTOENGRAVING PLATES. JAMES S. FAEER, Rutherford, N. J. Filed Feb. 23, 1922. Serial No. 538,751. 11 Claims. (Cl. 41—9.)



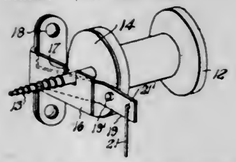
8. In an apparatus for use in treating etching plates composed of metal sheets with selected portions of a side thereof covered with an erosive resisting coating or resist, the combination of a frame, a housing mounted therein open at its upper end, a grid over said opening for supporting the plate with the resist-bearing side exposed, wings hingedly mounted on the side of the frame adapted to be folded over the plate, and means mounted in the housing for cooling the plate.

1,509,726. DOOR AND SHUTTER FASTENER. JOHN GALLI, Bethlehem, Pa. Filed June 12, 1922. Serial No. 567,689. 2 Claims. (Cl. 292—128.)



1. In a device of the class described, a housing having a slot therein, a guide within the housing, a slide including a hook projecting through the slot and including an offset end portion abutting one wall of the housing, the slide operating in the guide, a spring receptacle carried by the slide, a spring therein and engaging the

offset end of the slide, an element secured to the offset member and extending beyond the wall of the housing, an

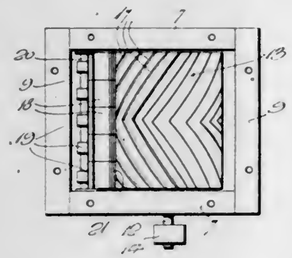


operating element secured to the element extending through the housing, and means positioned for engagement by the hook.

1,509,727. TIRE CARRIER. HARRY R. GERRIE, Montreal, Quebec, Canada. Filed Nov. 8, 1921. Serial No. 513,716. 8 Claims. (Cl. 224—29.)

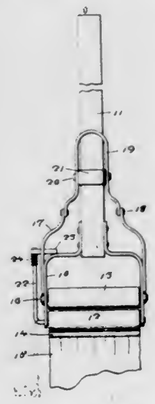
1. In a tire carrier, a pair of brackets, a carrier hingedly connected at one end with one of said brackets and slidable into supporting relation at the opposite end with the other bracket, and means intermediate the brackets to support the free end of the carrier and raise the same for supporting engagement with the bracket.

1,509,728. WINDOW-SHADE ROLLER. JOHN P. HALL, Patroon, Tex. Filed June 14, 1923. Serial No. 645,381. 1 Claim. (Cl. 156—34.)



The combination with a window shade roller, of a grooved member attached to one end thereof, and having a depression at one side, a cord adapted to be wound about said member and unwound therefrom to roll the shade against the tension of the spring of said roller, a bracket formed from a single length of material into substantially L-shaped formation, and including a fixed limb and a relatively movable resilient limb, means for securing the bracket to the window casing, a pin projecting from said movable limb and adapted to normally project within said depression to hold the roller stationary, and a flexible element suspended from said movable limb and utilized to separate the pin from said depression to permit rotation of the roller.

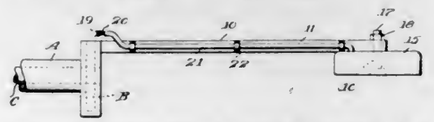
1,509,729. METHOD OF FACING MOLDED ARTICLES. THEODORE HOSTETTER, Toledo, Ohio, assignor, by mesne assignments, to The Krantz Realty & Investment Company, Toledo, Ohio, a Corporation of Ohio. Filed July 14, 1920. Serial No. 396,101. 3 Claims. (Cl. 18—60.)



1. The method of molding comprising flowing a coating about the mold interior, the coating flowing in such thinness that bubbles may not be trapped thereby to disturb the coating from conforming to the mold, and before the coating is set, pouring a filler body to carry thereupon such coating.

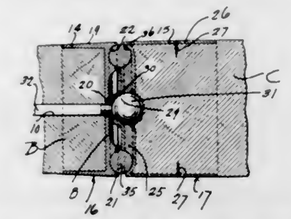
1,509,730. HULLING ATTACHMENT FOR THRASHING MACHINES. WILLIAM R. HUGHES, Fargo, Okla. Filed Aug. 1, 1922. Serial No. 578,940. 2 Claims. (Cl. 83—14.)

1. A hulling device comprising a housing having an inlet and an outlet, a cylinder rotatably mounted in the housing and extending between the inlet and outlet, a concave in the housing between the inlet and outlet and formed of longitudinally extending sections pivotally mounted at their upper ends and having their lower end portions curved to conform to the contour of the cylinder and terminating in depending end portions positioned above the outlet, resilient means engaging the depending end portions of the concave sections to yieldably hold the same against movement away from the cylinder, and means for engaging the depending end portions of the concave sections for moving the same against the action of the resilient means.



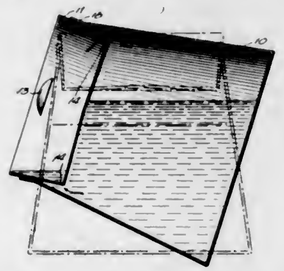
1,509,731. MOP. DUNCAN KERR, Atlantic City, N. J. Filed Apr. 4, 1923. Serial No. 629,837. 1 Claim. (Cl. 15—119.)

A mop of the character described comprising a pair of spaced bearing arms, a handle extending therefrom, rollers arranged parallel and one above the other, the upper roller having its pintle slidable within slots in



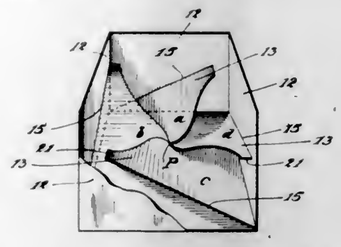
said bearing arms, a strip of fabric secured to and adapted to be wound upon the lower roller, a substantially yoke-shaped member pivotally mounted upon the handle, bars pivotally connected to the free ends of said yoke-shaped member and the projecting pintles on said upper roller respectively, a substantially L-shaped crank arm having one leg forming the pintle of the lower roller, and its other end normally extending longitudinally of the mop and means for holding said crank arm in an inoperative position.

1,509,732. MAGNETIC PEEL. PAUL F. KENNEDY, Marion, Ohio. Filed Sept. 26, 1923. Serial No. 665,030. 2 Claims. (Cl. 294—65.5.)



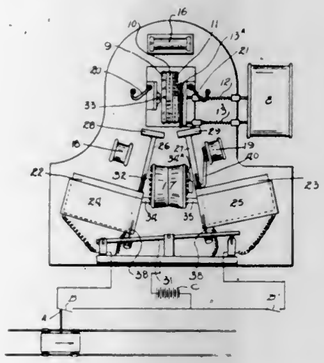
1. In combination with a charging machine, a magnetic peel comprising an elongated arm carrying an electromagnet, the charging machine having a plate and a plunger projectable therethrough, said arm terminating at one end in a vertical socket engaging upon said plate and formed with a hole receiving said plunger.

1,509,733. BALL BAT. JOHN HENRY LANGFORD, Imperial, Pa. Filed Aug. 23, 1921. Serial No. 494,626. 7 Claims. (Cl. 46—4.)



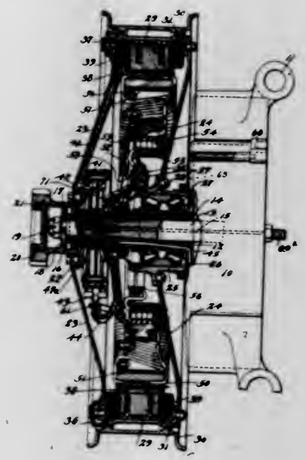
1. A ball bat comprising a hand engaging section and a ball hitting section; a resilient ring, and means carried by one section extending through the other section for exterior adjustment to clamp said ring intermediate the abutting ends of the sections.

1,509,734. DRINKING CUP. WILLIAM PERCY LANGLEY, Pittsfield, Mass. Filed Oct. 24, 1923. Serial No. 670,598. 3 Claims. (Cl. 65—13.)



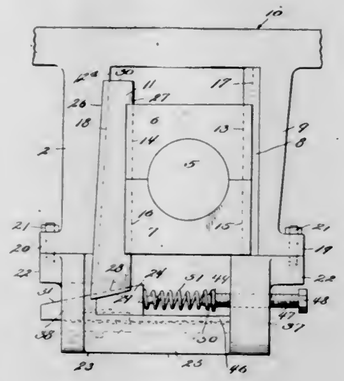
1. As a new article of manufacture, a drinking cup comprising an outer vessel, and a shallow inner cup fitting fluid-tight in said vessel at the top directly adjacent to the walls of the outer vessel and adapted to hold a limited quantity of the liquid received from the outer vessel, said inner cup having means to permit outflow of the fluid from the outer vessel to the inner cup and having a vent.

1,509,735. BOX. RICHARD H. LAUBERSHEIMER, Brooklyn, N. Y. Filed June 28, 1924. Serial No. 722,935. 6 Claims. (Cl. 229—39.)



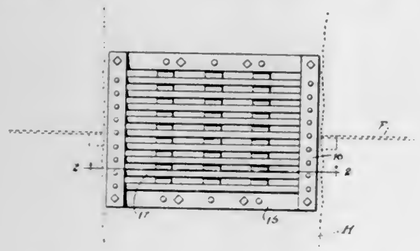
1. A box of the class described, including side walls, flaps connected to the edges of all of the side walls, each inter-engaging all of the others by simultaneous and direct swinging movement to form an end wall, said flaps having substantially identical locking structures integral therewith, resisting stresses exerted in the planes of said flaps, all operated concurrently to interlock by a single thrust in order to form the box end wall, each of said flaps having a stiffening extension in a unitary structure therewith projecting beyond the straight line connecting the locking structure and the base corner of the flap.

1,509,736. APPARATUS FOR RECORDING THE TIMES AT WHICH A VEHICLE PASSES TWO GIVEN POINTS. ERNEST EDWARD LUCY, Sydney, New South Wales, Australia. Filed Sept. 1, 1921. Serial No. 497,605. 1 Claim. (Cl. 234—27.5.)



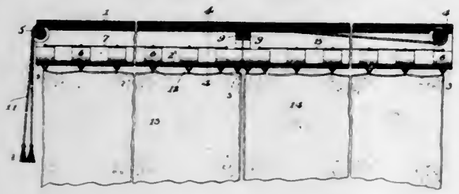
In apparatus for automatically recording the times when a train reaches the beginning and the end of a given section of track, comprising a pair of drums having a strip of paper adapted to wind off of one onto the other, rotatable discs between said drums having respective notations thereon denoting hours and fractions thereof, means for rotating said discs relatively to each other so as to indicate the exact time at a given place, an ink ribbon between the discs and strip, a shiftable switch and conductors adapted to form therewith electric circuits, said circuits being completed, one when the train reaches the beginning of the section and the other when it reaches the end of said section, electromagnets connected in said electric circuits, an armature associated with each magnet and adapted to be attracted thereby when the magnet is energized, and means actuated by said armatures for pressing the paper strip against the discs, for rotating said drums and for shifting the switch from one circuit to the other when the armature of said circuit is attracted by the magnet.

1,509,737. WHEEL MOTOR FOR FOUR-WHEEL DRIVES. HARRY C. MCCLEARY, Washington, D. C. Filed Sept. 27, 1923. Serial No. 665,249. 13 Claims. (Cl. 172—287.)



1. In an electric wheel motor, a wheel casing, a series wound field carried at the felly portion thereof, an armature disposed upon a relatively fixed member within the wheel, collecting rings rotatable with the casing for both the field and armature, cooperating brushes upon the fixed member for establishing circuits to said rings, an axle, a fixed supporting hub thereon provided with conductor conduits, and conductors from said hub to said brushes.

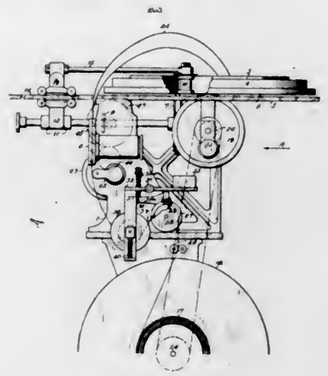
1,509,738. WEAR COMPENSATOR FOR JOURNAL BOXES. JAMES E. MCDANIEL, Columbia, S. C., assignor of thirty-one per cent to T. W. Waters, seventeen per cent to Theodotus C. Hamby, twenty-two per cent to Arthur W. Hamby, all of Columbia, S. C., and five per cent to Charles M. Galloway, Washington, D. C. Filed Sept. 28, 1923. Serial No. 665,389. 10 Claims. (Cl. 105—81.)



1. In combination with a bearing box and a frame in which said box is mounted having a lower yoke, an adjustable bearing wedge associated with the bearing box, mechanism mounted in said yoke for automatically controlling the position of said bearing wedge including an auxiliary wedge with which the said bearing wedge has direct engagement, and means engaging the said auxiliary wedge for automatically adjusting the bearing wedge to compensate for wear on the driving box.

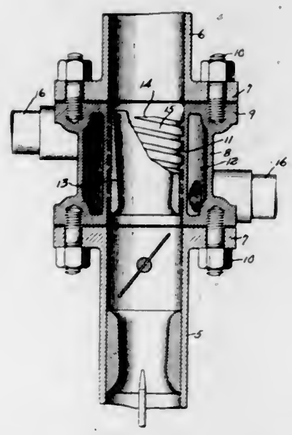
1,509,739. CATTLE GUARD. GEORGE MCLEAN, Texico, N. Mex. Filed May 7, 1923. Serial No. 637,337. 1 Claim. (Cl. 256—14.)

In highway construction, a pit, supporting bars extending across the pit and adapted to be secured in place, a grate supporting structure comprising supporting elements extending across the supporting bars and resting thereon, and anchoring plates at the ends of the supporting elements secured thereto, in combination with a grid comprising end plates having their ends supported on and remotely secured to the anchoring plates, and grid bars having their ends attached to the end plates and adapted to cover the pit when in place and to be removed when access to the pit is desired, substantially as described.



1,509,740. CURTAIN POLE. CHARLES A. WARSING, Cleveland, Ohio; Walter M. Tobias administrator of said Charles A. Warsing, deceased. Filed July 15, 1922. Serial No. 575,159. 1 Claim. (Cl. 156—20.)

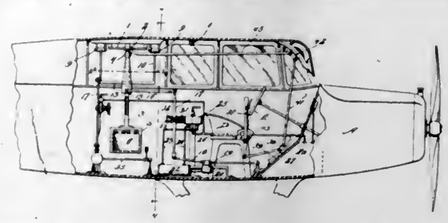
In a device of the kind described, a longitudinally slotted tubular pole, convexed blocks slidably mounted in the pole and arranged in two sets, the adjacent end blocks of said two sets having upwardly extending standards each of which has two bores therein, the bores of the two standards being similarly located, a pulley carried by the pole, a pull cord doubled on itself, said cord passing through the bores of the standard and secured to the latter and tapes secured to the standard carrying blocks respectively and extending across the remaining blocks of the sets and being secured to each of said blocks on its upper face, said blocks being adapted to support curtains, as and for the purpose set forth.



1,509,741. APPARATUS FOR MANIPULATING CINEMATOGRAPH FILMS. EDWARD JOHN WAY, Johannesburg, Transvaal, South Africa, assignor to Bioscope Improvements Limited, Johannesburg, Transvaal Province, South Africa, a Company of the Transvaal Province. Filed Mar. 1, 1922. Serial No. 545,581. 12 Claims. (Cl. 88—18.7.)

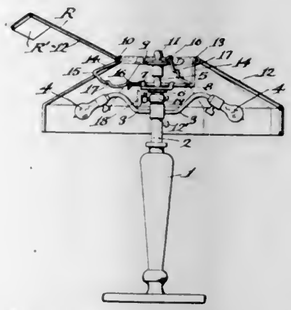
1. In film manipulating apparatus, the combination of means for utilizing a film, a rotatable carrier for unused film coil, means for rotating the latter to deliver film without tension, and a carrier for used film coil

driven from the unused coil carrier to rotate at substantially the same speed as the unused coil carrier.



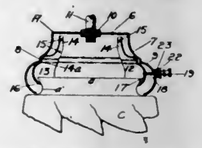
1,509,742. VAPORIZER. ARTHUR HORACE WEBBER, Boston, Mass. Filed Nov. 23, 1921. Serial No. 517,326. 4 Claims. (Cl. 48—180.)

1. A vaporizer for the interposition of fuel supply pipe between the carbureter and engine of an internal combustion engine, comprising a casing having an annular heating chamber, a venturi in the casing, and means between the venturi and the inner face of the casing for forming therebetween a spiral passage open at both ends.



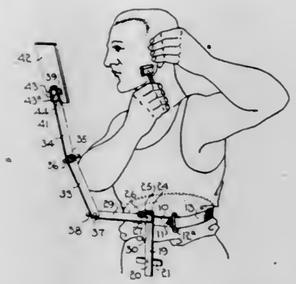
1,509,743. AUTOMATIC CONTROL FOR AEROPLANES AND DIRIGIBLE BALLOONS. EDWARD F. WEGNER, Council Bluffs, Iowa. Filed Apr. 26, 1921. Serial No. 464,494. 2 Claims. (Cl. 244—29.)

1. The combination with an aeronautic device, of a pendulum supported for pivotal longitudinal and transverse movement and being susceptible of a longitudinal slidable movement, means associated with said pendulum for automatically controlling the equilibrium of the device, manual means for controlling the automatic means and including a curved bar pivotally secured at one end to the means associated with said pendulum, a supported stirrup receiving the upper end of said bar, notches



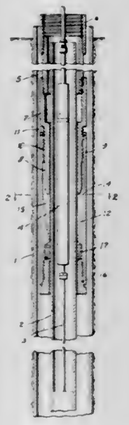
formed on this end, a locking lever designed to singly engage the notches and means for controlling the lock lever as and for the purpose specified.

1,509,744. LAMP SHADE. ROSE E. WILSON, Long Beach, Calif. Filed Apr. 7, 1923. Serial No. 630,593. 1 Claim. (Cl. 240—103.)



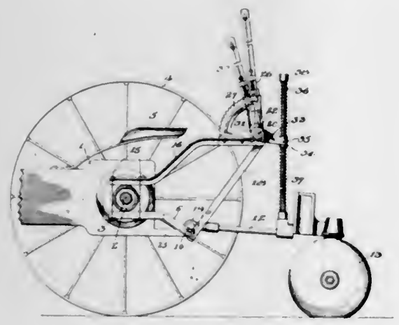
A device of the character described comprising a standard, a center post set in the standard and in alignment therewith, arms extending laterally from said post and adapted to carry incandescent lamps, a rod in alignment with said post and rotatably seated therein, two sets of radially disposed arms carried by said rod, a ring carried by each set of the radially disposed arms, the rings being in horizontal planes one above the other, a lamp shade, said shade comprising sectors, frames for said sectors, said frames being pivoted to the upper ring, extensions on the frames of the alternate sectors of said shade, a hook on the end of each of said extensions adapted to engage the lower ring to hold said alternate sectors in raised positions, and a universally pivoted concave reflector adapted to intensify the illumination from a lamp.

1,509,745. GLOBE HOLDER FOR ILLUMINATING FIXTURES. FRANK YOKEL, Avalon, Pa., assignor to Pittsburgh Lamp, Brass & Glass Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed June 21, 1923. Serial No. 646,795. 4 Claims. (Cl. 240—132.)



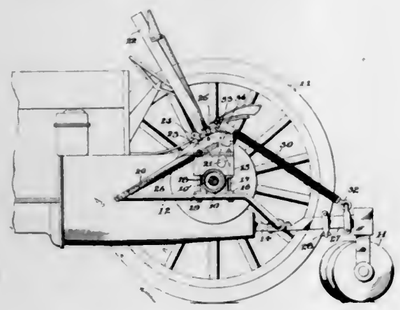
1. A globe holding device comprising a hollow shell open at its lower end for the reception of the top of a globe, a plurality of inwardly turned hook-like globe engaging members on the interior of the shell, and a screw passing through only one of said members and the shell by means of which the globe engaging member may be moved into and out of globe engaging position, said other member being substantially fixed in position.

1,509,746. MIRROR SUPPORT. GEORGE A. ZEDDLER, Cleveland, Ohio. Filed Sept. 11, 1922. Serial No. 587,465. 10 Claims. (Cl. 45—97.)



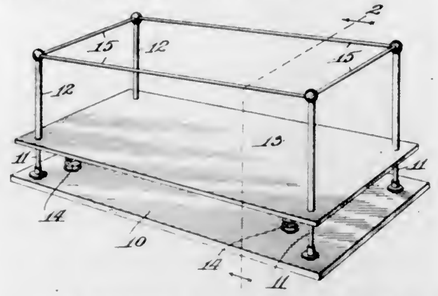
1. A mirror support comprising a body encircling member, a transversely arranged supporting plate connected therewith and adapted to bear flatwise against the front of the body of the wearer, a vertically disposed bar, means for rigidly but detachably connecting the upper end of said bar to said plate intermediate of the length of the latter, the bar depending from the plate and adapted to bear flatwise against the abdomen, a supporting strip outstanding from said plate and said bar at the upper end of the latter, a permanent connection between said bar and said strip, which connection is independent of the detachable connection between said bar and said plate, said permanent connection providing for a slidable and pivotal movement of the elements and normally holding the inner end of said strip against said plate, and a series of links adjustably connected to each other and carried by said strip and having means for supporting a mirror, said strip and said links being arranged edgewise and foldable one against the other and alongside said strip.

1,509,747. TUBING SPACER. CHARLES H. BENCKENSTEIN, Vinton, La. Filed Apr. 4, 1921. Serial No. 458,307. 6 Claims. (Cl. 265—22.)



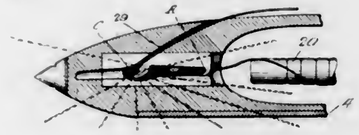
6. A pipe spacer mechanism including relatively movable top and bottom heads, through which the pipe is adapted to pass, means for locking the top and bottom heads against relative movement, a portion of the interior of the bottom head having a tapering wedging surface, gripping means coacting with the wedging surface and adapted to grip the pipe, the lower portion of the interior of the bottom head being cylindrical, a shoulder formed between the tapering portion and the cylindrical portion, a gland screwthreaded into the bottom head, and packing arranged between the shoulder and the gland.

1,509,748. TRACTOR ATTACHMENT. JOSIAH QUINCY BILLINGS, Shreveport, La. Filed Aug. 22, 1922. Serial No. 583,655. 1 Claim. (Cl. 97—47.)



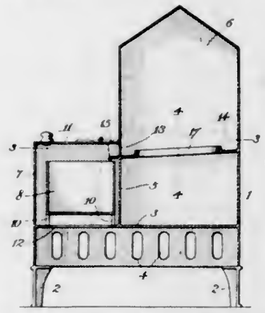
An attachment for tractors comprising in combination laterally spaced drawbars, a support extending upwardly and rearwardly from the rear end of the respective drawbars, a top frame bar secured to the upper end of said support and extending forwardly, the adjacent forward ends of said frame bars and draw bars being spaced apart and adapted to receive the rear axle housing between them, a cross bar extending between and anchored adjacent the rear ends of the drawbars, links swingably mounted on said cross bar and adapted for connection at their rear ends to an implement, a shaft extending between the rear ends of the frame bars and bracing the latter, and link elevating means mounted on said frame bars and shaft.

1,509,749. TRACTOR ATTACHMENT. JOSIAH QUINCY BILLINGS, Shreveport, La. Filed Apr. 18, 1923. Serial No. 632,955. 7 Claims. (Cl. 280—33.44.)



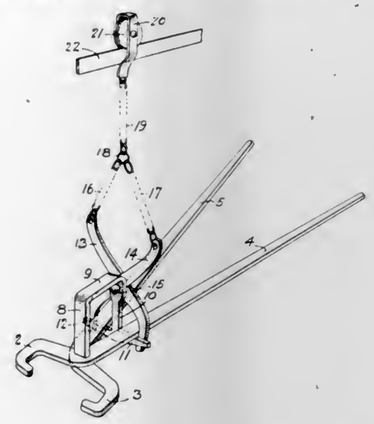
1. The combination with the rear axle housing of a tractor, of a bail-like draw-bar extending rearward of the housing from either end thereof and below the same, means securing the side bars of the draw-bar to the housing, one of the said side bars extending forward of the housing, a brace extending from the top of the said housing to the terminal of the forwardly extending side bar, and means for coupling implements to the draw-bar.

1,509,750. AMUSEMENT DEVICE. HELEN CAMPBELL, Yakima, Wash., assignor of one-half to Fred Girtanner, Los Angeles, Calif. Filed Mar. 1, 1922. Serial No. 540,133. 2 Claims. (Cl. 46—69.)



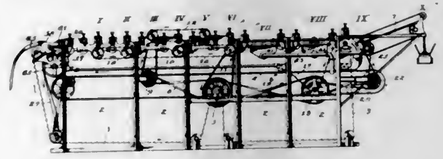
1. In an amusement device, a base, a series of uprights on said base, a platform arranged for vertical movement between said uprights, springs between said platform and said base, and a railing on said platform, said railing being connected to said platform by tubular members sliding upon said uprights.

1,509,751. SHUTTLE. JOSEPH EDOUARD GIROUARD and ALBERT LA CAIRE, Montreal, Quebec, Canada. Filed Nov. 7, 1923. Serial No. 673,380. 1 Claim. (Cl. 139—222.)



A shuttle comprising a shell, a threader lodged in the forward end thereof, said threader consisting of a metallic block having a slot in its upper surface, a pair of hooks formed at the rear end of said block and extending into the slot, said hooks being in vertical alinement, the upper hook pointing downwardly and forwardly and the lower hook pointing directly downwardly, and a third hook extending from the block into the forward end of said slot.

1,509,752. COMBINATION COOKER AND STEAMER. ADAM HASSLER, Fort Lee, N. J., and HARRY ROTHMAN, Brooklyn, N. Y. Filed Feb. 14, 1924. Serial No. 692,825. 3 Claims. (Cl. 126—20.)

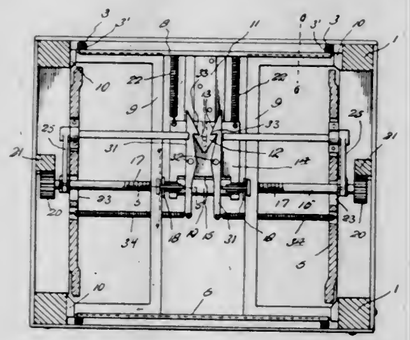


1. An apparatus of the character described, comprising a casing, a steamer, and a cooker constituting each a part of the casing and located side by side, a tray located intermediate the top and bottom of the steamer and directing condensation back into the cooker, a door normally closing the front of the steamer and a gutter on the inner face of the door discharging onto the tray when the door is closed and also when the door is opened.

1,509,753. TONGS. SAMUEL M. HEARD, Pittsburgh, Pa. Filed Mar. 13, 1924. Serial No. 698,985. 4 Claims. (Cl. 294—43.)

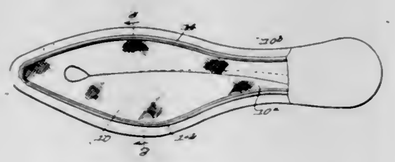
1. Tongs comprising a pair of relatively movable jaw members, handles for actuating said jaw members, and an auxiliary pair of tongs extending beside said handles and adapted to be actuated in response to a load carried by said jaw members to press said handles toward each other and to thereby press said jaws toward each other.

1,509,754. FIBER-CLEANING MACHINE. ANATOLE C. HEINY, Washington, D. C. Filed May 22, 1920, Serial No. 383,510. Renewed Feb. 9, 1924. 22 Claims. (Cl. 19—10.)



9. In a machine for cleaning plant fibers, the combination with clamps for holding the leading ends of the fiber masses to be cleaned, a conveyor with which the clamps are made to engage for carrying them through the machine, and means for cleaning the material during transit, of means for holding a clamp in position adjacent to, but free from, the conveyor, means for releasing the clamp from such holding means and causing it to engage with the conveyor, means for operating the said releasing mechanism timed with reference to the speed of the conveyor, and means for varying the timing of the said releasing mechanism.

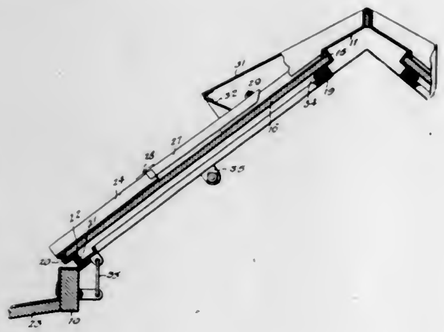
1,509,755. ELEVATOR SAFETY DEVICE. WILLIAM M. HENSLEY, Vieco, Va. Filed Feb. 9, 1924. Serial No. 691,730. 1 Claim. (Cl. 187—78.)



In combination, an elevator shaft, a car movable in said shaft, a cable for supporting and moving said car in the shaft, a pair of oppositely movable brake members slidably mounted in the car, having shoes carried thereby for engaging with the elevator shaft to arrest the movement of the car, a shaft rotatable in said car, a plate member rotatably mounting said shaft and adapted for a sliding movement relative to the car, the ends of said rotatable shaft being provided with pinions, racks carried by the elevator shaft for cooperative engagement with the pinions on said rotatable shaft to rotate the same in the movement of the elevator car in the shaft, means operating the plate member for normally holding the pinions in engagement with said racks, pawl members pivotally

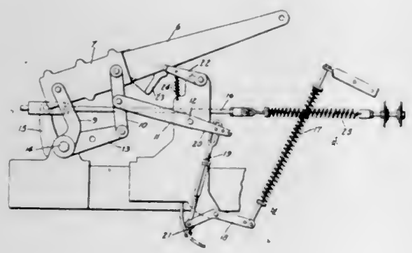
mounted on the plate member for cooperative engagement with a notch projection carried by the car to lock the plate member with the pole engaging said racks, releasing members carried by the plate member movable for disengaging said pawls for permitting a sliding movement of the plate member, cams carried by the brake member adapted for operating the releasable members to release said pawls, and cable operating means connected with the rotatable shaft normally operating to move said shaft and plate member for holding the pawls in disengaged relation with respect to racks, whereby the breakage of the cable will permit the operation of the plate to move the

pawls into engagement with the racks for rotating the shaft having connection with the brake members adapted for operating said brake members to apply the brakes to the elevator shaft and arrest the downward movement of the car, a subsequent upward movement of the car by the cable operating the rotatable shaft to retract said brake members from engagement with the elevator shaft for releasing the brakes, said retracting movement of the brake members operating the releasable members for disengaging the pawls from locking cooperation with the projection carried by the car for permitting the disengagement of the pawls from the racks through the operation of the cable operated means.



1,509,756. SHOE-SOLE LINING. MEYER S. HESS, Baltimore, Md. Filed Nov. 1, 1921. Serial No. 512,055. 6 Claims. (Cl. 36—22.)

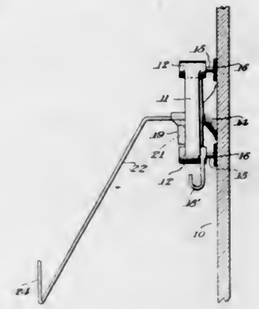
6. A sole lining adaptable to a plurality of sizes of shoes, consisting of a transversely dimensionable blank having side members separated on a longitudinal line extending from the heel end thereof to the point at the extreme forward end of the foot bearing area of the blank, with the inner edges of said side members secured together in overlapping relation.



1,509,757. SKYLIGHT. SAMUEL HEYMAN, Brooklyn, N. Y. Filed Apr. 25, 1923. Serial No. 634,538. 5 Claims. (Cl. 108—16.)

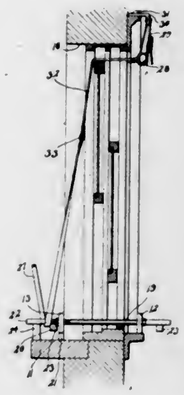
1. In a skylight including a frame and a sash pivotally mounted in the frame, means for covering the openings between the sides of the sash and the frame, comprising a channel member carried by the sash and projecting over the frame, said channel member extending throughout only a portion of the length of the sash, a second channel member carried by the frame and extending longitudinally over a portion of said opening, and a third channel mem-

ber overlapping the ends of said first-mentioned channel members hinged to the channel member carried by the sash, and a fixed cover member extending over the overlapping joint of the frame channel member and the hinged channel member.



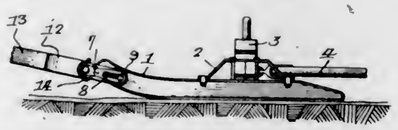
1,509,758. ELECTRIC SWITCH. HERMAN J. H. HUBER, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Aug. 30, 1920. Serial No. 406,966. 7 Claims. (Cl. 200—153.)

3. In an electric switch, the combination with relatively movable cooperating contacts, of a mechanism for controlling said contacts, a device in which energy is stored by the circuit opening movement of said mechanism, and means intermediate said device and said mechanism operative to prevent rebounding of said mechanism when reaching circuit opening position.



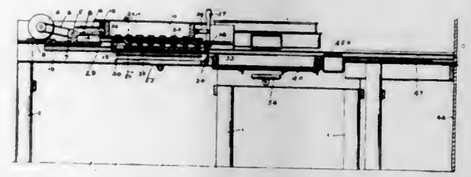
1,509,759. COMBINATION VACUUM WINDOW SNAP. OTTO G. HUBER, Hartford, Conn. Filed Feb. 5, 1923. Serial No. 617,056. 3 Claims. (Cl. 248—39.)

1. A device of the character described comprising a substantially U-shaped bracket, a cylinder carried at each end of said bracket, a resilient block secured within the U-shaped bracket and having a substantially cup-shaped member made integrally with and protruding from said resilient block, shanks extending within and without restricted openings in said cylinders and having knurled heads attached to their outer ends and head to their inner ends respectively, springs mounted within said cylinders and bearing against said heads, a hook extending downwardly from one of said cylinders, a socket mounted diametrically opposite said resilient block upon said bracket and having a longitudinal slot therein, and a hanger arm



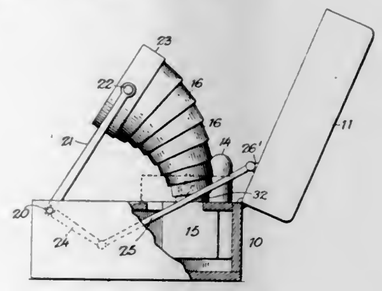
having its angular disposed upper portion received in said slot, and the lower portion thereof having upwardly bent extremities.

1,509,760. SCAFFOLD. FRANK KAYTE, Farr, Colo. Filed Dec. 5, 1923. Serial No. 678,738. 2 Claims. (Cl. 304—24.)



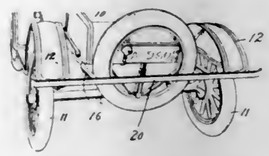
1. A window scaffold comprising spaced clamping members, means connecting said members whereby the latter may be engaged upon opposite sides of a window sill, a platform, means slidingly connecting the platform and clamping members, means for limiting such sliding movement, a cross bar adapted to be positioned transversely across the upper end of the window, means whereby the bar may be secured in position and a flexible loop member secured to the bar and detachably engaging the platform for supporting the outer end of the latter.

1,509,761. SLED BRAKE. XAVIER LEGAULT, De Lesseps, Quebec, Canada. Filed Apr. 19, 1924. Serial No. 707,738. 5 Claims. (Cl. 188—8.)



1. In combination with a pair of sled runners, a pair of links having sliding engagement therewith, and a braking device carried by said links.

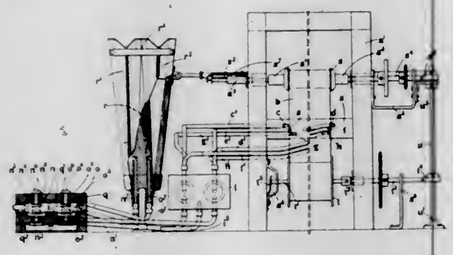
1,509,762. ALMOND-DIPPING MACHINE. ARTHUR C. MCCORD, Rochester, N. Y., assignor to Franklin D. McCord, Rochester, N. Y. Filed Oct. 4, 1922. Serial No. 592,258. 5 Claims. (Cl. 91—4.)



1. In a chocolate dipping machine, the combination of a hopper, said hopper comprising a distributing member, a locating member and a conveying member, means carried by said distributing member to allow the nuts to pass into holes provided in said locating member, and means provided by said conveying member to receive the nuts contained in the holes in said locating member and convey them away from said locating member, spoons located below said conveying member to receive the nuts conveyed from said locating mechanism, means for swinging said spoons and dipping them into a pan containing liquid chocolate at the end of its movement in one direction and means to receive the coated nut from said spoons at the end of its movement in the reverse direction.

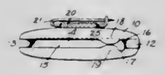
1,509,763. COLLAPSIBLE HORN. FRANCK MINUTILLO, New York, N. Y. Filed Apr. 18, 1923. Serial No. 632,984. 3 Claims. (Cl. 274—2.)

1. In a phonograph cabinet, the combination of container having a sound compartment, a collapsible horn made up of ring sections, a lid to the container, and means connecting the horn and the lid to cause the horn to open in one direction while the lid opens in the opposite direction.



1,509,764. COMBINATION FENDER BRACE AND BUMPER. EDWARD L. MOORE, Waterloo, Iowa, assignor to Alvah H. Warren, jr., St. Paul, Minn. Filed Oct. 3, 1923. Serial No. 666,291. 4 Claims. (Cl. 293—55.)

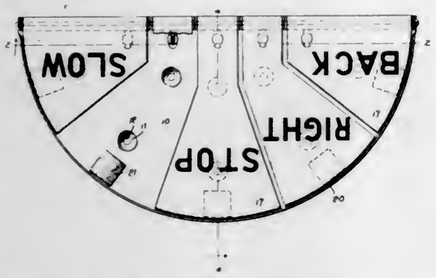
1. The combination with an automobile body having a pair of fenders, combined supporting and connecting members fixed to the automobile body and extending rearwardly therefrom, a bumper secured to the free ends of said members and having its ends projected beyond



said members and in the rear of said fenders, and a plate secured to said bumper at each end and to the fender at its other end for holding the fenders against movement relative to the automobile body.

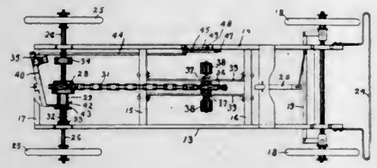
1,509,765. TRACKING MECHANISM FOR AUTOMATIC MUSICAL INSTRUMENTS. ERNEST GOODALL NICHOLSON, South Ealing, London, England, assignor to The Aeolian Company, Limited, London, England. Filed Dec. 4, 1923. Serial No. 678,492. 4 Claims. (Cl. 84—140.)

1. Tracking mechanism for automatic musical instruments operating under the control of a tune sheet and provided with means whereby upon lateral deviation of the tune sheet the exposure of a control duct results in the operation of mechanism serving to re-establish the normal disposition of the tune sheet with reference to the tracker bar, wherein a plurality of pairs of control ducts are provided each pair of which corresponds to a particular width of tune sheet, the said pairs of control ducts being so provided that only that pair of which one duct is uncovered as the result of lateral movement of the tune sheet is effective to determine the re-adjustment of the tune sheet with reference to the tracker bar, substantially as described.



1,509,766. WATCH HOLDER. PHILIP H. NOLTING, Jersey City, N. J. Filed Jan. 4, 1923. Serial No. 610,612. 2 Claims. (Cl. 2—250.)

1. A watch protector of the character described made of resilient material comprising two dished sections having rim portions presenting opposed cut-outs, said sections facing inward with the cut-outs in alinement and fixed together forming a casing, said cut-outs forming an opening for allowing the insertion of a watch, means adjacent one end of said opening for gripping the watch stem to hold it against movement, and means attached to one of the sections for fastening the casing in a pocket.

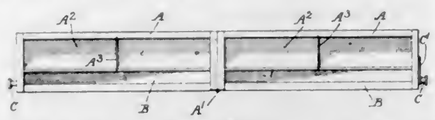


1,509,767. AUTOMOBILE INDICATOR. CHARLES A. O'TOOLE, Brooklyn, N. Y. Filed June 23, 1921. Serial No. 479,774. 3 Claims. (Cl. 177—327.)

1. An indicating device comprising a semicircular plate or support adapted to be disposed horizontally on the top of an automobile with the diametrical edge preferably facing forward of the automobile, a plurality of pivoted signal arms pivoted at one end to the plate along the diametrical edge and adapted when actuated to be moved to a vertical position along this edge, the plurality of signal arms adapted to lie normally flat on the support and to cover its entire surface, each arm occupying a definite portion of the plate one of said arms shaped to extend vertically when elevated, the others of said arms shaped to point in directions to the right

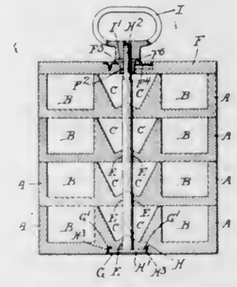
and to the left from the vertical when elevated, whereby the elevation of each arm will indicate a certain impending direction of movement.

1,509,768. TOY VEHICLE. DON A. OVERMAN, Omaha, Nebr. Filed Mar. 14, 1923. Serial No. 624,954. 5 Claims. (Cl. 192—13.)



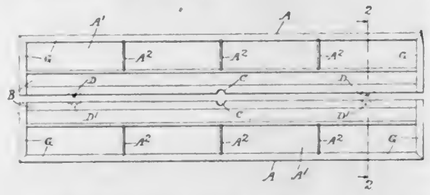
1. In a pedal wagon, pedal mechanism including a clutch member, a drive shaft, a second clutch member mounted on the drive shaft, means for normally interlocking said clutch members together, and manual means for separating the clutch members to free the drive shaft from the pedal mechanism.

1,509,769. DRESS FORM. EMIL THEODORE PALMENBERG, New York, N. Y., assignor to J. R. Palmenberg's Sons, Inc., New York, N. Y., a Corporation of New York. Filed May 5, 1923. Serial No. 636,887. 1 Claim. (Cl. 223—18.)



As a new article of manufacture, a dress form having a fabric covering around the body portion of the form, of a pair of shoulder straps secured at their ends to the covering and at their intermediate portions resting on the shoulders of the form, said straps having outer friction surfaces.

1,509,770. GAME DEVICE. LESLIE MONROE PARKER, Evanston, Ill. Filed Dec. 24, 1923. Serial No. 682,388. 9 Claims. (Cl. 46—55.)



1. As a new article of manufacture a game device, comprising a combined playing and storage receptacle formed of a plurality of members joined together for relative movement, said members adapted when in one relative position to form a rack for use during play, and when in another relative position to form the storage receptacle adapted to receive the pieces of the game.

1,509,771. GAME DEVICE. LESLIE MONROE PARKER, Evanston, Ill. Filed Feb. 8, 1924. Serial No. 691,356. 12 Claims. (Cl. 46—55.)

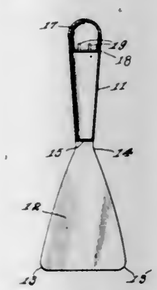
1. As a new article of manufacture a game apparatus comprising in combination a plurality of combined playing and storage receptacles each formed of a plurality of members associated together for relative movement, said members adapted when in one relative position to form a rack for use during play and to be moved from said position to another relative position, to be retained in that other relative position, and while so retained, to form a storage receptacle to receive the pieces of the game when not in play, and means for separably securing together said racks to form of themselves a box-like structure.

1,509,772. GAME DEVICE. LESLIE MONROE PARKER, Chicago, Ill. Filed Apr. 7, 1924. Serial No. 704,574. 11 Claims. (Cl. 46—55.)

1. A game device including in combination a plurality of unit rack members, means for separably joining pairs of such unit rack members in their normal upright position, and means for separably assembling together a plurality of such pairs of members.

1,509,773. GAME DEVICE. LESLIE MONROE PARKER, Chicago, Ill. Filed Apr. 7, 1924. Serial No. 704,575. 10 Claims. (Cl. 46—55.)

1. As a new article of manufacture a game device including a combined display and storage device comprising a plurality of independent members, associated together and adapted to have relative movement, parts on

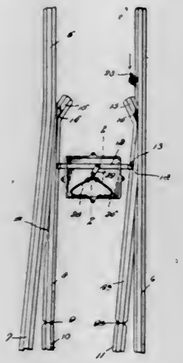


each of said members whereby they may be separately joined to each other in a plurality of different selective positions.

1,509,774. TREATMENT OF COPPER ORES. WALTER GEORGE PERKINS, London, England, assignor, by mesne assignments, to Metals Production Company of North America Incorporated, New York, N. Y. Filed Aug. 7, 1922. Serial No. 580,298. 8 Claims. (Cl. 70—18.)

1. A process for the treatment of an ore containing sulphide or copper which comprises roasting the crushed ore with access of air at such a temperature that copper sulphide is converted into copper sulphate with a corresponding swelling, then heating the oxidized material in the presence of a reducing gas for such a short time and at such a low temperature as to reduce copper compounds without melting the copper and without fritting the gangue and so that the reduced material is obtained in a porous condition, and thereafter submitting the product to a leaching operation with an ammoniacal solvent of copper in the presence of oxygen.

1,509,775. PUTTY KNIFE AND POINT HOLDER. EDWARD J. PHILLIPS, Hartford, Conn. Filed Oct. 22, 1923. Serial No. 670,155. 2 Claims. (Cl. 18—3.5.)

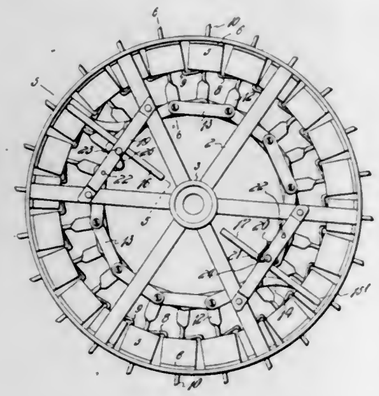


1. A putty knife formed from a single piece of sheet metal formed from a blank including a blade portion and a handle forming portion integral therewith, the sides of the handle portion being designed to be folded over to define a hollow handle, the outer corners of the handle forming portion nearest the blade being formed with curved extensions designed to lie against the blade when the handle is formed to define a bottom for the hollow handle whereby the latter may be used as a receptacle for containing glaziers' points.

1,509,776. RETURNABLE LABEL. HOWARD EMERSON PLIMPTON, Norwood, Mass. Filed Oct. 24, 1922. Serial No. 596,634. 3 Claims. (Cl. 40—5.)

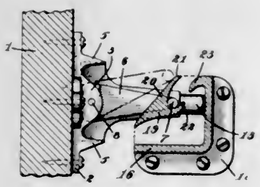
1. A returnable label, having each of its faces provided with indicia indicating spaces for the name and address of both the addresser and addressee, and with a series of small superimposed detachable sheets adapted to receive postage stamps.

1,509,777. RAILWAY SWITCH. JOHN F. QUALLS, White Star, Ky. Filed Dec. 18, 1923. Serial No. 681,386. 3 Claims. (Cl. 246—318.)



1. In a railway switch, a switch point comprising a rail section adapted for pivotal connection at one end with another rail section, and having its other end free and cut away on an oblique line at its outer side, adjacent said free end, the extreme free end portion of the switch point being directed laterally inwardly and said switch point having a groove in the tread portion thereof at the point of bend between the main portion of the same and the laterally directed free end thereof that extends parallel with the axis of the main portion thereof.

1,509,778. CRUTCH. CADWALLADER M. RAYMOND, deceased, late of Somerville, Mass., by Julia S. Thibodeau, administratrix, Fall River, Mass. Filed Oct. 15, 1920. Serial No. 417,261. 1 Claim. (Cl. 135—49.)



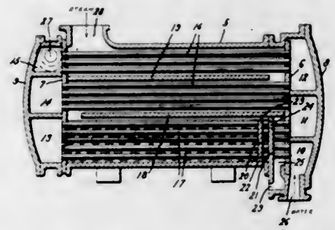
A crutch having spaced staff sections, tubular members extending therefrom, a hand-hold intermediate the sections, means surrounding the upper ends of the sections and the lower ends of the tubular members to secure them together, said means and ends having openings transversely therethrough, means selectively passing through the openings to adjustably secure the hand-hold in place, said first named means being constricted at the upper end, an arm rest, rods depending from said arm rest and into and in telescopic relation with said tubular members, and fastening means adjustably passing through the tubular members and rods.

1,509,779. TRACTION WHEEL. CHARLES REXROAT, Beardstown, Ill. Filed Oct. 16, 1923. Serial No. 668,867. 4 Claims. (Cl. 301—46.)

1. A traction wheel having its rim provided, adjacent to its edges with series of spaced slots, the slots of one series being disposed intermediate of the slots of the other series, a housing secured on the inner face of the rim bridging each slot, a calk in each housing having its outer portion received in each slot, said calks, when in retracted position being disposed angularly in the housings and when in projected position having portions thereof resting against the inner wall of the housing, and means for moving the calks to either of said positions.

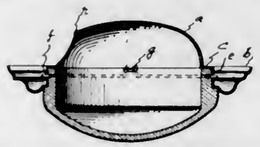
1,509,780. DOORCHECK. NEILL A. ROBERTSON, Oakfield, Me. Filed Sept. 4, 1923. Serial No. 660,834. 2 Claims. (Cl. 292—198.)

1. A door check comprising a catch adapted for pivotal attachment to a door, a spring for holding said catch at a constant angle to the door, a keeper adapted for attachment to a stationary object, said keeper comprising a plate, a pair of lips carried by said plate and forming a hook for receiving the catch, said lips being spaced from the stationary object to permit the catch to pass freely around the same, one of said lips presenting a bearing surface to the catch to guide the same into the hook, and a spring pressed bumper carried with the catch and adapted to engage said keeper.



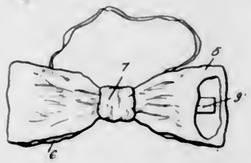
1,509,781. COMBINED LEASH AND WHIP. ADOLPH ROTH, New York, N. Y. Filed Aug. 2, 1923. Serial No. 655,315. 3 Claims. (Cl. 119—96.)

1. A device of the character described comprising a length of material having a loop formed on one of its ends, the other end of said material being bent backwardly upon itself to form a looped portion, said second mentioned end being secured to the first-mentioned end



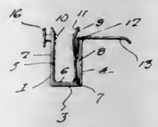
by stitching, a stiffening element interposed between said overlapped ends, and attaching means carried by said first-mentioned looped end.

1,509,782. FEED-WATER HEATER. FREDERICK SAMUELSON, Rugby, England, assignor to General Electric Company, a Corporation of New York. Filed Sept. 19, 1921. Serial No. 501,703. 4 Claims. (Cl. 257—236.)



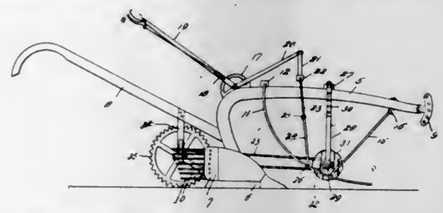
1. A feed water heater comprising a casing, tubes in the casing over which heating elastic fluid flows and through which feed water to be heated flows, and means dividing the tubes into three portions, a portion over which the elastic fluid flows and is condensed, a portion which is surrounded by condensed elastic fluid, and a portion over which the air and non-condensable gases flow.

1,509,783. DOME LIGHT. WILLIAM SCHNELL, Detroit, Mich., assignor to Ternstedt Manufacturing Co., Detroit, Mich., a Corporation of Michigan. Filed Sept. 17, 1923. Serial No. 663,018. 7 Claims. (Cl. 240—41.)



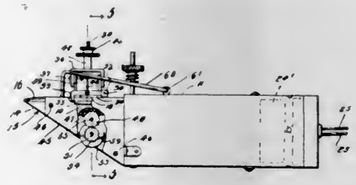
1. In a dome light, the combination of a shell forming the reflector and lens frame in a single piece, a spring member protruding through said shell to form a part of a bayonet lock, and a lens provided with a bayonet recess in the glass for engaging said spring members.

1,509,784. NECKTIE. ADOLPH SCHRETER, Baltimore, Md. Filed June 21, 1923. Serial No. 646,857. 1 Claim. (Cl. 2—154.)



In a necktie construction, a body portion, a necktie interior for positioning in the body portion and including a padding strip, a reinforced fabric stiffening member secured to the padding strip and the edges of the fabric stiffening member being substantially spaced from the edges of the padding strip, to allow the edges of the body portion to bend.

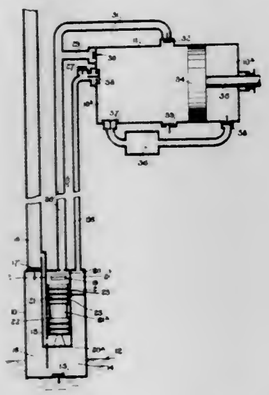
1,509,785. BUTTON AND SUPPORT THEREFOR. ROBERT C. SCOTT, Port Arthur, Tex. Filed Mar. 17, 1924. Serial No. 699,786. 2 Claims. (Cl. 24—80.)



1. A device of the class described comprising a substantially U-shaped frame, the upper end of one of the arms thereof forming a stationary jaw, a clamping jaw pivotally supported at its lower end adjacent the lower end of the other arm of said U-shaped frame, an actuating lever pivotally supported on the upper end of the last mentioned arm, the inner end of said lever being bent at substantially right angles thereto for engagement with said clamping jaw for moving the same inwardly for co-operation with the stationary jaw, the outer free end of said lever being curved and adapted for engagement with the base portion of said U-shaped frame for holding the lever in a locked position, and a button associated with the outer face of the stationary jaw.

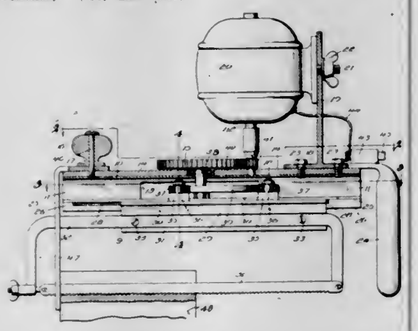
1,509,786. POTATO DIGGER AND VINE CUTTER. THOMAS SIMON, Mullica Hill, N. J. Filed Sept. 20, 1923. Serial No. 663,742. 3 Claims. (Cl. 55—107.)

1. In combination with a plow including a beam having a plow share, a substantially U-shaped vine lifting member having its intermediate portion extending transversely of and resting upon the rear portion of the beam, said vine lifting member having its legs depending and curved forwardly and downwardly, a bail pivoted to the forward portions of the legs of said vine lifting member and having its upper end pivoted to the forward end of the beam, and manually operable means attached to the legs of said vine lifting member for raising the latter or permitting the lowering of the same.



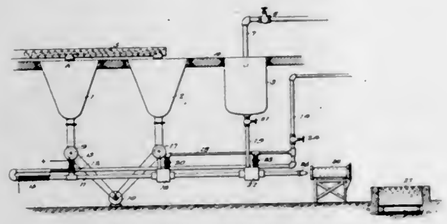
1,509,787. CLIPPER. HARRY O. SMITH, Los Angeles, Calif. Filed Aug. 25, 1923. Serial No. 659,286. 2 Claims. (Cl. 30—1.)

1. In a clipper, a head, a stationary cutter blade carried by said head, a block slidable in said head and having upstanding bosses, a cutter plate having recesses enlarged with respect to said bosses and receiving them,



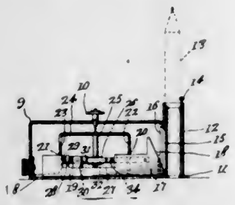
said cutter plate coacting with said stationary cutter blade, said head having a recess, a roller journaled to rotate in said recess, a gear rotatable with said roller, teeth formed on the under side of said block, and a gear meshing with said first named gear and said teeth and adapted to move said block when said roller is rotated.

1,509,788. FLUID PUMP. ALBERT HOWELL SPROULE and KENNETH RODAS DEVAIGNES SHAW, London, England. Filed Mar. 5, 1923. Serial No. 622,962. 12 Claims. (Cl. 103—245.)



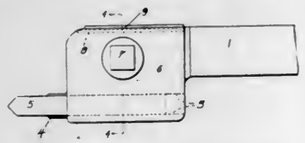
1. In a fluid pump for mining or other purposes, a pumping chamber located near to the fluid to be pumped having suction and delivery chambers and valves to control the inlet and delivery of the fluid, an air compressor located at a distance, compressed air and suction pipes leading from the compressor to the pump chamber, a valve located in a compartment in the pump chamber and operated automatically by the variation of pressure, means to permit the return of the residual compressed air in the air pipe to the compressor so as to supercharge the same, and a valve controlled outlet on the suction pipe to permit pressure air in the suction chamber to be discharged when they are placed in communication by the automatic valve in the pump chamber.

1,509,789. SAWING MACHINE. CHARLES H. STANTON, Chicago, Ill., and ELWOOD C. DESSEM, Worthington, Minn. Filed May 18, 1922. Serial No. 561,922. 3 Claims. (Cl. 29—73.)



1. In a device of the class described a supporting frame including spaced side members having longitudinal guideways in their confronting faces, a saw carrier having lateral ribs engaging in said guideways and depending below the line of said frame and adapted to support a saw from said depending portion, spaced studs rising from said saw carrier, a stub shaft mounted in said frame above the saw carrier, a cam device carried by said stub shaft and operating between said studs, and means for rotating said stub shaft and the cam device carried thereby to impart reciprocating movement to said saw carrier.

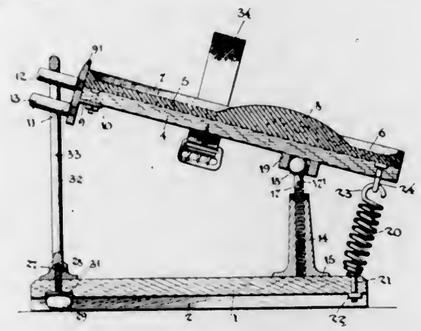
1,509,790. PROCESS FOR MAKING ELECTRODES. JOHN M. STEPHENSEN, Brooklyn, N. Y. Filed Apr. 1, 1922. Serial No. 548,602. 19 Claims. (Cl. 204—29.)



1. A process for preparing a mixture for making electrodes, comprising the forcing of a prepared carbon through a pipe line, and spraying a binder onto the prepared carbon as it passes along the pipe line.

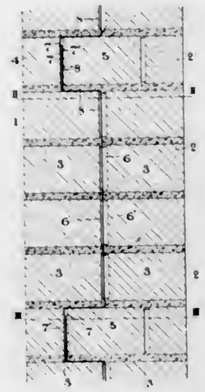
1,509,791. INDICATOR FOR USE IN CARD GAMES. JOSIAH PERCIVAL STEVENS, Atlanta, Ga. Filed May 21, 1923. Serial No. 640,452. 4 Claims. (Cl. 46—55.)

1. An indicator for card dealers and the like comprising a rotary pointer, a disc in fixed relation thereto having flat sides, reciprocating means acting off-center against the flat sides of the disc for initiating the rotary movement therein, and resilient keeper means associated with the disc and adapted to bear against the flat sides thereof, said keeper means acting to take up and complete the movement of the disc and pointer and acting further to arrest the disc at the end of its movement.



1,509,792. TOOL HOLDER. KARL STUDINKA, Donora, Pa. Filed Nov. 19, 1921. Serial No. 516,413. Renewed Feb. 18, 1924. 1 Claim. (Cl. 39—99.)

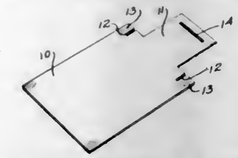
A tool holder of the character described comprising a body portion, a head formed on one end of the body portion and being provided with a laterally offset longitudinally disposed tool receiving groove, a boss formed on said head at the forward end thereof and providing a continuation for the bottom of the groove, a clamping plate adjustably secured to the head and being adapted



to hold said tool operatively positioned in the groove and a substantially V-shaped rib depending from one end of the plate to provide a fulcrum upon which the plate rocks as and for the purpose specified.

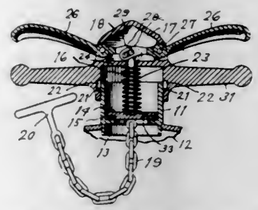
1,509,793. EXERCISING APPARATUS FOR THE FEET. RALPH S. THOMPSON, New York, N. Y. Filed Jan. 7, 1924. Serial No. 684,817. 31 Claims. (Cl. 46—69.)

12. In an exercising apparatus a spring controlled treadle element provided with an arch support, adjustable means to provide for the shifting of said element on its transverse and longitudinal axis on the application of pressure thereto, and means for imparting to said element an arcuate movement when shifted.



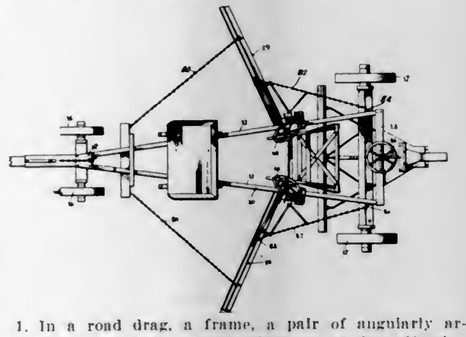
1,509,794. BUILDING WALL. ROBERT THOMSON, London, England. Filed June 16, 1923. Serial No. 645,814. 4 Claims. (Cl. 72—37.)

1. Walling which comprises two leaves that are bonded into each other, a staggered vertical series of insulating air spaces between the upright meeting faces of the out and the in bonding portions of said leaves, and an insulating sheeting of waterproofed material interposed between said leaves, dividing said insulating spaces into two separate parallel sets of insulating air spaces which completely separates from one another, and which sheeting at the same time also insulates the inner leaf and separates the two leaves of the wall from each other.



1,509,795. ROOFING. JOHN FRANCIS TINER, San Antonio, Tex., assignor of one-half to John E. Tiner, San Antonio, Tex. Filed June 30, 1923. Serial No. 648,798. 6 Claims. (Cl. 108—8.)

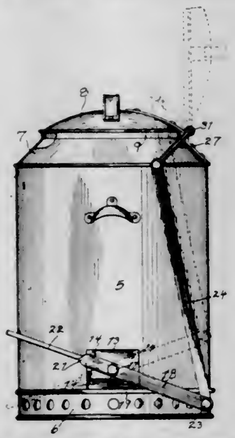
1. A roof made up of interlocking shingles, each shingle having a slit near each lower corner forming a tongue, and having at its lower end a shank portion of less width than the body portion, said shank portion having



a transverse slot in its lower end receiving the adjacent tongues of two shingles in the subjacent course.

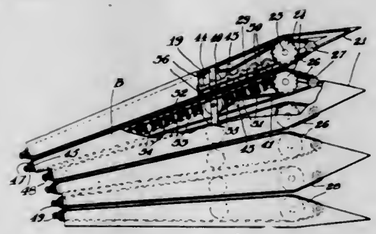
1,509,796. COVER FOR GASOLINE TANKS. TOKUSABURO TOKUHISA, Los Angeles, Calif. Filed Feb. 26, 1923. Serial No. 621,302. 6 Claims. (Cl. 220—24.)

1. In a quick-detachable tank cover, the combination with a nipple adapted to be secured to the tank opening, of projecting pins on opposite sides of the nipple, an annular flange projecting inwardly within the nipple and forming a valve seat, a cap for the nipple having integral arms, and grooves on the inner wall thereof adapted for engagement with the projecting pins on the nipple, a valve member within the nipple and an integral stem on the valve member, levers pivotally mounted relative to the cap, a cross bar on the end of the valve stem, slotted extremities on the levers in engagement with the cross bar, a partition wall within the cap and beneath the cross bar, a spring interposed between the partition wall and the valve member, and a chain and anchor fixed to the bottom of the valve member and retaining the cap relative to the tank when detached from the nipple.



1,509,797. ROAD MACHINERY. WALTER LANDON TOWNER, Muskogee, Okla. Filed Oct. 1, 1921. Serial No. 504,741. 10 Claims. (Cl. 37—154.)

1. In a road drag, a frame, a pair of angularly arranged scraper blades, independent means for adjusting each scraper blade and including a standard carried by said frame, rack and pinion mechanism for adjusting said standard, means for pivotally connecting the scraper blade to the standard whereby it can be swung vertically and horizontally, means for adjusting the standard vertically including a fixed yoke carried by the upper end of the standard, a swinging yoke carried by the fixed yoke, a nut having trunnions journaled in the swinging yoke, a controlling shaft having a screw engaged with the nut, a hand wheel on the upper end of said controlling shaft and a swivelled connection be-



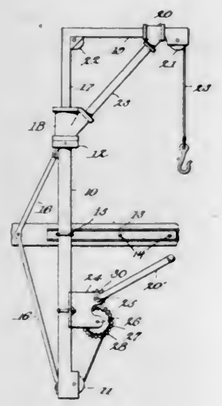
tween the lower end of the controlling shaft and the scraper blade, and means for adjusting the scraper blade horizontally including a rotatable control rod mounted on the standard and having a handle at its upper end, and a crank arm at its lower end connected with the scraper blade.

1,509,798. CONTAINER. ARTHUR A. VANCE and GERALD H. WESTOVER, Richmond, Calif. Filed Dec. 15, 1922. Serial No. 607,138. 1 Claim. (Cl. 220—36.)

In a device of the character described, a receptacle having a conical-shaped portion, a ring-shaped base secured to the base of said receptacle, a plate secured to the side of said receptacle at a point in close proximity to said ring-shaped base, a collar formed on said inclined conical-shaped portion, a cover adapted to rest on said collar, hinged portions parallel spaced and secured to said cover, hinged portions parallel spaced and secured to said inclined conical-shaped portion, a rod extending through said hinged portions and secured to the hinged portions fastened to said cover, said rod having a bent end, a link pivoted to said bent end, a lever pivoted to said plate, one end of said lever being pivoted to said link, and the opposite end of said lever being bent at right angles to the major portion of said lever so as to provide a flattened pedal portion.

1,509,799. FLAX-HARVESTING MACHINE. CHARLES HENRI VESSOT and CHARLES ULYSSES VESSOT, Ottawa, and GEORGE A. PILKEY, Corona, Ontario, Canada. Filed Jan. 29, 1920. Serial No. 355,805. 9 Claims. (Cl. 55—66.)

1. A flax pulling machine having a plurality of pulling belts, sprocket chains extending beneath and supporting the belts, and means for tensioning the belts independently of the chains.



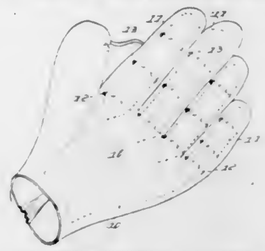
3. In a flax puller, the combination with a pulling belt, of an adjustable pulley, a central spindle therein, pins extending into the spindle, frames having slots slidably supporting the pins, angle brackets connected to the pins, brackets on the frames, and adjusting screws extending through the brackets on the frames and engaging the angle brackets.

4. In a flax puller, a pulling belt, a chain underlying the pulling belt, a supporting pulley engaging the belt and having a central peripheral recess, a sprocket having teeth extending in the central peripheral recess and adapted to engage the chain, a central spindle, a frame, and supporting members on the frame releasably connected to the spindle.

5. In a flax puller, a pulling belt, an adjustable supporting roller for the belt, a driving shaft, a driving connection between the driving shaft and the supporting roller, including a shaft and supporting means therefor permitting a slight rocking movement of the shaft.

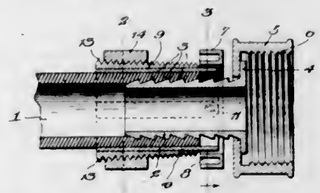
6. In a flax puller, a pulling belt, a supporting roller for the same, a driving shaft, a gear driven from the driving shaft, a tapered socket connected to the gear having an enlarged upper portion adapted to permit slight rocking movement of any shaft located in the socket, and a shaft connected to the supporting roller and to the gear extending in the aforesaid socket.

1,509,800. LIFT. REINHOLD VOGEL, Wilton, Conn. Filed Apr. 7, 1922. Serial No. 550,327. 1 Claim. (Cl. 212—61.)



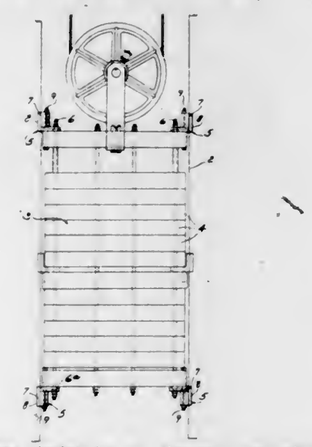
In a device of the character described, the combination with a chassis frame of a vehicle, a tubular section detachably secured midway its ends to the chassis frame, a prop having converging members secured to the section and frame respectively and being adapted to brace the section in upright position, a thrust bearing formed on the upper end of the tubular section, a Y-shaped fitting forming a portion thereof, an angle shaped tubular section telescopically mounted within the first mentioned tubular section and passing through the Y-shaped fitting in a manner whereby this angle shaped section is rotatably mounted through the medium of the bearing, the Y-shaped fitting formed on the outer end of the angle shaped section, a brace connecting the Y-shaped fittings, a winch mounted on the first tubular section below the chassis frame, sheaves mounted in rotation within the respective sections, and a cable mounted for movement within the sections and being operatively associated with the sheaves and the winch as and for the purpose specified.

1,509,801. SPORT GLOVE. DELONIA B. WALTERS, Ballengee, W. Va. Filed Nov. 23, 1922. Serial No. 602,784. 1 Claim. (Cl. 2—19.)



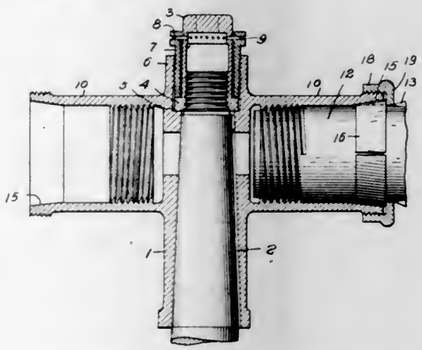
A glove for the purpose indicated having inner and outer padding disposed at the back of the hand, and a reinforcing member consisting of a flat plate and flat jointed finger elements, said plate and finger elements being embedded between said inner and outer padding, and the finger elements having rule joint connections with the plate and consisting each of a plurality of sections similarly jointed together to provide for inward folding

movement of said finger elements but to limit outward movement of the same to the plane of the plate, the free



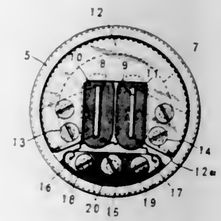
extremities of the finger elements projecting slightly beyond the ends of the fingers of the wearer to protect the fingers from the impact of an object.

1,509,802. HOSE COUPLING. JOSEPH F. WEIGAND, Evansville, Ind. Filed Dec. 24, 1920. Serial No. 432,911. 1 Claim. (Cl. 285—84.)



A coupling device of the character described, comprising a retaining element having a base and an integrally formed interior collar concentrically arranged with respect thereto semi-circular sections pivotally secured at their ends to said interior collar retaining member and adapted to have independent relative movements, said sections being adapted to surround a conduit, and a nipple positioned within the conduit, an adjustable nut mounted on said sections for moving the independently movable sections toward each other on an adjustment of the nut in one direction to clamp the conduit upon the nipple, and a coupling member carried by the nipple.

1,509,803. COUNTERBALANCE FOR ELEVATORS. ALFRED T. BROWN, Cincinnati, Ohio, assignor to The Warner Elevator Manufacturing Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Nov. 26, 1921. Serial No. 518,041. 4 Claims. (Cl. 187—94.)

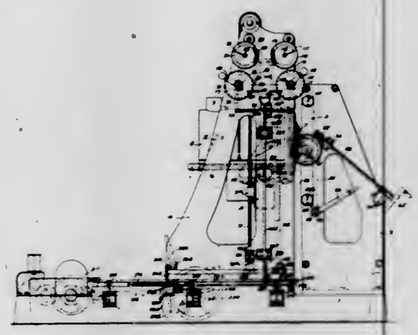


2. A slide-way device for an elevator counterbalance engageable with the shaft guide, comprising weight blocks of less width than the distance between the members of the shaft guide, said weight blocks non-engaged with said guide, stepped brackets on the ends of the weight blocks, tie-bolts passed through said blocks and said brackets, said brackets having laterally projecting portions formed with bearing grooves engaging the guides and tie-rods passing through cored orifices in the weight block castings and also passing through and constituting one of the holding members for said bearing brackets.

1,509,804. PROPELLER. THOMAS A. DICKS, Pittsburgh, Pa., assignor to Standard Steel Propeller Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Sept. 1, 1923. Serial No. 660,627. 6 Claims. (Cl. 170—160.)

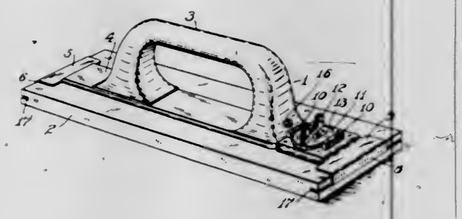
1. A propeller having in combination a hub having sockets extending radially therefrom, said sockets being internally threaded adjacent to their inner ends, blades having stems having their end portions threaded, and means whereby a solid bearing may be formed between the sockets and stems at points beyond the threaded portions of said parts.

1,509,805. TELEPHONE RECEIVER. HAROLD P. DONLE, Meriden, Conn., assignor to The Connecticut Telephone & Electric Company, Inc., Meriden, Conn., a Corporation of Connecticut. Filed Apr. 25, 1922. Serial No. 556,402. 6 Claims. (Cl. 179—117.)



1. In a telephone receiver, a casing, a U-shaped magnet therein having pole pieces and coil windings, a U-shaped plate overlying said magnet and said coil windings, and means for holding said plate and said magnet and windings in place.

1,509,806. PHOTOPRINTING MACHINE. OSCAR FOURNIER, Symmes Township, Hamilton County, Ohio, assignor to The United States Playing Card Company, Norwood, Ohio, a Corporation of Ohio. Filed Mar. 29, 1922. Serial No. 547,840. 20 Claims. (Cl. 95—75.)

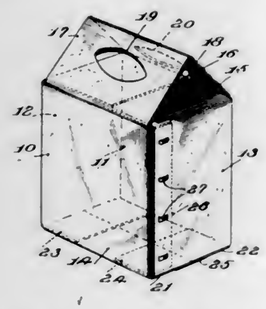


1. In a centering device, in combination with means for supporting a negative, a frame, supporting on its opposite faces in mutual parallelism, respectively a

translucent plate and a sensitized plate, said frame being symmetrically rotatable for alternately opposing

said plates to said negative, and means for positionally and contactually adjusting said negative relative to both plates.

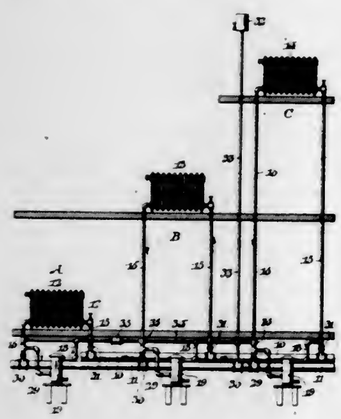
1,509,807. PLASTERER'S REVERSIBLE FLOAT. LOUIS E. GRAY, Indianapolis, Ind., assignor to Copartnership composed of said Louis E. Gray and James S. Judy, both of Indianapolis, Ind. Filed Dec. 18, 1922. Serial No. 607,550. 9 Claims. (Cl. 72—136.)



1. In a plasterer's float the combination with a reversible blade having its opposite faces each forming a working surface, of a handle therefor and means detachably gripping opposite edges of the blade for securing said handle to the blade and permit the use of either face of the blade.

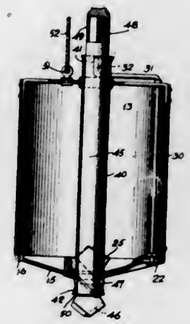
1,509,808. DICHLORINATED DERIVATIVE OF THE N-DIHYDRO 1, 2, 2^1, 1^2-ANTHRAQUINONE-AZINE AND A NEW PROCESS FOR MAKING SAME. GEORG KALISCHER and HEINRICH SALOWSKI, Mainkur, near Frankfort-on-the-Main, Germany. Filed Apr. 10, 1924. Serial No. 705,652. 2 Claims. (Cl. 260—31.)

1. The manufacture or production of a new dichlorinated N-dihydro 1, 2, 2^1, 1^2 anthraquinoneazine which consists in allowing chlorine to act on N-dihydro 1, 2, 2^1, 1^2 anthraquinoneazine in a medium of molten sulfur at temperatures about 200° C. and at ordinary pressure.



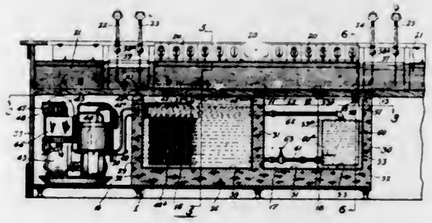
2. As a new article of manufacture the dichlorinated N-dihydro 1, 2, 2^1, 1^2 anthraquinoneazine, produced from N-dihydro 1, 2, 2^1, 1^2 anthraquinoneazine by treating it in a medium of molten sulfur at temperatures about 200° C. with chlorine, being in the dry state a blue powder difficultly soluble in the usual organic solvents, soluble in concentrated sulfuric acid with a brownish olive color, soluble with an alkaline hydrosulfide solution to a blue colored vat and dyeing cotton bright greenish blue shades which are distinguished by their excellent fastness to chlorine, equal in this respect to the tri- and tetra-chlorinated derivatives.

1,509,809. BOX. FERDINAND M. KAUFMAN, Atlanta, Ga., assignor to Empire Printing and Box Company, Atlanta, Ga., a Corporation of Georgia. Filed Mar. 6, 1923. Serial No. 623,149. 1 Claim. (Cl. 229—16.)



A box formed from a blank substantially rectangular in outline and comprising a central portion having bottom-forming tabs projecting from one side thereof, and flaps projecting from the opposite side thereof, said flaps being of a length substantially equal to the corresponding transverse dimension of the box, one pair of the flaps overlapping when the box is closed, and completely closing the upper end of the box, the remaining pair of flaps having hand admitting apertures, whereby the box may be carried by a hand of a carrier and said first named flaps held in closed position.

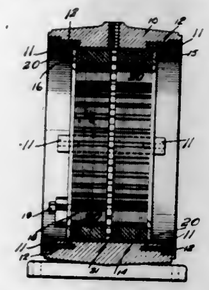
1,509,810. HEATING SYSTEM. JOHN F. MACINDOE, Philadelphia, Pa., assignor of one-half to L. Irving Reichner, Philadelphia, Pa. Filed Aug. 4, 1922. Serial No. 579,558. 3 Claims. (Cl. 237—56.)



2. In a continuous hot water circulating system including supply and return pipes, a heating branch containing a radiator with a riser and a drop line respectively connecting said radiator to the supply and return pipes of the system, a conduit interposed between the riser and drop line and in communication therewith, a water heater comprising a boiler having its inlet and outlet openings connected in the conduit to form a continuation of the latter, a burner for heating the boiler whereby the water may be heated to set up a local path of circulation including the radiator, conduit and boiler, and means permitting the accumulation of pressure in the radiator and the escape therefrom of any excess pressure into the system.

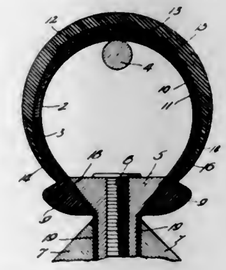
1,509,811. DIGGING BUCKET. WILLIAM J. PATZKE, Miller, S. Dak.; Emma A. Patzke administratrix of said William J. Patzke, deceased. Filed Apr. 9, 1921. Serial No. 459,850. 1 Claim. (Cl. 255—67.)

A device of the character described comprising a rod having a digging tool, a bucket slidably mounted on said rod, a pin carried by the rod and adapted to engage the sliding bucket to lock the bucket against sliding movement, a hinged bottom door for said bucket, a lever extending through the bucket and having a right-angular upper end, said lever serving to release the door and permit it to swing about its hinged point to discharge the contents of the bucket.



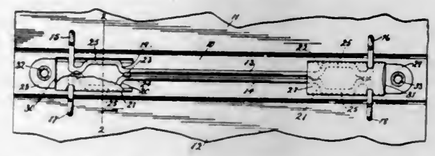
1,509,812. REFRIGERATED FOOD AND DRINK DISPENSING CABINET AND METHOD OF COOLING LIQUIDS. JOHN R. REPLOGLE, Detroit, Mich., and HARRY J. WALKER, Chicago, Ill.; said Replogle assignor to Nizer Laboratories Company, Detroit, Mich., a Corporation of Michigan. Filed Sept. 6, 1923. Serial No. 661,136. 21 Claims. (Cl. 62—177.)

1. In drink dispensing apparatus, the combination in a unitary structure of a section for cooling liquids on draft comprising a water-holding tank, a coil immersed in the water in said tank adapted to be connected at one end with the source of supply of liquid and at its other end with the draft means of the apparatus, and a conduit for cooling fluid also immersed in said water; means for causing flow of cooling fluid through said conduit; and a section for bottled goods and the like disposed adjacent the water-holding tank and comprising a dry chamber separated from the water in said water-holding tank by a heat conducting wall.



1,509,813. ELECTRIC MOTOR. JOSEPH MANASCO RODRIGUEZ, Brooklyn, N. Y. Filed Aug. 29, 1921. Serial No. 496,247. 5 Claims. (Cl. 171—252.)

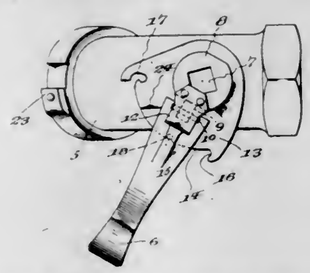
3. In a motor including a casing having guiding means provided therein and extending longitudinally of it, a stator for removably mounting in said casing, comprising a plurality of laminations clamped between plates,



said plates extending beyond the laminations and being provided with means for slidably engaging the guiding means provided in the casing.

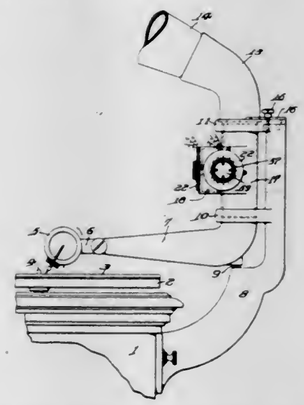
1,509,814. METHOD FOR MAKING PNEUMATIC-TIRE CASINGS. JOHN L. G. DYKES, Chicago, Ill., assignor, by mesne assignments, to Heller-Dykes Corporation, a Corporation of Illinois. Filed Mar. 14, 1921. Serial No. 452,017. 28 Claims. (Cl. 154—14.)

23. The process of making a pneumatic tire, comprising the building thereof in general tire form, but of less diameter than the ultimate product, providing the tire with predetermined surplus fibre material having trimmed edges, expanding and stretching the tire to full diameter by fluid pressure in direct contact with the interior thereof, using said surplus fibre material to hermetically seal and hold the tire in position during said expanding and stretching thereof, and vulcanizing the tire while thus maintained in ultimate tire form, whereby the tire is one size when built complete and is larger when expanded by pressure in direct contact with the inner surface thereof, including the provision of a cured or partially vulcanized inner surface of the tire, previous to the stretching thereof, to prevent the fluid pressure from entering the wall of the tire.



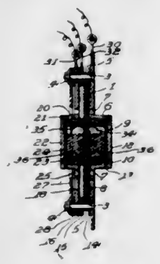
1,509,815. LOOSE-LEAF BINDER. JAMES C. DAWSON, Webster Groves, Mo., assignor to Elma N. Dawson, Webster Groves, Mo. Filed Mar. 8, 1923. Serial No. 623,690. 5 Claims. (Cl. 129—24.)

1. In a loose leaf binder, the combination of a pair of short rigid arches with the crown portions thereof lying in spaced relation and the spring portions engaged to



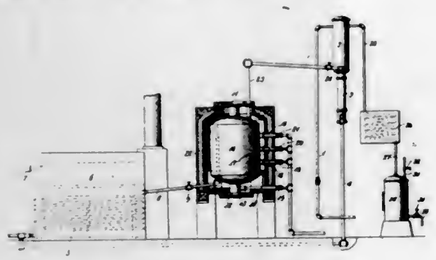
form a toggle joint, a spring clip in which the crown portions are rotatably mounted, and curved paper-holding prongs projecting from one spring portion only of each arch.

1,509,816. AIR-BRAKE VALVE. WILLIAM D. KENDRICK, Miami, Ariz. Filed Mar. 31, 1922. Serial No. 548,374. 3 Claims. (Cl. 251—165.)



1. A valve of the character specified comprising a casing having a lateral segmental flange provided at one end with an approximately L-shaped locking slot and a stop lug forming one wall of the slot, a plug having a spring pressed pivoted handle provided with a depending lock pin engaging the outer edge of said segmental flange and adapted to be received in said approximately L-shaped slot, said stop lug being extended beyond the outer edge of said flange and being in the path of travel of said pin whereby to limit the movement of the pin and guide the same into said slot.

1,509,817. TELEPHONICALLY-OPERATED SOUND RECORDING AND REPRODUCING MACHINE. JAMES W. OWEN, Secane, Pa., and ALBERTIS HEWITT, Camden, N. J., assignors to Victor Talking Machine Company, a Corporation of New Jersey. Filed Aug. 25, 1916, Serial No. 116,773. Renewed Feb. 8, 1924. 5 Claims. (Cl. 179—100.1.)



1. In a sound reproducing apparatus, the combination with means for reproducing sound from a record, means for conducting the reproduced sound therefrom including a tone arm, an amplifier, and a tubular conductor between said tone arm and said amplifier, of a flaring sound chamber extending laterally from said tubular conductor and adapted to receive sound therefrom, a microphone communicating with the interior of said chamber, an electrical circuit including a battery connected to said microphone, a receiver in said circuit adapted to convert electrical impulses into sound vibrations and an amplifier on said receiver, said microphone being adapted to respond to the sound vibrations in said chamber and to correspondingly vary the current in said circuit.

1,509,818. MICROPHONE. JAMES W. OWEN, Secane, Pa., and ALBERTIS HEWITT, Camden, N. J., assignors to Victor Talking Machine Company, a Corporation of New Jersey. Original application filed Aug. 25, 1916, Serial No. 116,773. Divided and this application filed July 8, 1919, Serial No. 309,382. Renewed Feb. 8, 1924. 9 Claims. (Cl. 179—135.)

9. As an article of manufacture, a mica diaphragm having a coating of silver adhering thereto and substantially covering a face thereof.

1,509,819. APPARATUS FOR TREATING OILS. ROBERT T. POLLOCK, Brookline, Mass., assignor to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed June 25, 1924. Serial No. 722,397. 2 Claims. (Cl. 196—107.)

1. In an apparatus for converting oil, the combination with a furnace, of a continuous heating coil disposed therein through which oil is passed to be subjected to a cracking temperature, of an enlarged vertically disposed insulated expansion chamber located outside of said furnace, means for introducing the heated products of conversion from said heating coil to be discharged into the upper portion of said expansion chamber, a vapor discharge line leading from said expansion chamber near its upper end, a plurality of independently controlled residual draw-off lines leading from said expansion chamber at different vertical positions, independent means for controlling each draw-off line, and a carbon discharge in the bottom of said chamber, and means for controlling the discharge of carbon therefrom.

Patents Nos. 1,509,820 to 1,510,451.

THE OFFICIAL GAZETTE OF THE United States Patent Office.

Vol. 326—No. 5. TUESDAY, SEPTEMBER 30, 1924. Price—$5 per year.

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $5.00 per annum; single numbers, 10 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

Cuba—Patent and Trade-Mark Fees.

U. S. PATENT OFFICE, *Washington, Sept. 19, 1924.*

The following communication from the Secretary of State is published for the information of those concerned.

THOMAS E. ROBERTSON,
Commissioner.

DEPARTMENT OF STATE, *Washington, Sept. 15, 1924.*

The honorable the Secretary of the Interior.

SIR: Referring to previous correspondence, I have the honor to say that the department has received a telegram from the American Ambassador at Habana in which he states that President Zayas, by Decree 1178, revoking Decree 643 of September 15, 1923, orders immediate delivery, without further payment, of those certificates of registration of patents and trade-marks, the fees for which were embezzled by employees of the Cuban Government.

I have the honor to be, sir, your obedient servant,

For the Secretary of State:
LELAND HARRISON,
Assistant Secretary.

Notices of Cancellation.

U. S. PATENT OFFICE, *Washington, Sept. 17, 1924.*

Ernest T. Wix, his assigns or legal representatives, take notice:

A cancellation proceeding having been instituted by this Office upon the application of Dae Health Laboratories, Inc., 113 West Eighteenth Street, New York, N. Y., to effect the cancellation of the trade-mark registration of Ernest T. Wix, 1212 Pierce Street, Sioux City, Iowa, doing business as Wixated Iron Co., No. 179,169, dated February 5, 1924, and the notice of such proceeding sent by registered mail to the said Wix at the said address having been returned by the post office undeliverable, notice is hereby given that unless said Wix, his assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the cancellation will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

KARL FENNING, *Acting Commissioner.*

U. S. PATENT OFFICE, *Washington, Sept. 3, 1924.*

Boston Pneumatic Action Company, its assigns or legal representatives, take notice:

A cancellation proceeding having been instituted by this Office upon the application of the M. S. Wright Company, of Worcester, Mass., to effect the cancellation of the trade-mark registration of the Boston Pneumatic Action Company, of 1075 Washington Street, Boston, Mass., No. 83,132, dated August 22, 1911, and the notice of such proceeding sent by registered mail to the said Boston Pneumatic Action Company at the said address having been returned by the post-office authorities as undeliverable, notice is hereby given that unless said Boston Pneumatic Action Company, its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the cancellation will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

KARL FENNING, *Acting Commissioner.*

Disclaimers.

1,372,157.—*Allan L. McGregor*, Chicago, Ill. BUMPER FITTING. Patent dated March 22, 1921. Disclaimer filed September 11, 1924, by the assignee, *The C. G. Spring & Bumper Company.*

Hereby enters this disclaimer—

"To claims 1, 2, and 4 of the said patent, which are in the following words, to wit:

"1. A fitting adapted to be permanently fixed to the end of a vehicle frame member, and comprising a head projecting beyond the end of the frame member, and an integral support for a bumper.

"2. A fitting adapted to be permanently connected at the end of a vehicle frame member, and comprising a shank portion extending lengthwise of said frame member, a head adapted to be connected with the end of a vehicle spring, and an integral support for the attaching member of the bumper.

"4. A bumper attaching fitting adapted to be permanently built into the end of a vehicle frame member, and comprising a shank portion adapted for overlapping connection with said frame members, a head beyond the end of the frame member, and a support for a bumper integral with said head."

1,413,788.—*John F. Rule*, Toledo, Ohio. METHOD AND MEANS FOR FORMING AND TRANSFERRING GOBS OF MOLTEN GLASS. Patent dated April 25, 1922. Disclaimer filed September 6, 1924, by the assignee, *The Owens Bottle Company.*

Hereby enters this disclaimer—

"To claim 7 in said patent, which is as follows, to wit:

"The combination of a partible gob forming receptacle open at its upper end to receive molten glass, and means to invert and open the receptacle."

Condition of Applications Under Examination at Close of Business September 19, 1924.

Room No.	(Total number of applications awaiting action, excluding Trade-Mark Division, 60,131. Trade-Mark Division, 2,036. Oldest new case, Jan. 12, 1924; oldest amended, Jan. 18, 1924. The dates given are 1924.) DIVISIONS, EXAMINERS, AND SUBJECTS OF INVENTIONS.	Oldest new application and oldest action by applicant awaiting office action. New.	Amended.	No. of applications awaiting action.

DECISIONS IN PATENT AND TRADE-MARK CASES.

Commissioner's Decisions.

EX PARTE KOHLER AND SMITH.

Decided June 6, 1923.

INVENTION—ADVANTAGES—COMMERCIAL USE.

Where advantages are obtained and the device has gone into commercial use as a result of a change in an otherwise old structure and the prior art fails to disclose anything suggesting this change in any similar devices, these facts are persuasive where there exists a reasonable doubt that the change was not obvious.

(Note.—This application has resulted in Patent No. 1,474,154, November 13, 1923.)

APPEAL from the Examiners in Chief.

ANCHORAGE UNIT.

Mr. C. P. Goepel for the applicants.

KINNAN, *First Assistant Commissioner:*

The applicants have appealed from the decision of the Examiners in Chief affirming that of the Primary Examiner denying patentability to some five claims, of which claims 1 and 2 will serve for illustrative purposes:

1. An anchorage unit consisting of a plurality of permanently assembled elements comprising an expanding member and an expansion member movable relative to the expanding member and a ram for the expansion member engaged with the expanding member and constituting a permanently connected component part of the anchorage unit.

2. An anchorage unit consisting of a plurality of permanently assembled elements comprising an expanding member, an expansion member movable relative thereto and a tubular ram frictionally engaged upon the expanding member and constituting a permanently connected component part of the anchorage unit.

The references are: Waage, 1,302,609, May 6, 1919; Ackerman, 1,265,866, May 14, 1918.

The claims are directed to the means for securing a socket or anchorage unit in a masonry structure. The specific use mentioned is in connection with a concrete floor to which some devices, such as theater chairs, are to be attached. The device comprises the expanding member, conical at one end and cylindrical for a portion of its length, and also having an internal screw thread, also a soft-metal expansion member and tubular ram made to frictionally engage the end of the expanding member and adapted to be driven upon the expanding soft-metal member to suitably wedge the expanding member in position.

The reference Waage discloses substantially the same mechanical parts, although differing in shape and relative size. Presuming it to be admitted, as it must be, that Waage could remove the bolt 16 and insert it after the anchor was placed in permanent position, in the manner in which appellants insert their bolt shown in Figure 3, there remains a construction substantially that set forth in the appealed claims. In the Ackerman patent there is also substantially the same expansion-bolt arrangement, and it may be considered obvious the bolt could be made hollow and have an internal screw thread in place of the external screw thread shown.

Without discussing the specific constructions further it will be sufficient to note that appellants rest their case upon the slight change they have made whereby the three parts are permanently assembled and are in position to be placed in the socket to receive them and the ram driven down at once, thereby saving the time and other inconveniences resulting from a necessity to assemble each part one after the other. Certain advantages, which are quite apparent, have been claimed for this change. The parts can be shipped, and being already assembled there is a minimum of loss of parts and loss incident to mistakes in improperly assembling the parts, as well as the loss of time. This advantage of permanent assemblage is obtained by having the ram frictionally engage the tubular end of the expanding member tight enough so that the device may be handled as a unit without its parts becoming separated. The tribunals below held that the change over the prior art was obvious. It has been submitted in the record that a considerable saving in the time of the workmen in placing the anchors in position has resulted from this change and that the device has gone into wide commercial use. These reasons are persuasive where there exists a reasonable doubt that the change was not obvious. No reference discloses the conception of having the parts permanently assembled, and since the result of doing this has proved valuable the conclusion seems reasonable that if the change were obvious it would have been made before. It is believed claims 2 and 4 define patentable subject matter and should be allowed. It is also thought the two additional claims presented in the brief in support of this appeal may be allowed. Claims 1, 3, and 5 do not define this construction, whereby the advantages claimed are realized, since they fail to state by what means the parts are held together. So far as set forth in these claims the parts might be fastened by a spring or wrapped with paper. It is not thought such an arrangement would be patentable. These claims do not define the invention which appellants have made.

The decision of the Examiners in Chief is reversed as to claims 2 and 4 and affirmed as to claims 1, 3, and 5. The two additional claims may be allowed.

U. S. Circuit Court of Appeals—Third Circuit.

SURBAUGH ET AL. *v.* HUBBARD & CO.

Decided July 21, 1922; rehearing denied October 10, 1922.

[282 Fed. Rep. 945.]

INVENTION—COOPERATION OF OLD ELEMENTS IN A NEW WAY—ADVANTAGEOUS RESULTS—CORRUGATIONS.

A patent for a corrugated shovel in which the corrugations of the shovel body extend over into the handle socket, thereby making the corrugations of the

blade proper cooperate in a new way with the handle socket, so as to increase the working strength of the shovel and at the same time lessen its weight by permitting the use of lighter material, is valid.

APPEAL from the District Court of the United States for the Western District of Pennsylvania; Charles P. Orr, judge.

Suit by John S. Surbaugh and another against Hubbard & Co. Decree dismissing the bill, and plaintiffs appeal. Reversed and remanded, with instructions.

Mr. Charles M. Clarke (*W. G. Doolittle* of counsel) for the appellants.

Mr. E. W. McCallister for the appellee.

Before BUFFINGTON, WOOLLEY, and DAVIS, Circuit Judges.

BUFFINGTON, *Cir. J.*:

This case concerns a patent for a shovel. Although one of the earliest and most generally used of tools, there has probably been the least inventive improvement made of it. When, therefore, we find a shovel which is more easily and more cheaply made, which couples to a lightness that eases labor a toughness that withstands use strain, and an evenness of balance that lessens torsional side turning, our attention is challenged by something novel in a practically unchanging art. Touching these advantages, we note the testimony of Grandon, a miner, who says:

Well, I have several reasons for using the Pacemaker. The first is the service it gives. It lasts longer than the Coal Bluff or any other shovel I have ever gotten hold of. And then it is so finely balanced; it doesn't turn in your hand. It is even a finer balance, and the weight is more equally distributed over the surface, than any shovel I ever used. That's why I use it. * * * A miner would pick up a shovel, and he looks at the way it balances in his hand. Then he puts it down on the floor and tries it that way. If it bends very easily, he throws it aside, and he will take up another one, until he finds one that is reasonably strong. That's the proof of a good shovel. There are two proofs; the only ones I ever used in my life is how the shovel would balance when you held it ready for work, and as to its strength when you bear on it. That's the only way I ever demonstrate a shovel.

Barnes, another miner, testified:

Q. 13. Tell us why you prefer these other two shovels to this hollow-backed shovel. A. Why, they don't split down the center, like the hollow-backed shovel. And there's more strength to them grooves in them, or corrugations, as they call them, prongs; and your coal don't stick on your shovel, like it does on that shovel there. Q. 14. You mean that your coal does stick on your shovel in using the hollow-back? A. Yes; it will stick on it, if it is a little damp. Q. 15. And it will not stick on the Coal Bluff or Pacemaker? A. No, sir; them forks there, I believe, get it and take it off. Q. 16. Did you ever use either of these shovels, Coal Bluff or the Pacemaker, in prying operations? A. Yes, sir. Q. 17. Is there any advantage in them for that purpose? A. Yes; they are a better shovel for that business than a hollow-back shovel. Q. 18. In buying these shovels, how do they compare in price with the hollow back? A. Well, I can't tell you exactly how, because it is so long since I used the hollow-back shovel. Q. 19. What is your own estimation of their value in comparison with the hollow-back? A. Well, I would sooner pay the extra price for the corrugated shovels, for the two-prong or three-prong shovels, than pay the small price for the hollow-back, because they last longer. Q. 20. And what is the extra price? A. Well, I can't just tell you that at the present time. Q. 21. How do they compare in length of time that they last with the hollow-back? A. Oh, your hollow-back shovels, I can wear one out each month. Q. 22. How about the Coal Bluff? A. Well, I've got a Coal Bluff now, if that is what you call a Coal Bluff—I am working with a Coal Bluff now for about four months. Q. 23. This is a Coal Bluff? A. Well, for four months I have worked with one of them, and I have still got it yet, and it's good. And that Pacemaker, I had one, and wore it out, and it lasted me in the neighborhood of about nine months.

Comparing the simply corrugated shovel of the old art and the corrugated prong shovel of the patent, here described as the Coal Bluff and Pacemaker shovel, Wilson, a jobber of shovels, says:

Q. 6. What is a corrugated shovel? A. A corrugated shovel is one which has ribs running in the body of the shovel, but not necessarily from the handle of the shovel. In fact, a corrugated shovel to the trade is known as the shovel which does not have ribs joined onto the handle or fork. Q. 7. Have you seen, and do you know, what is called the "Coal Bluff" shovel? A. Yes; we have handled the Coal Bluff for the past year and a half or more; more extensively in the past year and a half. Q. 8. And before that time you sold these corrugated shovels, did you? A. Yes, sir. Q. 9. What difference, if any, did it make in your business when you commenced to handle the Coal Bluff? A. We have increased our sales on shovels about 25 to 30 per cent. And the difference in sales, we can only specify fork or prong shovels in all orders. Q. 10. What do you understand by fork or prong shovels? A. We understand it to be a Coal Bluff shovel or Pacemaker shovel. Q. 11. What is the Pacemaker shovel?. A. That is a shovel manufactured by the Pittsburgh Shovel Company, of a three-pronged type, joined in the center. Q. 12. Is that the shovel that I now show you? A. Yes, sir. Q. 13. And bearing the name Pacemaker on the label?. A. Yes, sir. Q. 14. What difference is there between these two shovels, if any? A. There is a probability of added strength in the additional prongs of the shovel; and in the makeup here, you could add strength right here. Q. 15. How do these two shovels, the Coal Bluff and the Pacemaker, compare with the so-called corrugated shovels in efficiency, strength, and so on, if you know? A. Oh, from our sales I would say that they must outlast and must be more efficient shovels, or they would not have continued to sell when the other shovel was on the market; but the sales have dropped off entirely, and we have discontinued the sale of the corrugated shovel. Q. 16. How does the selling price compare with the so-called corrugated shovel? A. It is a dollar a dozen higher.

Beiter, engaged in miner supply business and covering three extensive mining counties of Pennsylvania, says he sells "from 50 to 60 dozen of Coal Bluff and Pacemaker to one dozen of the old style." Tovey, a salesman who sold to the trade in Ohio, West Virginia, Maryland, and Delaware, testified:

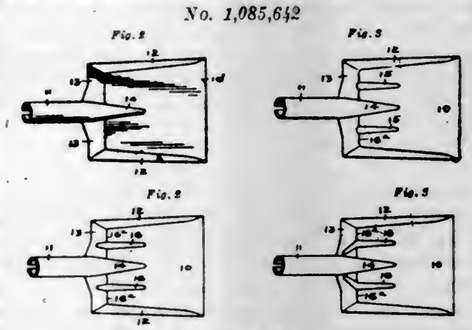
Q. 5. What particular make of shovels do you sell through that territory? A. You mean coal shovels? Q. 6. Yes. A. Coal Bluff and Pacemaker. Q. 7. Do you sell directly to the consumers, or to whom? A. To the jobbing trade. Q. 8. Do you ever meet the users of these shovels? A. Oh, yes. Previous to that, I was connected with a firm that sold to the retail trade. Q. 9. What is the general estimation of these through the trade, and, as far as you know, of the users A. Well, there is great demand for them. Q. 10. Do you know just why? A. Particularly on account of the construction of the shovel. Q. 11. Well, have you in mind any particular features of construction that would confirm that answer? A. Yes; on account of the prong of the shovel coming down through the center, and the two prongs distribute the strain of the shovel on the whole body of it, instead of just in one part, as in the old type of shovel and the strength it gives to the body of the shovel. Q. 12. Did you sell any other kinds of types of shovels before these? A. Yes, sir. Q. 13. How do your sales of Coal Bluff and Pacemaker compare with such sales? A. They are a great deal more than the other. Q. 14. Is the demand increasing or decreasing? A. Increasing, considerably.

Walsh, treasurer of the plaintiff company, which makes the patented shovel, testified to the rapid and steady increase of sales, except in the steel strike year, 1919. Referring to the Pacemaker type, he says:

I have them grouped. For the year 1917 we manufactured in Pacemakers 4,692¼ dozen; for the year 1918 we manufactured 6,764⅜ dozen; for the year 1919 we manufactured 4,137¹¹/₁₂ dozen; and for the year 1920 we manufactured 9,409½ dozen.

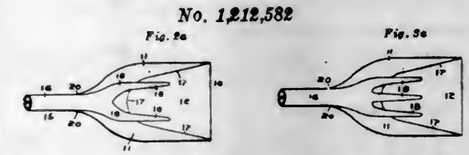
And referring to the Coal Bluff:

Yes, in the year 1917 we manufactured 1,781¼ dozen; in the year 1918 we manufactured 3,125¼ dozen; in the year 1919 we manufactured 3,544¹⁰/₁₂ dozen; in the year 1920, 6,438¾ dozen.



Indeed, it is quite evident, from the testimony of Smith, one of the defendant's officials, that the demand for these shovels was so insistent that the defendant was forced to make the Gold Bee shovel, the alleged infringing device. His testimony in that regard is:

There appeared to be a demand for a shovel with that design frog, and as I found the situation in this district, the sale was limited to one jobber, and that was Grier Bros.; that is, the Pittsburgh Shovel Company was selling only to Grier Bros., and naturally some of the other jobbers assumed that they had an advantage, and wanted that type of shovel. Q. 8. Why did the trade want this type of shovel? A. Well, it was something new in design. * * * Q. 37. And you got up this Gold Bee shovel, with this new design, to satisfy a demand of the trade, did you not? A. Yes, sir. * * * There was a demand for a two-prong shovel that couldn't be satisfied in this district. The situation as I found it was that one jobber here had the exclusive selling arrangement with the Pittsburgh Shovel Company; so, as I found it, other jobbers, outside of Grier Bros., couldn't get a two-prong shovel, for which reason we made these.



Seeing that the new type of shovel made by the plaintiff met with rapid success, we naturally inquire wherein it differed from the old art. The shovel of this patent is made in a single piece. But the single-piece shovel the art already had, and there was therefore no novelty in a one-piece shovel, in which the blade and handle socket were embodied in an integral whole without riveting or welding. The new shovel has the most desirable construction, in that it is a one-piece article, integral, dispensing with riveting or welding, but such one-piece, integral construction was found in the prior art. The new shovel also has the most desirable construction, in that it is hollow-backed; that is, so constructed that the hollowed back of the integral blade makes an opening or socket adapted to receive the shovel handle; but such a hollow-back handle attachment embodied in a one-piece shovel was likewise found in the prior art. So, also, were corrugations in the shovel blade as a means of strengthening the shovel blade. Indeed, all of these points, corrugations, one-piece, hollow-back, were combined in a patent of this present patentee, No. 1,085,642, for a shovel, applied for July 5, 1912 and granted February 3, 1914. But even the shovel of this last patent, with all these individual points of excellence, left no impress on the art, and seems to have filled no special need, in spite of the fact that its corrugations added strength to the blade body, its open back provided a socket, its one piece gave comparative lightness of weight and its manufacture economic, while the patent in suit, No. 1,212,582, which only purported to be an improvement on such previous patent, met with marked and instant approval and large sales.

Wherein did the improvement lie? The answer is that Surbaugh, in his new device, disclosed a very simple way of merely extending the corrugations of the shovel body over into the socket, and thereby make the corrugations of the blade proper so cooperate in a new way with the handle socket of the hollow back that he was able to increase the working strength of his shovel, while at the same time he lessened its weight by using lighter blade material. In the practical use of the shovel, both as a shovel and also as a pry, it was found the patented shovel had more strength to pry and less weight to carry. To the casual observer those seem factors of small moment, but when the miner who uses a shovel in cramped space and in awkward positions, finds its weight lessened and its torsional balance nevertheless improved, such things are of real moment to him, and when, in spite of such lessened weight, he finds the strength and prying power of the shovel increased, we can readily see why the new shovel so displaced the old ones that, as defendant says, they were forced to make the alleged infringing article. This use of corrugations as a new cooperating factor is best illustrated by these illustrations:

No. 1,085,642

No. 1,212,582

Figs. 2 and 3 are taken from Surbaugh's earlier and Fig. 2ª and Fig. 3ª from his later patent. In Fig. 2 we find the ordinary corrugations used to strengthen the blade of the shovel, and in Fig. 3 substantially the same thing, save that the corrugation takes a bend or angle toward the center of the blade and toward the hollow-back handle socket, the purpose of which is stated in the specification:

Fig. 3 is a view similar to Fig. 2, except that the rear ends of the ribs for reinforcing the shovel are bent toward the handle to add greater strength to the shovel blades.

From this statement of the patentee, it would seem that the shovel blade would have been strengthened in the same way if the ends of the corrugation had been turned toward the rim of the shovel, instead of inward toward the handle socket; the sole purpose being to add another corrugation to the shovel blade, or, as stated, "to add greater strength to the shovel blades." It will also be noted that the form of the corrugation, viz, widest at the line 16ª, and tapering to a point at both ends, had in view the strengthening of the shovel blade on the line 16ª, where the bend of the blade tended to produce crystallization, viz:

It will be noted that the ribs above noted have their greatest width at the meeting point 16ª of the flange 13 and the blade portion of the shovel, and that they taper gradually toward their extremities, as shown, which construction gives the greatest strength at the point of greatest strain, through the crystallization of the material along the line 16ª.

That the whole purpose Surbaugh had in view in his earlier patent was the strengthening of the

shovel blade alone is apparent not only from the physical construction of the shovel, but it also is evidenced by his express statement, viz:

> The main object of this invention is to remedy this difficulty by increasing the strength and rigidity of the shovel blade, without increasing the weight, by providing the ribs, heretofore described.

But in the patent in suit, as we read it, Surbaugh turned his attention to first strengthening the open handle socket through corrugations, and then using the increased strength of the open handle socket to strengthen the shovel blade. This was done by the simple process of carrying further and broadening out the upper ends of the shovel blade corrugations, and instead of running them to a narrow point near the handle socket, with no strengthening of such socket, he broadened the upper end of the shovel blade corrugation, and carried such breadth not near, but into, the even broader corrugations which formed the open handle socket. The form which this lengthened and broadened corrugation of the shovel blade took when it entered into the handle socket was the two-prong shape of Fig. 2[a] or the three-pronged shape of Fig. 3[a], as shown above.

The purpose to strengthen both socket and blade by such corrugation extension and coordination is stated in the specification, viz:

> Fig. 2 is a top or plan view of a finished shovel showing the ribs for reinforcing the shovel blade extending upwardly into the flanged portion of the shovel blade.

And in claim 1, viz:

> A shovel blade comprising a unit blank provided with an integral shank, said blank being crimped to provide a flat portion with raised sides and back, a cylinder formed of said shank, a centrally formed reinforcing frog in said blade extending to and merging with said cylinder, a reinforcing rib formed on each side of said frog across the juncture of the back and flat portion of the shovel blade and having their greatest width at said juncture, the rearward ends of said ribs back of said juncture being turned inwardly toward the central frog.

It will thus be seen how the extended and cooperating corrugations of the last patent of Surbaugh gave to the miner a lighter shovel than he had before, but with that lighter shovel there was, nevertheless, an increased strength that enabled him to use the shovel as a pry in a more forceful way than the heavier one of the earlier art, including the shovel of Surbaugh's earlier patent.

We are therefore of opinion that the patent in suit is valid, and giving due regard to the several claims here involved, we find them infringed. We deem it proper to say we have not overlooked the contention that the corrugations of the shovel plate of Surbaugh's earlier patent was carried into the curve of the handle socket, and that this is evidenced by the words of his specification:

> Figure 3 shows that portion of the ribs 16, which extend across the face of the flange 13, being formed at an angle, so that their rear extremities terminate in or near the central frog 14, thus insuring greater torsional support to the handle socket.

But several things are to be borne in mind: First, Fig. 3[a] shows a distinct space between the narrowed end of the angled corrugation and the line of the handle socket; second, the Patent Office, with Surbaugh's older patent before it, and the statement that the later one was an improvement on his earlier one, differentiated the two by the grant of the second patent; and, lastly, an inspection of the file wrapper shows that the original language in it was "terminate near the central frog 14," and that without any requirement by the Patent Office, and without erasing the word "near," which correctly described Fig. 3, the words "in or" were added, without any apparent reason. We are therefore warranted in regarding the words "in or" as simply an alternative of "near."

Holding these views, the decree below, dismissing the bill, must be reversed, and the record remanded, with instructions to reinstate the bill, enter a decree adjudging the patent valid, the claims in issue infringed, and directing an accounting.

PATENT SUITS.

[Notices under sec. 4921, R. S., as amended Feb. 18, 1922.]

858,188. A. G. Laurent, Hand fire-extinguishing apparatus, suit filed May 9, 1924, D. C. Del., Doc. E 544. *Foamite Childs Corp.* v. *Pyrene Mfg. Co.*

864,239, T. E. Flynn. Waste-pipe connection for water-closets, suit filed Aug. 18, 1924, D. C., E. D. Mich. (S. Div.), Doc. 798, *The Groeniger Mfg. Co.* v. *N. E. W. Bowcey (Greenwood Mfg. Co.)*

909,199. R. Miehle. Printing press, final consent decree sustaining patent, adjudging infringement, and granting permanent injunction filed Aug. 18, 1924, D. C., S. D. N. Y., Doc. E 29/195, *Miehle Printing Press & Mfg. Co.* v. *Printing Press Extension Delivery Co., Inc.*

914,313, M. C. Ryan, Shoe rack, suit filed Aug. 18, 1924, D. C., W. D. N. Y., Doc. E 708-D, *C. P. Mitchel* v. *A. D. Wilhelm & Sons et al.*

927,298, C. R. Twitchell, Pressure gauge for pneumatic tires; 1,451,038, R. Farles, Pressure Gauge; 1,451,257, W. P. Hammond, same, suit filed July 15, 1924, D. C., E. D. N. Y., Doc. 1813, *A. Schrader's Son, Inc.*, v. *Wein Sales Corp.*

927,475, Barberie & Walsh. Safety apparatus for motor cars, suit filed July 1, 1924, D. C., E. D. N. Y., Doc. 1789, *Barberie Locomotive Appliance Co.* v. *New York Rapid Transit Corp.*

1,018,502, Just & Hanaman, Incandescent bodies for electric lamps; 1,082,933, W. D. Coolidge, Tungsten and method of making same for use as filaments of incandescent electric lamps, etc.; 1,180,159, I. Langmuir, Incandescent electric lamp, suit filed July 18, 1924, D. C., E. D. N. Y., Doc. 1818, *General Electric Co.* v. *C. Bigler (Beacon Lamp Co.)*. Final consent decree entered July 23, 1924, against defendant.

1,021,175. Willson & Bourquin, Eye-shield spectacle, suit filed July 7, 1924, D. C., E. D. N. Y., Doc. 1793, *Willson Goggles, Inc.*, v. *E. Buegeleisen (Strauss & Buegeleisen)*.

1,042,472. Paridon & Palmer, Machine for making match books; 1,073,394, C. Campus, Book-match machine, suit filed June 16, 1924, D. C., E. D. N. Y., Doc. 1755, *The Diamond Match Co.* v. *Sun Match Corp.*

1,073,394. (See 1,042,472.)

1,082,933. (See 1,018,502.)

1,113,149, E. H. Armstrong, Wireless receiving system, suit filed Aug. 13, 1924, D. C. Mass., Doc. E 1997, *Westinghouse Electric & Mfg. Co.* v. *Clapp-Eastham Co.* Same, decree in favor of plaintiff, granting preliminary injunction, and adjudging infringement filed Aug. 8, 1924, D. C., S. D. N. Y., Doc. E 29/110, *Westinghouse Electric & Mfg. Co. et al.* v. *Experimental Information Service, Inc., et al.*

1,140,980, L. E. Haynes, Coiling device, suit filed June 5, 1924, D. C., E. D. N. Y., Doc. 1741, *Haynes Mfg. Co.* v. *L. Ludwig (Eagle Electric Mfg. Co.) et al.*

1,180,159. (See 1,018,502.)

1,180,264, A. Lederer, Incandescent body for electric lamps, suit filed Feb. 21, 1923, D. C., S. D. N. Y., Doc. E 26/116, *Westinghouse Lamp Co.* v. *P. R. Mallory & Co., Inc.* Decree sustaining patent, adjudging infringement, and granting an injunction filed Aug. 11, 1924.

1,232,618, W. J. Smart, Spraying or atomizing device, suit filed July 28, 1924, D. C., E. D. N. Y., Doc. 1826, *W. J. Smart et al.* v. *A. H. Costa et al.*

1,251,150, A. J. Widmer, Ceiling ties, decree of district court reversed with direction to dismiss bill (notice dated Aug. 9, 1924), C. C. A. (7th Cir.), Doc. 3384, *P. J. Kalman Co. et al.* v. *The Goldsmith Lath Co.*

1,262,860, S. B. Smith, Incubator, suit filed Aug. 19, 1924, D. C., S. D. Ill. (N. Div.), Doc. 292, *The Buckeye Incubator Co. et al.* v. *F. & H. Hatchery (Inc.) et al.*

1,267,409, H. Hermani, Apparatus for applying hinge pintles to box-part blanks; Re. 14,393, A. W. George, Hinge-wiring machine, suit filed Aug. 19, 1924, D. C., S. D. N. Y., Doc. E 30/107, *The Tin Decorating Co. of Baltimore* v. *Metal Package Corp.*

1,305,198, W. H. Deubener, Bag, suit filed Aug. 11, 1924, D. C. Minn., Doc. 723, *W. H. Deubener* v. *R. Brownson & Co.*

1,384,858, Sandusky & Sandusky, Shoe shank; 1,447,001, F. J. Winchell, Shank reenforce, suit filed July 8, 1924, D. C., E. D. N. Y., Doc. 1794, *M. M. Sandusky et al.* v. *Brooklyn Box Toe Co. et al.*

1,395,893, C. W. Beck, Steering wheel and method of forming same, suit filed Aug. 19, 1924, D. C., N. D. Ohio (W. Div.), Doc. E 484, *The Beck-Frost Corp* v. *E. Moser.*

1,399,570, E. C. Myers, Tractor, final decree July 29, 1924, dismissing bill of complaint and defendant's counterclaim, judgment for costs rendered against plaintiff, D. C., N. D. Ohio (E. Div.), Doc. 883, *E. C. Myers et al.* v. *The Hadfield-Penfield Steel Co.*

1,446,628, W. F. Ridge, Cover for steering wheels, suit filed Aug. 18, 1924, D. C., N. D. Ohio (E. Div.), Doc. 1273, *W. F. Ridge et al.* v. *H. L. Rieth.*

1,447,001. (See 1,384,858.)

1,450,080, L. A. Hazeltine, Method and electric circuit arrangement for neutralizing capacity coupling; 1,489,228, same, Method and means for neutralizing capacity coupling in audions, suit filed May 27, 1924, D. C., E. D. N. Y., Doc. 1731, *Hazeltine Corp. et al.* v. *J. C. Hoose.* Final consent decree entered July 1, 1924, in favor of plaintiff.

1,451,038. (See 927,298.)

1,451,257. (See 927,298.)

1,461,822, H. Epstein, Clamp for producing mottled skein dyeing; 1,498,079, same, Spot-dyeing process for textile fibers, suit filed Aug. 18, 1924, D. C., S. D. N. Y., Doc. E 30/105, *H. Epstein* v. *J. Rosenberg et al.*

1,483,437, W. T. Headley, Railway crossing and method of making same, suit filed June 10, 1924, D. C. Del., Doc. E 548, *The Barber Asphalt Co.* v. *Headley Good Roads Co.*

1,489,228. (See 1,450,080.)

1,492,758, Silberhartz & Abzug, Flower and fruit stand, suit filed July 21, 1924, D. C., E. D. N. Y., Doc. 1821, *Metropolitan Art Glass Co., Inc.*, v. *N. Sussman & Sons.*

Re. 14,393. (See 1,267,409.)

Re. 15,824, S. H. Calkins, Pattern and guide strip, suit filed July 24, 1924, D. C., S. D. N. Y., Doc. E 30/35, *Traitel Marble Co.* v. *U. T. Hungerford Brass & Copper Co.*

ADJUDICATED PATENTS.

(C. C. A. N. Y.) Dilg patents, No. 1,117,808 and 1,117,943, for ball bearings, *Held* invalid for prior invention by another. *Bearings Co. of America* v. *D. P. Harris Hardware & Mfg. Co.* 299 Fed. Rep. 782.

(C. C. A. Tex.) McAfee patent, No. 1,277,329, for method of refining mineral lubricating oil, *Held* valid. *Texas Co.* v. *McAfee*, 299 Fed. Rep. 718.

(D. C., Conn.) Burge patent, No. 930,527, for automatically-adjustable strain-insulator fixtures, *Held* valid and infringed. *Line Material Co.* v. *Brady Electric & Mfg. Co.*, 299 Fed. Rep. 822.

(D. C. Pa.) Rousso patent, No. 1,157,046, for towel cabinet. *Held* void for prior invention by another. *Rousso* v. *Barber*, 299 Fed. Rep. 801.

ADVERSE DECISIONS IN INTERFERENCE.

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 1,339,542, C. Birth, Calculating machine, decided August 16, 1924, claim 25.

Pat. 1,461,599, M. L. Cossitt, Manifolding attachment for typewriters, decided August 9, 1924, claims 1 and 2.

Pat. 1,467,658. E. L. Thomson, Distant tractor control, decided August 21, 1924, claims 1, 7, and 8.

Pat. 1,483,565, R. B. Adams, Device for testing hardness, decided August 19, 1924, claim 1.

TRADE-MARKS CANCELED.

74,796. Shoe blacking. Boyer & Co., Philadelphia, Pa. Registered August 10, 1909. Canceled July 21, 1924.

108,679. Certain named clothing. The Baby Outfitters, New York, N. Y. Registered February 22, 1916. Canceled June 11, 1924.

162,674. Malt extract and malt sugar for beverage purposes. Chas. W. Bayer, doing business as Bayer Sugar Co., Cincinnati, Ohio. Registered December 26, 1922. Canceled July 21, 1924.

171,228. Toy animals. Asiatic Import Co., Inc., New York, N. Y. Registered July 31, 1923. Canceled August 1, 1924.

175,006. Automobiles and automobile chassis. Alexandre Faure, New York, N. Y. Registered October 30, 1923. Canceled July 23, 1924.

176,355. Baby chicks, live poultry, and eggs. A. S. Douthit, doing business as Loup Valley Hatchery, Cushing, Nebr. Registered November 20, 1923. Canceled July 21, 1924.

176,846. Self-rising wheat flour. Model Mill Company, Jackson, Tenn. Registered December 4, 1923. Canceled May 27, 1924.

176,883. Wheat flour. Washburn-Crosby Company, Minneapolis, Minn. Registered December 4, 1923. Canceled June 11, 1924.

176,901. Cotton-fabric gloves. Lilienthal & Grossman, Inc., New York, N. Y. Registered December 4, 1923. Canceled July 21, 1924.

177,842. Nonalcoholic, maltless beverages sold as a soft drink. Snapp Bottling Co., Inc., St. Louis, Mo. Registered December 25, 1923. Canceled June 11, 1924.

178,797. Cake. Freihofer Baking Company, Philadelphia, Pa. Registered January 29, 1924. Canceled August 1, 1924.

180,484. Clothes-washing machines. The In-Vu Manufacturing Company, Rochester, N. Y. Registered February 26, 1924. Canceled July 23, 1924.

Interference Notices.

U. S. PATENT OFFICE, *Washington, Sept. 17, 1924.*

Marlowe Manufacturing Company, its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of The Rieser Company, Inc., 220 Fifth Avenue, New York, N. Y., for registration of a trade-mark and trade-mark registered November 1, 1910, No. 80,072, to Marlowe Manufacturing Company, 101 Fifth Avenue, New York, N. Y., and a notice of such declaration sent by registered mail to said Marlowe Manufacturing Company at the said address having been returned by the post office undeliverable, notice is hereby given that unless said Marlowe Manufacturing Company, its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

KARL FENNING, *Acting Commissioner.*

U. S. PATENT OFFICE, *Washington, Sept. 11, 1924.*

Herman Zohrlaut Leather Co., its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of C. Trautman & Company, 614 Main Street, Cincinnati, Ohio, for registration of a trade-mark and trade-mark registered November 9, 1897, No. 30,801, to Herman Zohrlaut Leather Co., 783 to 825 North Water Street, Milwaukee, Wis., and 115–117 Summer Street, Boston, Mass., and the Office having failed to secure service on said Herman Zohrlaut Leather Co., notice is hereby given that unless said Herman Zohrlaut Leather Co., its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

KARL FENNING, *Acting Commissioner.*

U. S. PATENT OFFICE, *Washington, Sept. 3, 1924.*

Rubber Company of America, its assigns or legal representatives, take notice:

An interference having been declared by this Office between the Continental Tire Corporation, 1508 South Michigan Avenue, Chicago, Ill., for registration of a trade-mark and trade-mark registered June 14, 1910, No. 78,448, to Rubber Company of America, 249–251 Ocean Avenue, Jersey City, N. J., and a notice of such declaration sent by registered mail to said Rubber Company of America at the said address having been returned by the post-office authorities as undeliverable, notice is hereby given that unless said Rubber Company of America, its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

KARL FENNING, *Acting Commissioner.*

TRADE-MARKS

OFFICIAL GAZETTE, SEPTEMBER 30, 1924.

[VOL. 326. No. 5.]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Ser. No. 125,762. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) SUNSET NUT SHELLING COMPANY, San Francisco, Calif. Filed Dec. 9, 1919.

SUNSET

Particular description of goods.—Walnuts, Shelled or Unshelled, or Candied or Salted; Filberts, Shelled or Unshelled, Candied or Salted; Almonds, Shelled or Unshelled, or Candied or Salted; Hazelnuts, Shelled or Unshelled, Candied or Salted; Pecans, Shelled or Unshelled, Candied or Salted; Pineapple, Candied or Dried; Figs, Dried or Candied; Dates, Dried or Candied; Prunes, Dried or Candied; Natural Raisins; Orange Peel, Dried or Candied; Lemon Peel, Dried or Candied; Citron, Dried or Candied; Dates, Stuffed or Filled with Walnuts, or Almonds, or Pecans, or Filberts, or Hazelnuts; Apricots, Stuffed or Filled with Walnuts, or Almonds, or Pecans, or Filberts, or Hazelnuts; Prunes, Stuffed or Filled with Walnuts, or Almonds, or Pecans, or Filberts, or Hazelnuts; and Nuts and Raisins Mixed.

Claims use since Apr. 1, 1903.

Ser. No. 131,367. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) GRITZNER & DITZEL, Chicago, Ill. Filed Apr. 19, 1920.

MALT-O-CREAMO

Particular description of goods.—Sweetmeats.

Claims use since Mar. 1, 1920.

Ser. No. 135,900. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) THE PIERCE-ARROW MOTOR CAR COMPANY, Buffalo, N. Y. Filed Aug. 7, 1920.

Particular description of goods.—Lifting Jacks.

Claims use since in or about 1901 for automobiles, parts thereof, and accessories therefor; in or about 1914 upon lifting jacks.

Ser. No. 137,349. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) H. O. WILBUR & SONS, INC., Philadelphia, Pa. Filed Sept. 18, 1920.

The figure shown is purely fanciful.

Particular description of goods.—Cocoa in Powdered Form for Drinking, Cooking, and Baking.

Claims use since about May 1, 1920.

Ser. No. 147,121. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) PALMER CANDY CO., Sioux City, Iowa. Filed May 2, 1921.

Particular description of goods.—Candy.

Claims use since Oct. 16, 1920.

Ser. No. 150,075. (CLASS 36. MUSICAL INSTRUMENTS AND SUPPLIES.) ROSA MESH, doing business as Mesh Singing Machine Company, Cincinnati, Ohio. Filed July 6, 1921.

No claim is made to the exclusive use of the words "Trade-Mark Reg."
Particular description of goods.—Phonographs.
Claims use since June 15, 1921.

Ser. No. 152,247. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) GORHAM MANUFACTURING COMPANY, Providence, R. I. Filed Aug. 27, 1921. Under section 5b of the act of 1905 as amended 1920.

GORHAM

Trade-mark comprises the word "Gorham."
Particular description of goods.—Electric Lamps and Electroliers.
Claims use since 1904.

Ser. No. 156,967. (CLASS 39. CLOTHING.) H. LEVI & CO., Kansas City, Mo. Filed Dec. 20, 1921.

Particular description of goods.—Underwear, Hosiery, and Work Clothing—Namely, Shirts, Pants, Overalls, and Sweater Coats.
Claims use since August, 1911.

Ser. No. 157,699. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) TEXAS STAR FLOUR MILLS, Galveston, Tex., and New York, N. Y. Filed Jan. 9, 1922.

AMAESSA

Particular description of goods.—Wheat Flour, Wheat Bran, Wheat Shorts, Corn Meal, Corn-Meal Grits, and Corn Flour.
Claims use since Oct. 14, 1915.

Ser. No. 160,550. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) ALBERT M. HOLTON, doing business as Nu-Life Food Co., Minneapolis, Minn. Filed Mar. 11, 1922.

Nu-Life
100% PURE

No claim is made to the exclusive use of the "100% Pure" apart from the other features of the mark.
Particular description of goods.—Cereal Breakfast Food and Pancake Flour.
Claims use since Nov. 2, 1916.

Ser. No. 163,932. (CLASS 39. CLOTHING.) H. M. HEINEMAN SONS, San Francisco, Calif. Filed May 16, 1922.

Magik

Particular description of goods.—Men's Necktles and Scarfs.
Claims use since July, 1916.

Ser. No. 164,990. (CLASS 38. PRINTS AND PUBLICATIONS.) SWEATER & KNITTED TEXTILE PUBLICITY BUREAU, INC., New York, N. Y. Filed June 3, 1922.

OUTERwear

Particular description of goods.—Printed Pamphlets, Circulars, and Periodical Publications.
Claims use since Mar. 1, 1921.

Ser. No. 164,992. (CLASS 38. PRINTS AND PUBLICATIONS.) SWEATER & KNITTED TEXTILE PUBLICITY BUREAU, INC., New York, N. Y. Filed June 3, 1922.

Particular description of goods.—Printed Pamphlets, Circulars, and Periodical Publications.
Claims use since Mar. 1, 1921.

Ser. No. 164,993. (CLASS 38. PRINTS AND PUBLICATIONS.) SWEATER & KNITTED TEXTILE PUBLICITY BUREAU, INC., New York, N. Y. Filed June 3, 1922.

Particular description of goods.—Printed Pamphlets, Circulars, and Periodical Publications.
Claims use since Mar. 1, 1921.

Ser. No. 166,069. (CLASS 39. CLOTHING.) GRAM HEADWEAR MFG. CO., St. Louis, Mo. Filed June 26, 1922.

RAINRSHINE

Particular description of goods.—Wearing Apparel—Namely, Capes and Coats and Top and Over Coats.
Claims use since May 15, 1922.

Ser. No. 168,759. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) WILLIAM H. EADS, Bristol, Va. Filed Aug. 28, 1922.

The word "Sucker" as a part of the mark is disclaimed apart from the other features thereof.
Particular description of goods.—Confection Composed of a Candy Coated with Ice Cream.
Claims use since May 1, 1922.

Ser. No. 169,555. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) F. E. NELLIS & COMPANY, Chicago, Ill. Filed Sept. 16, 1922.

RISING SUN

Particular description of goods.—Fresh Apples, Cantaloupes, Oranges, Lemons, Pears, Cherries, and Peaches.
Claims use since September, 1919.

Ser. No. 170,179. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) H. D. CAPRIATA, New York, N. Y. Filed Oct. 2, 1922.

ConteRosso

Particular description of goods.—Olive Oil.
Claims use since May 1, 1922.

Ser. No. 172,344. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) ANDREW OLSEN, Jr., doing business as Golden Nugget Sweets, San Francisco, Calif. Filed Nov. 21, 1922.

GOL-NUG

Particular description of goods.—Fudge Candy.
Claims use since Nov. 1, 1922.

Ser. No. 173,380. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) PILLSBURY FLOUR MILLS COMPANY, Minneapolis, Minn. Filed Dec. 15, 1922.

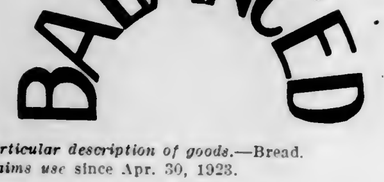
AMAZON

Particular description of goods.—Flour Made from Wheat.
Claims use since on or about July 1, 1904.

Ser. No. 173,408. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) DANVILLE WHOLESALE GROCERY CO., Danville, Ill. Filed Dec. 16, 1922.

Particular description of goods.—Canned Vegetables and Fruit.
Claims use since June, 1922.

Ser. No. 176,719. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) CLAFLINS INCORPORATED, New York, N. Y. Filed Feb. 28, 1923.



Particular description of goods.—Bleached Cotton Piece Goods.
Claims use since Mar. 26, 1891.

Ser. No. 178,176. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) S. E. GILINSKY, Omaha, Nebr. Filed Mar. 28, 1923.

Particular description of goods.—Fresh Apples.
Claims use since about Oct. 1, 1919.

Ser. No. 181,366. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) DANIEL P. WOOLLEY, New York, N. Y. Filed May 29, 1923.

Particular description of goods.—Bread.
Claims use since Apr. 30, 1923.

Ser. No. 182,017. (CLASS 36. MUSICAL INSTRUMENTS AND SUPPLIES.) SOCIEDAD ANONIMA "E. R. A.", Madrid, Spain. Filed June 14, 1923.

E. R. A.

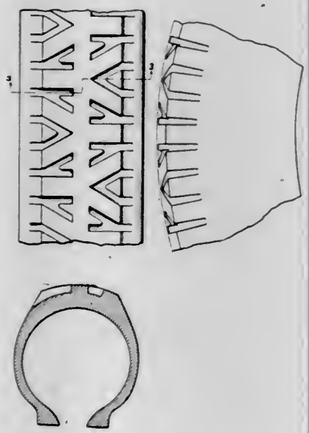
The ornamental design for a pneumatic tire as shown.

65,710. HAND BAG. MORRIS WHITE, New York, N. Y. Filed May 1, 1924. Serial No. 9,458. Term of patent 14 years.



The ornamental design for a hand bag, as shown.

65,711. PHONOGRAPH CABINET. FRED AUGUST WOLF, Quincy, Ill. Filed May 31, 1923. Serial No. 6,357. Term of patent 3½ years.

The ornamental design for a phonograph cabinet, as shown.

65,712. TIRE TREAD. WILLIAM S. WOLFE, Akron, Ohio. Filed June 14, 1923. Serial No. 6,490. Term of patent 14 years.

The ornamental design for a tire tread, as shown.

65,713. LIGHTING-FIXTURE BODY. HERMAN H. WOLTER, Meriden, Conn., assignor to The Miller Company, New York, N. Y., a Corporation of Connecticut. Filed May 19, 1924. Serial No. 9,640. Term of patent 3½ years.

The ornamental design for a lighting fixture body, as shown.

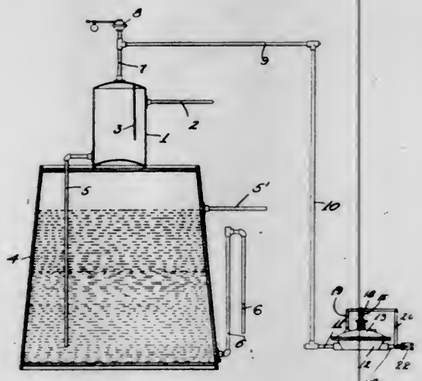
65,714. BACKPLATE FOR LIGHTING FIXTURES OR SIMILAR ARTICLES. HERMAN H. WOLTER, Meriden, Conn., assignor to The Miller Company, New York, N. Y., a Corporation of Connecticut. Filed May 19, 1924. Serial No. 9,643. Term of patent 3½ years.

The ornamental design for a backplate for lighting fixtures or similar articles, as shown.

65,715. BACKPLATE FOR LIGHTING FIXTURES OR SIMILAR ARTICLES. HERMAN H. WOLTER, Meriden, Conn., assignor to The Miller Company, New York, N. Y., a Corporation of Connecticut. Filed May 19, 1924. Serial No. 9,645. Term of patent 3½ years.

The ornamental design for a backplate for lighting fixture or similar articles, as shown.

65,716. SHOE. MICHAEL ZINSTEIN, New York, N. Y., assignor to The Sovereign Silk Co., New York, N. Y. Filed July 21, 1923. Serial No. 6,819. Term of patent 3½ years.

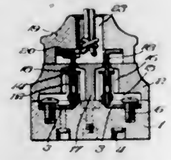


The ornamental design for a shoe substantially as shown.

PATENTS

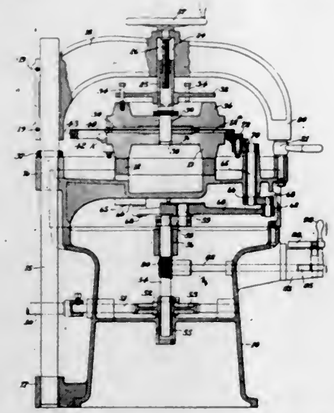
GRANTED SEPTEMBER 30, 1924.

1,509,820. APPARATUS FOR SEPARATING THE GAS, OIL, AND WATER FROM OIL WELLS. WILLIAM E. ADAMS and CHARLES B. HILL, Tulsa, Okla. Filed June 3, 1922. Serial No. 565,620. 2 Claims. (Cl. 183—27.)



1. In an apparatus of the class described, a separating vessel having an inlet adapted for receiving the product from oil wells, a gas discharge pipe connected to the top of said separating vessel, and an automatic pressure regulating valve in said gas discharge pipe for relieving either excess or sub-normal pressure therein.

1,509,821. GUIDE FOR POWER HAMMERS. TENGEL ANDERSEN, Port Richmond, N. Y. Filed Mar. 6, 1922. Serial No. 541,462. 7 Claims. (Cl. 61—73.)

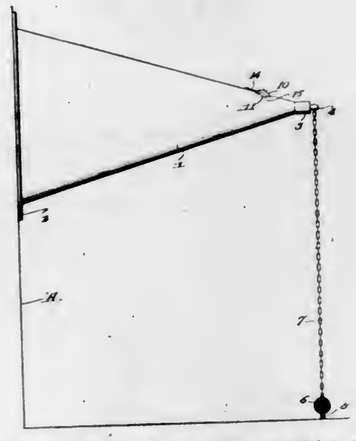


1. A guide for power hammers comprising a plurality of concentrically positioned and adjustable members adapted to be held in different relative positions to vary the length of the guide.

1,509,822. SEPARABLE CONTACT. REUBEN B. BENJAMIN, Chicago, Ill., assignor to Benjamin Electric Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 26, 1919. Serial No. 292,885. 2 Claims. (Cl. 173—338.)

1. An electrical connector device, comprising a receptacle portion for cooperation with a plug portion, said portions being separable by an angular break, said plug portion comprising a pair of contact blades, said receptacle portion comprising a pair of contact devices for engaging said contact blades respectively, and a cover having restricted openings through which said blades extend for engagement with said contact devices, the walls of said openings being thin to permit angular separations of the plug-in device, each of said contact devices comprising a pair of spring fingers embracing a contact blade and engaging its sides, and a pair of spring contact fingers embracing said contact blade and engaging its edges, the overlapping engagement between said spring contact fingers and said blades being relatively short, to permit angular separation of the plug-in device.

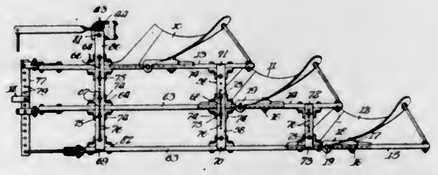
1,509,823. LAPPING MACHINE. BRYANT H. BLOOD, Hartford, Conn., assignor to Pratt & Whitney Company, New York, N. Y., a Corporation of New Jersey. Filed Apr. 13, 1921. Serial No. 460,903. 13 Claims. (Cl. 51—11.)



1. A lapping machine comprising in combination, a base, a lower lap mounted thereon, an upper lap, means to non-rotatably support said laps in operative position relatively to each other, a spider adapted to hold a plurality of articles disposed between said laps, and positive means to simultaneously rapidly reciprocate and slowly rotate said spider between said laps whereby lapping movements between the articles and laps are accomplished.

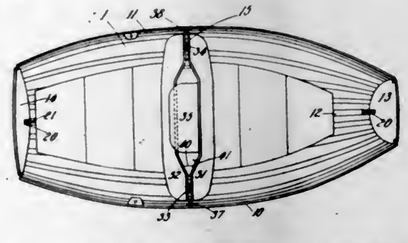
1,509,824. METHOD OF PREPARING SUBSTANCES IN FINELY-DIVIDED FORM. HAROLD S. BOOTH and GEORGE G. MARSHALL, Cleveland, Ohio. Filed June 28, 1922. Serial No. 571,565. 5 Claims. (Cl. 167—9.)

1. The method of preparing a substance in finely divided form, which consists in putting the substance in such form that the molecules thereof are in dispersed condition, and then injecting the substance in its dispersed condition into a suitable material which fixes and retains the said substance in its dispersed condition.



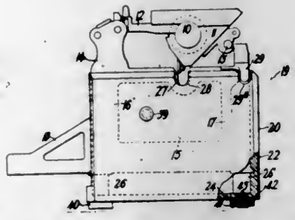
5. The method of preparing a substance in finely divided form which consists in volatilizing said substance and in placing the said substance while volatilized under pressure through a suitable orifice and into a liquefied material which condenses the said volatilized substance but retains it in its dispersed condition.

1,509,825. REGISTER FOR GOLF PRACTICE. FRED A. CATON, La Grange, Ill. Filed Oct. 2, 1922, Serial No. 591,952. Renewed Feb. 6, 1924. 5 Claims. (Cl. 265—22.)



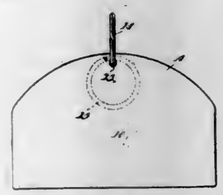
1. A device of the class described comprising a casing, a shaft rotatably mounted therein, a ball, a flexible member connecting the ball with the shaft, an indicator wheel geared to the shaft, a pointer associated with the wheel and carried by the casing and means for disengaging the wheel from the shaft.

1,509,826. AGRICULTURAL-IMPLEMENT FRAME. ROBERT C. CAUGHEY, Dixon, Ill., assignor to J. I. Case Threshing Machine Company, Racine, Wis., a Corporation of Wisconsin. Filed Mar. 9, 1922. Serial No. 542,201. 9 Claims. (Cl. 97—238.)



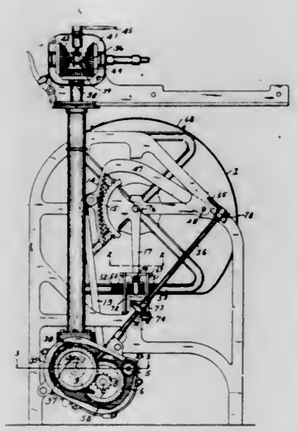
1. In an agricultural implement frame, the combination of a pair of transversely extending frame members, a pair of laterally spaced junction blocks clamped between and adjustable along said members, and an earth-turning-body supporting beam clamped between the blocks.

1,509,827. COLLAPSIBLE BOAT. FRANCIS JAMES COLLET, Swanick, near Southampton, England. Filed Feb. 2, 1924. Serial No. 690,113. 5 Claims. (Cl. 9—2.)



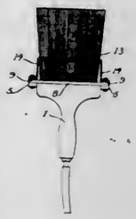
1. A collapsible boat comprising in combination a flexible skin, longitudinal stiffeners secured to said skin, end transoms, means for attaching said transoms to certain of said stiffeners whereby the skin is distended, and means for enfolding the ends of said flexible skin about said transoms.

1,509,828. TYPEWRITING MACHINE. CORNELIUS B. CORCORAN, New York, N. Y., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Dec. 2, 1922. Serial No. 604,468. 4 Claims. (Cl. 197—186.)



1. The combination with a typewriting machine comprising a framework, of a sound-deadening unitary sheathing formed with side walls, back wall and floor and boxing in the sides, rear and bottom of the typewriter framework and having a thick lining of sound-deadening felt or material, the framework having cushioned feet supported upon the floor of the sheathing, said sheathing firmly attached to the framework and constituting a permanent member of the typewriting machine and fitted closely thereagainst and clasping the sides of the same and dampening the sound vibrations of the framework.

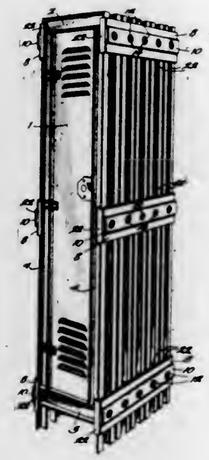
1,509,829. POUCH. MAURICE F. DOTY, Chicago, Ill. Filed July 28, 1922. Serial No. 578,220. 1 Claim. (Cl. 150—40.)



In a key pouch, an inverted receptacle open at its lower end, a tongue secured between the sides of the receptacle and having a portion projecting beyond the upper end for supporting the receptacle, and a portion of the said tongue being arranged within the receptacle and perforated to receive and support a key ring, for the purpose specified.

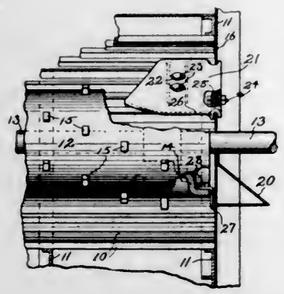
1,509,830. DRIVING AND CONTROLLING MECHANISM FOR WASHING MACHINES. OSCAR F. FISCHEDICK and ALVIN W. KRAHN, Milwaukee, Wis., assignors, by mesne assignments, to Sunbeam Electric Manufacturing Company, Evansville, Ind., a Corporation of Indiana. Filed Dec. 26, 1919. Serial No. 347,556. 10 Claims. (Cl. 14—50.)

1. In a washing machine, the combination with an oscillatory drum, of a rock shaft associated with the drum, an arm pivoted upon said shaft, means for resiliently connecting said arm to the drum, and a latch engageable with said arm when the drum is in its upright position.



1,509,831. FOUNTAIN PAINTBRUSH. STANLEY GASPARAITIS, Chicago, Ill. Filed Dec. 10, 1921. Serial No. 521,289. 3 Claims. (Cl. 15—128.)

1. A paint brush comprising a hollow handle, bristles supported by said handle, a pervious cloth funnel arranged within the bristles for controlling the flow of paint to the bristles from said handle and a rigid frame secured to said handle and surrounding said bristles at a distance from the point of attachment of said bristles adapted to retain the latter in contact with said funnel.

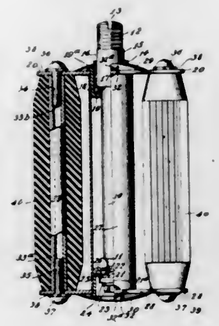


1,509,832. CRATE. CLARENCE E. GERBERICH, Aurora, Ill., assignor to Lyon Metallic Manufacturing Company, Aurora, Ill., a Corporation of Illinois. Filed June 18, 1923. Serial No. 645,976. 5 Claims. (Cl. 217—52.)

1. A crate comprising backs designed to be arranged parallel and opposite to each other, stalls on the inner faces of said backs, said stalls consisting of channel shaped elements having their flanges facing inward and the central portion secured to said backs, some of said

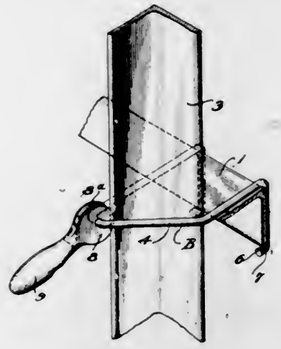
stalls being spaced from each other, and tie rods extending from one back to the other at the spaces between stalls.

1,509,833. CORN SHELLER. ALBERT E. GILMAN, Ottawa, Ill., assignor to King & Hamilton Company, Ottawa, Ill., a Corporation of Illinois. Filed Jan. 19, 1924. Serial No. 687,194. 3 Claims. (Cl. 130—6.)



1. In a corn sheller, the combination with a shelling cylinder, of a shelling concave in which the cylinder is mounted to rotate, said concave having an outlet opening in the discharge end thereof above the axis of the cylinder, a cob-deflecting plate projecting into the concave from one end of the outlet opening, and a cleaning tooth carried by the end of the cylinder and co-operating with said plate adjacent the outlet.

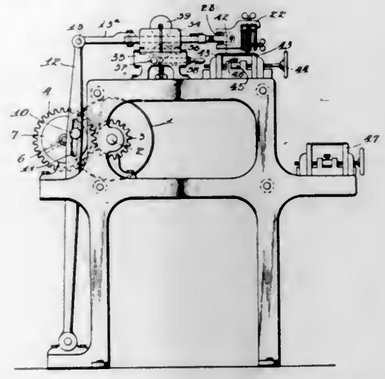
1,509,834. BICYCLE PEDAL. JAMES H. GRAHAM, Torrington, Conn., assignor to J. H. Graham Company, Torrington, Conn., a Corporation of Connecticut. Filed May 24, 1922. Serial No. 563,401. 11 Claims. (Cl. 208—70.)



3. In a bicycle pedal, a pin adapted to be secured to a bicycle crank, a pair of brace members rotatably mounted on said pin, a pair of tread-carrying rods supported on said brace members and laterally slidable therebetween,

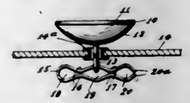
detachable tubular treads surrounding said tread-carrying rods, and means adapted to be manipulated from outside

said brace members for detachably securing said tread rods in position, whereby said treads may be removed from said tread rods without disturbing said brace members.



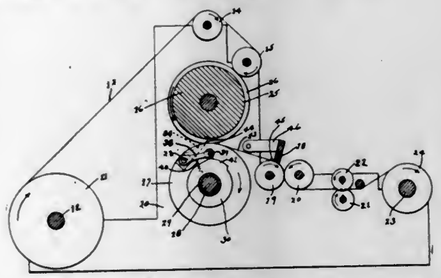
1,509,835. ALIGNER CLAMP. RUDOLPH C. GROSSENBACH, Milwaukee, Wis., assignor to Metal Forms Corporation, Milwaukee, Wis., a Corporation. Filed Apr. 23, 1921. Serial No. 464,044. 4 Claims. (Cl. 304—40.)

3. A clamp for fastening intersecting angle iron bars, said clamp including a frame having a looped portion adapted to straddle one of the bars and hooked end portions for detachably engaging the other bar, and an eccentric cam permanently mounted upon the frame and formed with a grooved edge portion for engaging an edge of one of the angle iron bars for clamping the bars rigidly in position.



1,509,836. REED-POLISHING MACHINE. JOHN J. HALDEMAN and ARNO W. VOGEL, Sunbury, Pa. Filed May 8, 1922. Serial No. 559,339. 5 Claims. (Cl. 51—59.)

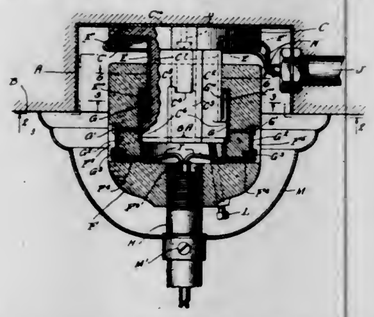
1. In a polishing machine, the combination with a holder for the article to be polished, of a plurality of horizontally movable operating arms, means for limiting the stroke of said arms, of adjustable arms mounted on the ends of said horizontally movable operating arms



adapted to hold abrasive stones or polishers, means for adjusting arms to accommodate reeds of different widths.

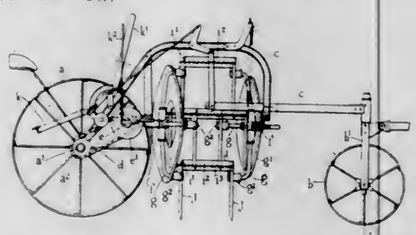
1,509,837. BUTTON TOGGLE. LINCOLN S. HAPEMAN, Waterbury, Conn. Filed Mar. 6, 1923. Serial No. 623,134. 7 Claims. (Cl. 24—106.)

1. The combination with a button having an attached eye, of a toggle adapted to be connected to said eye for locking said button to a sheet of material, said toggle comprising a wire rod bent upon itself to form a plurality of loops, one of said loops being open to permit the entrance of said button eye, and another loop serving to hold the button in locked position, the sides of said toggle being adapted to be laterally spread apart in a single plane to permit said button to be readily inserted within the end loop of the toggle, the ends of said rod converging inwardly, and lying in contact with each other whereby there will be no projecting points to catch the material.



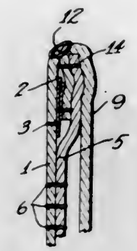
1,509,838. PAPER-PERFORATING MECHANISM. DAVID WILLIAM HUDSON, Green Bay, Wis. Filed July 26, 1922. Serial No. 577,512. 18 Claims. (Cl. 164—68.)

1. The combination with a grooved die and means for moving a web past the die said die being grooved in the direction of web travel, of a set of perforating elements registering with the grooves of the die, said elements extending transversely with reference to the path of web movement and being maintained normally in a retracted position, and means for projecting said elements in the direction of the die and through the web with a motion having a longitudinal component with reference to the



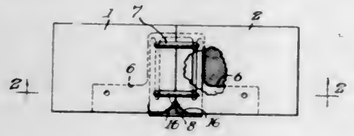
web, whereby tongues are struck upwardly from said web conforming in shape to the penetrating ends of said perforating elements.

1,509,839. ELECTRICAL-FIXTURE CONNECTION. PETER R. KUHN, New York, N. Y. Filed July 19, 1920. Serial No. 397,263. 5 Claims. (Cl. 173—330.)



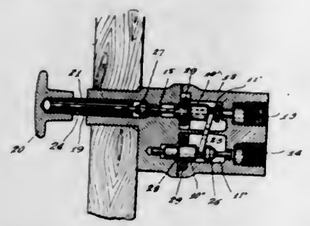
1. A connector for suspending an electric fixture comprising a part formed of insulating material and adapted to be secured in a standard ceiling outlet box and a co-operating part of insulating material adapted to be secured to the fixture, one of said parts being tubular and telescopically receiving the other, said tubular part having its inner wall shaped to provide an axially elongated cylindrical bearing surface, and the other part being shaped to provide an external axially elongated cylindrical bearing surface adapted to fit snugly in the first mentioned bearing surface, one of said parts being formed with a lug projecting from the bearing surface of the part and the other part being cut away to form a bayonet joint-like groove in its bearing surface, whereby the parts may be axially moved together, with said lug received in said groove, and may then be rotated relative to one another to bring the parts into position in which the end edge of said lug and the transverse edge wall of said slot form shoulders co-operating to prevent axial displacement of the parts, electrical contact members carried by and located within said tubular part and cooperating electrical contact members carried by the other part and brought into engagement with the first-mentioned contact member by the movement of said parts into the relative position in which said shoulders prevent axial displacement of said parts.

1,509,840. SWATH TURNER AND SIDE-DELIVERY RAKE. WILLIAM EDWARD MARTIN, Stamford, England. Filed Dec. 29, 1922. Serial No. 609,609. 8 Claims. (Cl. 56—366.)



1. A swath turner and side delivery rake comprising two parallel shafts, a flyer mounted on each parallel shaft, means for driving one of the parallel shafts in opposite directions, doubly bent rake heads carried by and connecting the flyers, each rake head having two parts arranged transversely of the machine in a horizontal plane and laterally displaced and longitudinally parallel with respect to each other and an intermediate connecting part, and hanging teeth carried by the parallel parts of the rake head, substantially as set forth.

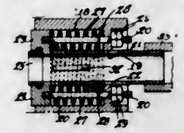
1,509,841. COAT COLLAR AND METHOD OF MAKING THE SAME. ISAAC MILLER, Scranton, Pa. Filed Jan. 31, 1924. Serial No. 689,607. 7 Claims. (Cl. 2—98.)



5. A collar wherein the under collar and the outer collar are joined together by a bent mounting strip sewed to each of said collars independently and stitches uniting the free edge of the under collar in the outer margin of the outer collar.

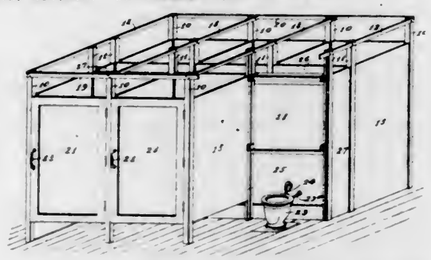
1,509,842. DESK PAD AND STAND. THEOPHIELD D. OAKLEY, Chicago, Ill., assignor, by mesne assignments, to Defiance Sales Corporation, New York, N. Y., a Corporation of New York. Filed Apr. 14, 1922. Serial No. 552,799. 7 Claims. (Cl. 40—120.)

3. In a device of the class described, the combination of a supporting base comprising a pair of sections adapted to be arranged either side by side or end to end, means for locking the sections together in either position, and pad retaining arches for holding a pad on one of the sections so that the leaves of the pad may be turned over onto the other section in either position of adjustment of the latter.



1,509,843. THREE-WAY VALVE. CHESTER S. RICKER, Indianapolis, Ind. Filed Jan. 5, 1921. Serial No. 435,079. 9 Claims. (Cl. 277—13.)

8. A three-way valve, comprising a casing having three ports, valve means controlling two of said ports, and an operating rod for said valve means extending through one of said ports.

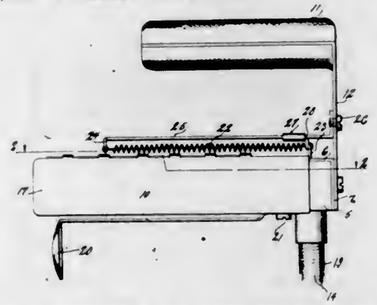


1,509,844. ADJUSTMENT FOR TERMINALS WITHIN CONNECTER HEADS. EDWARD A. ROBINSON, Montreal, Quebec, Canada, assignor of one-half to himself and one-half to Ellison A. Workman, Montreal, Canada. Filed May 17, 1922. Serial No. 561,706. 5 Claims. (Cl. 285—24.)

5. In an automatic train pipe connecter, a connecter head having a bore and a counterbore, a train pipe terminal through the bore and counterbore fitting to the bore at the rear and forwardly enlarged to slide within the counterbore, bolts engaging the enlargement at one end and limiting the forward projection

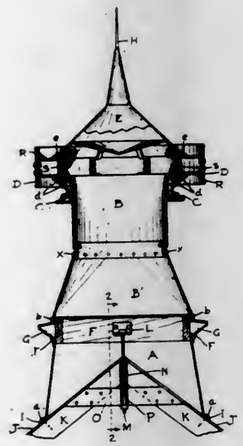
of the terminal, springs within the counterbore pressing the terminal forwardly and adjusting devices accessible from the rear for determining the extent of projection of the terminals.

1,509,845. TOILET PARTITION. SHELDON S. ROBY, New Britain, Conn., assignor to Hart and Hutchinson Manufacturing Company, New Britain, Conn., a Corporation of Connecticut. Filed Jan. 5, 1923. Serial No. 610,843. 12 Claims. (Cl. 189—34.)



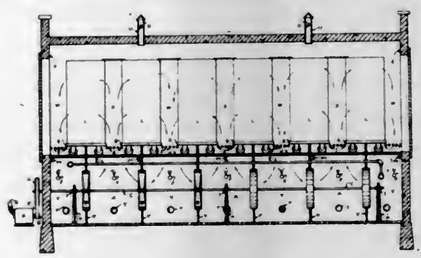
1. In a toilet system, a series of toilet compartments, a common piping and vent space communicating with each of said compartments, each compartment having a rear wall, a detachable panel in said wall adapted to permit access to said piping and vent space, said panel being removable without disturbing the piping in said toilet compartments or in said piping and vent space.

1,509,846. PRODUCTION OF ANTHRAQUINONE DERIVATIVES. JOHN H. SACHS, Wilmington, Del., and VAHAN S. BABASINIAN, South Bethlehem, Pa., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Sept. 25, 1920. Serial No. 412,819. 11 Claims. (Cl. 260—31.)



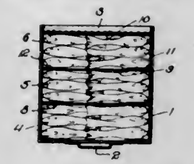
1. The process of producing an anthraquinone derivative which comprises oxidizing in the presence of an acid the leuco derivative of a product obtainable by fusing beta-amino-anthraquinone with potassium hydroxide and potassium nitrate.

1,509,847. HAIR-CUTTING APPLIANCE. SAMUEL SEVERSON, Valders, Wis. Filed Feb. 1, 1922. Serial No. 533,435. 4 Claims. (Cl. 30—1.)



4. In an appliance of the class described, the combination with a casing, cutting means carried by the casing, and a guard extensible over the casing to regulate the cut of said cutting means, of a rest providing a fulcrum to permit the gradual extension from the casing of the guard to produce an even tapering cut by the cutting means.

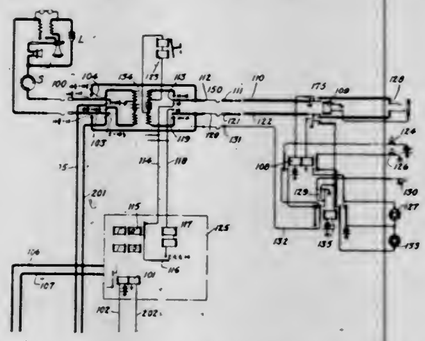
1,509,848. VENTILATING CUPOLA. HERMAN SILVER, Fairfield, Iowa, assignor to The Louden Machinery Company, Fairfield, Iowa, a Corporation of Iowa. Filed Aug. 17, 1921. Serial No. 492,953. 3 Claims. (Cl. 98—4.)



1. In ventilating cupolas having a base section, a rectangular shaped frame on the inside of said section, metallic plates secured to the inner sides of the timbers of said frame on opposite sides thereof, and threaded bolts provided with threaded nuts passed vertically through said plates, whereby when the cupola is placed on a building, the bolts may be passed down through a timber or timbers in the building, and the cupola may thereby be adjustably anchored to the building by turning up the nuts on the bolts.

1,509,849. REVERSIBLE-CIRCULATION INTERNAL-FAN KILN. ROLF THELEN, Madison, Wis., dedicated, by mesne assignments, to the Citizens of the United States of America. Filed July 12, 1923. Serial No. 651,071. 15 Claims. (Cl. 34—19.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)

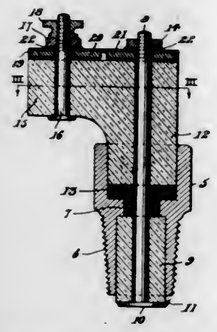
1. In a dry kiln arranged for flatwise cross piling; a series of fans in which adjacent fans are of opposite pitch; a shaft on which the fans are mounted for rotation; and means for rotating said shaft in either direction to cause reversal of the circulation of the air and vapor in said kiln.



1,509,850. METHOD OF AND APPARATUS FOR REFRIGERATING COMESTIBLES. CLIFFORD J. THOMPSON and PAUL W. PETERSEN, Chicago, Ill.: said Thompson assignor to said Petersen. Filed June 8, 1922. Serial No. 566,894. 5 Claims. (Cl. 99—14.)

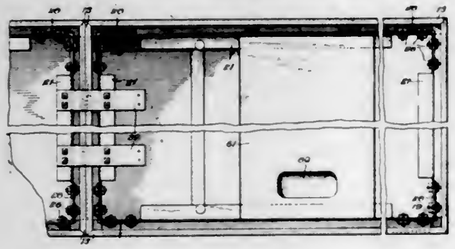
1. The method of handling comestibles for refrigerating them en masse into a solid mold subdivisible into sections of predetermined dimensions which consists in arranging and retaining said comestibles in regular order and in separate groups in a scoop-shaped container by interposing partitioning members between said groups, and then refrigerating the packed comestibles to freeze said partitioning members in situ with the comestibles whereby the frozen mold may be subsequently subdivided into separate groups along lines coincident with said partitioning members.

5. As an article of manufacture a frozen mold of refrigerated comestibles comprising a plurality of groups of comestibles frozen en masse, said groups being separated from each other by partitioning members frozen in situ in said mold, said partitioning members extending over the major part of a cross sectional area of the mold but permitting a small part of the comestibles of one group to freeze in direct contact with a small part of the comestibles of another group, whereby the groups may be retained together until deliberate separation thereof.



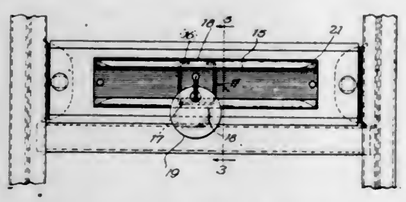
1,509,851. SIGNALING SYSTEM. EDWIN F. TRAPP, Valley Stream, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 2, 1920. Serial No. 427,791. 15 Claims. (Cl. 179—27.)

1. In a telephone exchange system, a subscriber's line, a trunk circuit, means under the control of said subscriber's line for extending a connection from said line, operator controlled means operative if the calling subscriber removes his receiver from the switch hook and fails to cause the extension of such connection for extending a connection from said line to said trunk circuit, a source of varying potential, and means for connecting said source operatively with said subscriber's line.



1,509,852. SPARK PLUG. JOHN TURČAN, South Akron, Ohio. Filed Sept. 22, 1921. Serial No. 502,353. 4 Claims. (Cl. 123—169.)

1. In a spark plug, an outer and an inner electrode, an insulator separating the said electrodes and positioned with the inner electrode projecting thereabove, a binding post projecting upwardly from said insulator in spaced relation to the inner electrode, a casing having spaced openings positioned upon the top of said insulator with the openings receiving the projecting ends

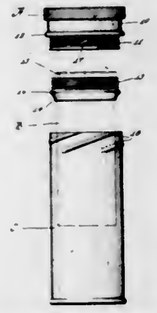


of said inner electrode and binding post, a conductor encircling the projecting end of the inner electrode, a second conductor encircling the projecting end of the binding post, said conductors being spaced to form a spark gap, and means for retaining the casing and conductors in position upon said insulator.

1,509,853. TABLE. WALTER N. VANCE, Chicago Heights, Ill., assignor to Durand Steel Locker Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 18, 1919. Serial No. 318,113. 14 Claims. (Cl. 45—31.)

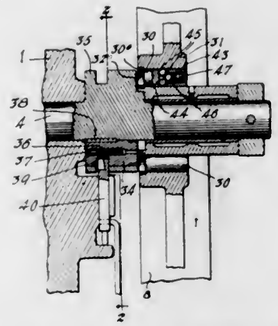
3. A sheet metal table, comprising a top, rails supporting the same, legs engaged only with said rails and locking the same to said top.

1,509,854. CHECKHOOK. WALTER N. VANCE, Chicago Heights, Ill., assignor to Durand Steel Locker Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 14, 1920. Serial No. 416,994. 7 Claims. (Cl. 40—19.5.)



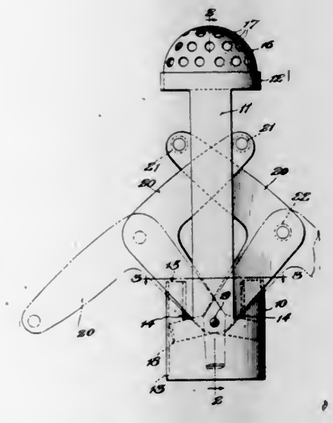
1. A check hook, comprising a resilient wire body having spaced apart ends bendable toward each other whereby the body may be sprung into a flanged holder having closed ends and returned to normal shape to cause it to be held therein, and a prong extending from said body portion end at an angle with respect to said holder.

1,509,855. HOLDING MEANS FOR DETACHABLE STRAPS. ARTHUR W. WADSWORTH and ARTHUR P. CONANT, Fort Thomas, Ky., assignors to The Wadsworth Watch Case Company, Dayton, Ky., a Corporation of Kentucky. Filed Aug. 3, 1923. Serial No. 655,498. 8 Claims. (Cl. 24—265.)



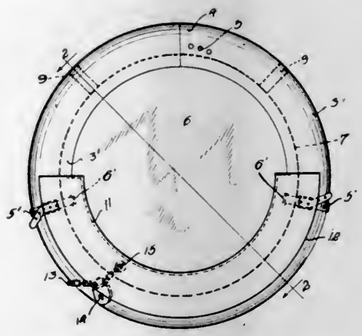
1. In detachable holding means, a T-lug suitably mounted and spaced apart from the article to which it is attached, and a looped strap having a slot therein whereby said lug may be detachably connected to said loop.

1,509,856. SHAVING-STICK CONTAINER. PHILIP K. WILLIAMS, Glastonbury, Conn., assignor to The J. B. Williams Company, Glastonbury, Conn., a Corporation of Connecticut. Filed Mar. 15, 1923. Serial No. 625,382. 4 Claims. (Cl. 206—56.)



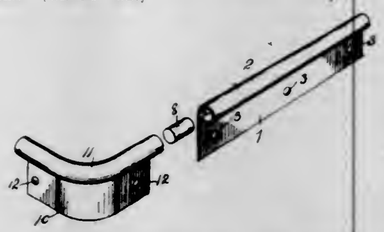
1. A shaving stick container comprising, in combination, a sheet metal cap having threads pressed therein, a ring for encircling the shaving stick and threaded to engage the threads of said cap whereby the soap stick is supported thereon, and a sheet metal casing to cover the free end of the shaving stick, said cap being provided with a short rib pressed outwardly from the metal at the threaded portion thereof and extending in a direction across the threads, and said casing being provided with a groove pressed therein cooperative with the rib on said cap.

1,509,857. LOCK FOR CLUTCH STRIKING PINS AND THE LIKE. EDMUND W. ZEH, Newark, N. J. Filed Dec. 4, 1920. Serial No. 428,405. 3 Claims. (Cl. 85—5.)



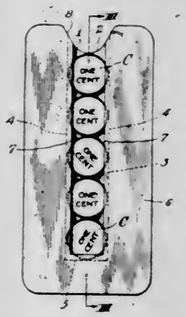
1. The combination with a part having a socket, of a removable pin fitting said socket laterally and having a transverse passage opening through its side within said socket and a longitudinal passage communicating with said transverse passage and opening through one end of the pin, a locking member movable longitudinally of said transverse passage and adapted to engage the wall of the socket, and means for holding said locking member in engagement with the wall of the socket to prevent withdrawal of the pin longitudinally, said means including a screw in said longitudinal passage capable of passing through the said socket for the pin, whereby the pin may be removed from its socket without removing the screw from the pin.

1,509,858. CORING DEVICE. CHARLES H. BOYLE, New Haven, Conn. Filed June 13, 1924. Serial No. 719,910. 7 Claims. (Cl. 146—3.)



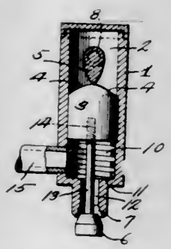
1. A coring device comprising a tubular cutter; lever handles pivotally connected therewith; and segmental cutters connected with said handles and adapted to be moved toward each other by separation of the upper ends of the handles, said segmental cutters during their entire movement being within the tubular cutter.

1,509,859. TIRE SHIELD. ARTHUR H. CALKINS, Spokane, Wash. Filed May 8, 1923. Serial No. 637,435. 3 Claims. (Cl. 150—54.)



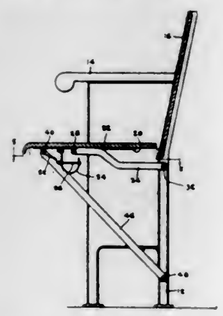
1. A tire shield comprising a web conforming to the shape of the tire and provided with an edge ring to fit over the rim of a tire, means for suspending the web on a tire, and a curved strip having its inner edge attached to the web near its periphery leaving the major portion of said strip free.

1,509,860. CURBING. EZRA H. CANNADY, Kansas City, Mo. Filed Aug. 21, 1922. Serial No. 583,133. 1 Claim. (Cl. 94—32.)



In a curbing, a suitable support, bolts mounted therein, a guard plate having a flat body portion through which said bolts extend, the upper portion of the plate being formed into a horizontal longitudinal barrel which extends outwardly beyond said bolts and the longitudinal edge of which bears against the outer side of the flat body portion above said bolts, and nuts mounted on said bolts and bearing against the outer side of said body portion.

1,509,861. FARE HOLDER. WILLIAM J. COLEMAN, Cleveland, Ohio. Filed June 21, 1922. Serial No. 569,782. 3 Claims. (Cl. 133—6.)

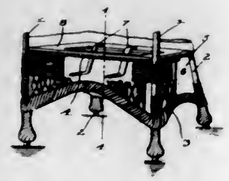


1. An article of the character described composed of five laminated and adhering flat elements, viz: a middle partition, and two pieces on each side thereof, each piece being provided with a slot, the slots in the outer pieces being smaller than the slots in the pieces which abut said partition.

1,509,862. PET COCK. ROY E. EDICK, Gladwin, Mich. Filed Apr. 12, 1923. Serial No. 631,610. 1 Claim. (Cl. 251—132.)

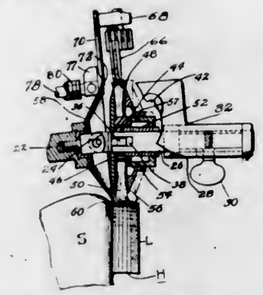
A pet cock comprising a casing, a member slidably mounted within a chamber of the casing, the upper end of said member having oppositely disposed bevelled walls, a rotatable cam disposed within the chamber and cooperating with said bevelled walls, the lower end of the casing terminating in a reduced portion having a discharge port therethrough, a valve stem carried by the slidable member and extending axially through the discharge port out of engagement therewith, the lower end of the valve stem being provided with a conically shaped valve cooperating with a valve seat carried by the lower end of the extension, an intake port extending through the casing adjacent the lower end thereof and below the slidable member, and a coiled spring interposed between the lower end of the slidable member and the bottom of the chamber, said slidable member and the coiled spring forming the only support for the stem and valve.

1,509,863. AUTOMATIC FOLDING-SEAT DEVICE. JOHN E. ERICKSON, St. Paul, Minn., assignor to Automatic Seating Company, Superior, Wis. Filed Apr. 5, 1923. Serial No. 630,915. 2 Claims. (Cl. 155—85.)



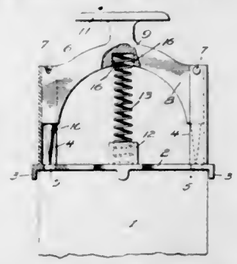
1. An automatic folding seat device comprising a support, a seat member, two link members pivotally connecting said support and said seat member, spring means which when said member is not occupied causes the latter to assume a folded position, and an adjustable buffer secured to said seat member, said buffer engaging one of said link members to limit the extent of folding movement.

1,509,864. METHOD FOR PRODUCING A MIXTURE OF MONO- AND DI-ACETINS. GUSTAVUS J. ESSELEN, Jr., Swampscott, Mass., assignor to Arthur D. Little, Inc., Cambridge, Mass., a Corporation of Massachusetts. Filed July 21, 1920. Serial No. 397,960. 3 Claims. (Cl. 260—106.)



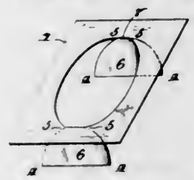
1. A method of producing a mixture of mono- and diacetins which consists in mixing glycerin and acetic acid, adding sulphuric acid, heating the mixture to a temperature of approximately 100-110° C., and finally subjecting the resultant product to distillation to recover certain of the esters of glycerin and acetic acid which are formed.

1,509,865. WILLOW OR CANE FURNITURE. JAMES J. FESS, PETER J. FESS, and JOSEPH P. FESS, Rochester, N. Y. Filed Aug. 4, 1922. Serial No. 579,635. 2 Claims. (Cl. 155—191.)



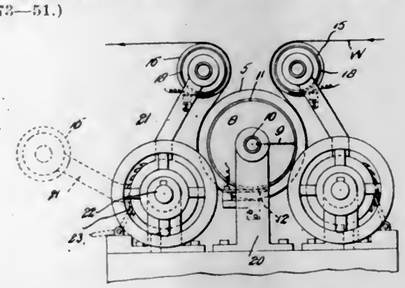
1. In willow or cane furniture, the combination with a pair of front legs and a pair of rear legs each formed with seats, of willow work connecting said legs and having a hoop about which the base material is woven resting upon the seats of the rear legs, and a seat frame supported upon said hoop.

1,509,866. COATING APPARATUS. FREDERICK M. FURBER, Revere, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Aug. 9, 1923. Serial No. 656,564. 30 Claims. (Cl. 91—37.)



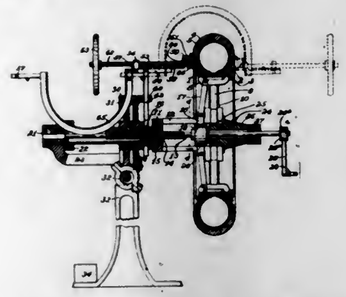
1. In a coating apparatus, a rotatable applying brush having a wall for contact with its fibers at one side and at the opposite side a member adjustable toward and from the wall to vary its contact with the fibers, the wall and contact member leaving the applying ends of the fibers free to bend.

1,509,867. CAN PERFORATOR. CHARLES A. GORDY, Hanford, Calif. Filed Mar. 14, 1923. Serial No. 625,150. 5 Claims. (Cl. 164—119.)



1. A perforating device of the character described comprising, a plate having centering means extending from one side and further having apertures therethrough, spaced vertical channeled guide posts carried by said plate, a yoke member having its extremities slidable in said posts, piercing means carried by said extremities in alinement with said apertures for passage therethrough and normally housed in said posts, and means for retaining said yoke and piercing means in retracted position.

1,509,868. SANITARY COVERING FOR SEATS. THOMAS P. HARRISON, Raleigh, N. C. Filed Feb. 14, 1923. Serial No. 618,959. 3 Claims. (Cl. 4—243.)

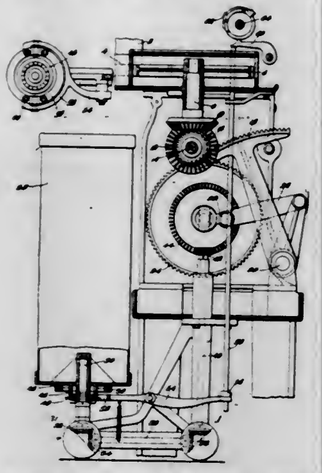


1. The method of forming a seat cover from a sheet of material which method comprises folding the sheet on itself along one dimension, folding the resultant folded sheet on itself on a line at right angles to the line of said first fold, thus providing a corner having the adjacent marginal edges extending in one direction with a closed four-ply fold and in the other direction with two separate closed folds each of two-ply, removing a strip of the folded material from a point on one edge adjacent said corner and part way only along the length of the adjacent edge and thus providing one edge portion open to all of the plies thereof, and cutting all of the plies of said folded sheet inwardly from a point along said open portion in a curved line toward said adjacent edge and terminating the cut short of said closed four-ply fold.

1,509,869. INSTRUMENT FOR THE AUTOMATIC DETERMINATION OF MOISTURE IN PAPER OR TEXTILES. ARTHUR R. HARVEY, Middletown, Ohio. Filed July 11, 1923. Serial No. 650,810. 11 Claims. (Cl. 73—51.)

1. In an instrument for the automatic determination of moisture content in a web while moving during its course of manufacture, means for supplying heat to said web, means sensitive to the heat of the web before and means sensitive to the heat of the web after being heated by said heating means, and an indicator controlled by said heat sensitive means for indicating the moisture content of said web.

1,509,870. APPARATUS FOR MOUNTING AND DEMOUNTING PNEUMATIC TIRES. PETER F. KLEIN, Waterloo, Iowa. Filed Mar. 9, 1923. Serial No. 623,980. 9 Claims. (Cl. 157—6.)



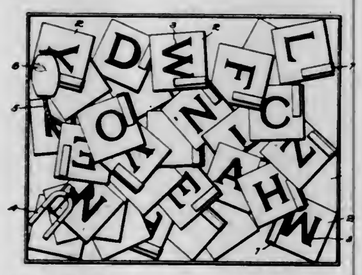
1. In apparatus for mounting and demounting pneumatic tires, rotatable clamping-means adapted to adjustably removably hold a rim with pneumatic tire thereon, a supporting device pivotally mounted intermediate its ends and a pressure-tool mounted adjustably adjacent to abutting parts of either side face of said rim and tire to operate adjustably on either from either side of the clamping-means while the latter is in rotation.

1,509,871. FABRIC RECEIVER FOR KNITTING MACHINES. MAX C. MILLER, Cumberland Hill, R. I., assignor to Jenckes Knitting Machine Company, Pawtucket, R. I., a Corporation of Rhode Island. Original application filed Apr. 5, 1921, Serial No. 458,640. Divided and this application filed May 27, 1922. Serial No. 564,210. 7 Claims. (Cl. 66—9.)

1. A knitting machine having, in combination, a rotating and reciprocating needle cylinder, a fabric receiver

below the cylinder, mechanism underlying and engaging the lower end of the fabric receiver for rotating it in

unison with the needle cylinder during rotary knitting, and means for disconnecting the receiver during reciprocatory knitting.



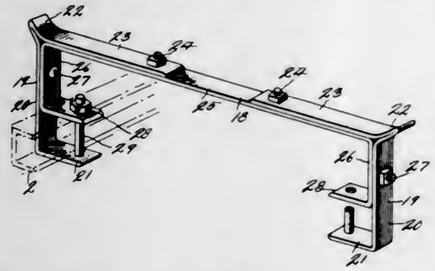
1,509,872. METHOD OF PRINTING SIZED PAPER. WALLACE J. MURRAY, Boston, Mass., assignor, by mesne assignments, to Todd Protectograph Company, Inc., Rochester, N. Y., a Corporation of New York. Filed June 9, 1921. Serial No. 476,310. 7 Claims. (Cl. 91—67.95.)

1. A method of making permanent records on sized paper which consists in impregnating the paper with a reagent capable of yielding nitrous acid and applying to the surface of the paper an ink capable of penetrating the sized paper and reacting with the reagent to liberate nitrous acid and precipitate a pigment within the body of the paper.

6. A method of printing sized paper, which consists in impregnating the paper with sodium nitrite, drying the paper, applying to the surface of the paper an ink consisting of a solution of dianisidine and beta-naphthol in oleic acid.

7. A sized paper impregnated with a nitrite.

1,509,873. GAME. FRANK L. ORDWAY, Salem, Mass., assignor to Parker Bros., Salem, Mass., a Corporation of Maine. Filed Apr. 14, 1922. Serial No. 552,615. 4 Claims. (Cl. 46—48.)

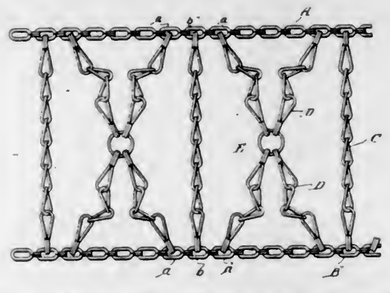


4. A game apparatus comprising at least one magnet and a receptacle having a series of pasteboard pieces, each having a letter upon one face thereof, each of said pieces having a steel clip secured thereto, thereby rendering the pieces attractable by the magnet, whereby players may contest in drawing letters from the receptacle thereafter to be built into words.

1,509,874. FLYTRAP. JOHN PELYP, Chicago, Ill. Filed Feb. 7, 1924. Serial No. 691,208. 4 Claims. (Cl. 43—118.)

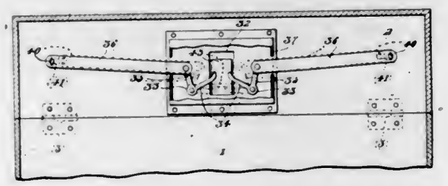
1. In a fly trap, a frame structure, a screened casing carried by the structure, a hinged cover for the casing, a platform at the lower end of the structure, a hinged bottom for the casing spaced upwardly from the platform, and a cone-shaped entrance and bait support detachably connected to the bottom, said bait support including a ring, spider arms carried by the ring and bait hooks depending from the center of the spider arms.

1,509,875. DUMP-BODY BRACKET. JOSEPH S. RASNICK, ROBERT A. BUTTERY, and EWDARD L. LUSK, St. Paul, Va. Filed Jan. 8, 1924. Serial No. 684,988. 1 Claim. (Cl. 298—17.)



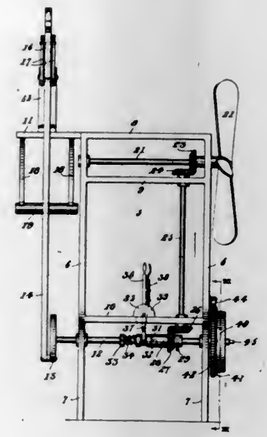
The combination with the side rails of an automobile frame, the free end of a pivoted dump body carried thereby, of a bracket for receiving and supporting the free end of the dump body, said bracket comprising horizontally disposed U-shaped members having upper and lower arms, the lower arms of the U-shaped members underlying the rails of the frame, the upper arms extending inwardly towards each other above the rails and spaced therefrom, the upper outer corners of the U-shaped members being bent to form upwardly extending dump body engaging lugs, an inverted U-shaped member having its transverse portion secured to the upper arms of the first mentioned U-shaped members, the downwardly extending arms of the inverted U-shaped member being secured to the vertical arms of the first mentioned U-shaped members, said arms of the inverted U-shaped member terminating in horizontally disposed arms engaging the upper sides of the rails and bolts extending through the lower arms of the first mentioned U-shaped members and the last mentioned horizontally disposed arms of the inverted U-shaped member.

1,509,876. CHECK-CANCELING ATTACHMENT FOR FOUNTAIN PENS. PEDRO ESCALAMBRE RICERRA, Manila, Philippine Islands, assignor of one-half to Gregorio Polintan, Manila, Philippine Islands. Filed Feb. 23, 1923, Serial No. 620,714. Renewed Aug. 20, 1924. 2 Claims. (Cl. 101—3.)



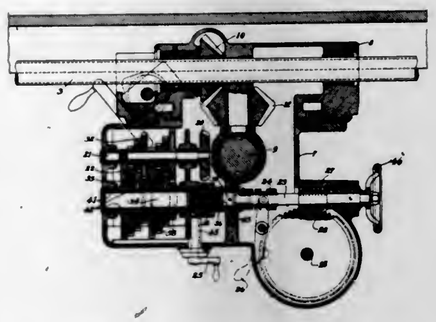
1. A check protector comprising, a bifurcated resilient body member, a substantially U-shaped member secured at the inner end between the furcations of the body member and serving to normally retain the furcations extended outwardly, and teeth formed integrally with and upon the opposed inner faces of said U-shaped member and positioned in a manner as to cause them to mesh when the parts are actuated.

1,509,877. TIRE CHAIN. JOSEPH D. RICHIE, Casper, Wyo. Filed Aug. 21, 1923. Serial No. 658,539. 1 Claim. (Cl. 152—14.)



A non-skid structure for automobile tires, comprising a plurality of longitudinal side chains formed of ordinary links and adapted to extend entirely around an automobile tire and to engage the side surfaces of the latter, equally spaced transverse chains connecting the side chains and each adapted to extend from one side chain over the tread of the tire to the opposite side chain, and a pair of diagonal crossed chains arranged between each two adjacent transverse chains and having their ends connected to the links of the side chains, said crossed chains being of such length as to pass over the tread of the tire without pulling the side chains toward said tread, and said diagonal chains having the links thereof normally out of alignment.

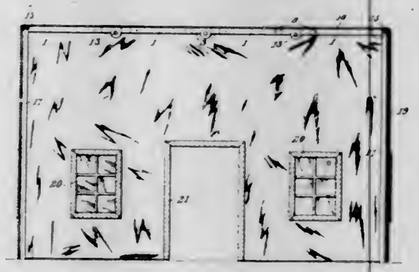
1,509,878. TRUNK LOCK. LOUIS ROBERTS, Brookville, Pa. Filed Jan. 17, 1924. Serial No. 686,787. 3 Claims. (Cl. 70—115.)



1. In a trunk lock, a key-operated swinging hasp, end locks including tensioned latch levers and rigid keeper lugs for the latch levers, and means for disengaging the latch levers from the lugs arranged in the path of movement of the hasp.

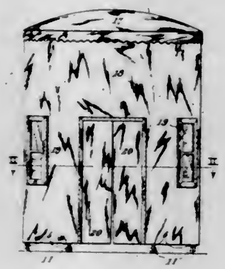
1,509,879. MECHANICAL TOY. AFTAN ROMANZAK, Singac, N. J. Filed Feb. 21, 1924. Serial No. 694,254. 1 Claim. (Cl. 46—40.)

In a device of the type described, a supporting frame, a power shaft carried by said frame, a platform projecting laterally from the upper end of said frame, a jointed doll mounted upon said platform, a saw connecting said doll and said power shaft in such a manner that rotary movement of the shaft will cause longitudinal movement of the saw, a hollow cylinder carrying granular material resiliently connected to said platform and positioned in engagement with the teeth of said saw, and means for operating said power shaft so that said saw and doll will be actuated and said saw will agitate said cylinder for disturbing the granular material positioned therein.



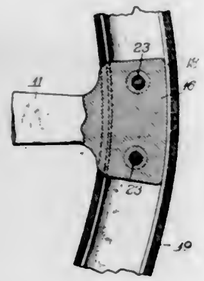
1,509,880. CHANGE-SPEED MECHANISM FOR DRILLING MACHINES. WILLARD T. SEARS, Montclair, N. J., assignor to Niles-Bement-Pond Company, New York, N. Y., a Corporation of New Jersey. Filed Sept. 30, 1920. Serial No. 413,935. 6 Claims. (Cl. 74—59.)

1. A change speed mechanism, comprising the combination of a driving device and a driven device, means including a longitudinally movable shaft rotatably connecting such devices in a manner whereby the entire driving torque is transmitted through such shaft, one of the devices comprising a plurality of differently diametered gears mounted on the shaft and operatively engaged by a like number of companion gears on a parallel shaft, two keys mounted on the first mentioned shaft in spaced relation therealong and adapted to be engaged alternately with certain of the gears, either key



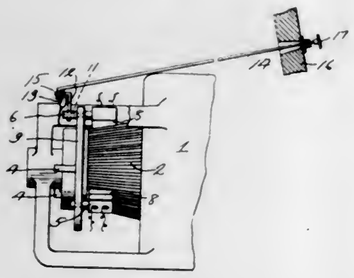
being disengaged when the other key is engaged, and means for moving the first said shaft longitudinally to operatively engage the keys successively with the first mentioned gears.

1,509,881. PORTABLE BOOTH OR TENT. ANNA SEVERIN, Weatherford, Tex., assignor of one-half to John B. Alvis, Weatherford, Tex. Filed Dec. 31, 1923. Serial No. 683,766. 3 Claims. (Cl. 135—4.)



2. In a device of the class described, an upper horizontal frame formed of side bars, each embodying a plurality of hinged rod sections, vertical supporting posts for the upper frame, a canopy inclosing the frame and posts, the hinge connections between the rod sections including bearing studs rotatable in the adjacent ends of the rods to permit the rod sections to be swung in opposite directions, the rotatable mounting formed of an adjustable swivel connection, and springs associated with the rod sections and bearing studs cooperating with the adjustable swivel connections for holding the rod sections in shifted positions.

1,509,882. PORTABLE BOOTH OR TENT. JOHN A. SEVERIN, Weatherford, Tex., assignor of one-half to John B. Alvis, Weatherford, Tex. Filed Dec. 31, 1923. Serial No. 683,767. 6 Claims. (Cl. 135—1.)

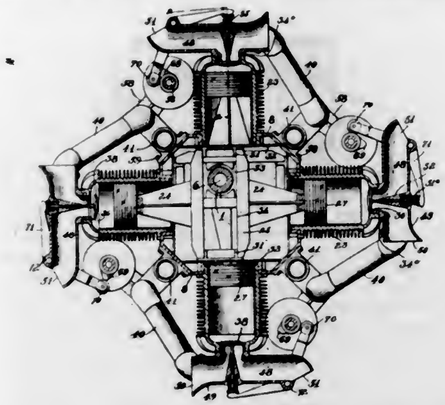


6. In a device of the class described, a frame structure for supporting a canopy, embodying an upper frame and vertical supporting posts, the upper frame being formed of a plurality of substantially radially disposed links pivotally connected at their inner and outer ends, pairs of pivoted links pivotally attached at their outer ends to the pivotally connected outer ends of the radial links, means associated with the outer pivoted end of a pair of links for holding the same in extended position, cord guides carried by some of said links, and a cord passing through the links, anchored at one end to one guide and freely extended through the remaining guides whereby a pull on the cord will contract the upper frame.

1,509,883. STEERING WHEEL FOR AUTOMOBILES AND THE LIKE. FRANK H. STANWOOD, Chicago, Ill. Filed Feb. 25, 1918. Serial No. 219,003. 4 Claims. (Cl. 74—33.)

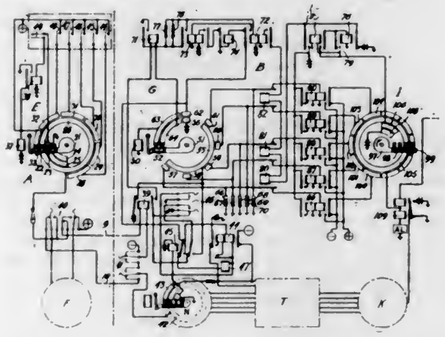
1. A steering wheel for automobiles and the like, comprising a hollow sheet metal annulus, spokes having their ends disposed within and filling the cross-sectional area of said annulus, and a covering of soft rubber encasing said annulus and providing a permanent non-slipping non-heat-conducting hand hold, said covering consisting of an integral body having apertures therein to receive said spokes to prevent circumferential slipping of said cover with respect to said annulus.

1,509,884. ELECTRIC GENERATOR. FRED J. TERWILLIGER, Montague, Calif. Filed July 11, 1923. Serial No. 650,855. 1 Claim. (Cl. 171—324.)



The combination with a generator brush, a brush carrying ring, of means for mounting said brush on said ring, said means comprising a shaft, a reduced portion carried by said shaft and extending through an arcuate slot in the ring, said reduced portion of the shaft terminating in an enlarged eye engaging the outer side of the ring and preventing inward movement of the shaft, a bell crank lever, and an arm carried by said bell crank lever and extending through said eye and forming means whereby upon a movement of the bell crank lever, said brush will be concentrically moved.

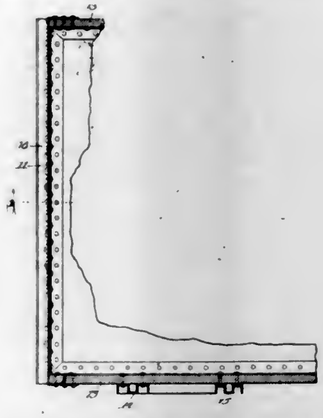
1,509,885. ROTARY ENGINE VALVE. HENRY L. F. TREBERT, West Bloomfield, N. Y., assignor to Trebert Airplane Motor Company, Inc., Penn Yan, N. Y., a Corporation of New York. Original application filed Aug. 27, 1917, Serial No. 188,342. Divided and this application filed July 26, 1921. Serial No. 487,765. 1 Claim. (Cl. 123—44.)



In a rotary gas engine, the combination with a fixed central element and a plurality of rotatable radial cylinders arranged side by side, axially of the fixed element, in pairs, of cylinder heads cast integrally for each pair

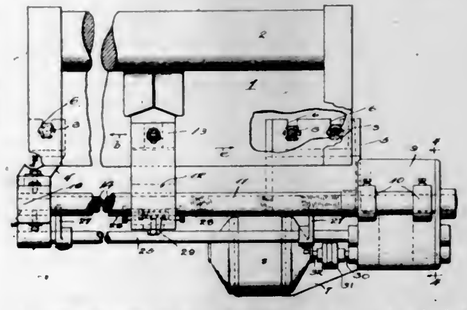
of cylinders and each comprising a fuel intake chamber common to both cylinders and individual exhaust pipes

for the latter, which pipes are so disposed as to be traversed internally by air currents superinduced by the movement of the cylinders about the fixed element.



1,509,886. PRINTING-TELEGRAPH SYSTEM. GILBERT S. VERNAM, Brooklyn, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Sept. 5, 1923. Serial No. 661,069. 4 Claims. (Cl. 178—2.)

1. In a telegraph system, a plurality of stations interconnected by a line conductor, duplex equipment located at each of said stations, distributing apparatus associated with each end of said line, extension circuits extending from said stations, transmitting and receiving equipment associated with each of said extension circuits, means at said stations for changing said system from full duplex to half duplex operation and vice versa, and means associated with the extension circuits for connecting said receiving equipment serially with said transmitting equipment.

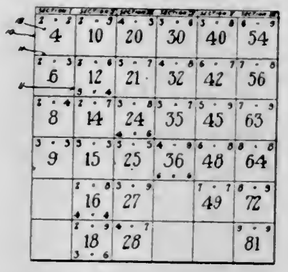


1,509,887. REINFORCING MEMBER. ROBERT R. WEAVER, Chicago, Ill., assignor to General American Tank Car Corporation, Chicago, Ill., a Corporation of West Virginia. Filed Nov. 22, 1922. Serial No. 602,535. 4 Claims. (Cl. 105—411.)

2. In combination with a car wall to be stiffened, a stiffening member consisting of a channel comprising substantially parallel web portions at which said member seats against said wall, the flanges of the channel being located along the outer lengthwise-extending edges of said portions substantially in parallelism and generally in the same direction outwardly from said wall, the channel intermediate said web portions having rolled webs extending substantially the length of the stiffening

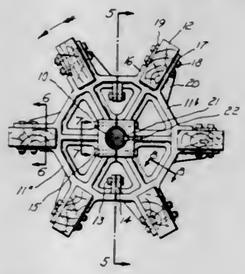
member and outwardly of the web portions, the webs being united at their outer edges, a plate-like portion at each end of the stiffening member, and an angularly extending portion projecting from each of the last mentioned portions and fastened to the wall.

1,509,888. MECHANICAL INKING APPARATUS. CHARLES F. WELDON, Delavan, Wis. Filed Sept. 11, 1923. Serial No. 662,102. 2 Claims. (Cl. 101—364.)



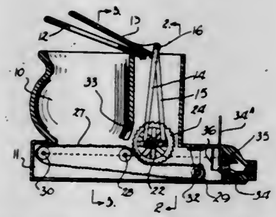
1. The combination with an ink fountain of a printing press, of an ink agitating device therefor, said device comprising an agitating member, a feed screw, a guide rod, said agitating member being mounted on said feed screw and guide rod, a power shaft, gear and clutch connections between the power shaft and feed screw, a clutch control rod slidably mounted and normally independent of the agitating member, adjustable stops carried by said clutch control rod and yieldably mounted stops carried by the agitating member in the path of the adjustable stops.

1,509,889. EDUCATIONAL DEVICE. FLORENCE M. C. WHEATON, South Manchester, Conn. Filed Sept. 28, 1921. Serial No. 503,747. 5 Claims. (Cl. 283—44.)



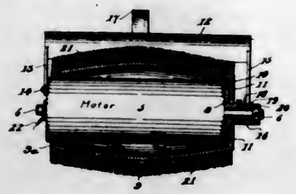
1. An apparatus for teaching arithmetic comprising a body portion provided with means to form one face thereof with a plurality of sections and means within each of said sections to constitute a multiple, a factor thereof, a multiplicand for the factor to produce such multiple and a multiplication symbol between the factor and the multiplicand, and a set of cards, each of the

cards of said set associated with a section and having one face thereof provided with indicia corresponding to the indicia in that section with which the card associates, each of said cards having its other face pro-



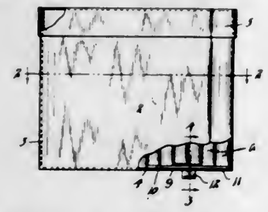
vided with means to constitute a multiple corresponding to the multiple in that section with which the card associates, the indicia in each of said sections being different from each other.

1,509,890. REEL. HAROLD A. WILCOX, Webster, Mass., assignor to Rodney Hunt Machine Company, Orange, Mass., a Corporation of Massachusetts. Filed Apr. 30, 1923. Serial No. 635,423. 6 Claims. (Cl. 9—19.)



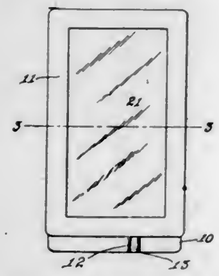
3. A reel having, in combination, a supporting shaft, a plurality of heads spaced along said shaft, a plurality of bars mounted on said heads and secured thereto, sectional end flanges for said reel, and means to secure said flanges in position.

1,509,891. SANITARY CLOSET. JAMES WILDMAN, Sydney, Australia. Filed Sept. 1, 1923. Serial No. 660,563. 2 Claims. (Cl. 4—115.)



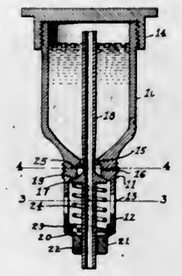
1. In sanitary closets in which fæcal matter and other soluble contents are acted upon by a chemical solution, the combination with a closet pan, of a tank or chamber positioned below and in communication with said pan, an endless chain or flexible conveyor movable across the opening between the pan and adapted to be passed through a chemical solution within the tank, and means for actuating the conveyor.

1,509,892. ROTARY BRUSH. JOHN H. ZIELINSKI, Hartford, Conn. Filed Feb. 14, 1924. Serial No. 692,747. 2 Claims. (Cl. 15—23.)



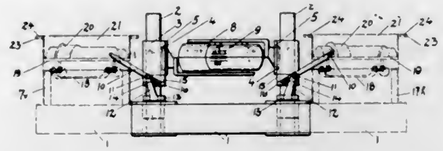
1. In a rotary brush of the type described, an electric motor including a cylindrical casing and an armature shaft projecting from one end thereof, a barrel-shaped brush frame loosely encircling said motor casing, means connecting one end of said brush frame to the projecting end of said shaft, a guard plate, means rigidly connecting one end of said guard plate to one end of the motor casing, means loosely connecting the other end of said guard plate to the projecting end of said armature shaft, and a handle strap carried by said guard plate for permitting the rotary brush to be manually operated.

1,509,893. CIGARETTE CONTAINER AND DISPENSER. MARTIN A. ZIEME, Minneapolis, Minn. Filed June 25, 1923. Serial No. 647,535. 4 Claims. (Cl. 206—41.)



1. A flat container for cigarettes having a peripheral wall with parallel sides spaced to accommodate two rows of cigarettes parallel thereto, said wall at one end of said periphery being curved to form two parallel semi-cylindrical pockets one adjacent one side wall and one adjacent the other side wall, one of said pockets being deeper than the other and adapted to receive a cigarette substantially below the bottom of the other, the shallower pocket preventing cigarettes in one row from moving into the deep pocket.

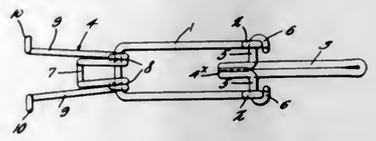
1,509,894. TOILET KIT. ELMER M. AXNESS, Montevideo, Minn. Filed May 2, 1924. Serial No. 710,672. 1 Claim. (Cl. 132—84.)



A toilet kit comprising a case open at one end, a telescopic cover for the case, oppositely located depressions extending inwardly from opposite sides of the case and defining combined ribs to divide the case into a dentifrice compartment and a tooth brush compartment and to provide air passages between the case and cover.

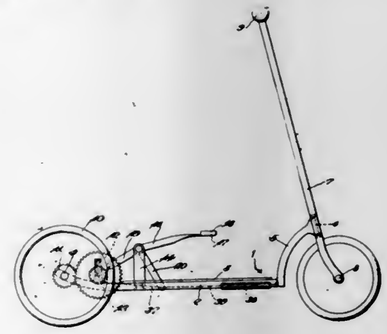
1,509,895. OIL CUP FOR AIR COMPRESSORS. WILLIAM A. BALMANNO, Albuquerque, N. Mex. Filed Mar. 30, 1922. Serial No. 548,061. 2 Claims. (Cl. 84—58.)

1. A lubricator of the character described comprising a receptacle formed with a reduced threaded extension for screwing engagement within a hole in a cylinder, a removable cover for the receptacle, the receptacle being adapted to contain oil and having its lower portion formed with a chamber and a valve seat located between the chamber and the main body and establishing communication between the interior of the body and said chamber, the wall of said chamber portion being formed with openings, a tubular stem located axially of the receptacle and extending below said chamber, said tubular stem having its intermediate portion enlarged to define a valve for closing said seat, a plug screwed into the lower end of the chamber and having a bore through which said tubular stem is slidable, and a spring encircling said stem and bearing against the top of the plug and the underside of the valve for holding the valve seated, said plug being rotatably adjustable whereby to regulate the tension on said spring.



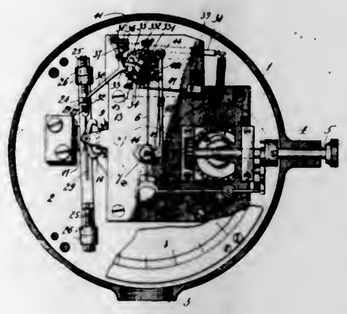
1,509,896. CASTING MACHINE FOR THE MANUFACTURE OF CORE CASTINGS SUCH AS TUBES AND THE LIKE. EVERT ERICSSON, Christiania, Norway. Filed Aug. 9, 1922. Serial No. 580,696. 18 Claims. (Cl. 22—10.)

1. In a casting machine for the manufacture of core castings such as tube parts and the like a machine frame, supporting columns thereon, supporting arms pivotally and slidably mounted on said columns and means for fastening core box and mould box or chill sections on said supporting arms, said supporting columns being so placed with relation to each other, that the sections carried by said supporting arms may be brought in engagement with corresponding sections on two or more other supporting arms.



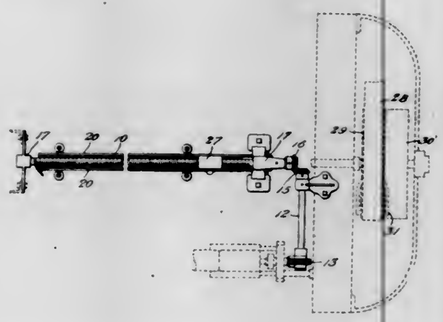
1,509,897. TIRE-CHAIN FASTENER. JOSEPH F. GRAHAM, Tunnelton, W. Va. Filed Mar. 3, 1924. Serial No. 696,679. 1 Claim. (Cl. 24—69.)

A tire chain fastener comprising a U-shaped body having eyes at its ends, a tongue having a loop at its heel and also having lateral journals disposed in said eyes and terminating in hooks, the said tongue loop extending at right angles therefrom, and the major portion of the tongue resting in the same plane as the loop and extending at the opposite side of the plane of the journals, and a keeper having coils surrounding the bight of the body and also having a loop arranged to



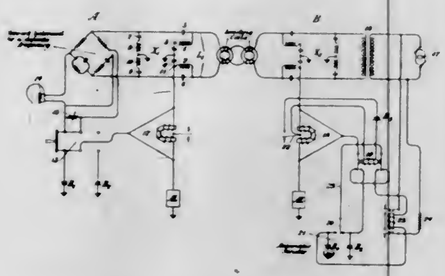
straddle the tongue and resilient arms terminating in outwardly directed hooks adapted to be sprung into and out of engagement with the side portions of the body.

1,509,898. VELOCIPEDE. GEORGE E. MCCONNELL, Aurora, Ill. Filed Aug. 27, 1923. Serial No. 659,577. 3 Claims. (Cl. 208—36.)



1. A velocipede comprising a driving axle, a pivotally mounted operating lever adapted to be forced downwardly by manual pressure, a spring connected to the lever for moving the lever upwardly, means including the spring associated with the lever for transmitting driving power to said driving axle upon both downward and upward movement of the lever, and means for preventing reversed rotation of the driving axle.

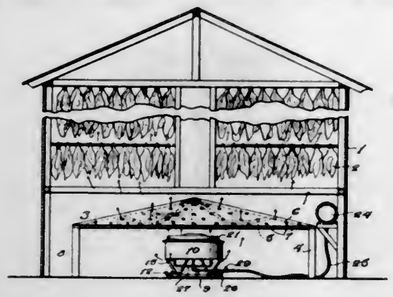
1,509,899. STOP-WATCH MECHANISM. DAVID W. MANN, Lincoln, Mass. Filed Mar. 26, 1921. Serial No. 455,805. 8 Claims. (Cl. 58—116.)



1. In an escapement mechanism, a stationary member, a spring mounted thereon, a vibratory member mounted between its ends on said spring, an escapement lever, and means connecting said escapement lever and said vibratory member whereby said vibratory member will be vibrated.

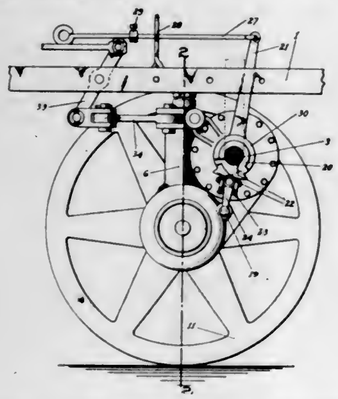
1,509,900. MEASURING AND AUTOMATIC KNOCK-OFF DEVICE. JAMES NEWSOM and CALEB P. DEAL, Lagrange, Ga.; said Newsom assignor to Unity Cotton Mills, Lagrange, Ga., a Corporation of Georgia. Filed Sept. 13, 1921. Serial No. 500,344. 1 Claim. (Cl. 235—132.)

In a device of the class described, a driven element, a scale parallel therewith, a combined pointer and trigger release movable by the operation of said element in a path parallel with the scale, said pointer and release being in a line perpendicular to the scale, a trigger having one end positioned to indicate the point on the scale at which the trigger release will be effective, a lever pivoted intermediate of its ends and having connection at one end with the trigger, a belt shifting device also connected with said end of the lever, and a spring connected with the opposite end of the lever, for throwing the latter when released by the trigger.



1,509,901. ELECTRICAL MEASURING SYSTEM. HARRY NYQUIST, Elmhurst, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Oct. 28, 1921. Serial No. 511,004. 8 Claims. (Cl. 179—175.)

1. In a loaded circuit characterized by the simultaneous transmission of a plurality of currents, the method of investigating flutter which consists in suppressing the larger steady part of a fluttered wave and transmitting and investigating the unsteady part of smaller amplitude.

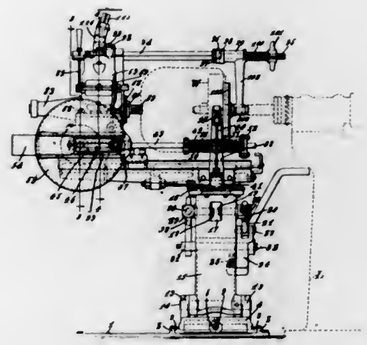


1,509,902. TOBACCO-CURING APPARATUS. JOSHUA C. REYNOLDS, Owensboro, Ky., assignor of one-third to Clarence D. Brown, Owensboro, Ky. Filed May 2, 1923. Serial No. 636,183. 4 Claims. (Cl. 34—19.)

1. Means for curing tobacco comprising an awning, means for supporting said awning within a tobacco-curing barn below tobacco hung in the barn, the said awning being provided with perforations throughout its area,

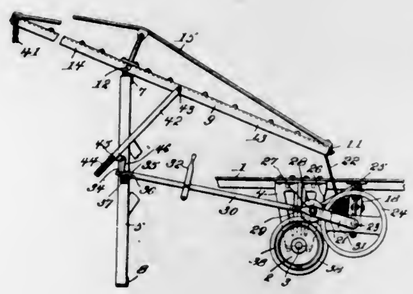
and a heat-creating medium disposed below and freely movable under the awning.

1,509,903. DEPTH-CONTROL AND POWER-LIFT DEVICE FOR PLOWS. EDWARD J. RIMPLE, San Jose, Calif. Filed Dec. 4, 1922. Serial No. 604,749. 12 Claims. (Cl. 97—72.)



1. A power lift for plows and the like including a fixed horizontal spindle, a rotatable wheel whose axis lies in a plane offset from said spindle, means connecting said spindle and wheel in a manner to permit arcuate movement of the wheel axis about the spindle as an axis, means actuated by the rotation of the wheel for imparting such movement to the wheel axis in either direction, hand actuated means for putting said actuating means into action, and independently acting means for automatically throwing said actuating means out of action when the wheel axis has reached its limit of arcuate movement in either direction.

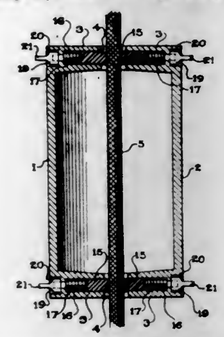
1,509,904. POLISHING MACHINE. ROBERT F. SALISBURY, New Kensington, Pa., assignor to Aluminum Company of America, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Aug. 21, 1920. Serial No. 405,003. 20 Claims. (Cl. 51—237.)



1. The combination with a polishing wheel, of a work holding device having a portion tiltably mounted, a standard, pivotally connected members constituting a toggle and connected to the standard and tiltable portion of the device for holding the device normally against movement, means under the control of the operator for shifting said members out of normal position and resilient means for automatically tilting the tiltable portion of the device toward the wheel when the members are shifted from normal position.

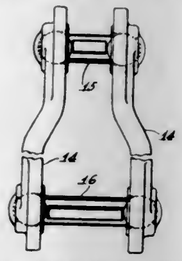
2. The combination with a polishing lathe, of a work holding device having a portion tiltably mounted, pivotally connected members constituting a toggle for holding the machine normally against movement, a counterbalance

lever connected to one of said members, and spring operated means for automatically swinging the tiltable portion of the device toward the lathe when the members are moved out of normal positions.



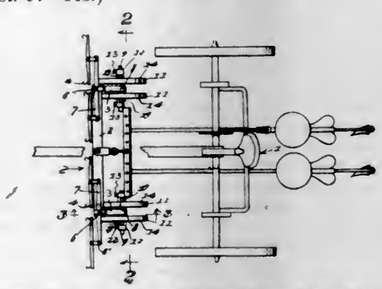
1,509,905. LIFTING ATTACHMENT FOR TRACTORS. CLYDE SALYARDS and GEORGE B. SCHEFFEY, Haxtum, Colo. Filed Sept. 27, 1922. Serial No. 590,844. 5 Claims. (Cl. 212—8.)

1. In winding means, the combination of a supporting frame, a swinging frame mounted on the supporting frame, drums carried by the swinging frame, a transverse shaft on the swinging frame, worm gearing between said shaft and each of said drums, a primary driven gear mounted on said shaft, a swinging member supported for movement in an arc different from the arc of movement of said shaft, a secondary driven gear carried by said swinging member, and shifting means coupling said shaft and swinging member for movements in unison.



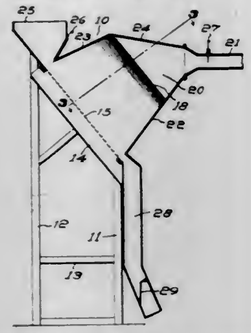
1,509,906. WIRE-LINE LUBRICATOR. GILBERT GOSS SAWTELLE, Arkansas City, Kans. Filed July 17, 1922. Serial No. 575,562. 3 Claims. (Cl. 184—15.)

1. A wire line lubricator comprising a casing adapted to be secured in closed state about a line, and means carried by the casing at the side and ends thereof to retain oil therein, and including rubbers or packing sections adapted for the passage of a line; the said casing including sections hingedly connected together and each provided



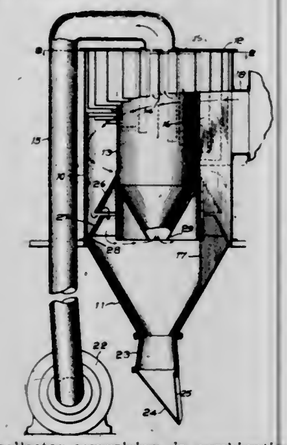
with end portions, and means detachably connecting the sections and constructed and arranged to hold the same in closed state against each other.

1,509,907. ARTICULATED BRAKE HANGER. FREDERIC SCHAEFER, Pittsburgh, Pa. Filed May 31, 1923. Serial No. 642,464. 6 Claims. (Cl. 188—207.)



5. An articulated brake hanger comprising side arms provided at their lower ends with sockets having cylindrically shaped bearing walls, and a lower yoke provided at its ends with cylindrically shaped bearing heads pivotally mounted in said sockets, said heads having cup-shaped recesses in their sides, and the side walls of said sockets being integrally provided with buttons extending in said recess to lock said yoke and side arms in their pivotal connections to each other.

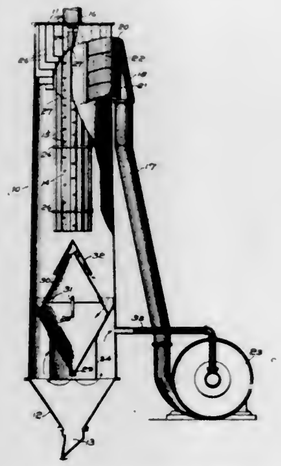
1,509,908. TRUCK ROW GUIDE ATTACHMENT FOR CORN LISTERS. LEVI J. STARK, New Raymer, Colo. Filed Aug. 16, 1922. Serial No. 582,196. 4 Claims. (Cl. 97—143.)



1. The combination with a corn lister having an evener bar, and draft trees pivoted to said evener bar, of a pair of row guiding wheels mounted upon the evener bar to one side of the middle of the draft line of the machine and adapted to travel in a furrow, said wheels being adjustable toward or from each other.

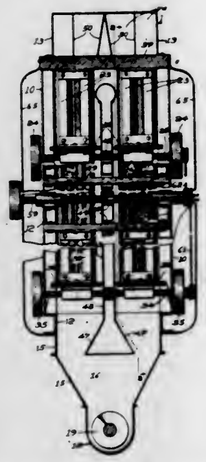
1,509,909. PNEUMATIC SIZER. ALBERT H. STEBBINS, Los Angeles, Calif. Filed Apr. 8, 1922. Serial No. 550,873. 4 Claims. (Cl. 83—54.)

1. A pneumatic sizer, comprising in combination, an inclined apertured surface, means for delivering materials to be separated to said surface, a casing forming a chamber extending over said surface, suction means for effecting passage of air currents through the apertures of the surface, and means for controlling the passage of air through said surface so that the strength of the air will be gradually decreased as the materials travel lengthwise of the surface, comprising a restricted throat within the casing extending approximately parallel to the surface and having the opening of the throat gradually decreased in the direction of its lower end.



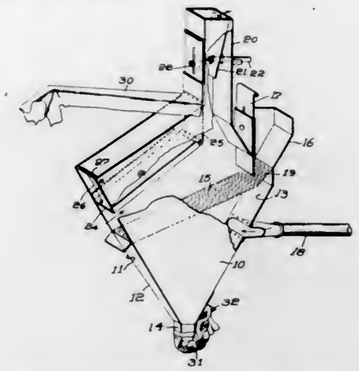
1,509,910. DUST COLLECTOR. ALBERT H. STEBBINS, Los Angeles, Calif. Filed Apr. 13, 1922. Serial No. 552,175. 14 Claims. (Cl. 183—83.)

1. A dust collector comprising, in combination, a drum having dust receiving means at its lower end, a tube extending longitudinally within the drum and having an opening at its upper end for the passage of air from the drum, a series of radially disposed vanes within the upper end of the drum and extending outwardly from the tube, means for introducing air into the drum to pass around the tube and upwardly between the vanes, and means for conducting the air that passes up between the vanes through said opening and out of the drum.



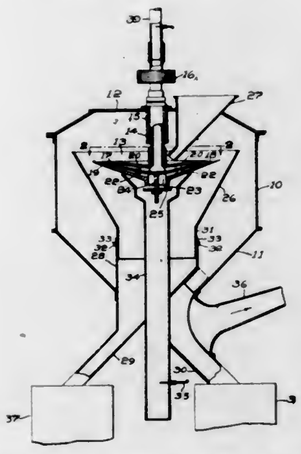
1,509,911. DUST COLLECTOR. ALBERT H. STEBBINS, Los Angeles, Calif. Filed Apr. 15, 1922. Serial No. 553,120. 8 Claims. (Cl. 183—87.)

1. A dust collector comprising, in combination, an upright drum possessing a length substantially greater than its diameter and having a closed upper end and means for discharging dust from its lower end, an air discharge tube extending centrally downwardly within the drum for a substantial portion of the length of the latter and having apertures in its walls at intervals along the tube for the passage of air into the tube from the drum, means for delivering dust ladened air into



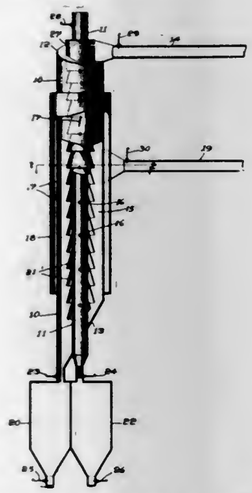
the upper portion of the drum with a downward movement whirling about the tube so that the particles of dust are thrown outwardly by centrifugal force away from the tube, and vanes extending outwardly from the tube to prevent whirling movement of the air adjacent the apertures and constructed to form dead air chambers at the entrance to the apertures.

1,509,912. DUST COLLECTOR. ALBERT H. STEBBINS, Los Angeles, Calif. Filed June 1, 1922. Serial No. 565,199. 14 Claims. (Cl. 183—54.)



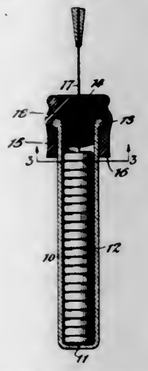
1. The process of treating dust laden air to separate the dust and air, which consists in passing the dust laden air into fabric tubes the mesh of which will permit the passage of air and substantially prevent the passage of dust, and producing a continuous suction of light character through the tubes to pull through the tubes the dust left in the tubes by the air that escaped through the mesh of the tubes.

1,509,913. DUST EXTRACTOR. ALBERT H. STEBBINS, Los Angeles, Calif. Filed July 3, 1922. Serial No. 572,375. 5 Claims. (Cl. 83—54.)



2. A dust extractor, comprising in combination, a casing having an apertured surface extending across the casing, a cover supported in spaced relation to said surface to provide an air passage between the cover and surface, means for drawing air into the passage through an end thereof to travel lengthwise of the passage, a hopper for delivering materials to the surface, means for forcing jets of air upwardly through the apertures of the surface to carry different particles of material upwardly into the passage to different degrees so that the lighter particles will be completely removed from the heavier particles and carried off by the air introduced through said end and traveling lengthwise of the passage, and means for supporting the cover in different positions of adjustment relative to the apertured surface to vary the area of said passage and the action of the air passing therethrough upon the materials lifted by the jets of air.

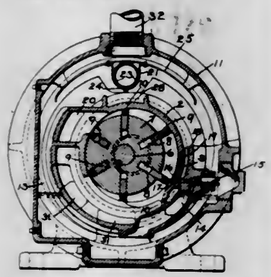
1,509,914. CONCENTRATOR. ALBERT H. STEBBINS, Los Angeles, Calif. Filed July 13, 1922. Serial No. 574,600. 7 Claims. (Cl. 83—54.)



2. An air concentrator, comprising in combination, a rotary distributor having a disk adapted to throw outwardly materials delivered upon the upper face of the disk, a wall surrounding the distributor in spaced relation thereto, fan vanes secured to the lower face of the disk to throw air outwardly, and means having a surface inclined to the path traveled by the materials thrown outwardly by the distributor and adapted to direct the air in an inclined direction toward the material to deflect the lighter materials from the wall.

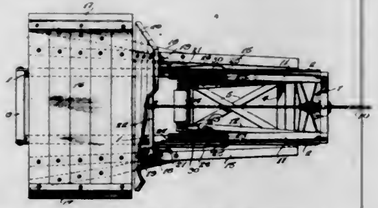
1,509,915. CONCENTRATOR. ALBERT H. STEBBINS, Los Angeles, Calif. Filed Nov. 9, 1922. Serial No. 599,926. 7 Claims. (Cl. 83—54.)

1. A concentrator comprising, in combination, a container supported in a standing position, a tube mounted centrally within said container and having apertures therein along its length for the passage of fluid from the container into the tube, means for delivering a fluid bearing the materials to be treated into the upper portion of the container with a downward whirling movement about the tube to throw the heavier materials outward by centrifugal force away from the tube, and means for directing jets of a fluid inwardly through the walls of the container in substantially a tangential direction further to promote whirling movement of the material bearing fluid moving downwardly within the container.



1,509,916. METHOD OF PRESERVING CONTENTS OF CONTAINERS. RALPH B. WAITE, Springville, N. Y., assignor to The Antidolor Mfg. Co., Springville, N. Y., a Corporation of New York. Filed Oct. 5, 1922. Serial No. 592,646. 1 Claim. (Cl. 99—8.)

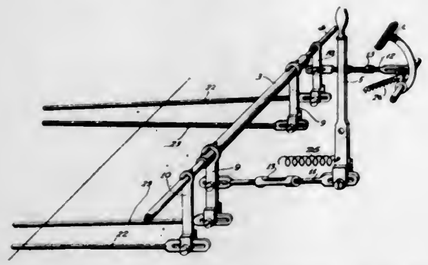
The hereindescribed method of preserving articles susceptible of deterioration when exposed to air which consists in placing such articles in a receptacle having a rigid



wall and an inlet, then mounting a closure of elastic material on said receptacle so that the same extends across and closes the inlet thereof, then passing a hollow needle inwardly through said closure so that the needle communicates with the interior of said receptacle, then applying an exhausting effect on the outer end of the needle so as to withdraw the air from said needle through said needle, and then withdrawing the needle from said closure and permitting those parts of the closure which have been separated by the needle during the perfecting operation to again come together due to the resilience of the closure and operate to seal the puncture.

1,509,917. ROTARY PUMP. HENRY H. WESTINGHOUSE, New York, N. Y., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed July 8, 1922. Serial No. 573,680. 4 Claims. (Cl. 230—30.)

2. In a rotary fluid exhauster, the combination with a cylinder and a pump rotor in said cylinder for exhausting fluid, of means for lubricating the cylinder and a discharge nozzle mounted in axial alinement with the longitudinal axis of the cylinder for receiving fluid discharged from the exhauster having openings for permitting the outflow of fluid and ports through which oil separated from the fluid and deposited in the nozzle will drain.

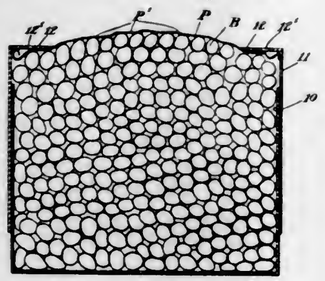


1,509,918. LOADER. WILLIAM B. WIESE, Howells, Nebr. Filed Apr. 9, 1923. Serial No. 630,765. 2 Claims. (Cl. 214—143.)

1. A loader comprising a base, an upright at one end of the base, braces secured to and extending between the upper end of the upright and the sides of the base, a frame rising from the base between said braces, a roller mounted at the upper end of said frame, lever arms pivoted to the base, a platform carried by the free ends of said arms, a back carried by the arms in cooperative proximity to the platform, a cross bar connecting said arms adjacent the back, guide rollers on the upright adjacent the upper and lower ends of the same, a hoisting cable secured to the cross bar and passing over the first-mentioned roller and about the guide rollers on the upright, and yieldable extensible connections between the braces and the cross bar.

1,509,919. DUPLEX BRAKE MECHANISM FOR MOTOR VEHICLES. ARTHUR AMEND, New York, N. Y. Filed June 11, 1921. Serial No. 476,959. 9 Claims. (Cl. 188—204.)

1. Duplex brake mechanism for motor vehicles embodying two pairs of brake spindles for operating the brakes of the associated car, an equalizer connected with each pair of brake spindles, links for connecting each spindle of each pair to the equalizer, a braking foot pedal, a braking hand lever, a rock shaft having link connection with the foot pedal and adapted to be oscillated when the foot pedal is operated, a rock shaft having link

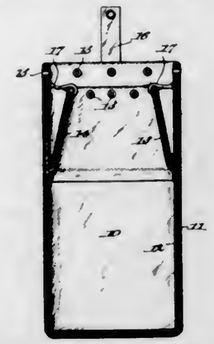


connection with the hand lever and adapted to be oscillated when the hand lever is operated, a rigid link operatively connecting the foot lever rock shaft to each equalizer and a rigid link operatively connecting the hand lever rock shaft with each equalizer, whereby all of the brake spindles may be operated from the foot pedal without operating the hand lever and vice versa.

1,509,920. PROCESS OF MAKING MOLDABLE FABRIC FOR VARIOUS USES. RAYMOND F. BACON, New York, and CLEO H. KIDWELL, New Brighton, N. Y., assignors to John Manning Van Heusen, Boston, Mass. Filed Nov. 2, 1922. Serial No. 598,694. 14 Claims. (Cl. 18—56.)

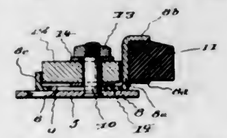
2. The method of molding or shaping knitted fabric, which consists in subjecting the fabric to the action of an acid, washing out the acid, placing the fabric while wet on a form of the desired shape, and drying the fabric while on the said form.

1,509,921. SHIPPING PACK. JOHN J. BEATON, Wareham, Mass. Filed Oct. 22, 1923. Serial No. 669,951. 4 Claims. (Cl. 206—44.)



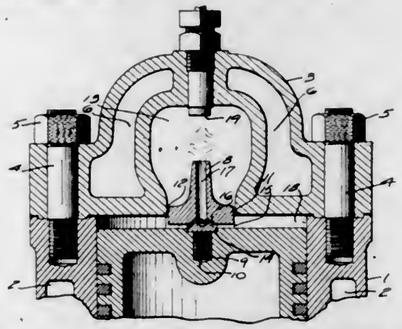
1. A unitary pack comprising a rectangular open top container and a surrounding shell slidably mounted thereon, and having a narrow flange at its upper edge adapted to overlie the margins of the container top and to have continuous progressive bearing on the contained fruit adjacent the margins of the container, a predetermined weight of berries disposed in said pack through the opening defined by said flange, and a flexible transparent sheet inserted over the top of the berries and having its edge tucked beneath said flange, said flanges having ventilating apertures formed therein.

1,509,922. SAFETY MAIL BAG. HUGO BELZ, New York, N. Y. Filed Dec. 17, 1921. Serial No. 523,101. 1 Claim. (Cl. 150—15.)



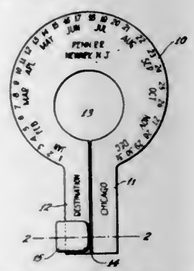
A bag having outer and inner closure members, each of said closure members having perforations spaced about the free edges, means carried by the inner sides

of the outer closure for engagement in the openings of the inner closure for holding the same in open position, and the respective openings of the inner and



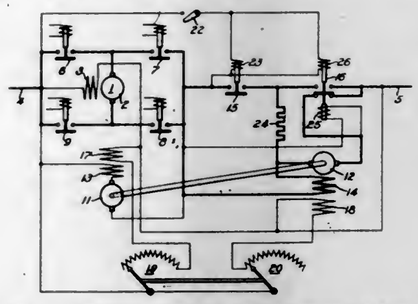
outer closures adapted to have locking means passed through their perforations to secure the respective closures in bag closing position.

1,509,923. WINDOW STOP AND ANTIRATTLER. HARRY H. BERRYMAN, Chicago, Ill. Filed Jan. 8, 1923. Serial No. 611,519. 2 Claims. (Cl. 292—140.)



2. A window stop and anti-rattler comprising a longitudinally slidable bolt having one end portion provided with a laterally projecting portion having a socket and the other end portion provided with an abutment, a window contact element received in said socket, a base plate supporting said bolt, a pivot element carried by said base plate and extending through said bolt, a cam mounted on said pivot element and confined between said end portions of the bolt and having operating means, and spring washers mounted on said pivot element on opposite sides of said cam to hold the cam against accidental turning, one of said spring washers being confined between the cam and the bolt and holding the bolt against rattling.

1,509,924. INTERNAL-COMBUSTION ENGINE. CARL A. BJORNSSON, Wellsville, N. Y. Filed Oct. 26, 1922. Serial No. 596,940. 1 Claim. (Cl. 123—32.)



In an internal combustion engine, in combination: a working cylinder; a combustion chamber communicating therewith by a throat of relatively ample cross sectional area; a piston; a nozzle attached to the piston and having a flange approximating in cross section that of the throat and positioned to enter the throat upon a stroke of the piston prior to the completion of the piston's stroke, said nozzle formed with a duct and means communicating therewith forming a passage between the duct and the space in advance of the piston, the duct and the said means forming the sole passage for compressed air above the piston when the flange is within the throat and a fuel injection duct opening in the combustion chamber in a direct line with the first mentioned duct.

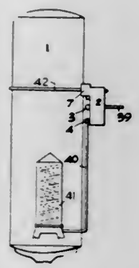
1,509,925. CAR SEAL. CYRUS R. BOSTWICK, Mariposa, N. Y., assignor of one-half to Henry Wallace, Glen Ridge, N. J. Filed Apr. 1, 1921. Serial No. 457,790. 3 Claims. (Cl. 40—2.)

1. A tag for the doors of freight cars, comprising a tag plate having an aperture therein, and two closely spaced tabs extending from adjacent portions of the periphery of said plate, the opening between the tabs extending to the aperture in the plate, the tag being made of a single piece of sheet metal of sufficient flexibility to permit overlapping of the outer ends of the tabs so that they may be sealed together, and means for securing the outer ends of the tags together when overlapped.

1,509,926. MOTOR-CONTROL SYSTEM. EDGAR M. BOUTON, East Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 11, 1922. Serial No. 593,664. 10 Claims. (Cl. 172—179.)

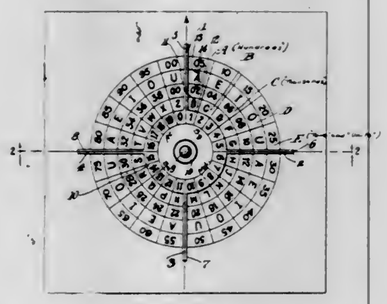
3. The combination with an electric motor having an armature and a source of power therefor, of an auxiliary motor-generator set having its armatures connected electrically, means for connecting the armature of said motor in circuit with said motor-generator set, and means controlled in accordance with the speed of said motor for rendering said motor independent of said motor-generator set.

1,509,927. CAN OPENER AND PARING KNIFE. ROBERT H. BOWERS, Nashville, Tenn. Filed Mar. 24, 1922. Serial No. 546,466. 1 Claim. (Cl. 30—3.)



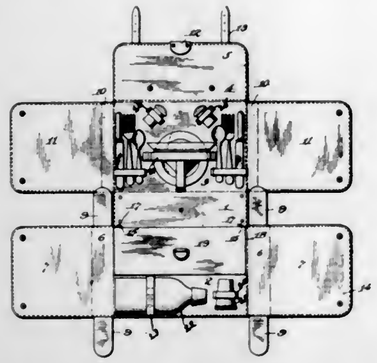
An implement of the class described, comprising a thin blade, a handle formed by doubling one end of the

blade upon itself so that the flat sides come in contact, a stud through said handle provided with an enlarged head, said blade having a sharp front edge, and a straight blunt back terminating with a short sharp



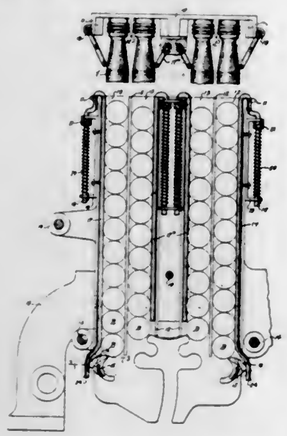
edge forming a lancet point with said front edge, said front edge having an ogee adjacent said lancet point and tapering away from said back making the width of the blade greatest close to the handle.

1,509,928. THERMOSTATIC CONTROLLING DEVICE FOR HOT-WATER-BOILER HEATERS. WILLIAM ROBERT BREEDS, Toronto, Ontario, Canada. Filed Feb. 28, 1921. Serial No. 448,535. 2 Claims. (Cl. 236—48.)



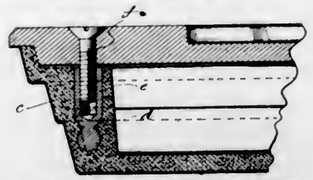
1. In thermostatic controlling devices for hot water boiler heaters, the combination with a gas inlet valve for the heater and a valve casing, of a thermostatically actuated lever pivoted in the casing, a swingable trigger journalled intermediately of the length of the casing, spring connecting means between the trigger and the free end of the lever, an intermediately journalled beam in the casing having one end pivotally connected to the valve and the other end constituting a ring into which the trigger is inserted, and spring means for normally holding the valve seated.

1,509,929. CRYPTOGRAPHIC APPARATUS. ARMANDO C. CABALLERO, New York, N. Y., assignor to The Universal Coding System Co. Ltd., Valparaiso, Chile, a Corporation of Chile. Filed Sept. 21, 1920. Serial No. 411,700. 12 Claims. (Cl. 35—13.)



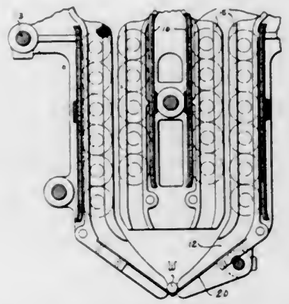
1. In apparatus of the class described, a device having subdivisions corresponding respectively to certain collocations of signs and having other subdivisions containing signs and figures for translating a number into signs and vice versa.

1,509,930. LUNCH KIT. BENJAMIN CHARSKY, Brooklyn, N. Y. Filed July 1, 1921. Serial No. 481,840. 4 Claims. (Cl. 206—4.)



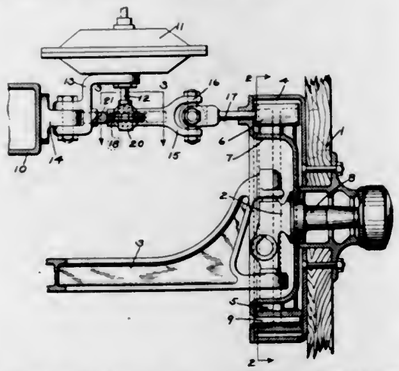
1. In a kit holder: the combination with an envelope of pliant material having a central portion adapted to form the bottom and side members, and projecting flaps adapted to form the top and end members of a substantially rectangular receptacle produced by folding said envelope; of a rigid rectangular container and brackets secured to the envelope, said brackets having attaching means adapted to unite with complementary attaching means on the container, whereby said container is positioned and secured with edges coincident with fold lines defining the bottom of said receptacle.

1,509,931. BOBBIN-HOLDING DEVICE FOR STATIONARY MAGAZINES. ALEXANDRE COMPAGNA, Biddeford, Me., assignor to Crampton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Nov. 15, 1923. Serial No. 675,002. 5 Claims. (Cl. 139—245.)



1. In a loom, a weft carrier magazine having a plurality of weft carrier compartments, holding devices extending alongside said compartments and adjacent the weft carriers, and movably mounted members for supporting and releasing said weft carriers, said members directly engaging said holding devices and each member moving its associated holding device to inoperative position when releasing a weft carrier from its magazine compartment.

1,509,932. REFRIGERATOR LINING. LLOYD G. COPEMAN, Flint, Mich. Filed Mar. 5, 1923. Serial No. 623,045. 7 Claims. (Cl. 20—35.)

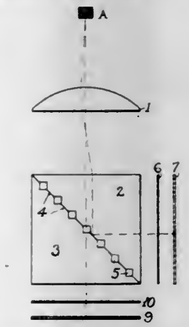


1. In a container construction, the combination of an outer panel, and a stonework lining therefor, comprising a separate hollow tile secured to the outer panel.

1,509,933. WEFT-REPLENISHING MECHANISM. JAMES R. COPLAND, Danville, Va., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Nov. 9, 1921. Serial No. 514,060. 5 Claims. (Cl. 139—245.)

1. In a weft replenishing mechanism, a magazine having a plurality of vertical compartments, means to position a plurality of weft carriers in vertical series in said compartments, and a vertically disposed friction plate extending substantially the entire height of each compartment and adjacent each vertical series of weft carriers, said friction plate yieldingly engaging said carriers to prevent vibratory movements thereof.

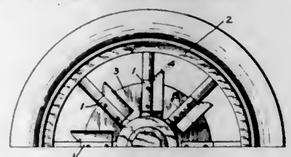
1,509,934. MOTOR VEHICLE BRAKE. JOHN F. CRAIG, Edgewood, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Sept. 22, 1922. Serial No. 589,763. 2 Claims. (Cl. 188—152.)



1. In a motor vehicle, the combination with a vehicle frame and a fluid pressure brake chamber mounted on said frame, of a vehicle front wheel, a rotating brake member carried by said wheel, a stationary brake member for engaging the rotating brake member, an operating connection between said brake chamber and said stationary brake member, and a universal joint in said operating connection.

1,509,935. EXPLOSIVE AND PROCESS OF ITS MANUFACTURE. WILLIAM M. DEHN, Seattle, Wash. Filed Sept. 16, 1922. Serial No. 588,708. 12 Claims. (Cl. 52—14.)

1. The process of manufacturing an explosive composition of plant tissue, ammonium nitrate and an alkali metal nitrate, which comprises distributing the alkali metal nitrate in minute and intimate contact with sufficient plant tissue impregnated with ammonium nitrate.

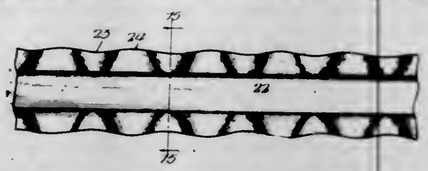


11. The explosive comprising 1–4 parts of powdered sodium nitrate mechanically mixed with 1.5–6 parts of comminuted plant tissue impregnated with 3–7 parts of ammonium nitrate.

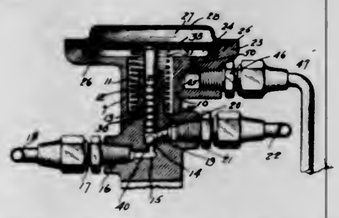
1,509,936. DEVICE FOR PRODUCING DUPLICATE IMAGES ON PHOTOGRAPHIC FILMS. LEON F. DOUGLASS, Menlo Park, Calif. Filed Feb. 25, 1924. Serial No. 694,931. 4 Claims. (Cl. 88—1.)

1. A device for producing duplicate images of one object on two sensitized films, comprising two large-angle prisms located behind a camera lens with their large faces mutually engaged and provided with a plurality of parallel depressions extending parallel with each other along the said large faces of the prisms and a plurality of reflecting surfaces located between the depressions.

1,509,937. BRAKE-COOLING DEVICE. SIDNEY G. DOWN, Pittsburgh, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Feb. 11, 1922. Serial No. 535,764. 2 Claims. (Cl. 188—264.)



1. The combination with a motor vehicle wheel having a brake drum, of radially disposed fan blades associated with the wheel and axially extending vanes for generating and deflecting air currents to the brake drum.

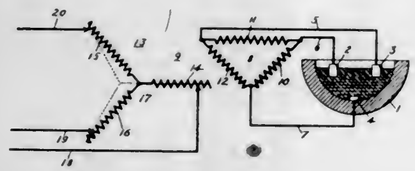


1,509,938. PROCESS FOR MAKING RUBBER-TIRE ARTICLES AND THE LIKE. JOHN L. G. DYKES, Chicago, Ill., assignor to Dykes Tire Machinery Company, Washington, D. C., a Corporation of Delaware. Filed Sept. 25, 1919. Serial No. 326,194. 6 Claims. (Cl. 154—2.)

1. The process of making an article of the class described, comprising the stretching of sheet material

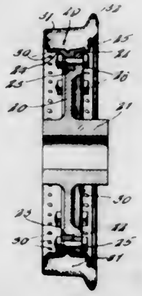
along the edge thereof without stretching the body of the material inside said stretched edge portion, to permit curvature of said material with the edge extending outwardly of the curve.

1,509,939. MEANS FOR CONTROLLING FLUIDS UNDER PRESSURE. JACOB G. ELKIN, New York, N. Y., assignor to Willis D. Sprague, New York, N. Y. Filed Sept. 24, 1921. Serial No. 503,075. 4 Claims. (Cl. 137—153.)



1. A control valve for lubricating systems comprising a body portion provided with a longitudinally extending passageway, a transverse passageway intersecting said longitudinal passageway, a ball loosely mounted in the longitudinal passageway and adapted to close the transverse passageway, a stem slidably mounted in the longitudinal passageway and adapted to limit the movement of said ball in said longitudinal passageway, a diaphragm connected to said stem and adapted to depress the latter upon creation of vacuum on one side of said diaphragm, means for creating a vacuum to cause a movement of the diaphragm, and a spring surrounding said stem and exerting pressure upon the diaphragm to move the same in a direction opposite to the direction in which the diaphragm is moved by the creation of a vacuum, as and for the purpose set forth.

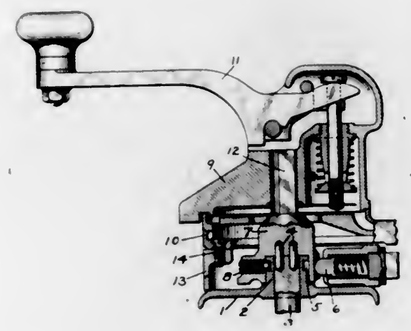
1,509,940. BOTTLE HOLDER. LILYAN M. ELLIOTT, San Diego, Calif. Filed June 21, 1923. Serial No. 646,938. 3 Claims. (Cl. 215—100.)



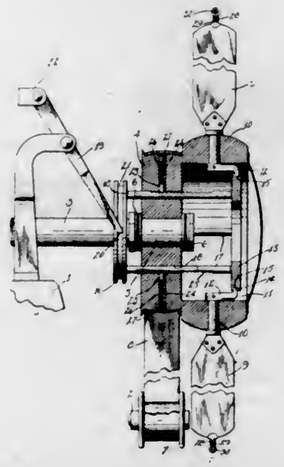
1. A circular member of metal or other flexible material lined with rubber or cork, a hollow locking member hinged to one end of said circular member and having a bar on its inner periphery and a tongue having a plurality of transverse grooves and notches, fixed to and forming a part of or continuation of said circular ring member, adapted to fit into the hollow locking member and be locked in position by a thumb screw positioned on the outer periphery of the said hollow locking member substantially opposite said bar.

1,509,941. ELECTRIC-FURNACE-BALANCING SYSTEM. ROBERT D. EVANS, Wilkinsburg, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed May 13, 1918. Serial No. 234,137. 12 Claims. (Cl. 204—64.)

9. The combination with an electric furnace, and a polyphase supply system therefor, said furnace operating in such manner that an unbalanced load is imposed on said supply system, of a transforming aggregate interposed between said furnace and said supply system, the primary and secondary phases of said transforming aggregate being so connected and so inductively interlinked as to cure the unbalanced conditions imposed on said polyphase supply source.



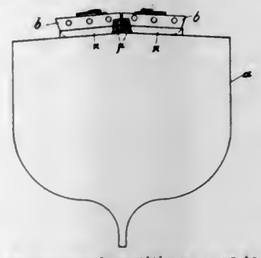
1,509,942. CAR WHEEL. EMERY H. FAHRNEY, Chicago, Ill. Filed Feb. 26, 1923. Serial No. 621,131. 4 Claims. (Cl. 295—20.)



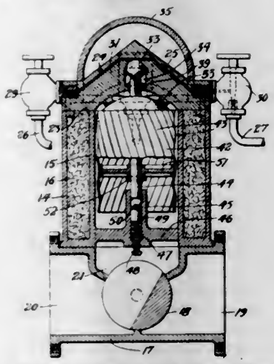
2. A car wheel construction embodying a hub and web formed of pressed metal, a felly formed of pressed metal and detached from the wheel, a rim cast upon the felly, interengaging means between the rim and felly to prevent relative circumferential movement of the rim and felly, and means for detachably securing the felly to the said web.

1,509,943. SAFETY CONTROLLER HANDLE. CLYDE C. FARMER, Pittsburgh, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Dec. 1, 1921. Serial No. 519,170. 1 Claim. (Cl. 74—33.)

The combination with an electric motor controller having means for receiving the usual controller handle, of an extension shaft constructed for application in place of the usual controller handle and provided with a key section, and a safety controller handle unit having a key aperture for receiving the key section of the extension shaft.



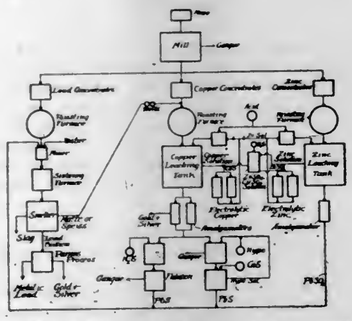
1,509,944. DEVICE FOR CONTROLLING THE HEAT OF INTERNAL-COMBUSTION MOTORS. JOSEPH O. FORGETTE and RICHARD LEGOIS, Hartford, Wis. Filed Apr. 21, 1923. Serial No. 633,792. 3 Claims. (Cl. 170—163.)



1. A device of the type described comprising a housing adapted to be rotated, blades carried by said housing, said blades being adapted to rotate on their longitudinal axes, means for swinging said blades into any angle desired, means for locking said blades in adjusted position, and means connecting the outer ends of said blades together.

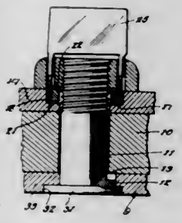
1,509,945. SHIP'S CABIN. JOSEF FUCHS, Schwyz, Switzerland. Filed June 3, 1922. Serial No. 565,663. 1 Claim. (Cl. 9—12.)

Buoyant ship cabins in the form of decked boats shaped so that, when placed stern to stern and side to side on a ship's deck, the decks of the boats combine into a continuous surface, the internal top corners of the boats being divided off by curved partitions so as to form watertight bulk heads.



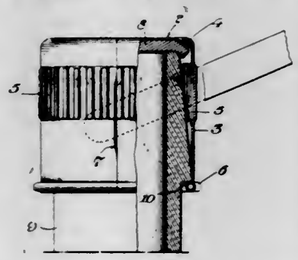
1,509,946. CARBURETOR. EDWARD G. GAGE, South Norwalk, Conn., assignor of one-half to Alexander Chandler, New York, N. Y. Filed Nov. 7, 1917. Serial No. 200,673. 6 Claims. (Cl. 261—18.)

1. In a kerosene vaporizing and mixing device, a hollow casing; a roughened rotating member located within said casing and moving in close proximity with the inner surface thereof, whereby a thin passage of large superficial area is provided between the said rotating member and the adjacent inner surface of said casing a support for said member: air and fuel supply passages leading into said casing; a vertically movable valve controlling said passages and operatively associated with said support and a mixture outlet passage leading from said casing.



1,509,947. METALLURGICAL PROCESS. WILLIAM E. GREENAWALT, Denver, Colo. Filed July 22, 1921, Serial No. 486,817. Renewed Aug. 28, 1923. 26 Claims. (Cl. 204—15.)

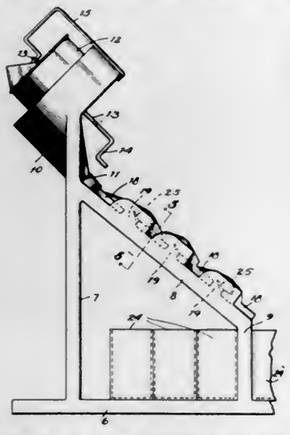
1. A metallurgical process comprising concentrating ores containing copper and zinc into a concentrate relatively high in copper and low in zinc and a concentrate



relatively high in zinc and low in copper, separately roasting the copper and the zinc concentrates, repeatedly applying an acid solution to the roasted copper concentrate to extract the copper and the zinc, repeatedly precipitating the copper from the resulting copper leach solution, and then when the solution becomes charged with zinc from copper leaching applying the solution to the roasted zinc concentrate.

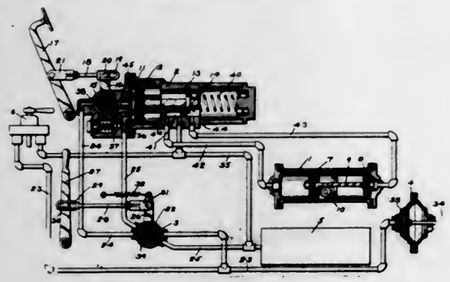
1,509,948. NUT LOCK. CHARLES W. HALL, Princeton, W. Va. Filed June 22, 1923. Serial No. 647,051. 1 Claim. (Cl. 151—41.)

The combination of a plurality of members to be connected, a bolt inserted through the members, one of the members having an annular recess in its outer side concentric with the bolt and provided with longitudinal grooves in the annular wall of said recess, a nut fitted on the end of the bolt over said recess and provided on its inner side with an annular series of ratchet teeth, a ring fitted in the recess around the bolt, peripheral lugs on said ring engaging the grooves in the annular wall of the recess, ratchet teeth on the upper side of said ring meshing with the ratchet teeth on the nut, and a split spring washer seated in the recess below and bearing against the ring to hold it to the nut, the nut having key-receiving openings therethrough and the ring having a marginal portion radially beyond the ratchet teeth to be engaged by the key.



1,509,949. CATCHUP CAP. CHARLES HAMMER, Hollis Court Boulevard, N. Y. Filed Jan. 6, 1923. Serial No. 610,983. 5 Claims. (Cl. 215—38.)

1. A metal cap adapted for use with a container having a shoulder and comprising a top and a depending flange having a curled, beaded or rolled lower edge insettable under the shoulder of the container and functioning as the holding element of the cap, said curled edge being spaced from the neck of the container to permit the insertion of a coin under the container shoulder, whereby the cap may be coin removed and thereafter snapped on.

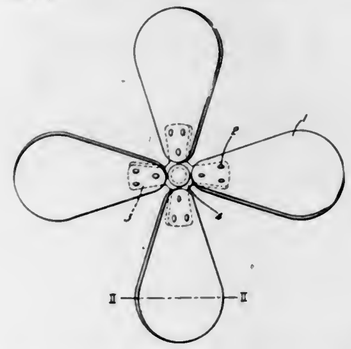


1,509,950. COIN SORTER. JESSE D. HEDRICK, Marion, Ind. Filed Feb. 13, 1924. Serial No. 692,489. 6 Claims. (Cl. 133—3.)

1. In a coin sorter in combination, an inclined chute having a slideway at one side thereof down which coins slide flatwise and a flange provided with openings at the inner edge of the slideway, and a series of baffles adjacent the openings successively, each baffle consisting of a curved member having a spiral upper edge extending over the slideway at a sufficient height above the same to tilt the coins to edgewise position, the upper end of said edge

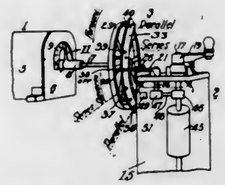
rising from the floor of the slideway, whereby coins will ride up said edge and be tilted thru the openings, the said upper ends of the successive baffles being positioned at decreasing distances from said flange.

1,509,951. BRAKE AND DOOR CONTROL. HENRY D. HUKILL, Pittsburgh, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Jan. 11, 1924. Serial No. 685,565. 14 Claims. (Cl. 303—6.)



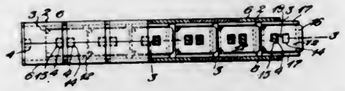
1. In a vehicle brake and door controlling mechanism, the combination with a fluid pressure brake and means operated by fluid under pressure supplied in operating the brakes for controlling a vehicle door, of manually controlled means for controlling communication through which fluid is supplied to said door controlling means.

1,509,952. ERASER SUPPORT. MERRILL M. HUNTING, Chicago, Ill. Filed May 18, 1922. Serial No. 561,893. 1 Claim. (Cl. 120—36.)



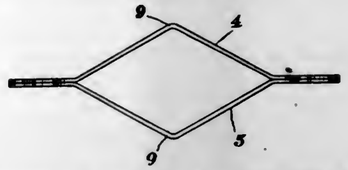
A device of the character described comprising a stirrup for removably supporting an eraser, a split ring adapted to fit the finger of a human hand, and a flexible stem for movably supporting said stirrup on said ring whereby said stirrup will normally lie in close contact with the palm of said hand.

1,509,953. FAN. CHARLES W. JOHNSON, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 30, 1918. Serial No. 268,792. 5 Claims. (Cl. 170—159.)



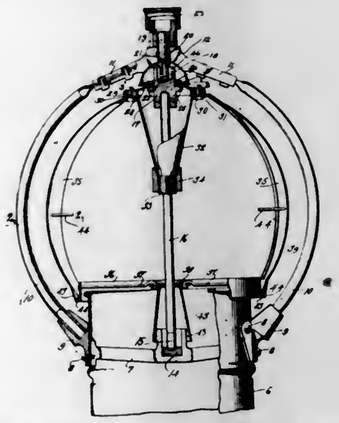
1. A fan including a hub and a plurality of fan blades secured thereto, the blades each comprising fibrous material impregnated with a hardened binder.

1,509,954. CONTROL APPARATUS. HOWARD H. JOHNSTON, Edgewood Park, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 11, 1919. Serial No. 281,933. 14 Claims. (Cl. 200—18.)



1. The combination with two rotatable members having transversely extending axes, of single operating means for one of said members, and multi-position means rigidly secured to the other member for directly interlocking with said single operating means in various positions of said multi-position means to prevent movement thereof.

1,509,955. ADJUSTABLE STRAP OR BAND. CHARLES H. KESTENMAN, Providence, R. I., assignor to Kestenman Brothers Mfg. Co., Providence, R. I., a Partnership consisting of Abraham Kestenman and Charles H. Kestenman. Filed May 31, 1924. Serial No. 716,904. 4 Claims. (Cl. 59—80.)

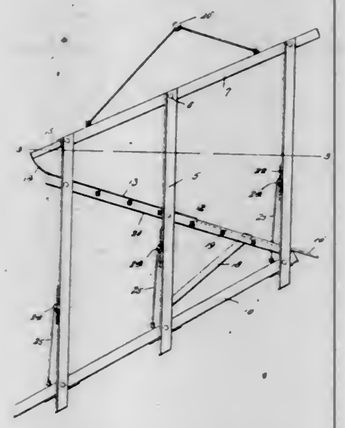


3. In an article of the type specified, the combination of tubular main link-members folded from strips of sheet-metal with the edges thereof forming a butted seam on the under side of the link with lugs bent inwardly from the ends of the folded portions and abutting to provide prongs projecting part way across the openings at the ends of the links, and inner box-like link-members formed from strips of metal folded to provide opposite parallel sides and having a flap extending from one end and bent upwardly and across between the sides with spaced slots pierced therethrough and adapted to be sprung into engagement with the prongs at the opposite ends of the main links to connect the latter in a band or chain.

1,509,956. SOUNDING TOY. LEONARD F. KIPP, Council Bluffs, Iowa. Filed Apr. 29, 1922. Serial No. 557,268. 1 Claim. (Cl. 46—46.)

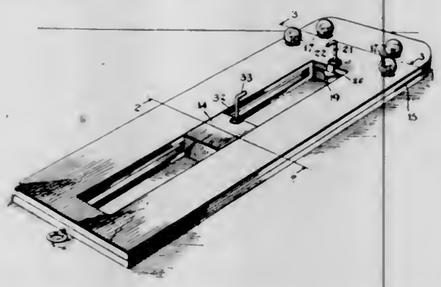
A sounding toy comprising a pair of strips of flexible material, said strips being relatively thin and long and secured together in superposed relation at their opposite ends, the intermediate portions of said strips being unattached and free of each other and the median portions thereof being crimped in opposite directions with the inner sides of the creases facing each other to produce a normal tendency for said intermediate portions to separate, said superposed strips being adapted to be drawn suddenly taut for slapping said intermediate portions of the strips together and producing the desired sound, the interfastened ends of the strips being relaxed for permitting return of the intermediate portions to open position.

1,509,957. VETILATING DEVICE. EDWARD J. KRUEGER, Milwaukee, Wis. Filed May 6, 1921. Serial No. 467,385. 3 Claims. (Cl. 98—2.)



1. In a device of the class described, the combination with an air shaft, of means for creating a suction at the mouth of said shaft and comprising a spider member secured in said shaft near its mouth and having a recess in axial alinement with the shaft, a bracket member disposed above the mouth of the shaft, said bracket member having a threaded bore in axial alinement with the shaft, a pintle in threaded engagement with said bracket bore, a rod having its lower end journaled in the recess of said spider member, a socket bearing member carried by the upper end of said rod for receiving the pintle, said pintle having a passage extending therethrough and communicating with the socket bearing member, a lubricant supply communicating with said passage, and vanes carried by said rod.

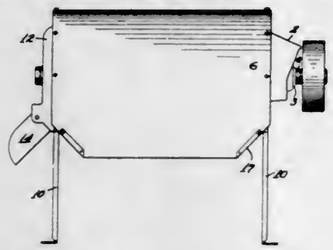
1,509,958. ROCK-REMOVING ROAD DRAG. VALMAH R. KUHNES, Ringling, Mont. Filed Nov. 21, 1923. Serial No. 676,121. 4 Claims. (Cl. 37—143.)



1. A road levelling and rock removing drag comprising a forward digging and scraping blade, a rear levelling blade, said forward and rear blades being arranged in parallel spaced relation obliquely to the line of travel of

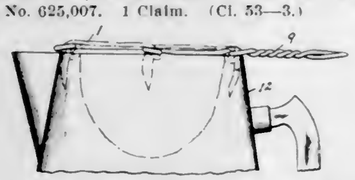
the drag, an intermediate blade extending at its forward end beyond the rear end of the forward blade, and at its rear end beyond the forward end of the levelling blade, said intermediate blade being obliquely disposed

in an opposite direction to the direction in which the forward and rear blades extend and embodying a rear sifting section through which dirt may pass and by means of which rocks are caused to be conveyed to one side of the road.



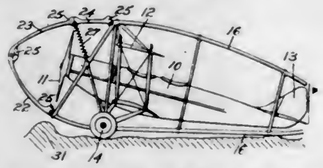
1,509,959. TESTING DEVICE FOR DRY BATTERIES. DAVID WILLIAM LANDES, Portland, Oreg. Filed June 16, 1921. Serial No. 477,962. 6 Claims. (Cl. 175—183.)

6. A test unit including a base, a channel guideway, a contact member upstanding between the side walls of said guideway and at one end thereof, a contact upon said base and exposed within said guideway, an indicating means connected with said member and said contact, and a contacting member slidably supported within said guideway adapted to cooperate with said contact whereby a battery may be accommodated between the members closing a circuit therethrough and through said indicator.



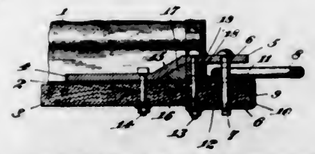
1,509,960. ROTARY BOLTER. JOHN HOLLAND LETZ, Crown Point, Ind., assignor to Letz Manufacturing Co., a Corporation of Indiana. Filed Nov. 20, 1922. Serial No. 602,075. 4 Claims. (Cl. 83—50.)

1. In a device of the class described, a stationary cylindrical screen, sheet metal joining strips interlocking with the edges of said screen to reinforce the same, reinforcing bars arranged in contact with the screen below the center of said screen axis, end members secured to said screen, charging and discharging chutes in said end members, a plurality of interlocking beater arms on said shaft whereby only one of which need be fastened



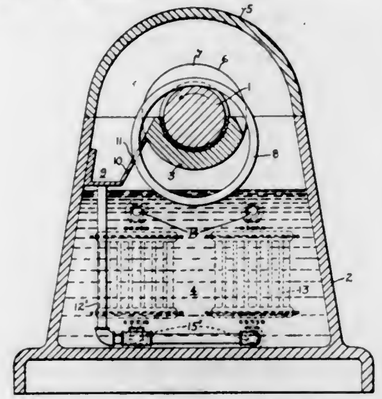
to said shaft, and a one-piece cover over said screen fastened to the end members and formed into a collecting chute beneath said screen.

1,509,961. DRIP-COFFEE-MAKING DEVICE. CHARLES TILGHMAN LONG, Eureka, Calif. Filed Mar. 14, 1923. Serial No. 625,007. 1 Claim. (Cl. 53—3.)



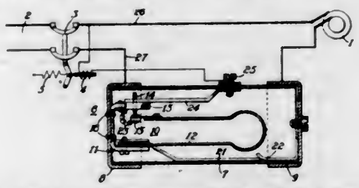
A bag holding device of the character described, formed from a single strip of wire rounded upon itself to provide a ring, a plurality of loops forming rings and being arranged at equi-distantly spaced intervals in the periphery of the rounded portion, said wire at the intersection of the rounded portion being further rounded in an opposite direction from the first mentioned rounded portion to provide a loop disposed diametrically opposite a centrally disposed loop of the first mentioned rounded portion, said wire having its strands from the second mentioned rounded portion twisted upon themselves and thence being arranged in diverging relation and further rounded upon themselves so as to bring the ends into confronting engagement to provide a handle and a nail receiving means whereby the device may be supported, and said loops being adaptable to receive a bag as and for the purpose specified.

1,509,962. AIRPLANE SAFETY CAGE. WILLIAM A. LORENZ, Hartford, Conn. Filed Apr. 4, 1921. Serial No. 458,248. 3 Claims. (Cl. 244—30.)



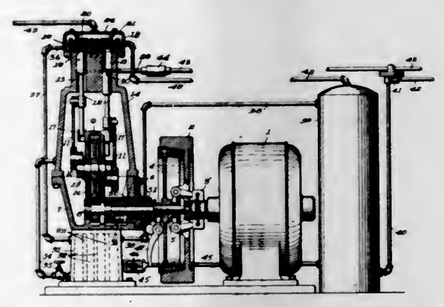
1. The combination with an airplane of a protecting frame comprising a pair of rails extending longitudinally of the plane above the wings from in front of the propeller to back of the rudders, a pair of rails extending longitudinally of the plane below the fuselage from in front of the propeller to back of the rudders, said pairs of rails being a greater distance apart than the diameter of the propeller and the spread of the rudders, braces connecting said pairs of rails in front of the propeller and braces connecting said pairs of rails in back of the rudders, whereby the propeller, fuselage and rudders are entirely within and protected by said frame.

1,509,963. MINE CAR. JOHN C. H. LUBKEN, Johnstown, Pa. Filed Aug. 27, 1921. Serial No. 496,121. 3 Claims. (Cl. 213—220.)



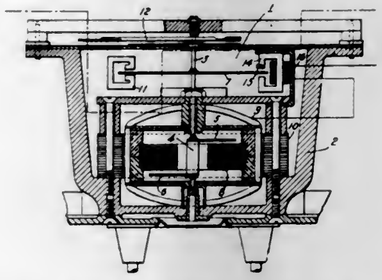
1. A car provided with a draw bar mounted and secured to the upper surface of the floor thereof, having upwardly bent end portions, a spacer block inserted and secured between the car floor and the inner portion of the bent-up end of the draw bar and of shape and having a tapered inner end conforming to the draw bar and the car floor.

1,509,964. BEARING-COOLING DEVICE. ROY A. MCCARTY, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Feb. 20, 1922. Serial No. 537,670. 13 Claims. (Cl. 64—28.)



1. A bearing cooling device comprising a bearing, a substantially horizontal shaft co-operating therewith, a reservoir adapted to contain a body of lubricant, substantially below the plane of the shaft, and self actuated circulating means for cooling the lubricant contained in said reservoir.

1,509,965. THERMAL RELAY. ALLIS M. MACFARLAND, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 17, 1920. Serial No. 404,064. 7 Claims. (Cl. 200—113.)

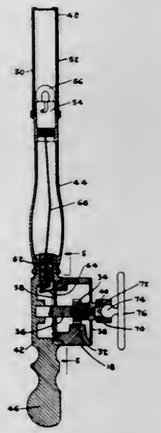


1. A thermal relay comprising a tubular member of insulating material, ferrules disposed at the respective ends thereof, a supporting member disposed on one ferrule, a bimetallic member disposed on the supporting member and looped back to permit a relatively long element to be disposed within a space of predetermined length, means for connecting one end of the bimetallic member to the opposite ferrule, and a contact member controlled by the bimetallic member.

1,509,966. REFRIGERATING APPARATUS. GEORGE MCFARLAND, Fort Madison, Iowa. Filed June 9, 1921. Serial No. 476,251. 1 Claim. (Cl. 230—6.)

In a refrigerating apparatus the combination of a compressor base, a cylinder carrying frame mounted thereon, a gear housing carried by the base and projecting above the joint between it and the cylinder carrying frame, a shaft journalled in the gear housing, cranks carried by the shaft, a gear carried by the shaft, cylinders carried by the cylinder carrying frame, plungers in the cylinders, plunger guides carried by the gear housing and in line with the cylinders and guiding the plungers, connections from the plungers to the cranks of the shaft, a driving pinion below the shaft, a driver shaft for the pinion, and means for driving the last mentioned shaft.

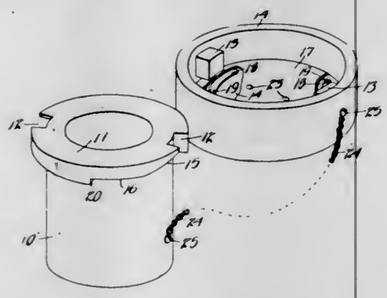
1,509,967. ELECTRICAL-MEASURING INSTRUMENT. PAUL MACGAHAN, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Feb. 15, 1919. Serial No. 277,161. 7 Claims. (Cl. 172—245.)



1. In a power-factor meter, the combination with a movable member, polarized members thereon, windings for actuating the polarized members, and a disk armature on the movable member, of means for actuating the armature to compensate for effects on the movable member caused by current and frequency changes.

4. In a power-factor meter, the combination with a movable member, windings for actuating the same and means connected thereto, of means connected to the windings for cooperating with said means to neutralize the drag effects on the movable member incident to changes in current and frequency in the windings.

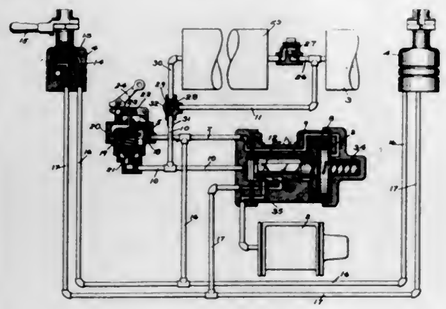
1,509,968. VISIBLE SIGNAL FOR MOTOR VEHICLES. FRANK J. MACK, Minneapolis, Minn., assignor to Mack Manufacturing Company, Incorporated, Minneapolis, Minn., a Corporation. Filed May 4, 1922. Serial No. 558,340. 2 Claims. (Cl. 116—51.)



1. A signal for motor vehicles comprising a support adapted to be secured to a wind-shield post of the vehicle, a sleeve secured to said support so as to extend outwardly therefrom, a bearing member secured to the

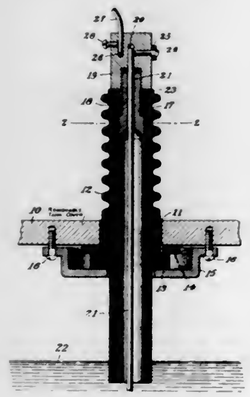
outer end of said sleeve, a shaft rotatably mounted in said bearing member, an indicating arm secured to the outer end of said shaft, a pinion secured to the inner end of said shaft, a bar slidably mounted in said sleeve and having a rack portion on its outer end in mesh with said pinion, a spring pressed ball mounted in said bearing member, and adapted to engage in any one of

a number of depressions in said outer end for holding said indicating arm in different positions into which it is moved, an operating shaft rotatably mounted in said support, a pinion on the inner end of said operating shaft in mesh with a rack portion on the inner end of said bar, and a handle on the outer end of said operating shaft.



1,509,969. CAP FOR TANKS. CHARLIE H. MARTIN, Danville, Ind. Filed Apr. 9, 1923. Serial No. 630,900. 9 Claims. (Cl. 220—44.)

1. A closure for automobile tanks comprising a tube extending from the tank, a radial flange on the tube, a cap having internal lugs adapted to engage underneath the flange and springs on the inner face of the cap opposite said lugs adapted to press said flange against the lugs for preventing dislodgment of said cap, substantially as set forth.



1,509,970. FLUID PRESSURE BRAKE. GEORGE H. MARTIN, Newtonville, Mass., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Nov. 17, 1923. Serial No. 675,247. 6 Claims. (Cl. 303—85.)

1. The combination with a source of fluid under pressure and an emergency valve device operated upon a reduction in fluid pressure for supplying fluid from said source to effect an application of the brakes, of an additional source of fluid pressure and means for connecting

said additional source of fluid pressure to the emergency valve device upon failure of supply from the first source of pressure.

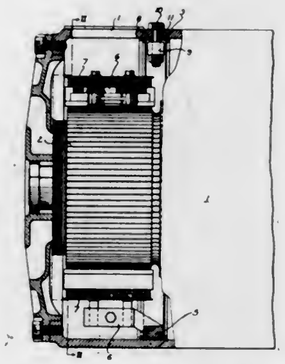
1,509,971. INSULATED TERMINAL FOR ELECTRICAL APPARATUS. RALPH D. MERSHON, New York, N. Y. Filed Jan. 8, 1920. Serial No. 350,183. 11 Claims. (Cl. 173—311.)

1. The combination with a tank for containing an electrolyte and having an opening in a wall thereof, of sealed means for electrical connection between the inside and outside of the tank, comprising an insulating bushing extending through the opening and into the electrolyte and sealed to the wall, a conducting member sealed on the outer end of the bushing for connection with an external circuit, and an electrical conductor extending from within the tank through the bushing and into electrical connection with said conducting member, said bushing and conductor being spaced apart a substantial distance at the inner end of the bushing and throughout the major portion of the length of the latter.

1,509,972. AVOCADO-PICKING BAG. HAMILTON MICHELSEN, Miami, Fla. Filed Dec. 18, 1923. Serial No. 681,344. 2 Claims. (Cl. 56—339.)

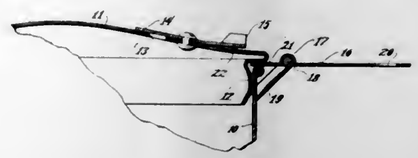
1. A fruit picking apparatus including a single piece of material bent to provide an open bag mounting frame comprising opposing side members and terminal ends lying in parallel relation opposite to each other, one end of the frame having a relatively narrow throat, the opposing frame side members intermediate the throat and terminal ends being outwardly curved, a bag provided

with a mouth, the free edges of said bag mouth being each formed with an open ended frame receiving recess, one end of said bag being opened downwardly from the



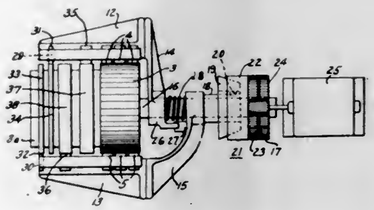
mouth to permit the bag to be positioned on the frame by longitudinal movement of one of the frame members through each of the frame receiving recesses, and a handle to which the terminal ends of the frame are secured.

1,509,973. GARMENT. LOUIS MILLER, Brooklyn, N. Y. Filed Nov. 14, 1923. Serial No. 674,616. 2 Claims. (Cl. 128—284.)



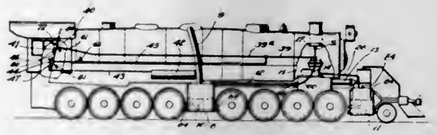
1. A diaper comprising a flexible washable single ply sheet folded to provide a substantially rectangular multiple ply pad, adapted to be folded to embrace the thighs, the outer face of said pad having cords at opposite sides adjacent one edge and a cord keeper adjacent the opposite edge intermediate the sides thereof, said cords being adapted to cooperate with each other to fold said first mentioned edge around the trunk and to cooperate with said keeper to retain said second mentioned edge in place.

1,509,974. BRUSH-HOLDER ROCKER RING. BENJAMIN S. MOORE, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 20, 1921. Serial No. 438,566. 3 Claims. (Cl. 171—324.)



1. In a commutator-type dynamo-electric machine, the combination with the frame thereof, of means for providing, in effect, an annular channel therein, a split brush-holder rocking ring rotatably mounted in said channel, and means engageable with said frame only at a predetermined point for coacting with the split ends of said ring and expanding said ring into interlocking engagement with said channel, whereby the brush-holder ring may be readily moved to a temporary position and restored to normal position without loss of adjustment of the commutating brush axis.

1,509,975. COOKING VESSEL. RAY J. MORGAN, Chicago, Ill., and ROBERT H. WENTORF, West Bend, Wis., assignors to West Bend Aluminum Company, a Corporation of Wisconsin. Filed June 27, 1921. Serial No. 480,702. 1 Claim. (Cl. 53—1.)

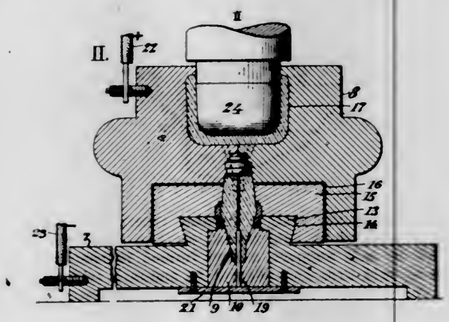


The combination with a cooking vessel, of a cover, a support carried by said vessel, an arm detachably supported by said support, a loop formed intermediate the ends of said arm and adapted to embrace said support, one end of said arm being adapted to lie between said cover and said vessel.

1,509,976. RHEOSTAT. NORMAN E. NORTH, Cantley, England, assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 1, 1922. Serial No. 548,748. 6 Claims. (Cl. 219—35.)

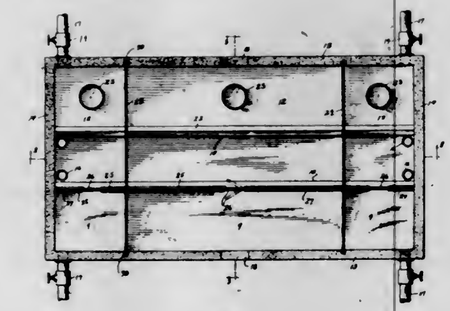
1. A rheostat comprising a resistance element arranged in a loop; and a plurality of relatively movable contact members for shunting said element, and means for continuously moving said contact members over said element to effect uniform heating of said element.

1,509,977. LOCOMOTIVE. JOHN E. OSMER, Owosso, Mich., assignor of one-half to Frederick H. Smith, Columbus, Ohio. Filed Aug. 18, 1921. Serial No. 493,351. 66 Claims. (Cl. 188—99.)



1. In a locomotive, the combination with a cylinder having a piston and an exhaust passage leading from the cylinder, of a valve means for closing said passage and operable in the direction of exhaust pressure to permit the escape of the latter, and pressure-fluid-actuated means operable to hold said valve means closed whereby to cause exhaust pressure to build up in the cylinder so as to exert a retarding or braking force upon the piston.

1,509,978. MOLD. EMILIO PASCUCCI, Corning, N. Y., assignor to Corning Glass Works, Corning, N. Y., a Corporation of New York. Filed Apr. 13, 1921. Serial No. 461,066. 6 Claims. (Cl. 49—66.)

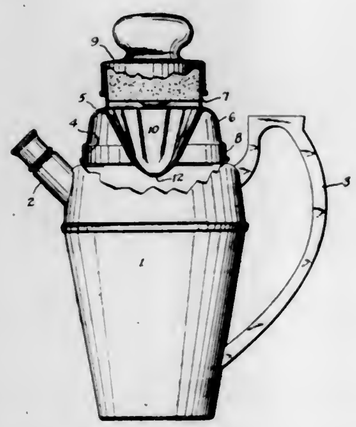


6. A mold of the class described comprising a base portion and an upper portion adapted to be assembled on the base, said upper portion consisting of hinged

halves, means formed on the base for anchoring the upper portion, a cavity formed in part in the base and in part in the upper portion, an electrode centrally po

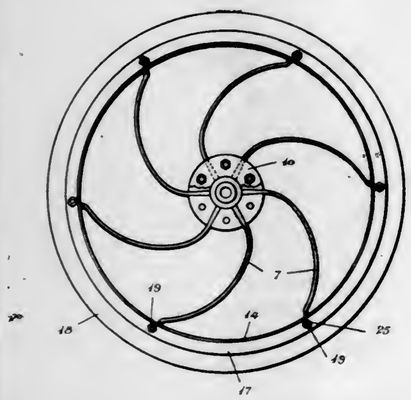
sitioned axially in said cavity and retained by the upper and base portions of the mold, and means for insulating the upper portion of the mold from the base portion thereof.

1,509,979. FISH NURSERY. DAVID C. PRYOR, Oklahoma City, Okla. Filed Apr. 21, 1923. Serial No. 633,636. 15 Claims. (Cl. 119—3.)



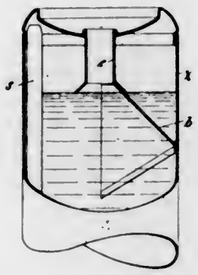
1. A fish nursery comprising a central deep pool, shallow flanges extending outwardly from the deep pool to each side thereof, and suitable partitions dividing the flanged portions into compartments to accommodate the fish during their early life cycle.

1,509,980. CHAIR GLIDE AND METHOD OF MAKING THE SAME. WILLIAM RAEBURN, Waterbury, Conn., assignor to The Mattatuck Manufacturing Company, Waterbury, Conn., a Corporation of Connecticut. Continuation of application Serial No. 629,574, filed Apr. 3, 1923. This application filed Nov. 24, 1923. Serial No. 676,676. 8 Claims. (Cl. 16—42.)



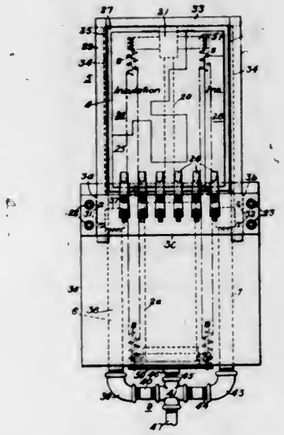
1. A chair glide consisting of a saucer-shaped hardened steel head and a softer tough prong of driving hardness, said head having swaged portions embracing one end of said prong so as to hold the two parts permanently together.

1,509,981. BEVERAGE SHAKER. LOUIS W. RICE, New York, N. Y. Filed June 21, 1924. Serial No. 721,393. 1 Claim. (Cl. 146—3.)



A beverage shaker comprising a body having a wide mouth, a top, and an intermediate reversible part comprising a breast portion having a flange to fit said mouth and a neck to receive the top, said intermediate part containing a fluted dome depending within its breast portion, said dome being united to the interior of the intermediate part at the region of the junction between the breast and neck portions at the bases of the flutes, leaving basal openings at the ends of the grooves between the flutes.

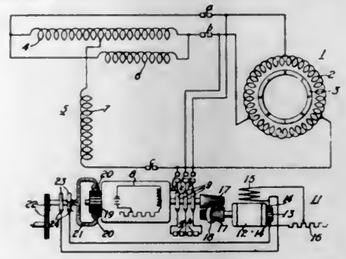
1,509,982. WHEEL CONSTRUCTION. ADOLPH SCHOENECK and AUGUST SEIDEL, Enterprise, Wis. Filed Mar. 13, 1923. Serial No. 624,738. 1 Claim. (Cl. 301—67.)



1. In a wheel, a rim composed of rings one fitted on the other, said rings having opposite flanges for holding a tire between them, securing elements connecting said flanges, and spokes extending through said rings and anchored to said elements, said rings having slots through which the spokes extend, and the slots of the outermost ring extending to the edge of said ring opposite to the flange of said ring in order that said ring can be removed from the spokes and other ring.

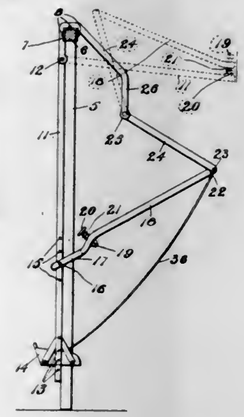
1,509,983. CONTAINER FOR LIQUIDS. GUSTAV SCHWORETZKY, Esslingen-on-the-Neckar, Germany. Filed Apr. 18, 1922. Serial No. 555,202. 2 Claims. (Cl. 220—25.)

1. In a container for liquids, the combination of an outer shell, a top and a bottom plate in said shell, a central charge opening in said top plate, a tube fitting into said charge opening and extending into the interior of the container, and a trough extending obliquely from said shell to the free end of said tube.



1,509,984. CONTROL APPARATUS. KARL A. SIMMON, Edgewood Park, and HARRY R. MEYER, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 23, 1920. Serial No. 368,023. 7 Claims. (Cl. 200—82.)

1. Control apparatus comprising a movable contact member, a piston-and-cylinder device for actuating said member, a base member for supporting said device, a supply-pipe for said cylinder fitted with a four-way connector, and a plurality of auxiliary cylinders located on opposite sides of the cylinder device and supported solely by said connector.

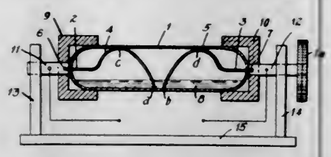


1,509,985. ACCELERATING SYSTEM FOR INDUCTION MOTORS. JOSEPH SLEPIAN, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 28, 1919. Serial No. 340,986. 10 Claims. (Cl. 172—274.)

6. In combination with a single-phase source of energy, a polyphase induction motor, an auxiliary induction machine having wound primary and secondary members, means for, at times, furnishing low-frequency energy to said motor from said secondary member, means for varying said frequency from zero to line frequency, means for operating said motor single-phase during certain

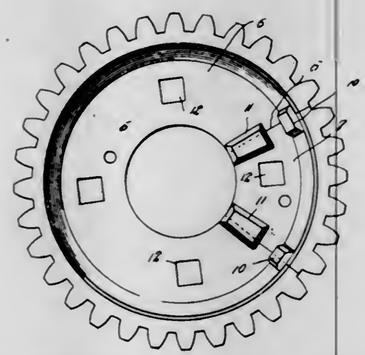
transition periods, and means for, at other times, operating said auxiliary machine as a phase balancer connected between said single-phase source and said polyphase motor.

1,509,986. SWING. EMIL M. SPRICH, St. Louis, Mo., assignor of one-third to John Sprich, Colorado Springs, Colo., and one-third to Albert T. Sprich, Belleville, Ill. Filed Sept. 25, 1922. Serial No. 590,327. 3 Claims. (Cl. 155—65.)



1. A swing comprising in combination with a pair of vertical supports having a cross bar extending across their upper ends, a pair of spaced apart inverted channels secured to the cross bar, a vertical member having its lower end bifurcated formed integral with and depending from one side of each channel, a bar pivotally secured at one end in each bifurcation, a seat pivotally and adjustably secured between and adjacent the opposite end of said bars, a rod adjustably extending through said bars intermediate their ends, a projecting arm formed integral with the opposite side of each channel, a lever pivoted at one end to each arm, a link pivoted to the free end of each lever, a bar extending through said levers and links, said bar also serving as a pivot for the links, a bifurcation formed in the free end of each link, said bifurcation adapted to straddle the first mentioned bars and be held in position thereon by means of the rod passing therethrough, a spring bumper carried by the links and adapted to contact with the first mentioned bars for limiting the swing thereof, and a flexible cable having one end attached to the bar carried by the levers for placing the swing in operation.

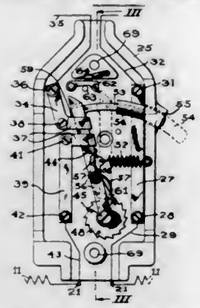
1,509,987. VARIABLE-RESISTANCE DEVICE. LEE SUTHERLIN, East Pittsburgh, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 27, 1922. Serial No. 590,811. 7 Claims. (Cl. 219—57.)



1. In a variable resistance device, a vessel, a liquid having a high resistance disposed therein and means for con-

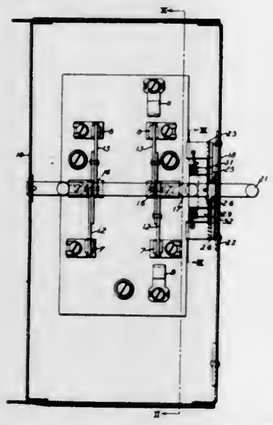
tinuously varying the effective resistance of said liquid, said means comprising a pair of rotatably mounted conductors having portions contained in said liquid, said con-

ductors being so arranged that the spacing thereof with respect to said liquid is continuously varied for a movement of said conductors.



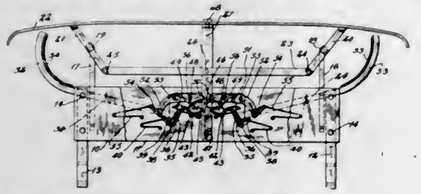
1,509,988. CRANK-SHAFT GEAR FOR LOOMS. WILLIAM HENRY THOMPSON and IRA FRANKLIN CAPE, Seneca, S. C. Filed Mar. 23, 1923. Serial No. 627,061. 1 Claim. (Cl. 74—78.)

A gear wheel adapted to be applied to the side of a pulley which is fixedly mounted upon the shaft, comprising an arcuate body provided with a central opening adapted to receive the shaft, the body being provided at one side with a recess leading in from the outer edge thereof and communicating with the said opening, the said recess having radially disposed side walls which are disposed at an acute angle with relation to each other and a segment adapted to completely fill the recess and provided with an inner curved edge adapted to conform with the curvature of the edge of the opening in the body, the segment being provided at its outer side and at its inner portion with lugs adapted to bear against the side surface of the intermediate portion of the body, the body and the segment being provided in the vicinity of their outer edges with outstanding flange sections adapted to register with each other when the segment is in position in the recess the inner surface of the flange upon the body being inwardly inclined and the flange of the segment being provided with lugs adapted to engage under the end portions of the inclined surface of the flange section which is carried by the body.



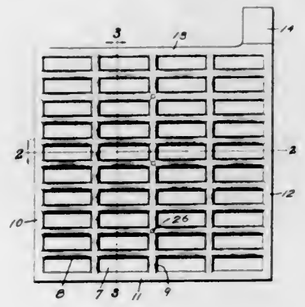
1,509,989. AUTOMATIC CUT-OUT FOR ELECTRIC FLATIRONS. FRANK THORNTON, Jr., Mansfield, Ohio, assignor to Westinghouse Electric Products Company, a Corporation of Michigan. Filed Nov. 29, 1921. Serial No. 518,345. 4 Claims. (Cl. 200—124.)

1. A combined terminal and temperature-limiting device for an electrically heated flat iron comprising a handle member, and a cover member to which said handle member is secured, said device comprising an insulating casing, a bolt for securing said casing to said handle member, a switch in said casing biased to its open position, means for manually closing said switch, locking means for holding said switch in its closed position, means for securing said locking means to said bolt, said locking and se-



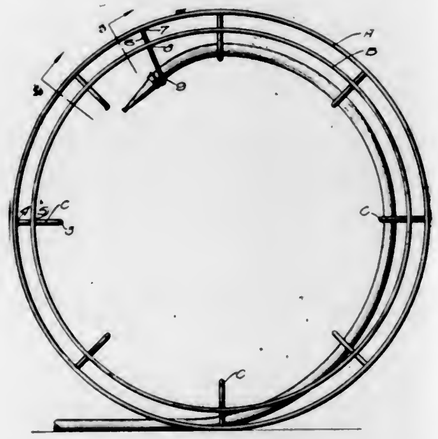
curing means permitting said switch to open at a predetermined temperature of said iron.

1,509,990. TRANSFER SWITCH. FRED G. VON HOORN, Turtle Creek, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed June 30, 1923. Serial No. 648,706. 5 Claims. (Cl. 200—15.)



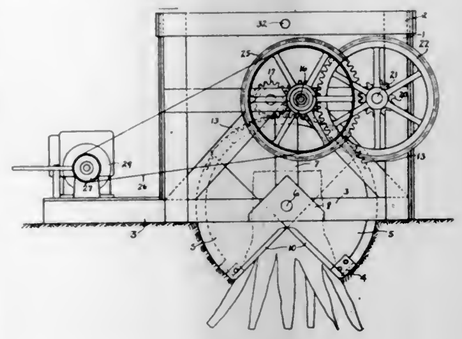
3. Switch mechanism comprising a pair of main contact members, a pair of auxiliary contact members, a switch member adapted when in middle position to engage both main contact members and when in extreme positions to engage one main contact member and one auxiliary contact member, means for moving the switch member to different operative positions and means for automatically moving the switch member out of engagement with the auxiliary contact member without disengaging it from the main contact member when the first said means is released.

1,509,991. LIFE-SAVING FENDER FOR VEHICLES. STANLY ADVENT, Detroit, Mich. Filed May 10, 1924. Serial No. 712,307. 8 Claims. (Cl. 293—16.)



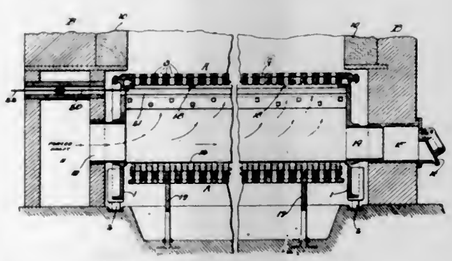
1. Vehicle fender of the class described, comprising a fender bar, a frame carrying said fender bar and adapted to be attached to a vehicle, a pair of plates on said frame, an arm connected to said fender bar slidingly guided between said plates, and means between said plates to open and close a pair of jaws during the movements of said arm between said plates, said means adapted to be locked in the open and closed positions of said jaws.

1,509,992. ELECTRODE OR GRID FOR STORAGE BATTERIES. JAMES M. ALLEN, St. Louis, Mo., assignor to James M. Allen, Fred P. Smith, and Frederick D. Tucker, as trustees for The Smith Allen Battery Company, St. Louis, Mo. Filed Oct. 6, 1920. Serial No. 415,020. 1 Claim. (Cl. 204—29.)



An electrode for storage batteries formed of a single folded sheet of metal, said sheet when folded having two spaced apart sides, a bottom, and two vertical edges, said vertical edges composed of a double thickness of material, concavo-convex bars arranged vertically and horizontally formed integrally with said sides, said bars having their convex sides facing outwardly and upwardly projecting lugs formed integral with said sides.

1,509,993. HOSE REEL. FRED C. BELL, Alameda, Calif. Filed June 21, 1922. Serial No. 569,785. 4 Claims. (Cl. 242—86.)

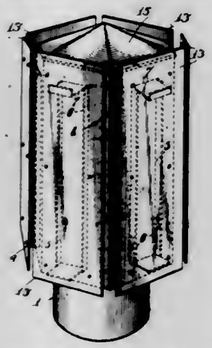


1. A reel comprising a pair of interspaced rings, a plurality of U-shaped cross arms secured to and connecting the same, and a single cross arm disposed between the rings and secured thereto, said cross arm being substantially U-shaped and the bottom portion thereof being bent to form an opposed U.

1,509,994. STUMP-CUTTING MACHINE. JOHN T. CARROLL, Houston, Tex. Filed Oct. 5, 1923. Serial No. 666,759. 8 Claims. (Cl. 37—2.)

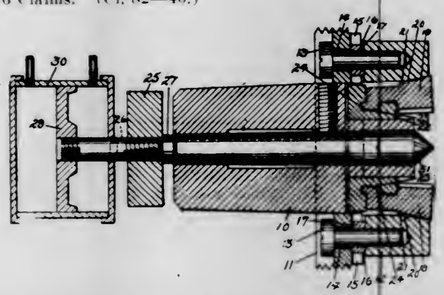
1. A stump cutting device comprising a supporting frame, two opposing sets of end plates approximately semi-circular in shape pivotally mounted therein, a knife connecting the lower edges of each said set of plates, knives on the forward edges of said plates, gears on the outer peripheries of said plates and means engaging said gears to rotate said plates and knives toward each other in an arc beneath the stump to sever the roots thereof.

1,509,995. FURNACE AND MEANS FOR CONTROLLING THE DRAFT THEREIN. WILLIAM M. DUNCAN, Alton, Ill. Filed Feb. 10, 1921. Serial No. 444,019. 5 Claims. (Cl. 100—40.)



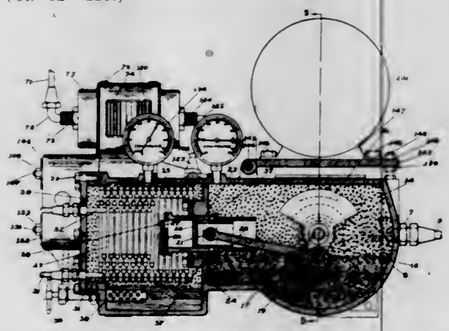
1. A furnace provided with a fuel-supporting grate, and means for preventing free escape of draft through openings in the fuel on said grate, said means including a series of draft-closures located between the grate and the source of the draft, said draft-closures being located below and movable transversely of the bottom of said grate so that either closure may be selected and located below an opening in the fuel and said draft-closures being shorter than the width of the grate so as to obstruct the draft tending to escape through said openings and at the same time permit the delivery of draft through the fuel adjacent to said openings.

1,509,996. VENTILATOR. THEODOR ELTING, Chicago, Ill. Filed Dec. 9, 1920. Serial No. 429,404. 9 Claims. (Cl. 98—4.)



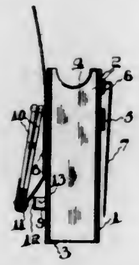
1. A ventilator, comprising a cylindrical shell having a plurality of spaced openings, a polygonal casing comprising a plurality of connected panels spaced from

said shell and provided with openings, said last named openings being opposed to imperforate parts of said



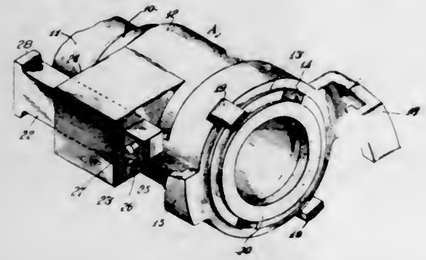
shell, and a plurality of plates spaced from each other and from said panels and means for supporting said plates directly from said panels of said casing.

1,509,997. PNEUMATIC CHUCK. GEORGE W. FRY, Toledo, Ohio. Filed Dec. 17, 1923. Serial No. 681,220. 6 Claims. (Cl. 82—40.)



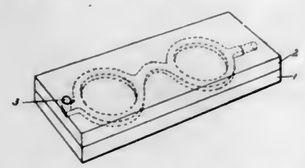
1. In a chuck, a ring floating radially of the chuck and having beveled surfaces, jaws having beveled surfaces adapted to cooperate with the beveled surfaces of the ring, and means to produce relative movement between the ring and jaws longitudinally of the chuck.

1,509,998. REFRIGERATING MACHINE. CARL F. GEIGER and FREDERICK C. GEILER, Dayton, Ohio. Filed Sept. 19, 1921. Serial No. 605,658. 5 Claims. (Cl. 62—115.)



1. In a refrigerating apparatus, the combination with a compressor, of an expansion coil, a refrigerant line leading from said compressor to the expansion coil, means for returning cool gas from the latter to the compressor, a shaft for the compressor, and packing means surrounding said shaft in the path of the cool gas returned to the compressor from the expansion coil.

1,509,999. COMBINATION ASH TRAY AND MATCH HOLDER. CHARLES W. GIRSCH, New York, N. Y. Filed July 13, 1923. Serial No. 651,278. 4 Claims. (Cl. 206—38.)

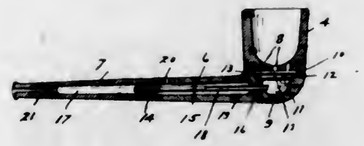


1. In an ash tray and holder for matches which are mounted on a flexible strip, the lower end of the strip being bent up over the front of the lower portions of the stem of the matches, the combination of a support; a pair of parallel guides on said support behind which the flexible strip may slide; a stop on said holder on which the lower end of the strip may rest; and a retainer adapted to engage over the upwardly bent part of the strip.

1,510,000. HOSE COUPLING. EGBERT H. GOLD and EDWARD A. RUSSELL, Chicago, Ill.; said Russell assignor of his interest to Vapor Car Heating Company, Inc., Chicago, Ill., a Corporation of New York. Filed May 1, 1922. Serial No. 557,675. 19 Claims. (Cl. 285—67.)

1. In a hose coupling, the combination of a conduit member, a coupling member adapted to interlock with a mating coupler and movably arranged on said conduit member, and means movable longitudinally of the coupling member for tightening the engagement between the coupling member and the mating coupler and forcing the conduit member against the corresponding part of the other coupler.

1,510,001. OPHTHALMIC MOUNTING. WILLIAM A. GUNNING, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed Mar. 3, 1922. Serial No. 540,698. 8 Claims. (Cl. 18—55.)

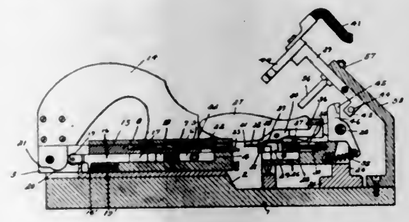


1. The process of producing a non-metallic ophthalmic frame consisting in forming dies having the necessary configurations, and forcing the frame material in liquid form between the dies to produce the finished article.

1,510,002. SELF-CLOSING PET COCK. FRANK A. B. HOLMES, Chicago, Ill. Filed Sept. 22, 1923. Serial No. 664,213. 1 Claim. (Cl. 251—125.)

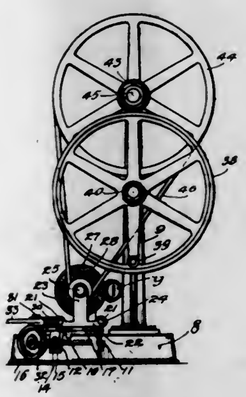
A self-closing pet cock comprising, a main body having a screw threaded attaching neck at one end, an aligned annular valve seat at the other end, and a lateral lug at one side, a rocker bar having at its midlength a pair of spaced ears adapted to straddle said pivot lugs and be attached thereto by a pivot pin, said rocker bar having a recess at each end and an orificed lug adjacent to one of said recesses, a valve head fitting one of said recesses and having closing engagement against the annular seat of the main body, a spring engaging in the other of said recesses and adapted to hold said valve head to its engagement, and a handled pull rod attached to the aforesaid orificed lug.

1,510,003. TOBACCO PIPE. CARL O. JOHNSON, Minneapolis, Minn. Filed May 17, 1920. Serial No. 381,821. 1 Claim. (Cl. 131—12.)



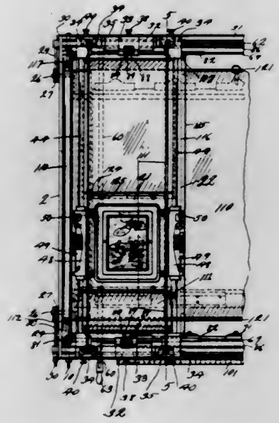
A tobacco pipe comprising a stem having two distinct longitudinal chambers formed therein, the inner of which forms a saliva collecting chamber and the other of which forms a cooling chamber, said cooling chamber having an aperture therefrom to the atmosphere at its top portion adjacent one end and another aperture to the atmosphere at its bottom and adjacent its other end, a conduit passing centrally through said cooling chamber and communicating with said saliva collecting chamber, said stem having a sub-bowl with a chamber formed therein at its outer end with which chamber the other end of said conduit communicates, a tobacco receiving bowl attached to said stem above said sub-bowl having a perforated bottom, and a plurality of spaced layers of absorbent material disposed in said sub-bowl chamber and spaced from said perforated bottom of the tobacco receiving bowl.

1,510,004. SEAMLESS-END NECKTIE. MICHAEL C. KELLY, Minneapolis, Minn. Filed May 18, 1923. Serial No. 639,781. 5 Claims. (Cl. 2—146.)



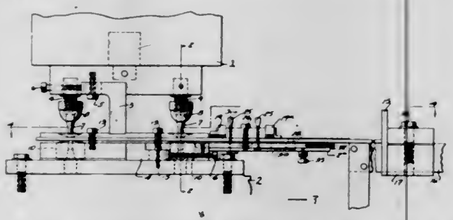
1. A necktie in the form of an elongated band of sufficient length to surround the neck and have its ends tied in a knot including a pair of tying ends of two ply formation each having a fold constituting a lateral end of the necktie and having seams extending along its longitudinal edges.

1,510,005. MACHINE FOR INSERTING METAL ENDS IN SPECTACLE TEMPLES. WILLIAM J. KELLEY, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed Sept. 18, 1922. Serial No. 589,033. 12 Claims. (Cl. 18—1.)



1. A machine of the class described including a supporting base, a sliding carriage upon one end thereof, means for supporting a temple in longitudinal position upon said carriage, a swinging carriage member upon the opposite end of the base, means to carry a temple end piece on the swinging carriage, means to swing the swinging carriage, means to contact with the end piece for heating said end piece, and means to move the sliding carriage to force the heated end piece into the temple.

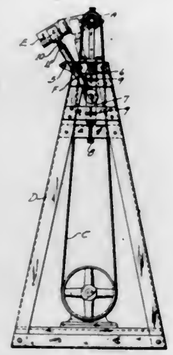
1,510,006. VALVE-GRINDING MACHINE. EVERETT F. KIESTER, Minneapolis, Minn. Filed Nov. 4, 1922. Serial No. 599,054. 2 Claims. (Cl. 51—105.)



1. A valve grinding machine comprising a base, a carriage slidably mounted on said base, manually operated means for adjusting said carriage, a turret rotatively mounted on said carriage, means for locking said turret to said carriage in different angular adjustments, said turret having diametrically opposite bearing lugs, a bearing plate connected to the lugs of said turret for straight line reciprocating movements, a grinding wheel having a spindle extended parallel to the reciprocating movement of said bearing plate and journaled in bearings on said plate, means for rotating said spindle and grinding wheel, means for imparting straight line reciprocating movements to said bearing plate and parts carried thereby, said means comprising a rack secured to said bearing plate, an arm projecting from said turret, and a hand operated gear journaled to said arm and meshing with said rack.

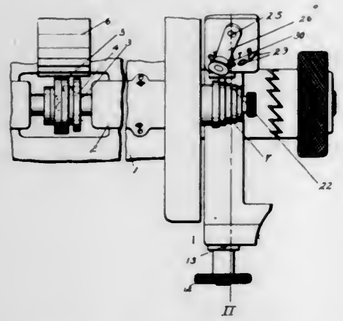
1,510,007. MACHINE FOR MAKING OFFSET PRESS PLATES. ALEXANDER T. KOPPE, Chicago, Ill., assignor to Offset Directoplate Company, Chicago, Ill., a Corporation of Illinois. Filed June 30, 1922. Serial No. 572,054. 40 Claims. (Cl. 95—76.)

1. The combination with the bed plate of a machine for photographically preparing offset press plates, of a resilient blanket carried by said bed plate, and means operable for stretching the blanket whereby the degree of stretch thereof may be varied.



1,510,008. COMBINED PUNCH AND SHEAR. LOUIS NORMAN LUMB, Astoria, N. Y., assignor to Irving Iron Works Company, a Corporation of New York. Filed July 2, 1923. Serial No. 648,861. 4 Claims. (Cl. 164—15.)

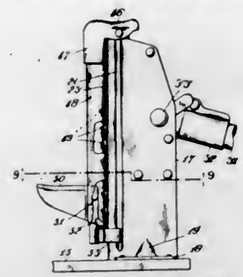
1. In a machine for punching holes in metal strips at predetermined points and cutting said strips to predetermined lengths, the combination, with the main frame, and a die supported thereby, guides for the metal strip to be punched, a reciprocating head and a punch carried thereby, and cooperating knives carried by said frame and head forming a pair of shears, of an adjustable stop and gauge rigidly connected to the main frame in line with the guides for the strip being punched and in position to act as a stop for said strip when a predetermined number of holes have been punched therein and also as a gauge for same when placed in the shears to sever said punched portions from the remainder of the strip.



1,510,009. HEEL-GROOVING MACHINE. DAVID O. MARSHALL, St. Louis, Mo., assignor to Mound City Wood Heel & Mfg. Co., St. Louis, Mo., a Corporation of Missouri. Filed June 18, 1923. Serial No. 646,153. 10 Claims. (Cl. 12—47.)

1. A machine for grooving shoe heels, comprising a tapered, rotatable cutter provided with longitudinally-disposed cutting teeth, a heel carrier for holding a heel in a position extending longitudinally of the axis of the cutter with its breast presented towards the cutter and its upper end portion positioned beyond the end of the cutter, and a support on which said carrier is

rockably mounted, disposed parallel to the longitudinal axis of the cutter, said carrier being adapted to be rocked towards the cutter so as to cause the cutter to form a groove in the lower end portion of the breast of the heel.

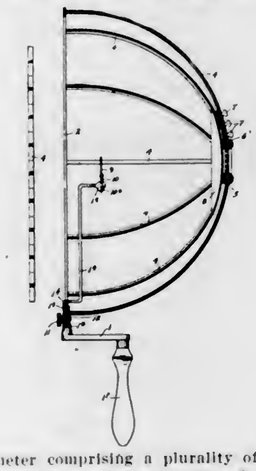


1,510,010. EDGING MACHINE. ALBERT E. MAYNARD, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed May 20, 1920. Serial No. 382,802. 3 Claims. (Cl. 51—101.)

1. In a device of the character described, the combination with a supporting member, a tube slidably mounted therein, means for adjusting said tube within the support and a block movable with the tube and formed with the guide way, of a plate having a member slidably engaged in the guide way, said plate having a rack portion and a contact shoe, a pinion meshing with the rack portion for adjusting the plate upon the block, means for rotating the pinion to accomplish such adjustment and means for locking the parts in the desired adjusted position, said means including a plurality of sockets formed on the block and a pin for selective engagement in the socket.

1,510,011. LIFTING JACK. JOSEPH J. MIZER, Racine, Wis., assignor to Walker Manufacturing Company, Racine, Wis., a Corporation of Wisconsin. Filed Dec. 17, 1923. Serial No. 681,196. 2 Claims. (Cl. 254—111.)

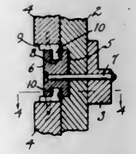
1. A jack comprising a standard in the form of a channel member comprising a continuous web and substantially parallel side flanges, there being inwardly extending ribs pressed from each flange extending parallel to the web, thus forming interior grooves or channels adjacent the web, and exterior grooves parallel with the web and interior grooves, a lifting member comprising a pair of bars connected at their upper ends, one sliding inside the channel and guided by the inner



grooves, and the other mounted outside the web and having extensions at its lower end engaging in and guided by the exterior grooves.

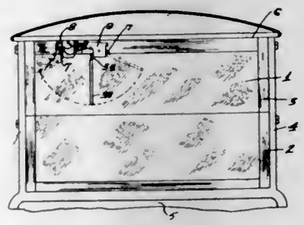
1,510,012. TELESCOPIC HANDLE FOR AUTOMOBILE JACKS. JOSEPH J. MIZER, Racine, Wis., assignor to Walker Manufacturing Company, Racine, Wis., a Corporation of Wisconsin. Filed Mar. 28, 1923. Serial No. 628,216. 10 Claims. (Cl. 74—39.)

1. A telescopic jack handle, comprising two flat bar members, the free end of one member adapted to enter the socket of a jack, and a handle formed on the free end of the other member, a sleeve permanently secured to the opposite end of each of the members and having slidable engagement with the body portion of the other member, and an integral stop on the handle member, just beyond the handle portion, to engage the sleeve on the other member and prevent disengagement of the members when telescoped to inoperative position, and an integral stop on the jack-engaging member, near its sleeve-carrying end to limit movement of the other sleeve thereon when the parts are moved to operative position.



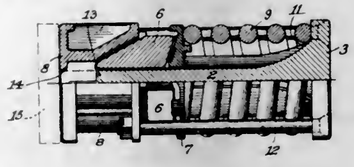
1,510,013. SELF-DETERMINING PERIMETER. HOWARD McI. MORTON, Minneapolis, Minn. Filed Mar. 5, 1921. Serial No. 449,944. 19 Claims. (Cl. 88—20.)

1. A perimeter comprising a plurality of spaced relatively fixed meridian members arranged in diverging relation in a substantially semi-spherical surface, sight objects slidable on each of said members and disposed



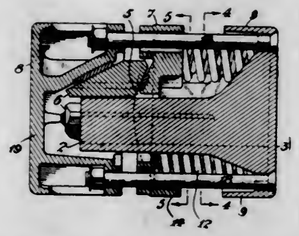
at the concave side thereof, the spaces between said members being open and unobstructed for substantially their entire extent whereby an open-work structure is provided in which light can pass between said members.

1,510,014. SILO DOOR AND LOCK. FREDOLIEN J. OBERER, Los Angeles, Calif., assignor to National Tank & Pipe Co., Portland, Oreg., a Corporation of Oregon. Filed June 20, 1922. Serial No. 569,659. 12 Claims. (Cl. 20—1.4.)



1. In a device of the character described, the combination with a door opening, of a hinged door adapted to close said opening, said hinge means having co-operating abutments arranged to automatically draw said door against the door opening as the door is swung to closed position.

1,510,015. CLEANING MECHANISM. CHARLES L. RAYFIELD, Chicago, Ill. Filed Nov. 25, 1921. Serial No. 517,431. 7 Claims. (Cl. 15—25.3.)

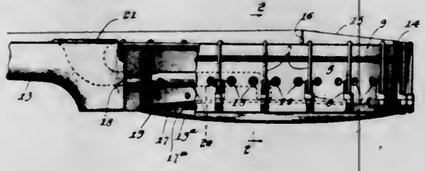


1. A windshield cleaner comprising a wiper mounted for reciprocation over a windshield glass, and means for reciprocating said wiper, said wiper comprising an elastic tubular member having a heating element therein.

1,510,016. SHOCK-ABSORBING MECHANISM. ERNEST H. SCHMIDT, Cleveland, Ohio, assignor, by mesne assignments, to National Malleable and Steel Castings Company, Cleveland, Ohio, a Corporation of Ohio. Filed Oct. 16, 1922. Serial No. 594,674. Renewed May 9, 1924. 5 Claims. (Cl. 213—36.)

1. A shock absorbing mechanism, a central friction member having outwardly radiating arms, friction shoes arranged between said arms and having a friction bearing thereon, said arms extending outwardly beyond the zone in which the shoes bear to reinforce the mechanism to resist bulling and draft stresses, a compression spring arranged between said shoes and a portion of said central member to resist the travel of the shoes along said central member and increase the friction therebetween, a follower wedge bearing upon said shoes, and a limiting stop against which the central friction member comes into bearing to protect the mechanism against over solid blows.

1,510,017. SHOCK-ABSORBING MECHANISM. ERNEST H. SCHMIDT, Cleveland, Ohio, assignor to National Malleable and Steel Castings Company, Cleveland, Ohio, a Corporation of Ohio. Filed Jan. 31, 1923. Serial No. 616,003. Renewed June 20, 1924. 5 Claims. (Cl. 13—36.)

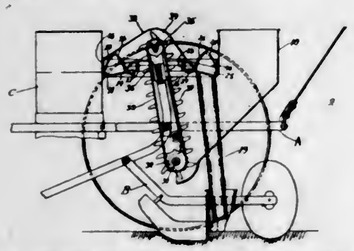


1. A shock absorbing mechanism comprising a central friction member having a broad, flat base of resistance and outwardly radiating arms, friction shoes arranged between said arms having a friction bearing thereon, followers engaging the ends of said shoes, one of said followers and the said base having aligned pockets therein for housing a plurality of compression springs arranged in parallel with the axis of said central member.

1,510,018. OPHTHALMIC MOUNTING. ELMER L. SCHUMACHER, Southbridge, and WILLIAM H. BOUTELLE, Sturbridge, Mass., assignors to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed Mar. 6, 1922. Serial No. 541,523. 7 Claims. (Cl. 88—83.)

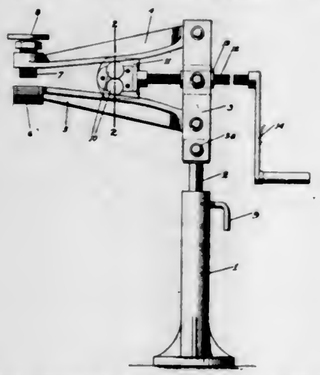
1. The process of producing an ophthalmic frame consisting in cutting away a portion of a composition end piece, securing a metallic member to the end piece and within the cut away portion, and subsequently bending the combined parts whereby the material of the end piece is caused to shift relative to the metallic member and partially enclose the same.

1,510,019. SOUND MODIFIER FOR STRINGED INSTRUMENTS. HENRY H. SLINGERLAND, Chicago, Ill. Filed Nov. 9, 1921. Serial No. 513,905. 3 Claims. (Cl. 84—271.)



3. The combination with a banjo, of a structure closing the portion of the body opposite the strings; said structure comprising two convaco-convex disks arranged in superposed relation with their concave portions facing each other; said disks being apertured and the inner disk providing a resonator opposite the head of said banjo whereby the sound vibrations of the banjo head are augmented and modified by said resonator disk, and a horn secured to the inner disk at an aperture therein and extending through the body of said banjo.

1,510,020. SAFETY RAZOR. ANTHONY SNIEGOCKI, Oakland, Calif. Filed July 13, 1922. Serial No. 574,697. 2 Claims. (Cl. 30—12.)

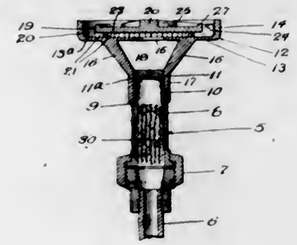


1. A safety razor comprising a holder, a pair of interspaced removable shaving blades adapted to be received thereby, said blades being disposed in parallelism, a roller disposed between the blades and extending substantially from end to end thereof, said roller being free to rotate and forming a guard for the respective blades, a spring disposed between the blades and secured midway of its ends to the holder, a pair of set screws one disposed at each end of the holder and engageable with the spring, and a bearing member at each end of the spring for the support of the roller.

1,510,021. FEEDING MECHANISM FOR POTATO PLANTERS. JOHN STURROCK, Chicago, Ill., assignor to International Harvester Company, a Corporation of New Jersey. Filed Sept. 3, 1920. Serial No. 407,865. 11 Claims. (Cl. 221—127.)

6. The combination in a potato planter of an annular picker pan, a revolvable carrier mounted on the pan, radially extending movable seed pickers mounted on the carrier, means on the pan for actuating the pickers when the carrier revolves, and means for supplying seed to the pan through its central opening.

1,510,022. SPREADING JACK. JESSE D. TUCKER, Sacramento, Calif., assignor to Tucker Brothers Manufacturing Company, Sacramento, Calif. Filed June 11, 1923. Serial No. 644,717. 6 Claims. (Cl. 157—9.)

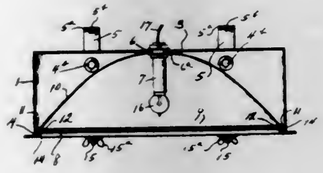


1. A jack comprising a vertical frame, arms projecting horizontally from the frame and adapted to be inserted between the hub and felly of a wheel, and means mounted on the frame for spreading the outer ends of said arms.

1,510,023. MUSICAL INSTRUMENT. JOSEPH N. VASEY, Brookfield, Ill. Filed July 7, 1922. Serial No. 573,364. 11 Claims. (Cl. 84—197.)

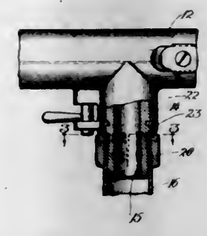
1. In a musical instrument, the combination of a frame, a band secured at one end to the bottom of the frame near one edge thereof, a string anchored to the other end of said band and extending around the other edge of said frame and across the top thereof, and a tuning pin receiving the end of said string.

1,510,024. BURNER. AXEL WARNER, Chicago, Ill. Filed Nov. 2, 1923. Serial No. 672,255. 3 Claims. (Cl. 158—67.)



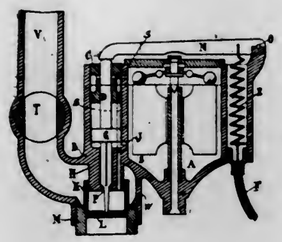
3. A burner comprising, in combination, a burner tube having a thin side wall and a relatively thick top wall, the top wall being formed with a centrally disposed, relatively long, capillary discharge duct, a centrally apertured burner pan having downwardly converging arms terminating in a band secured upon said burner tube, said burner pan being formed with an upturned marginal flange, and the upper face of the bottom of said burner pan being flat, and a spreader plate above said burner pan and of less diameter than the internal diameter of said flange, the lower face of said spreader plate being flat, and formed with a marginal row of spaced lugs resting on the bottom of the burner pan, the spaces between said lugs being relatively low, the flat upper face of the burner pan and lower flat face of the spreader plate forming therebetween a relatively thin horizontal passage of uniform thickness throughout and the space between the edge of the spreader plate and flange of the burner pan being relatively wide as compared with the thickness of said flat passage.

1,510,025. SIDE PLATE FOR CABINETS AND THE LIKE. CLAY WEESNER, Newcastle, Ind., assignor to Hoosier Manufacturing Company, Newcastle, Ind., a Corporation of Indiana. Filed Aug. 20, 1923. Serial No. 658,242. 2 Claims. (Cl. 45—16.)



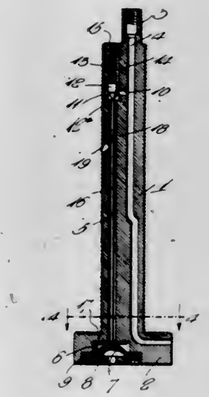
1. The combination with the base and superstructure of a cabinet, screws in said members of the cabinet, and a mold board slidingly mounted on the base of the cabinet and separating the said superstructure from the said base of the cabinet, of end plates having the central portions thereof outwardly curved to provide clearance for said mold board, and said plate having two horizontal rows of inturned tongues punched out of the metal of the plate to space the base and the superstructure of the cabinet apart, and also having vertical screw slots entering from each horizontal margin of the plates and receiving said screws, and said slots having lugs at the sides of the slots to prevent sliding movement of the screws in the slots when the screw heads are contacting the plate.

1,510,026. REAR LIGHT, LICENSE PLATE, AND HOLDER THEREFOR. JOHN A. ADLER, North Milwaukee, Wis. Filed Nov. 18, 1922. Serial No. 601,755. 3 Claims. (Cl. 40—132.)



1. In a combined rear light, license plate and holder therefor, an outer casing, a second casing mounted in the first named casing and opening toward the rear of the first named casing, the rear end of the inner casing having flanges terminating short of the rear end of the outer casing, means for fastening the two casings together, a transparent sheet engaging against the flanges of the inner casing, and a pair of U-shaped spring clamps, each having the extremities of its arms angularly bent and inserted through the upper and lower walls of the first named casing, said clamps being shiftable to a position to hold the transparent sheet in place, the end walls of the outer casing having inwardly extending lugs overlying the cross bar of each of said clamps, and a stenciled number plate engaged with the ends of the outer casing rearward of the transparent plate.

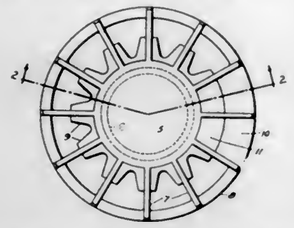
1,510,027. ROTATIVE FRICTION JOINT. ERNST G. K. ANDERSON, Chicago, Ill., assignor, by mesne assignments, to Appleton Electric Co., Chicago, Ill., a Corporation of Illinois. Filed June 9, 1921. Serial No. 476,227. 7 Claims. (Cl. 240—61.2.)



6. A rotative tapered joint comprising axially disposed joint members and a nut, one of said joint members having a shouldered extension, externally tapered and the other joint member being tubular and frictionally and rotationally engaging over said tapered extension and slitted and externally threaded at its part abreast said taper, and a nut adapted to engage the shoulder of said extension threaded over the slitted end of said tubular member and having an internal taper opposed to the external taper of said extension.

1,510,028. CARBURETOR. FRANK HADFIELD ARNOTT, London, England. Filed Aug. 9, 1921. Serial No. 490,986. 1 Claim. (Cl. 261—44.)

A carburetor of the type described including in combination a mixing chamber, a throttle valve between the engine and said mixing chamber, a constant level float chamber sealed from the atmosphere, a jet orifice below the level of the fuel in said float chamber, a loaded combined air and fuel valve adapted to be opened by engine suction through said throttle valve, fuel ports in the lower part of said combined valve at the position of greatest restriction of air entering the mixing chamber, and a passage connecting the area surrounding and acting upon the fuel jet with the upper part of said float chamber.

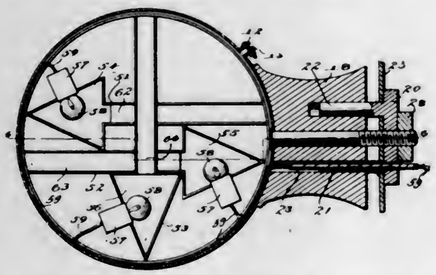


1,510,029. TIRE-VALVE STEM. CHARLES EDWIN BALDWIN, Oconto, Wis., assignor of one-fourth to Philip Abram Badour, Oconto, Wis. Filed Aug. 20, 1923. Serial No. 658,403. 2 Claims. (Cl. 152—11.5.)

1. A tire inflation stem having an enlarged inner end, a longitudinal inflation bore opening laterally through said enlarged end, an off-center recess in said enlarged end, a second longitudinal bore leading from said recess, a pressure escape port from said inflation bore into said second bore, and a second pressure escape port from said second bore; a slidable spring-seated valve in said second bore for closing said first named port, a releasing rod in said second bore for unseating said valve, and a diaphragm secured in said recess for operating said rod.

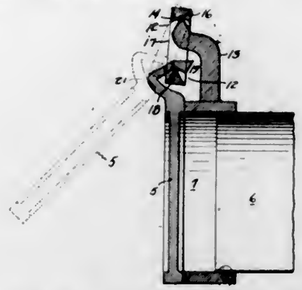
1,510,030. COOKING PLATE. EDMOND H. BALDWIN, Alameda, Calif. Filed Mar. 17, 1924. Serial No. 699,806. 1 Claim. (Cl. 126—215.)

A cooking plate, comprising a ring, a center, ribs connecting the ring and center, and spaces between the ribs; some of said spaces being open, and other of said spaces being closed for a protective area for utensil



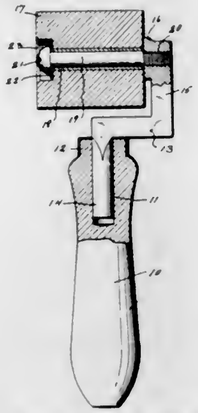
handles; the said center being raised above the ring and provided with web extensions projecting into the spaces between the ribs to form a flame-spreader.

1,510,031. ARTIFICIAL FLOWER. FRED BEYER, Denver, Colo. Filed Mar. 26, 1923. Serial No. 627,725. Renewed July 31, 1924. 5 Claims. (Cl. 41—13.)



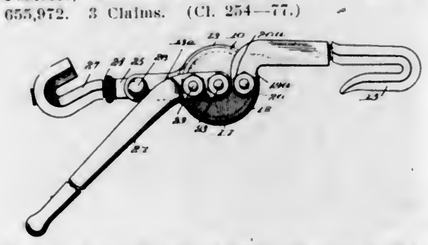
3. The method of forming artificial flowers consisting in topping a pine cone, and roughly removing the upper petals from the remaining body portion to form the center of the flower.

1,510,032. AUTOMOBILE SIGNAL. CHARLES FREDRICK BLISS, Olive, Calif. Filed Feb. 8, 1922. Serial No. 534,955. 2 Claims. (Cl. 177—329.)



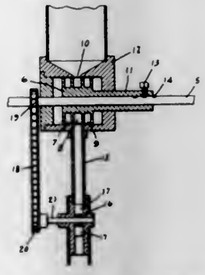
2. A signalling device comprising a cylindrical body open at its ends, a signal device disposed within the cylindrical body, a binding ring encircling said body and being enlarged diametrically intermediate its ends to provide an annular channel encircling the cylindrical body, said body having an opening through its walls in communication with the annular channel, a bracket associated with the binding ring, said bracket and the channeled portion of said binding ring having alined openings formed therethrough, means for releasably holding the binding ring and bracket in clamped together relation and for clamping said bracket to a fixed support, flexible means extending through the alined openings of the bracket and binding ring along the channel encircling the cylindrical body and through the first named opening in the latter to the signal device, whereby the latter may be energized, and light admitting panels adapted for disposition in abutting relation to the opposite ends of the cylindrical body, said binding ring having flanges at its ends adapted to engage with said panels to hold the latter in abutting relation to the opposite ends of the cylindrical body.

1,510,033. FLOODGATE. ALBERT J. BOLD, Oakland, Calif. Filed June 25, 1923. Serial No. 647,561. 7 Claims. (Cl. 251—123.)



1. A flood gate comprising, the combination with a conduit, a gate seat member carried by said conduit, a gate adapted to seat on said member, and a knife edge and cooperating bearing member pivotally connecting said seat member and gate adjacent their upper edge.

1,510,034. PAPER HANGER'S SEAM ROLLER. JAMES EDWARD BRADER, Bethlehem, Pa. Filed Mar. 11, 1924. Serial No. 698,455. 1 Claim. (Cl. 216—61.)



A seam roller of the character described comprising a handle, an angularly bent shank extending from the handle on one side thereof, a pin having screw threaded engagement with the shank and intersecting the axis of the handle and having a head at its outer end, a sleeve surrounding the pin and a roller mounted upon the sleeve, the roller being countersunk at one end to receive said head.

1,510,035. PULLING DEVICE. FREEMAN J. BRADLEY, Fostoria, Ohio. Filed Aug. 6, 1923. Serial No. 655,972. 3 Claims. (Cl. 254—77.)

2. In a device of the character described, a rotatable member having a peripheral groove, a hand lever secured to one side of the rotatable member, a hook eccentrically and pivotally connected to said rotatable member, a ring loosely mounted in the peripheral groove of the rotatable member, and a second hook connected to said ring.

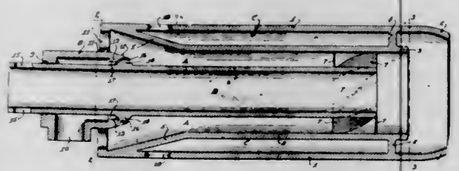
1,510,036. CORN PLANTER. BENJAMIN F. BURKIT, Walton, Ind. Filed Mar. 5, 1921. Serial No. 450,002. 1 Claim. (Cl. 221—157.)

In combination, a hopper, a housing adjacent the bottom of the hopper having an opening communicating with the hopper said housing having bearings in its end walls, a dispensing wheel having a hub slidably mounted in one of the bearings the wheel and its hub being provided with a bore, a drive shaft extending through the other bearing in the housing and through the bore of the hub said dispensing wheel being provided with a plurality of sets of pockets for selective registration with the housing opening, and means for rotating said drive shaft, substantially as set forth.

1,510,037. TOOL. SALVADOR CARNISÉ BURRULL, Barcelona, Spain. Filed Apr. 8, 1922. Serial No. 550,728. 3 Claims. (Cl. 82—4.)

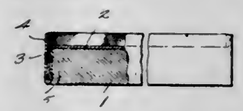
1. Apparatus for machining the seats of flanges in tubular boilers, comprising in combination a support, a tool carrier mounted on said support, gearing for causing the rotation of the said tool carrier, means for causing the continuous feed in a radial direction of the tool carrier, consisting of a screw threaded spindle, means for causing the continuous axial movement of the said spindle on its rotation by the said gearing, and means for causing the radial movement of the said tool carrier on the axial movement of said spindle, substantially as described.

1,510,038. CUT-OFF VALVE. ROBERT G. CAMBLIN, Bartlesville, Okla., assignor of one-half to Anthony R. Edmondson, Bartlesville, Okla. Filed Mar. 24, 1923. Serial No. 627,380. 3 Claims. (Cl. 67—115.)



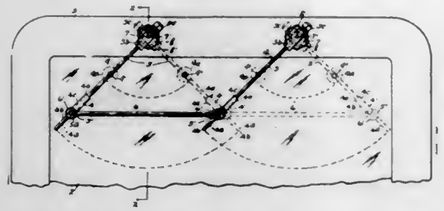
1. A mechanism of the class described comprising, in combination, a cylinder adapted for communication with a source of gas under pressure, a pipe leading therefrom, a valve mounted within the cylinder, the pressure of the gas adapted to maintain the valve beyond the connection between the cylinder and the pipe to permit unobstructed flow through the pipe, the stem on the valve extending exteriorly of the cylinder, a

weighted member carried by said stem for moving the valve into closed position upon reduction of the gas pressure, a latch pivotally engaged with the cylinder, said latch being disposed toward the stem and in a direction lengthwise thereof, said latch being provided with an inwardly facing shoulder, an outstanding pin



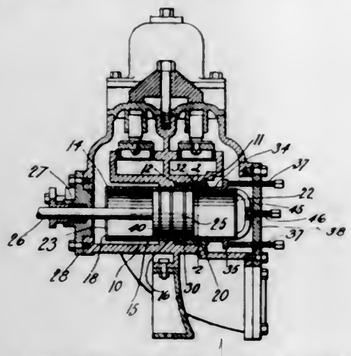
carried by the stem, the latch outwardly of the shoulder having contact with the pin when the valve is in open position, the shoulder of the latch engaging over the pin when the valve is in closed position to hold the valve against movement into open position, and means constantly urging the latch toward the stem and pin.

1,510,039. GAS BURNER FOR BOILERS AND OTHER FURNACES. WALLACE CANFIELD, Taft, Calif. Filed Apr. 26, 1924. Serial No. 709,193. 16 Claims. (Cl. 158—110.)



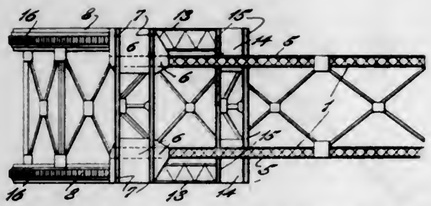
1. A gas burner comprising nested, spaced, open-ended pipes; and means for supplying gas under pressure to the open rear end of the space between said pipes whereby air currents are induced both through said space and through the inner pipe.

1,510,040. STOVE BOARD. BERNARD J. CARTER, Cleveland, Ohio. Filed Jan. 4, 1924. Serial No. 684,454. 3 Claims. (Cl. 126—278.)



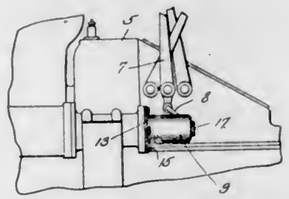
1. A stove board of the class described including a body board, a platform disposed over the body board and provided with a depending marginal flange slightly spaced from the side of the body board, and a band disposed about said flange extending a distance above the platform and provided at its bottom with an inturned upwardly extending flange disposed between the flange of the platform and the sides of the body board.

1,510,041. DUPLEX WIPER FOR WINDSHIELDS. WALTER W. CHAMBERLAIN, Watertown, N. Y. Filed June 7, 1924. Serial No. 718,543. 1 Claim. (Cl. 15—251.)



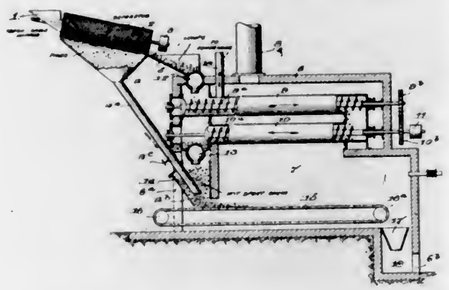
A duplex wind-shield wiper for vehicles, comprising spaced depending wiper arms, the lower ends of said arms being bent outwardly and terminating in a threaded stud, wiping brushes mounted on said arms near said studs, shafts for pivotally supporting said arms journalled in the frame of the wind-shield, a tie-rod having its opposite ends swiveled to said outwardly bent portions for effecting the oscillation of said arms and brushes as one part, and crank rods carried by said shafts adapted to be used singly at the option of the driver or a passenger seated beside the driver for effecting the simultaneous oscillation of said brushes.

1,510,042. PUMP LINER. LOUIS O. CLEWETT, Los Angeles, Calif., assignor to Los Angeles Pump & Supply Co., a Corporation of California. Filed Nov. 4, 1922. Serial No. 599,124. Renewed Apr. 2, 1924. 9 Claims. (Cl. 74—108.)



1. In a pump, the combination of: a cylinder; an adapter within said cylinder; a liner held in said adapter; a packing ring between said liner and said adapter; a packing ring between said adapter and said cylinder; and means for longitudinally compressing said packing rings so as to form a seal between said members.

1,510,043. BASCULE BRIDGE. ANDREW O. CUNNINGHAM, St. Louis, Mo. Filed May 5, 1920. Serial No. 378,964. 4 Claims. (Cl. 14—36.)

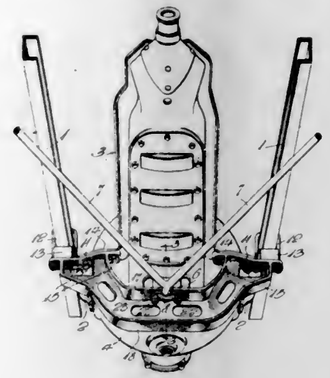


1. A bascule bridge comprising a single pair of columns, a leaf pivotally supported on said columns to swing vertically, and counterweights for said leaf, the truss members of the leaf being in line with the respective columns and said counterweights being offset laterally from the body of the leaf far enough to clear the respective columns.

1,510,044. STARTER CASING. FLETCHER A. DANNELLEY, Lockhart, Tex. Filed Nov. 3, 1922. Serial No. 598,057. 1 Claim. (Cl. 74—56.)

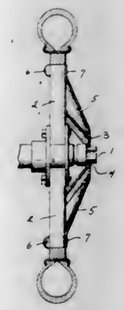
In a motor-propelled vehicle, a transmission housing, a chassis rail disposed adjacent to the housing, a pedal and a pedal-operated member mounted on the housing, a rearwardly extended sleeve, securing elements connecting the sleeve to the housing, the chassis rail and the pedal-operated member being so located as to render certain of the securing elements inaccessible, and a rearwardly extended bendix casing threaded on the sleeve, the casing, the pedal and the pedal-operated member being located on the same side of the housing, the casing being provided on its rear end with a wrench-engaging means, the pedal-operated member being located in advance of the wrench-engaging means, and the wrench-engaging means being of such diameter that a wrench applied thereto may be operated readily between the transmission housing and the chassis rail.

1,510,045. METHOD OF FIRING RETORT FURNACES. DAVID T. DAY, Washington, D. C. Filed June 15, 1923. Serial No. 645,632. 9 Claims. (Cl. 110—101.)



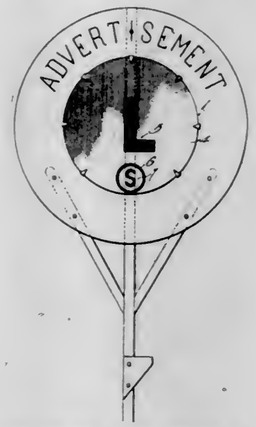
2. The method of firing retort furnaces, which method comprises treating fresh oil shale to separate it into fines and lumps, passing the lumps through a retort heated by a furnace, passing the hot spent shale from the retort, and using the spent shale while yet hot together with the fresh shale fines as the fuel for the furnace.

1,510,046. SEPARATION OF ALKALI-METAL SALTS. CLINTON E. DOLBEAR, San Francisco, Calif., assignor to Industrial Research Co., San Francisco, Calif. Filed Aug. 18, 1923. Serial No. 658,186. 5 Claims. (Cl. 23—22.)



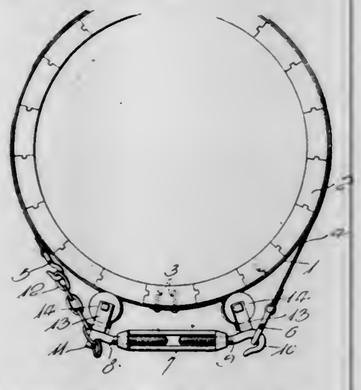
1. That step in the method of separating from each other different alkali-metal salts held in common in solution, which consists in adding ammonia to the solution to selectively precipitate them.

1,510,047. MOTOR SUPPORT AND THRUST MEMBER. WILLIAM G. DUNN, Clarinda, Iowa. Filed Nov. 21, 1921, Serial No. 516,849. Renewed Aug. 7, 1924. 4 Claims. (Cl. 180—64.)



4. A thrust member comprising a bar adapted to extend across a chassis frame under the rear end of the motor, said bar having a hemi-spherical projection formed on its upper side for reception in the usual radius rod ball socket of the motor, said bar being provided with a downwardly opening hemi-spherical socket extending into said projection to receive the radius rod ball, said last named socket being adapted for coaction with the usual cap to hold the ball in place, and means for securing said bar to the chassis frame.

1,510,048. WHEEL GUARD. ELISHA FRANKLIN EVANS, Homerville, Ga. Filed Feb. 14, 1924. Serial No. 692,901. 4 Claims. (Cl. 301—37.)

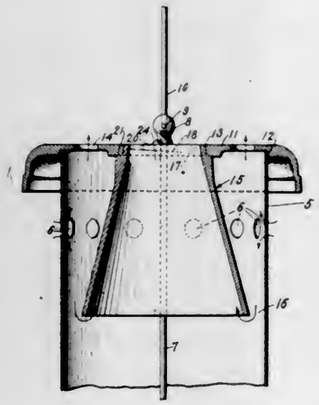


1. The combination with a vehicle wheel including a hub having a cap and spokes extending from the hub, of a guard including a central portion having a centrally located opening for receiving the hub cap of the wheel, arms extending from the central portion of the guard in radiating relation and extending at an incline for engagement with the outer end portions of the spokes of the wheel, said arms being curved transversely and having their outer free end portions in flat engagement with the spokes of the wheel and provided with side wings extending upon opposite sides of the spokes and, together with the outer end portions of the arms, constituting arms snapped into straddling relation to the outer end portions of the spokes and releasably holding the guard in connection with the wheel.

1,510,049. LUMINOUS SIGN. ANDREW A. FAIR, Sioux City, Iowa. Filed Jan. 15, 1923, Serial No. 612,735. Renewed Feb. 25, 1924. 6 Claims. (Cl. 40—135.)

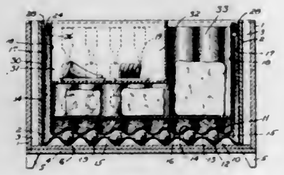
3. A luminous highway sign operable by the projected rays of approaching vehicle headlights, comprising a reflecting surface, and a sheet of light diffusing material applied to said reflecting surface.

1,510,050. HOOP SETTER. PERL F. FLOWER, La Fayette, Ind. Filed July 5, 1923. Serial No. 649,661. 10 Claims. (Cl. 217—95.)



1. A method of forming a hoop for a tub comprising placing a strip about the tub passing a tightener about the tub in overlying relation to the strip and tightening the tightener to hold the strip tightly about the tub with its end portions overlapping, and passing fasteners through the overlapped end portions of the strip into the tub.

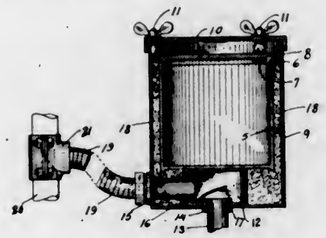
1,510,051. BELT CONVEYER. BYRON FORBES, Miami, Ariz. Filed May 29, 1922. Serial No. 564,367. 4 Claims. (Cl. 198—202.)



1. In combination with a conveyer belt a plurality of self aligning idler means distributed along the length of the belt, each of said self aligning idler means being pivotally mounted to enable it to swing laterally of the belt and being provided with belt supporting idler rolls and with means adapted to engage the respective edges of he belt to swing the idler means so as to cause the belt to be aligned by operation of the belt supporting idler rolls, and fixed idler means distributed along the conveyer belt and interposed between the said self-aligning idler means.

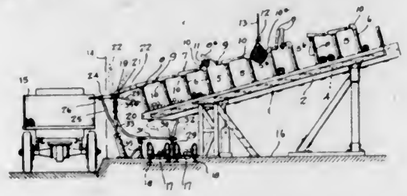
1,510,052. COMBINED TOP AND TRUNCATED-CONE RADIATING FLUE FOR OIL STOVES. ABRAHAM M. GOLDSTONE, Baltimore, Md. Filed May 19, 1924. Serial No. 714,456. 4 Claims. (Cl. 126—96.)

1. A stove-top which includes a crown having a central opening therethrough and a downwardly and outwardly flared frusto-conical chimney united with the crown and having its outlet through said opening, said crown being formed with a series of outlets around said central opening.



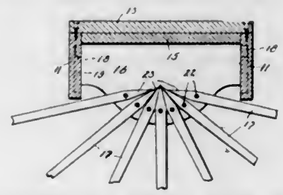
1,510,053. BOTTLE REFRIGERATOR. ELIHU C. GRACE, Mobile, Ala. Filed Mar. 20, 1924. Serial No. 700,689. 7 Claims. (Cl. 62—34.)

7. A bottle refrigerator comprising a chamber provided with a plurality of nested transversely corrugated tanks each tank so spaced and so disposed one inside the other that the corrugations of said tanks will form a plurality of longitudinally disposed rows of passageways adapted to receive curved rows of bottles and a fluid to buoy up said bottles each row of passageways being of U-shaped cross section and means located within the innermost tank for cooling said fluid and bottles.



1,510,054. COOKER FOR AUTOMOBILES. FUHRMAN L. HAINES, Denver, Colo. Filed Apr. 1, 1922. Serial No. 548,767. 4 Claims. (Cl. 126—20.)

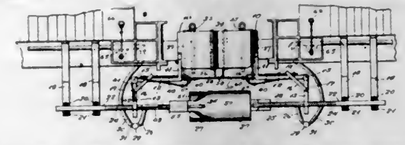
1. In a cooker adapted to be heated by hot gases, a container, a pot within said container and spaced therefrom by means of heat insulating material, a heat box within the container said box having its upper surface in contact with the bottom of the pot, a pipe leading into



said heat box through one side thereof, a second pipe connected to the bottom of said box and a deflector plate in said box between said pipes.

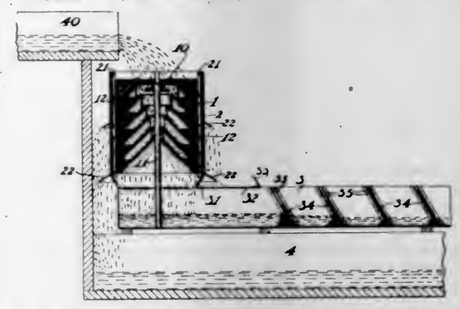
1,510,055. LOADING RACK FOR WAREHOUSES. HARRY F. HALDEMAN, Los Angeles, Calif. Filed Mar. 5, 1923. Serial No. 622,808. 10 Claims. (Cl. 212—16.)

1. A rack for facilitating delivery of rod-like material of different sizes, from a warehouse, comprising a supporting floor for the material, uprights carried by the floor dividing the same into compartments for the different sizes, and an inclined skidding rail disposed over the compartments with its depressed end located at the side of the warehouse and having movable sections corresponding to the compartments, adapted to be raised to give access to the compartments.



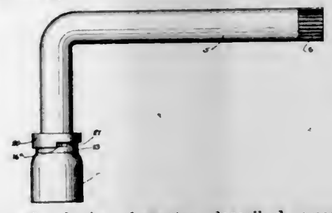
1,510,056. CLOTHES HANGER. ARTHUR L. HAMSON, Los Angeles, Calif., assignor of one-fourth to Bernhard J. Lampe, Los Angeles, Calif. Filed Oct. 2, 1923. Serial No. 666,071. 9 Claims. (Cl. 45—13.)

3. In combination, a support having two spaced side parts, a body having two spaced flanges, a plurality of arms extending between the flanges and pivotally connected therewith so that they can be folded together or spread apart, and means for holding the body between the side parts so that it is movable between a position where the arms extend downwardly and a position where the arms project outwardly.



1,510,057. AIR-TRAIN-LINE COUPLING. SAMUEL J. HAYES, Rock Hill, S. C. Filed Oct. 2, 1923. Serial No. 666,206. 12 Claims. (Cl. 23—76.)

1. In combination with the ordinary hose couplings for railway cars, an attachment comprising a second pair of coupling members, locks for said second coupling members, means for releasing said locks on separation of the cars in case the cars are uncoupled, and means for



preventing the operation of said releasing means in case a coupling pin or hinge pin breaks or in case the draw head pulls out.

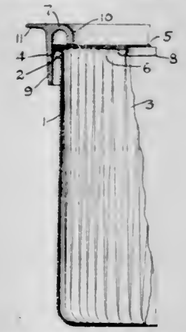
1,510,058. SCREENING DEVICE. RICHARD D. HELLER, Boise, Idaho. Filed Apr. 4, 1921. Serial No. 458,374. 7 Claims. (Cl. 210—172.)

1. The combination with a primary self-cleaning screen for the elimination of a considerable percentage of the water, of a flow channel for receiving the unscreened water and the débris, having a series of screens adapted to be overflowed when clogged, and to successively function to retain the débris as the preceding screens of the series become clogged.

1,510,059. WRENCH. OTTO D. HOLLE, Bremen, Kans. Filed July 25, 1923. Serial No. 653,768. 3 Claims. (Cl. 81—62.)

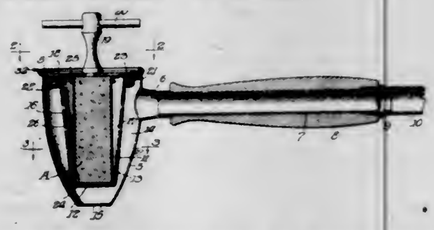
1. A tool of the character described comprising a socket portion having a bored shank, said shank having diametrically opposed slots and a groove extending substantially half-way around said shank, a spring in said groove, a handle adapted to enter said shank and having its extremities provided with elongated teeth, pawls associated with said socket portion and entering said slots and means for operating said pawls for the purpose of either locking the handle to the socket portion or operating so the tool may be used as a ratchet.

1,510,060. GAS BURNER. MERTON DE FLURA HOOVER and ORVILLE L. M. HOOVER, Dallas, Tex. Filed Dec. 5, 1923. Serial No. 678,594. 2 Claims. (Cl. 158—118.)



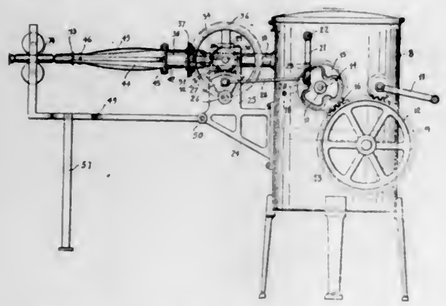
1. A burner of the class described comprising a mixing tube through which air is adapted to pass, one end of said tube being closed by a perforated mixing screen, a supply pipe within said tube having a cap thereon, perforated distributing arms radiating from said cap, said mixing tube being adjustable with respect to said supply pipe for varying the space between said cap and

screen, means carried by said pipe for breaking up the air as it passes through said tube, a closing element for said tube slidable upon said pipe for controlling



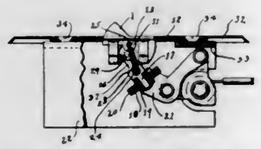
the amount of air passing through said tube, and means for maintaining said closing element in any adjusted position upon said pipe.

1,510,061. PORTABLE COMMODE. HENRY P. JONES, Buffalo, N. Y. Filed Mar. 24, 1923. Serial No. 627,316. 8 Claims. (Cl. 4—138.)



1. In a portable commode, in combination, a vessel, a seat member removably fitted thereon and having means whereby it is held against sliding displacement, and a member having a flat bearing upon the upper edge of the vessel and engaged from above by the seat member and along its edge by said means, said last named member being thereby confined against displacement relatively to the vessel and to the seat member.

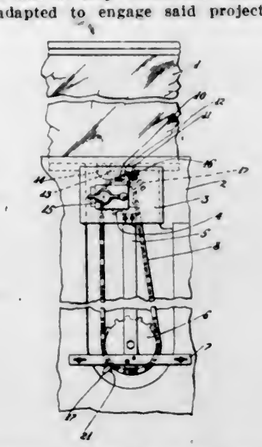
1,510,062. WASHING DEVICE. JAMES F. KENNEY, Maywood, Ill. Filed Sept. 20, 1922. Serial No. 589,437. 5 Claims. (Cl. 299—83.)



1. A portable washing device for domestic use and the like having a casing open at the bottom and having an induction passage at the side, said passage being extended to form a handle for manipulating the device, a soap container within the casing spaced from the sides and bottom whereby clear water may flow down through the casing and out through the bottom, the soap container being located opposite to the induction passage, and the entering liquid consequently being deflected approximately through a right angle between its entrance and exit, the soap container comprising a receptacle having holes in the side, and a rotatable member having holes adapted to register with the holes in the receptacle for varying the size of the openings, and a handle on top for regulating the position of the rotatable member.

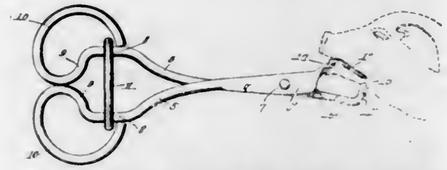
1,510,063. SAUSAGE-LINKING MACHINE. ISIDORE KERTES, New York, N. Y. Filed Jan. 18, 1924. Serial No. 687,019. 7 Claims. (Cl. 17—33.)

1. In mechanism of the character described, the combination with a conical tube supported for rotation and means thereon for holding a sausage casing in position to be filled with sausage meat pressed through said tube, of a pair of superposed rollers arranged to receive the stuffed casing, said rollers having annular corrugated surfaces to prevent lateral turning of the stuffed casing, one of said rollers having a spring-pressed axis adjustable towards and away from the other roller, and means for intermittently rotating said conical tube to twist the sausage line into links.



1,510,064. ELECTRICAL SWITCH. FRANK E. KLOSS, Milwaukee, Wis. Filed Dec. 27, 1921. Serial No. 525,086. 7 Claims. (Cl. 200—72.)

1. A tumbler switch comprising a support, operating means pivotally mounted upon said support, a lever pivotally and slidably carried by said means, a spring tending to rock said lever, and a pair of stops located in the path of movement of said lever, whereby when said lever suddenly strikes one of said stops its pivoted end will slide relatively to said operating means to thereby produce a cushioning effect.



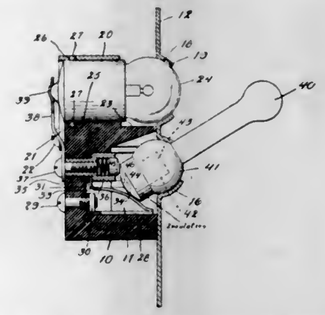
1,510,065. ADJUSTABLE STOP FOR WINDOW REGULATORS. PETER JOHN KURSCHEIDT, Brooklyn, N. Y., assignor to Perfect Window Regulator Company, New York, N. Y., a Corporation of Maine. Filed Feb. 27, 1922. Serial No. 539,371. 9 Claims. (Cl. 268—4.)

1. In a window regulator, a sprocket, a chain running thereover for transmitting motion to the window, a projection and a stop detachably fastened to said chain and adapted to engage said projection for pre-

venting movement of the window beyond any given predetermined position in its travel.

1,510,066. VETERINARY OBSTETRICAL INSTRUMENT. AASNE MADLAND, McKenzie, N. Dak. Filed Apr. 5, 1923. Serial No. 630,160. 1 Claim. (Cl. 128—324.)

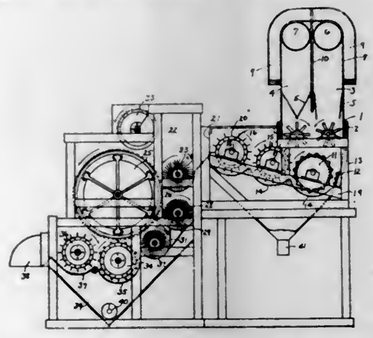
An instrument of the character described comprising, a pair of pivoted arms, said arms being provided at their rear ends with spaced substantially parallel portions and inclined portions rearwardly of the parallel portions, said inclined portions being continued in forwardly extending loops having their ends terminated adjacent to the parallel portions, a link carried by the rear ends of said arms and adapted for movement upon said parallel portions for locking the arms against opening movement, the forward movement of the link being limited by contact with the forward ends of said loops, a shank carried by the forward end of one arm and projecting outwardly and interally therefrom and provided with a longitudinally extending jaw to engage within the lower jaw of the pig, a shank carried by the other arm and projecting forwardly thereof and provided with an inwardly projecting jaw extending toward the first named jaw and having a blunt end to engage with the exterior of the jaw of the pig without liability of puncture.



1,510,067. RUST-DISSOLVING LIQUID. EAIK J. NORBERG, Everett, Wash. Filed Feb. 26, 1923. Serial No. 621,473. 3 Claims. (Cl. 148—8.)

1. A composition adapted to penetrate and dissolve rust, comprising in its larger proportion an acid liquid, a smaller proportion of crystalline burning acid such as carbolic acid, and a pungent and mobile liquid obtained by destructive wood distillation.

1,510,068. SWITCH. JOHN F. O'MALLEY, Geneva, N. Y. Filed Jan. 26, 1922. Serial No. 531,963. 6 Claims. (Cl. 200—167.)

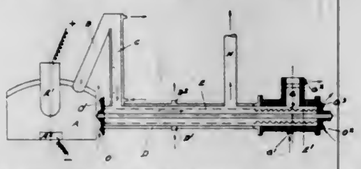


4. A switch of the character described comprising a body of insulating material chambered out to provide

a plurality of intersecting recesses, stationary contacts mounted within said recesses, a plurality of contacting spring contacts located within the respective recesses and normally spaced from said stationary contacts, a face plate secured upon the body and covering said chambered out portion, said face plate being formed with a somewhat spherical flange surrounding an opening opposite the center of the chambered out portion of the body, a lever formed with a ball portion revolubly mounted within said flange and carrying a button of insulating material, said flange being formed with a series of notches corresponding to the number of re-

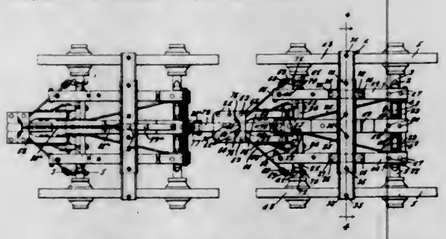
cesses, said lever being engageable within a selected one of said notches whereby to bring said button into engagement with one of said spring contacts for forcing the latter into engagement with the associated contact, a bracket secured externally upon said body, the adjacent portion of the body portion being cut away and mating with the bracket to form a socket, an incandescent bulb mounted within said socket, said face plate being formed with an opening through which said bulb partially projects, and a metallic strip having one end connected with said spring contacts and having its other end engaging against the central contact of the bulb.

1,510,069. COTTON-HULL-EXTRACTING MACHINE. JOHN ARNOLD STREUN, Sherman, Tex., assignor to Hardwicke-Etter Company, Sherman, Tex. Filed Jan. 2, 1924. Serial No. 683,862. 7 Claims. (Cl. 19—38.)



3. A cotton hulling device comprising a pair of feeding rollers, two valves controlled chutes adapted to discharge cotton alternately to said rollers, means to fill the said chutes alternately, means below said feeder rolls to break up bolls and agitate the cotton, a saw cylinder, conveyor rolls closely adjacent said saw cylinder arranged to carry said cotton repeatedly across the length of said cylinder and to discharge the hulls at the end of the lowest of said conveyor rolls, means to remove said cotton from the cylinder and separate means to discharge said cotton from the machine.

1,510,070. PROCESS FOR TREATING FIBROUS MATERIALS FOR PAPER MAKING AND OTHER PURPOSES. CHARLES WEYGANG, Maidenhead, England. Filed June 9, 1922. Serial No. 567,198. 2 Claims. (Cl. 92—13.)



1. In a process for the treatment of straw to produce a paper making material, treating the straw with a chemical liquor comprising 8 parts by weight of caustic lime slacked and diluted with water to a paste, 1 to 4 parts by weight of a mineral oil such as petroleum and 4 to 8 parts of carbonate of soda, as set forth.

1,510,071. APPARATUS FOR PRODUCING ZINC POWDER. FOLKE JARL ANDERS WENNERGREN and FRIDTJOF ANDERSEN, Trollhattan, Sweden, assignors, by mesne assignments, to Trollhättan Elektrothermiska Aktiebolag, Stockholm, Sweden. Filed Oct. 6, 1922. Serial No. 592,821. 3 Claims. (Cl. 266—19.)

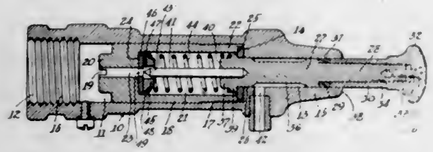
1. The combination with a furnace for producing metal vapors mixed with noncondensable gases, of a pipe for discharging said vapor and gas from the furnace, a substantially vertically arranged condenser connected to the outlet end of said pipe, means for cooling said condenser, a receiver connected to the outlet of the condenser, means for maintaining the receiver in cooled condition, a powder outlet connected to said receiver and arranged to cause the powder to rise and form a powder seal at the outlet end of the receiver, a gas discharge pipe connected to the receiver between the powder inlet and outlet, and a conveyer arranged in the receiver and adapted to force powder along the receiver and into the powder outlet.

1,510,072. EIGHT-WHEEL WAGON. BENNIE LEE ZEAGLER, Lufkin, Tex., assignor to The Martin Wagon Company, Lufkin, Tex. Filed May 14, 1921. Serial No. 469,596. 5 Claims. (Cl. 280—81.)

1. In a device of the class described, a frame; a rear axle carried by the frame; a front axle mounted to swing with respect to the frame; draft members carried by the front axle; a tongue mounted in the draft members; a block connecting the draft members; connections having their rear ends assembled with the forward axle, the forward ends of the connections being slidable in the block; and adjusting devices on the forward ends of the connections and cooperating with the block.

1,510,073. PACKING STRUCTURE AND METHOD OF MAKING SAME. JOHN A. ZUBLIN, Los Angeles, Calif. Filed Feb. 9, 1923. Serial No. 617,902. 12 Claims. (Cl. 29—156.)

1. An expansible packing structure comprising a tubular member longitudinally slit from one end inwardly and at circularly spaced intervals to form a series of blades, the several slits being closed throughout their length and transversely angled, whereby each blade throughout its length has a permanent coengagement with the adjacent blades.

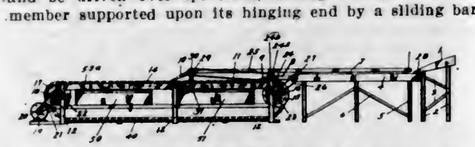


5. In a method of forming a cylindrical expansible packing structure, the steps consisting of longitudinally slitting through the wall of a hollow piece of material from one end inwardly and at circularly spaced intervals in transverse planes out of registry with the axis of said structure to form a series of blades, closing the several slits to bring the blades into cooperative engagement, and subsequently turning the piece to gauge.

1,510,074. ACCELERATOR FOR THE VULCANIZATION OF CAOUTCHOUC. CLAYTON WING BEDFORD, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Original application filed May 17, 1919, Serial No. 297,920. Divided and this application filed Nov. 24, 1919, Serial No. 340,262. Again divided and this application filed June 10, 1922. Serial No. 567,433. 6 Claims. (Cl. 260—23.)

5. The process of producing a sulphur-nitrogen accelerator which consists in admixing methylene-aniline and aniline, heating the mixture, subsequently adding sulphur thereto and again heating the mixture, eliminating hydrogen sulphide and aniline.

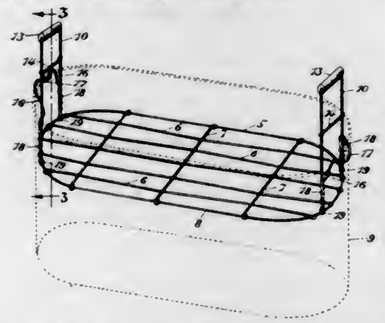
1,510,075. LIQUID DISPENSER. GABRIEL A. BOBRICK, Los Angeles, Calif. Filed Feb. 21, 1921. Serial No. 446,885. 11 Claims. (Cl. 221—102.)



1. The combination with a liquid dispenser, having a displacement chamber, inlet and outlet ports in said chamber, a valve for the outlet port, yielding means to hold said valve normally seated in said outlet port, and a valve pin carried by said valve adapted to extend into and close said inlet port when the outlet valve is open; of a flexible plate mounted adjacent said inlet port having an aperture in axial alinement therewith, the said aperture being of smaller area than the cross-sectional area of the valve pin, the said pin being adapted to extend through said aperture and be frictionally engaged by its perimeter to seal the closure of the inlet port, a secondary plate having an aperture and bearing against the inner face of said flexible plate, the said valve seating means being confined between the last named plate and the valve.

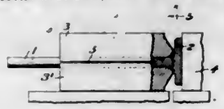
2. In a liquid dispenser, a displacement chamber having a port and a longitudinally movable pin adapted to move to and from said port, a compressible washer arranged at the ported end of the chamber and having an opening which is effectively smaller than the pin, the pin being movable through said opening and pressure means pressing on the washer and acting to keep its opening reduced in size.

1,510,076. GRADING MACHINE. DAVID B. CARR, Portland, Oreg. Filed Feb. 15, 1923. Serial No. 619,251. 10 Claims. (Cl. 130—32.)



1. The combination in a machine of the character described of a segregator endless chain adapted to run

and be driven over sprockets, having a hinged bottom member supported upon its hinging end by a sliding bar



adapted to move along adjustable link supports to govern the time and location of the opening to be created by the hinging down of the hinged bottom.

1,510,077. CLOTHES DRAINER. EDWARD W. HACKNEY, Bridgeport, Nebr. Filed Sept. 22, 1923. Serial No. 664,180. 2 Claims. (Cl. 68—30.)
